Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following article by Paul Mallon:

BEHIND THE NEWS (By Paul Mallon)

WHEAT AT 381/2 CENTS; AMERICANS PAY 70

After all that has been said and done in Washington about stop-

ping the dictators, listen:
A German ship, the S. S. Donau, is now on the high seas for Bremen with a cargo of American wheat. It was bought by foreign buyers at the equivalent of 38½ cents f. o. b. Portland, Oreg., whence the *Donau* departed last week at a time when wheat was

selling to Americans at 70 cents in Chicago.

The foreign buyers got it for around half what Americans pay because they got it from the American Government—the Federal Surplus Commodities Corporation—which paid far more for it. The loss is taken by the F. S. C. C., which has no funds except those paid into the United States Treasury by taxpayers.

In short, the American taxpayer is paying almost 50 percent of Hitler's purchase price of the wheat, and the transaction was consummated as another branch of the Federal Government, the Treasury, was announcing a 25-percent penalty against imports from Germany in an attempt to curtail trade with that dictatorial

nation.

Listen further:
The F. S. C. C. has sold several cargoes of wheat lately to Shanghai (now controlled by the Japanese) at prices ranging from 39 to 40 cents f. o. b. Portland, whereas it actually purchased this wheat f. o. b. steamer Portland at 72½ cents.
This was a subsidy of 33½ cents a bushel to a foreign buyer paid by the Government of the United States from taxes.
In neither this nor in the German case was the wheat worked into flour in American mills employing American labor. No subsidy was granted to them so they could get the business now to be done in Bremen and Shanghai, although they would use American cotton bags and American railway transportation as well as labor.

Now Agriculture Secretary Wallace wants to institute a similar export subsidy system for cotton, whereby foreign buyers will be able to get it cheaper than Americans, and American taxpayers will pay the difference.

Plain fact behind the matter is that the foreign policy and the

Plain fact behind the matter is that the foreign policy and the Plain fact behind the matter is that the foreign policy and the farm policy conflict. Mr. Wallace and State Secretary Hull are working at cross-purposes. Mr. Wallace wants to get rid of surplus American farm products, while Mr. Hull wants to get rid of the dictators. Mr. Hull wants to promote foreign trade with nondictatorial nations through reciprocal agreements. Mr. Wallace wants to dump his farm surpluses, and the dictator nations happen to be the ones in need of raw materials.

The sacrifice of the taxpayers' money, says Mr. Wallace, is justified because otherwise the farmer would not get a half-decent price. Then the farmer could not buy American manufactured goods and all business would suffer.

Views From the Bench

EXTENSION OF REMARKS

HON. EARL R. LEWIS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 11, 1939

Mr. LEWIS of Ohio. Mr. Speaker, the threatening international situation and certain actions on the part of responsible officials of the Government of the United States have given deep concern to many of us who feel that no vital interest of the United States is being threatened by the events occurring in Europe.

The reaction of the common people of the country to this whole situation seems to me well set forth in an editorial column of Hi Waters, a philosopher of the people, who presents their views regularly in certain newspapers published in eastern Ohio, and I wish to quote from a column which appeared in the Bellaire (Ohio) Daily Leader of Wednesday, April 5, 1939, as follows:

> VIEWS FROM THE BENCH (By Hi Waters) TO CONGRESS

Us common folks back home hear a lot these days about democracy, about dictators, about totalitarian states, and about kings, dukes, premiers, Parliament, Reich, and Congress.

We hear a lot about taxes, incomes, crops, overproduction, underproduction, labor unions, nonunions, unemployment, W. P. A. Budgets, balances, boycotts, and cost of livin'. But do we care a whole lot about it all?

We've been hearin' about all them things * * some under other names * * ever since the Pilgrims landed and cooked their first Thanksgivin' dinner with the Indians. We always will hear about 'em

hear about 'em. No, sir; we live in a country, thank goodness, where we elect men and women to office to do our worryin' for us. Of course, for somethin' better to do, we kinda perk up and get interested about election time, not about the issues particularly, but about whether the gentleman on Front Street is elected instead of the

whether the gentleman on Back Street, or vice versa.

After they get in, we set back and really start worryin' about the real issues of a country.

What we're interested in in America is, basically, jist a few things, like eatin', sleepin', lovin', worshipin', getting entertained, and

All them other things mentioned first, is subissues—kinda adjectives, so to speak, or side dishes for the real dinner. Them first things is jist for Congress to worry about and to fix up if they can and as they see fit.

and as they see fit.

And broadly speakin', every one of us has confidence in our Congress to solve 'em one way or another. If they solve 'em accordin' to a method we don't like, we call 'em nitwits and numskulls

* * * about like we would jump stiff-legged on a shortstop who misses a bounder and let the winnin' score come in.

Then we forget all about it * * * forget, even if we praised or condemned.

or condemned.

Because we're really interested in them lone seven points that I mentioned last.

I mentioned last.

And thank goodness, we live in a country where we have a Congress who, be they good or bad, labor on in the knowledge that they might be retired by a ballot * * * but never by a bayonet.

We thank goodness we live in a country where we are awakened in the mornin' by the nerve ranglin' gong of an alarm clock—not to the blood stirrin' notes of a bugle. We're glad we live in a country where we have to push and shove our way up to a counter for doughnuts and coffee and have the whole thing dribble over shirt fronts—instead of bein' marched up in an orderly mess call for Government—owned paneakes. for Government-owned pancakes.

We thank goodness we live in a country where we can love our bonnie lassie and the Nation's flag * * instead of in a country where we have to love the Nation's flag and a bonnie lassie.

We're glad we live in a country where we are allowed to worship a Supreme Being who we think is responsible for our blessin's * * * * without feer of feelin'; they we're unparticitie to a human

without fear of feelin' that we're unpatriotic to a human

We're glad we live in a country where we cuss when we slice a golf ball * * * instead of in a country where we cheer when we slice an enemy's throat; where we lost at poker * * * instead of winnin' with a parry; where we may sulk when the visitin' halfback crashes through our line on the griding * * * instead of feelin' elated when we wipe out a platoon with a grenade.

And finally, we're glad we live in a country where, when we come to die, we may go quietly while church bells ring instead of gloriously while rifles crack.

Yes, sir; them's the things * * * us common people * * *

Certainly the foregoing editorial is a true reflection of the interest of the average citizen and his reactions to the turmoil in the modern world. While he may not be as learned as some who would involve us in the affairs of Europe his sound common sense instinctively tells him that in that quarrel he has no part, and I believe the philosopher of eastern Ohio, in his homely philosophy, expresses the reaction of the average citizen of America to the turmoil of the present day.

Do Our Trade Agreements Benefit Agriculture?-Yes

EXTENSION OF REMARKS

HON. A. WILLIS ROBERTSON OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 11, 1939

RADIO ADDRESS BY EDGAR W. SMITH, VICE PRESIDENT OF GENERAL MOTORS OVERSEAS CORPORATION

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by Edgar W. Smith, vice president, General Motors Overseas Corporation, New York, N. Y., broadcast on Farm Forum program, Schenectady, N. Y., March 10, 1939:

I feel highly complimented at having been asked to speak tonight to a farm audience on a subject which is of great importance
to the farmer and the industrialist alike.

You may well wonder why a representative of the automobile
industry should feel called upon, as I do, to take a stand on the
question of the benefits of the administration's reciprocal trade
agreements program to American agriculture. There was a time,
to so long ago when all of us were supposed to stay in our own not so long ago, when all of us were supposed to stay in our own backyards and tend to our own knitting—the farmer, under this principle, thought exclusively in terms of his crops and his prices;

principle, thought exclusively in terms of his crops and his prices; the big manufacturer thought in terms of the goods he produced and sold; the small merchant kept his eyes fixed very closely on what was going on in his own immediate neighborhood.

That experiment in isolationism worked out very badly indeed, and I think we can safely say that the days of narrow self-interest which gave the idea birth are gone with the big wind of the depression. We recognize today that our economy is an economy which is woven and interwoven not only within our own national boundaries but over the whole feet of the globat that Array is which is woven and interwoven not only within our own national boundaries, but over the whole face of the globe; that America is prosperous when the world is prosperous; that industry and agriculture and labor, to say nothing of the consumer himself, are interrelated and interdependent threads in the great fabric of our national well-being. There is no more hopeful sign on the economic horizon today than the fact that this new recognition of our mutual dependence on each other has arisen.

The automobile industry is deeply concerned, of course, with maintaining and expanding the market it has found for its product abroad. I can say to you quite sincerely, however, that we

uct abroad. I can say to you quite sincerely, however, that we are even more deeply concerned in seeing the market maintained and expanded in foreign lands for the agricultural commodities that the farmer produces. If this statement sounds paradoxical, I have only to remind you that the number of motor vehicles sold in the agricultural areas of the United States is for greater than I have only to remind you that the number of motor vehicles sold in the agricultural areas of the United States is far greater than the number of vehicles sold in all of our export markets combined. We have no illusions, in the last analysis, as to where our greater interest lies. We want to see farm exports increased because we know that our domestic market for motorcars and other manufactured goods is definitely in jeopardy so long as a lack of foreign demand for American farm products keeps the American farmer from a full measure of prespective.

American farmer from a full measure of prosperity.

There are some who will say that there are other solutions to the farmer's problem than an increase in his export sales. I say in reply that these other solutions have been tried and that they have failed, and I urge, therefore, that the farmer throw his whole weight behind the effort to expand his foreign markets as the one approach above all others that holds promise of success without attendant danger.

If any of us are to set about the job of increasing our exports, whether of motorcars or of farm crops, we shall find that the

first necessity is to provide a volume of dollar exchange abroad sufficient to enable us to get paid for the things we want to sell. We shall find that the only way this dollar exchange can be created is by a substantial increase in the volume of foreign goods imported into the United States, and we shall find furthermore that such an increase can occur, from this point on, only if our American tariff structure is revised on a safe, sound, and intelligent basis.

The automobile industry, of all industries in the United States, has given the most consistent and the most vigorous support to has given the most consistent and the most vigorous support to the reciprocal trade agreements program sponsored by the Honorable Cordell Hull. We have given this support because we believe in the principle of a more abundant two-way flow of American trade with the rest of the world, and because we believe that tariff making in the United States is a business problem which ought to be dealt with in a businesslike way. We have supported the Hull program because we believe that tariff making can be dealt with in a businesslike way only if it is taken out of reach of the logrolling and the back scratching that has always gone on in Congress, and put instead into the hands of the executive department. We have supported it because we believe that the executive department can handle the problem, with finality and without risk of a senatorial veto, in the over-all economic interest of the Nation as a whole.

of the Nation as a whole.

The businesslike manner in which the State Department has dealt with the tariff problem has given us, to date, 19 trade agreedealt with the tariff problem has given us, to date, 19 trade agreements which have greatly expanded our exports, without harming, in the instance of the reciprocal imports, a single efficient industry or a single producer of basic commodities in the United States. If these agreements had not been negotiated finally by the State Department, I think it is safe to say that we would have, today, not 19 agreements, but one or two or three; and that these would have been emasculated by the logrolling and back scratching in the Senate to a point where they lacked any potency of real effect.

effect.

Exports of American automobiles have increased under the reciprocal trade agreements program, and that is one of the reasons we are enthusiastic about it; but I want to remind you again of what I said about our greater and more realistic interest in farm exports. If we really thought, in the automobile industry, that Mr. Hull had "sold the American farmer down the river" in the negotiating he has done, I assure you that we would not dare to stand for him as boldly as we do. The accusation that he has betrayed the farmer in the work he has done is incredible, but the accusation has been made, and its very shamelessness demands that it be answered.

I want to cite you, in this connection, three very pertinent ques-

tions and three very pertinent answers.

1. Has there been an unprecedented and ruinous flood of imports of farm products into the United States as a result of the trade-

agreements program?

No. The value of competitive agricultural imports was greater in 7 cut of the 12 years prior to 1932 than the value in 1937. Imports of two types of agricultural products were unusually high in 1937. One type included products such as rubber, silk, tea, coffee, and bananas, which are not produced in the United States

coffee, and bananas, which are not produced in the United States at all.

The other type included food and feed crops of which domestic production was severely curtailed by the drought of 1936 which cut our crops from one-fourth to one-half. Drought shortages of these crops cut down the production of livestock and livestock products such as meat and dairy products, and imports of these products made up the balance of our total agricultural imports—but they never amounted to more than a small fraction of the losses caused by the drought itself the drought itself.

2. Were the increased imports in 1937 due to the general lowering of tariffs on farm products under the trade-agreements pro-

gram?

No. Tariff rates on practically all food and feed products are exactly where they were fixed in the Hawley-Smoot Tariff Act of 1930.

3. How have the trade agreements benefited the American farmer?

3. How have the trade agreements benefited the American farmer? Since 1934 our exports to countries with which we have trade agreements have increased, year by year, more rapidly than our exports to countries with which we do not have agreements. In 1937 exports of American agricultural products to countries with which we had trade agreements were 42 percent greater than they were in 1935 when only one trade agreement was in effect, while exports of farm products to non-trade-agreement countries were 4 percent less than in 1935. In the 12 months ended line 30, 1938 our exports of farm products to trade-agreement. June 30, 1938, our exports of farm products to trade-agreement countries increased in value \$81,000,000, or more than 39 percent over the value for the preceding 12 months, while exports of these products to non-trade-agreement countries in the same period increased only a little more than 14 percent.

In 1932, before the Trade Agreement Act was passed, American farm cash through on dementic and export sales combined was

farm cash income, on domestic and export sales combined, was only \$4,328,000,000. In 1937, when imports were higher, farm cash

income was \$8,600,000,000.

income was \$8,600,000,000.

As far as I can make out from that analysis, the only agriculturists in the United States who have been "sold down the river" by Mr. Hull, are banana growers of Idaho, the rubber planters of Vermont, the coffee planters of New York, and the producers of silk and tea and cocoa in Georgia and Kansas and New Jersey. All the rest of the agriculturists who have been critical of Mr. Hull, have, I am afraid, gotten the Department of State mixed up with the Weather Bureau.

As a last word, I want to express again my conviction that agriculture and industry have a common stake in foreign trade which springs from the stake they hold as one in the domestic welfare. We can help ourselves and help each other best, I think, by giving united support to the cultivation of that "extra business" we are seeking under the liberal principles of give and take for which our great Secretary of State has always stood, and which have served us both so well.

Parity Payments

EXTENSION OF REMARKS OF

HON. MARVIN JONES

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1939

RADIO ADDRESS BY HON. CLARENCE CANNON OF MISSOURI ON APRIL 8, 1939

Mr. JONES of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of Hon. Clarence Cannon, of Missouri, over N. B. C. Farm and Home Hour, April 8, 1939:

When, in the closing days of the Fifty-fifth Congress, it was announced, that for the first time in the history of the United States, appropriations for all departments of the Government for 2 years had reached a grand total of a billion dollars, headlines flashed the news from coast to coast, and editorials in every metropolitan newspaper in the Nation commented apprehensively

metropolitan newspaper in the Nation commented apprehensively on a billion-dollar Congress.

This session of Congress the Committee on Appropriations reported out a bill carrying an appropriation in excess of a billion dollars for 1 year only, and for one department of the Government alone—the Department of Agriculture. And the newspapers had very little to say about it.

A billion dollars for agriculture, but perhaps that is the explanation of the lack of editorial interest. For, when you come to examine this long bill, with its hundreds of items, and millions of dollars, you discover that the term "agricultural appropriation"

of dollars, you discover that the term "agricultural appropriation bill" is largely a misnomer and highy misleading and that while it is known as the agricultural appropriation bill, as a matter

of fact, a large part of the money it appropriates is for other than agricultural purposes.

For example, the bill carries \$6,000,000 for the Weather Bureau, of only incidental service to agriculture, and now maintained chiefly for the benefit of the civil and military air service; \$7,000,000 for the eradication of tuberculosis and kindred stock diseases, primarily for the protection of the health of consumers; \$5,000,000 for meat inspection, a service for the exclusive benefit

\$5,000,000 for meat inspection, a service for the exclusive benefit of the packers and middlemen, through its guaranty of quality and wholesomeness to the general public.

Approximately \$20,000,000 for the Forestry Service—not even a branch of agriculture, consumed principally in the protection and development of national forests and national resources. Four million dollars for the Bureau of Biological Survey, the conservation of wildlife, a national interest, demand for which comes in greater volume and insistence from the city than the country. Nearly \$200,000,000 for the Bureau of Public Roads—a most laudable activity but one in which the farmer is no more interested. hearly \$200,000,000 for the Bureau of Public Roads—a most laudable activity but one in which the farmer is no more interested than any other citizen; in fact, out of this amount a wholly inadequate sum is provided for farm-to-market roads, connecting the farm with the great system of interurban highways for which most of this money is spent. Two and a half million dollars for the Food and Drug Administration, which deals with food as it leaves the processors and not as it leaves the farm, and with cosmetics are of secondary importance on the farm and et most metics, etc., of secondary importance on the farm, and at most of no more benefit to the farmer than to any other industry. Ten million dollars for forest roads and trails, spent largely in the national forests and of practically no agricultural benefit whatever. And similar items throughout the bill too numerous

So, when prompted to comment on the size of the agricultural appropriation bill and the amount it carries, it is well to remem-

appropriation bill and the amount it carries, it is well to remember that a large part of it is far from being agricultural and is to be charged neither to the farmer nor the farm.

But such items serve to make the bill, already of surpassing importance, probably the most widely discussed of all the supply bills affecting directly and immediately every congressional district, directly or indirectly every interest and industry in the Nation, urban and rural, field and factory, farm and city.

In this connection there is sometimes a tendency to confuse the jurisdiction and functions of two great committees the Hcuse, the Committee on Agriculture, a legislative committee, which cannot report appropriations, and the Committee on Appropriations, exclusively an appropriating committee which cannot report legislation. In other words, the Committee on Agriculture

writes the farm laws, establishes the farm programs. And the Committee on Appropriations furnishes the money to operate those laws and put these farm programs into effect. Without money to run them, farm programs are like guns without ammunition or automobiles without gas. And the Committee on Appropriations, in the agricultural appropriation bill, furnishes the ammunition and the gas, supplies the money, to make the mare go.

Let us take a concrete instance. The Seventy-fifth Congress passed the Farm Act of 1938, directing that the farmers of the ccuntry be paid parity prices for their products. But the law meant nothing, and the farmer's prices were not affected until the Committee on Appropriations put through an appropriation and provided the money to make the law operative.

What is a parity price? I suppose so much has been written and said about parity prices, and there has been such exhaustive debate in Congress on farm parity, for the last 20 years, that

debate in Congress on farm parity, for the last 20 years, that everybody understands that a parity price for wheat, corn, cotton, eggs, and other farm products, is a price which will make the farmer's wheat, corn, cotton, and eggs today buy as much as the same wheat, corn, cotton, and eggs would have bought before the

Everybody will remember that before the war the price of farm products and the price of manufactured products—wages for farm labor and wages for union labor—were fairly adjusted, and under the price schedules of that day agriculture was on a for farm labor and wages for union labor—were fairly adjusted, and under the price schedules of that day agriculture was on a plane of economic equality with labor and industry. Then came the war, and all prices advanced. Farm prices went up. Industrial prices went up. Wage scales went up—went up together—to the highest peak in the economic history of the country. And everybody was satisfied; everybody had purchasing power; everybody had enough and to spare; everybody was prosperous—on the farm and in the city. But with the close of the war a surprising thing happened—a thing as unfair and unjust and inequitable as it was surprising. The bottom fell out of farm prices while the prices of everything the farmer had to buy remained at wartime levels. Hogs fell from \$28 to \$2. Wheat went down from \$2.40 to 30 cents. Eggs dropped from 60 cents to 8 cents. And everything else in proportion. Now that would not have been so bad if the price of everything that went up with farm prices had come down with farm prices. But incredible as it may seem, while agriculture was falling, labor and industry not only maintained wartime levels, but advanced, until today it costs more to ship 45-cent corn than it cost to ship \$1.50 corn in 1920; costs more to ship 9-cent cotton than it cost to ship \$5-cent cotton during the war; takes more to buy a binder to cut 60-cent wheat than it took to buy a binder to cut \$2.40 wheat. And today—when pork is \$7 and eggs are 20 cents—the union wage scale is higher than when pork was \$28 and eggs were 60 cents. Do our friends who wear cotton clothing and who eat ham and eggs approve of that disparity?

Now, do not misunderstand us. The farmer believes in high wages and high prices. He would not take a penny from the

wages and high prices. He would not take a penny from the wages of labor or the profits of industry. But he submits to all fair-minded Americans that if he pays high wages for the products of labor and high prices for the output of industry, he is entitled to an honest wage for his labor and a fair price for his products.

That is what a parity is—as fair a price for what the farmer sells as the farmer must pay for what he buys.

And the justice of that contention is so obvious that all political parites have promised parity in their national platforms. And the Seventy-fifth Congress, at last, wrote into law a provision

And the Seventy-fifth Congress, at last, wrote into law a provision to pay parity prices.

But such laws are of no effect until money is provided to make them operative. They are, as has been said, like guns without ammunition or automobiles without gas. So the Committee on Appropriations last year provided \$212,000,000, and this year reported out \$250,000,000 for parity prices. These amounts are not sufficient to give the farmer full parity, but they are steps in the right direction.

From the \$212,000,000 conpressited last year the former of the farmer full parity and the former full parity is the farmer full parity.

right direction.

From the \$212,000,000 appropriated last year the farmers of the Nation will receive 11 cents a bushel more for wheat than they have already been paid, 6 cents a bushel more for corn, and nearly 2 cents a pound more for cotton on their 1938 crop, payable this coming September and October. And if the \$250,000,000 appropriation is made, they will receive as much or more for their 1939 crop, payable in 1940. We had a hard fight on parity in the House and lost by a vote of 191 to 204. Six votes would have changed it. But if the Senate adds it to the bill, and the country supports us, we have enough votes to pass it—and to spare—when it comes back to the House in conference.

supports us, we have enough votes to pass it—and to spare—when it comes back to the House in conference.

And industry and labor will profit as well as agriculture. The day these checks reach the farm, the cash registers will begin to ring in every business in the community, orders will start flowing to the factories, and labor will be called back on the job. On the other hand—by inverse ratio—when farm prices fall, farm buying power drops, factories close, and labor is out of a job. Agriculture and labor and industry are all in the same boat. We must sink or swim together.

must sink or swim together.

And let it never be forgotten that when hogs were \$28 and eggs were 60 cents, there was not a single hungry child in America; and when hogs were \$2 and eggs were 8 cents famine stalked like a

when hogs were as and eggs were of cents fainthe stated like a grim spectre through alley and lane, and bread lines formed, and soup kitchens opened in every city in the Nation.

My friends, farm parity means business parity. A square deal for agriculture is a square deal for labor and industry. And inevitably, irrevocably, inexorably, farm prosperity is national prosThe Industrial Machinery and Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1939

Mr. REED of New York. Mr. Speaker, since the country has for some years enjoyed quite a large export business in industrial machinery, it was natural during the negotiation of the reciprocal-trade agreements that this field should be given consideration. Of the 16 agreements negotiated and in effect prior to January 1, 1938, 9 of them gave this country concessions relative to some types of industrial machines.

The trade statistics classification "industrial machinery" covers the major portion of our exports of machines to produce raw materials and finished consumers' goods, including construction and conveying machinery, metal-working machinery, mining, well, and pumping machinery; textile, sewing, and shoe machinery; and many other types. In most of these fields the American-made product is far superior to the product of any other country.

An analysis of exports of industrial machinery shows clearly that these concessions have not been of any special value. According to figures compiled by the Bureau of Foreign and Domestic Commerce, our total exports of industrial machinery in 1937 were 86.6 percent of the 1929 level. To nonagreement countries the total exports in 1937 were slightly above the 1929 level, while to agreement countries which gave us concessions they were but 55.6 percent of 1929, and to non-concession-agreement countries but 62.7 percent

And, if we analyze the picture honestly, we will find that our increase in these exports is not of a healthy nature, because it is well to remember that in the prosecution of war, minerals of all types are important. There have been very large increases in machinery of this type. It is also essential in the prosecution of war to have metal-working machinery to take these minerals and make them into armament. Thus we find that a great deal of this increase is due to present world unrest, for practically all of the nations of the world are increasing their expenditures for armaments. It is ample evidence of the fallacy of Secretary Hull's claim that these treaties are a force helpful to the maintenance of peace. Thus it will be seen that the agreements have achieved neither of their objectives: To promote our foreign trade and to help maintain the peace of the world.

Problems of the South

EXTENSION OF REMARKS

HON. H. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES Tuesday, April 11, 1939

STATEMENT BY ELLIOTT ROOSEVELT

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article from the Washington Post of this morning entitled "Son Doubts President's Aid for South—Roosevelt's Advice Termed 'Vague'; Elliott Criticizes Spending, Taxes.'

I also ask that a similar article from the New York Herald Tribune of April 11 on the same subject be printed in

the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post of April 11, 1939]

Son Doubts President's Aid for South—Roosevelt's Advice Termed "Vague"; Elliott Criticizes Spending, Taxes

FORT WORTH, TEX., April 10.—Elliott Roosevelt, second son of the President, tonight said the South could never "get out of hock" under the administration's "vague" encouragement. He said the

under the administration's "vague" encouragement. He said the New Deal pump priming "and tax structure erected to foot the bill are defeating their purpose of business recovery."

Young Roosevelt, in a regular radio commentary, called his father's assertion that the South could better its position by investing its own capital in its own establishments "vague and distant when one begins to analyze the ills to overcome."

UTOPIAN IDEAL

"Without specific aid and encouragement from the administra-tion," he said, "the South cannot be expected to take its place in the economic sun

"It is the opinion of many, I regret to say, that the New Deal pump-priming methods and the tax structure erected to foot the bill are defeating their purpose of business recovery.
"The New Deal and its leader, the President," he declared, "had a utopian ideal in mind in its recovery program. That ideal is the president," it is the program of the president of the president in the program of the president in the president. a utopian ideal in mind in its recovery program. That ideal was the raising of standards of living of persons in all walks of life.

"The primary aim was business recovery, which would make that goal possible. The pump-priming theory was an abortive means to an end—a hit-or-miss program. * * * The New Deal planners seem to have overlooked the fundamental fact that without healthy competition and adequate return, there can be no healthy trade."

BLAMES FROZEN CAPITAL

He listed four "chief obstacles" to the South's economic rejuvenation—frozen capital, inequitable freight rates, lack of a balanced agricultural program, with resultant denuded soil, and lack of a long-range educational program "to teach the masses the art of better living."

In referring to his father's formula for getting the South "out of hock to the North," Roosevelt said that "the problem of frozen capital" was hindering the South from taking this bit of advice. Frozen capital, he said, "is perhaps more pressing on the South than on any other section, since as a comparatively undeveloped country the South must look to new investments of new capital if it is to become industrialized."

Inequitable freight rates, he said, "make it impossible for industrial production to get its products."

dustry and potential industry of this section to get its products to market and compete with products from the more favored areas."

The abolition of "discriminatory rate differentials," he asserted, is the battle "of greatest importance to the South at this time."

[From the New York Herald Tribune of April 11, 1939]

ELLIOTT ROOSEVELT SAYS NEW DEAL'S HELP IS "VAGUE"—CONTENDS IT WILL NEVER GET SOUTH "OUT OF HOCK"; HITS PUMP PRIMING AND TAXES

FORT WORTH, Tex., April 10.—Elliott Roosevelt, second son of the President, said tonight that the South could never "get out of hock" under the administration's "vague" encouragement. He said the New Deal pump priming "and tax structure erected to foot the bill were defeating their purpose of business recovery."

In a regular radio commentary he called his father's assertion that the South could better its position by investing its own capital in its own establishments "vague and distant when one begins to analyze the ills to overcome.

"Without specific aid and encouragement from the administra-tion," he said, "the South cannot be expected to take its place in the economic sun.

PUMP PRIMING "ABORTIVE"

"It is the opinion of many, I regret to say, that the New Deal pump-priming methods and the tax structure erected to foot the bill are defeating their purpose of business recovery. The New Deal and its leader, the President, we all agree, had a utopian ideal in mind in its recovery program. That ideal was the raising of standards of living of persons in all walks of life.

"The primary aim was business recovery, which would make that goal possible. The pump-priming theory was an abortive means to an end—a hit-or-miss program without precedent, and consequently without thorough planning in advance.

"In constructing their theory the New Deal planners seem to have overlooked the fundamental fact that without healthy competition and adequate returns there can be no healthy trade."

Mr. Roosevelt said that one must look farther than the claim that business was "scared of Government," which he described as a "will-o'-the-wisp" psychology.

LISTS FOUR OBSTACLES

He listed four "chief obstacles" to the South's economic rejuvenation:

Frozen capital.
 Inequitable freight rates.

2. Inequitable Highlitanes.

3. Lack of a balanced agricultural program with resultant denuded soil.

4. Lack of a long-range educational program "to teach the masses the art of better living."

In referring to his father's formula for getting the South "out of hock to the North," he said that "the problem of frozen capital" was hindering the South from taking this bit of advice. Frozen capital, he said, "is perhaps more pressing on the South than on any other section, since as a comparatively undeveloped country the South must look to new investments of new capital if it is to become industrialized."

Inequitable freight rates, he said, "make it impossible for industry and potential industry of this section to get its products to market and compete with products from the more favored areas."

The abolition of "discriminatory rate differentials," he asserted, is the battle "of greatest importance to the South at this time."

Defense Policy

EXTENSION OF REMARKS

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Tuesday, April 11, 1939

ARTICLE BY OSWALD GARRISON VILLARD IN APRIL ISSUE OF HARPER'S

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD an interesting and thought-provoking article by Oswald Garrison Villard entitled "Wanted: A Sane Defense Policy," which appears in the April 1939 issue of Harper's magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

> [From Harper's Magazine for April 1939] WANTED: A SANE DEFENSE POLICY (By Oswald Garrison Villard)

Of all the acts being put upon our national stage there is none to compare with the drama of national defense. Annually the show appears and always on a larger scale, always costing more and more millions, always featuring the pitiful appearance of our two national orphans, the Army and the Navy, who exhibit their rags before the footlights, bewail their absolute indigence, their lack of everything necessary to make them great and powerful and capable of affording 100 persons protection to any potential country. capable of affording 100-percent protection to our entire country.

of everything necessary to make them great and powerful and capable of affording 100-percent protection to cur entire country. Year by year the congressional audience is deeply moved by this distressing picture, and year by year it hands out larger and larger sums to meet those tragic wants. This year, according to The Assistant Secretary of War, there are grave and dangerous "shortages in artillery, tanks, combat cars, airplanes, machine guns, semi-automatic rifles, antitank guns, antiaircraft guns, ammunition, gas masks, searchlights, telescopes, and quadrants," and all gun carriages are of "an old model designed more than 40 years ago."

Yet since 1933 the Army and Navy have received a total of nearly \$5,000,000,000. In 1933-34 these orphans got a beggarly \$540,356.000; in 1934-35, \$709,931,000; in 1936-37, \$935,114,000. In 1937-38 the services rejoiced in gifts of \$1,027,841,000, and perhaps by the time this article appears their last demand for \$1,668,283,000 will have been honored. If so, that joint Army and Navy bill will be \$954,227,000 more than the entire cost (\$734,056,202) of the United States Government in the year before we entered the World War. It would seem as if even in these days of dictators and of alarms of war that might satisfy our military mendicants, but he would be a fool who would prophesy that we shall not reach the two-billion mark within 2 years.

The more we give the fighting services the less they have and the more they want. Only one thing is clear year by year: The fear which pries these vast beneficences out of the national till grows steadily. Each year we are bidden to look upon the tragedies on other stages overseas, and when we do, we open up our purses and count no cost; after which we taxpayers go about our business confident that now we are really protected and that all is well and secure—until the show goes on again.

and count no cost; after which we taxpayers go about our business confident that now we are really protected and that all is well and secure—until the show goes on again.

As a matter of fact no one knows whether the last billion and a half has really advanced our security or not. If we peek behind the defense curtains, we find on the testimony of many of the actors themselves waste, extravagance, incompetence, a babel of contradictory voices, confusion. We discover that there is no established defense policy, that our military and naval objectives have never been defined and adopted. Nor have we decided on the foreign policy by which these may be shaped—has not President Roosevelt just told the Washington correspondents that probably only a newspaper columnist could work out a complete and rigid only a newspaper columnist could work out a complete and rigid foreign policy? Hence the Government is demanding the impossible of Army and Navy, since we ask them to defend us and yet do not tell them what they shall defend. Nobody knows whether Army and Navy are merely to guard our coasts or are to be prepared to fight overseas, as in 1917–18, or are just to defend all the Amer-

icas, or must protect our coasts and also keep open our trade routes to South America. It is not even established whether we shall or shall not fight for the Philippines, independent or otherwise.

One byproduct of this is that there is no single joint defense plan. Moreover, there is no adequate cooperation between Army and Navy—nothing approaching it; the hostility between them is so great that it was announced on January 1 that combined maneuvers would not be carried on in the Caribbean this year because of the bitter feeling engendered by the last joint war games—a situation which must make the dictators hold their sides for laughter for laughter.

Our defense policies change literally from hour to hour as the

Our defense policies change literally from hour to hour as the President is swayed by some gust of emotion or some admirals have bright new ideas about extending our defense lines farther into the Pacific. A year ago the President declared that we must have two huge navies, one in the Pacific and one in the Atlantic, each able to defeat any two adversaries that might together attack us. He did not stop to consider what that would cost or how many years it would take to build such a fleet, even if we had shipyards capable of undertaking it. That was too much even for the admirals. Persuaded to abandon this scheme, the President, profoundly alarmed perhaps by talk of Nazi intervention in South America, turned to aviation. The first trial balloon suggesting a total of 10,000 airplanes having met with a bad reception, he then decided to ask for a mere 8,000, of which 500 are to be manufactured at once.

At one time Mr. Roosevelt assured the Daughters of the American Revolution that we were planning only to defend our coasts and never to send troops abroad—he had previously appealed to all the nations in an address before the Woodrow Wilson Foundation to join him in building no offensive weapons and in pledging themselves never to send troops beyond their boundaries. Next he decided that we must meet and defeat the enemy 500 miles from our shores—500, not 600, or 1,000—so that no single shell might fall upon our shores. Meanwhile Mr. Roosevelt has never himself sat down with the high commands of both services, plus leading Members of Congress, to tell the Army what role its forces shall play if the country is attacked. So far as anybody knows, the part of the Navy in relation to our coast defenses (manned by the Army) and our mine fields, and what is to be the relation of the Army air fleet to the Navy air fleet when the country is attacked have never these defended with the state of the fleet to the Navy air fleet when the country is attacked have flever been defined; a major general recently sarcastically remarked that if war should come a collision in midair of Army and Navy flyers would not be impossible, since neither force would know which way the other was going. Yet the President must recall that it was the long-delayed unity of command under Foch which made pos-sible the allied victory in 1918 and must be aware that unity of purpose and action is the primary requisite for successful defense of any territory. of any territory.

of any territory.

It would seem as if the first requisite for a sound and intelligent defense program would be a most careful consideration of what dangers actually confront us. Who are our potential enemies? Next, we need to know whether such potential enemies can actually invade this country or undertake serious air attacks. The layman believes, as the result of unceasing Army and Navy propaganda as to our defenselessness, that we are liable to attack coming through the oceans or the air, and supposes that all military and naval authorities are in agreement on this. It is for this reason that, according to the Gallup poll, a large majority of the voters consent authorities are in agreement on this. It is for this reason that, according to the Gallup poll, a large majority of the voters consent to the voting of those billions of defense dollars which they or their children, or their children's children, will some day have to pay. As a matter of fact, there is great division of opinion among military and naval experts as to whether this country can be successfully attacked. Since this is the crux of the whole defense problem, it is astounding that only a handful of Senators and Congressmen is really concerned with a serious study of the actual existing world situation in connection with our own safety, and existing world situation in connection with our own safety, and cares enough really to ask whether we are or are not in danger. The rest vote the sums asked, like a flock of sheep.

Now, let us inquire if invasion is possible. Here are some of the outstanding opinions: Speaking to the National Foreign Trade Convention, the late Rear Admiral W. W. Phelps declared on November 18, 1935: "Of course, there is no possibility ever of any hostile attack on either of our coasts." Admiral Yarnell, who has so admirably commanded our fleet in Asia during the war in China, testified in Washington that Japan would need twice as large a fleet as we have in order to attack us—her present fleet is by no means as large as ours; to build a fleet double the size of ours would be beyond the financial possibilities of Japan or any other country, except possibly England. It will be recalled that Admiral William S. Sims, the admirable commander of the American fleet in Europe during the World War, told Congress shortly before his recent death: "No foreign power or group of powers can operate across the ocean and stand in combat with the American Navy and planes operating from home bases."

As for other opinions, Hanson W. Baldwin, the military and naval Now, let us inquire if invasion is possible. Here are some of the

As for other opinions, Hanson W. Baldwin, the military and naval expert of the New York Times, writing in Foreign Affairs in April expert of the New York Times, writing in Foreign Affairs in April 1938, before the huge naval-expansion program of last winter, wrote that: "The Army and Navy are at present prepared to defend both coasts of the United States against simultaneous invasion, and at the same time to protect Hawaii, Panama, Alaska, and probably South America, from any attacks that can reasonably be foreseen." Maj. George Fielding Eliot, author of The Ramparts We Watch, which has attracted so much attention, exclaims that: "We should thank God that today we can pursue our national way, secure as yet from the fear of invasion." Maj. Gen. Johnson Hagood, in his book We Can Defend America (1937), declares that: "Considered from a defensive standpoint, America is the strongest military nation on earth—that is, it is the easiest nation to prepare for defensive warfare. It would not take much to make it invulnerable against any nation or combination of nations that could possibly be brought against it." In another place he says that it is the fashion to discount "the enormous difficulties" that "the trackless seas would impose upon our would-be invaders." Finally Maj. Gen. William C. Rivers, retired another, lifelong soldier, stated after the

seas would impose upon our would-be invaders." Finally Maj. Gen. William C. Rivers, retired, another lifelong soldier, stated after the President's address to Congress in January that an invasion of the United States by any considerable force is out of the question. Major Eliot after most careful computation believes that:

"The full force that might possibly be brought against us" by any other power than England, or combination of two powers in one ocean, "is in the neighborhood of 200,000 combat troops."

Why, then, do we have the persistent public belief that we are in danger, first of all, from an invasion by the Japanese? The only explanation is that from this field reason has fied, and that there is a determined effort to deceive the American people by those who want us to go to war in the east in order to assert our rights and the open door and to rescue China from the Japanese. The most extraordinary about-face is that of Franklin D. Roosevelt The most extraordinary about-face is that of Franklin D. Roosevelt himself. Writing in the magazine Asia in 1923—Asia thought so much of this article that they reprinted it in March 1934—he said:

"If, with a fleet double the size of Japan's and our vastly greater resources, invasion of the western shores of the Pacific was admitted to be probably impossible, certainly impracticable, for us, how much more formidable was the corresponding problem presented to the military strategists of Japan."

Yet the author of these lines now insists on our pouring out hundreds of millions of dollars, presumably for preparations for a war which he here admits is impracticable, probably impossible, war which he here admits is impracticable, probably impossible, and, as he elsewhere says, certain to result in a military deadlock with "Japan and the United States * * * making faces at one another across a no-man's water as broad as the Pacific." If it is urged that this opinion was expressed 16 years ago and that conditions have changed during that time, the reply is that nothing whatever has been altered in the strategic situation of Japan to the United States and vice versa. The ocean is just as large; it is still impossible for a bomber to fly 7,000 miles to the United States with a load of bombs—the longest single flight ever made is 6,295 miles—and, as Major Eliot points out, in wartime "the military radius of action is roughly about one-fourth of the maximum range; that is, the plane must go out from its base and return, which cuts the range in half. * * *." He then affirms that the maximum range of a bombing plane today is only 1,500 miles—750 out and 750 back.

This statement, which is of fundamental importance in the con-

750 out and 750 back.

This statement, which is of fundamental importance in the consideration of American defense, has been confirmed by the highest naval authority, Admiral Leahy, who has just testified before the House Committee on Naval Affairs that the fortifying of Guam would not be a threat to Japan because planes loaded with bombs could not reach Japan proper from Guam, although the distance is only 1,400 miles. This testimony alone should end the ignorant talk that America is in danger of airplane attack not only from Japan but from the other side of the Atlantic. Here Major Eliot has something further to say:

"While it is theoretically possible for single planes to fly across the Atlantic with a very small military load, drop a bomb or two, and return, as a practical operation of war even this is out of the question and will remain so as far as can now be foreseen; a serious

question and will remain so as far as can now be foreseen; a serious attack by a large air unit is still less to be envisaged. Planes which did not expect to return might raid our coasts, but no nation has

did not expect to return might raid our coasts, but no nation has enough long-range bombers and highly trained crews to waste them in enterprises of this nature."

Yet only the other day in Washington a high official told me that Hitler has 1,500 bombers ready for action which could fly across the South Atlantic to Rio Janeiro in 26 hours. I have wondered ever since how there could possibly be sufficient fields in the mountain-surrounded Rio Janeiro to take care of them—there are not; whether there would be hangars for even 50; whether they would bring their trained mechanics with them—for every flyer the German Army details 15 groundmen to keep him in the air.

If reason were applied to this problem, we should recall that the

German Army details 15 groundmen to keep him in the air.

If reason were applied to this problem, we should recall that the making and repairing of aircraft is a highly specialized business requiring special machinery and specially trained mechanics; that the President is asking for millions of dollars in order that airplane factories in this country may be put in readiness for mass production if war should come. Yet one constantly hears the glib assertion that there is nothing to prevent Germany's establishing, more or less secretly, an airplane base in Mexico or Nicaragua or Guatemala or Colombia and then raiding New York City or Washington. Admiral Leahy's testimony is the complete answer to that. That sporadic air raids could be made upon the United States from an airplane carrier lying 500 miles out at sea is quite possible. An Army officer who has been studying this problem for some time tells me that no country can hope to protect itself absolutely from airplane attack. English and French maneuvers have shown that some airplanes are bound to slip through any defensive cordon and airplane attack. English and French maneuvers have shown that some airplanes are bound to slip through any defensive cordon and escape antiaircraft batteries, especially if there is low visibility or fog. This officer laughs at the suggestion that it would be possible to line the coasts of the United States, more than 7,000 miles long, with antiaircraft batteries. Furthermore, it should never be forgotten in considering warfare in the air that, as a French general has put it, it is not the airplanes that one has in hand at the outbreak of war which win a war but the airplanes made after war has begun.

Whether Admiral Leahy and Major Eliot are right or wrong, it would certainly seem as if Congress could profitably inquire into just what the situation is, either through a joint committee of its own or through the appointment of a competent board (two bills for this purpose have been introduced), like the Howell Board authorized by Congress on June 12, 1934. Surely Congress could inquire now whether the President is right in asserting that aviation conditions have undergone so sudden and so radical a change as to demand of us a total air force of 8,000 planes.

ш

Right here it should be pointed out that if Congress really desired an efficient airplane defense it would have acted immediately upon one recommendation of its own creation, the Howell Board,

upon one recommendation of its own creation, the Howell Board, which was officially known as the Federal Aviation Commission. This was that another board should be constituted immediately to consider "the whole problem of military organization and of interservice relationship," which, it felt, called for "extended examination by some appropriate agency in the near future."

The Howell Board stated that "the present degree of mutual understanding between the Army and Navy is less than might be desired; that the machinery for settling differences in matters of detail lacks something in effectiveness; and that the arrangements for keeping commanders in the field notified of their respective responsibility in joint operations with neighboring units of the sister service are strikingly inadequate." But Congress has not acted. It has paid no attention to the fact that Lieutenant General Bullard has said that "there should be a separate unified air force equal in rank and importance with the Army and Navy, and force equal in rank and importance with the Army and Navy, and the three services should be united under a single department head." The former chairman of the House Military Committee, head." The former chairman of the House Military Committee, John J. McSwain, also told Congress of his conclusion that "all the fighting forces of the Nation, organized solely for the defense of the Nation, in order to accomplish economy, in order to accomplish effective cooperation in training and fighting, must be under a single authority and in a single department."

Nineteen of the principal nations—all except the United States—have a single head for defense. Congress must realize that a war cannot be carried on with three separate air forces, to say nothing of the coordination of the ocean forces and land forces. We now have a Marine Corps of fleet a Navy air fleet, and an Army air

of the coordination of the ocean forces and land forces. We now have a Marine Corps air fleet, a Navy air fleet, and an Army air fleet, and even a small Coast Guard air fleet. Apparently Congress is willing that the coordination of these organizations should be left until the coming of war, if and when one comes. How could that be done efficiently, economically, and wisely in the terrific

stress, turmoil, and confusion of a modern war?

IV

Turning now to the question of invasion by a foreign army, I suppose that someone is thinking of a statement by our former Secretary of War and Secretary of State, Henry L. Stimson, in his letter opposing the Ludlow resolution for a referendum on war. In this letter he stated that "a hostile expedition which had defeated or evaded our Navy and approached within 200 miles of our coast, not only could within 24 hours strike a devastating blow upon one of our great cities and its neighboring industrial centers, but could within a week thereafter land a hostile force of at least 100,000 men upon our shores." With all respect to Mr. Stimson, this statement shows an astounding lack of realistic understanding of the military and navel problems involved. If this son, this statement shows an astounding lack of realistic understanding of the military and naval problems involved. If this hostile armada had merely "evaded" our Navy it would certainly never dare to land at any point on our soil until it had fought and defeated our fleet and so established a safe line of communication with its home territory. If it had defeated our fleet, Mr. Stimson forgets that it would still have to encounter our submarines, our mine fields, our coast defenses, our Navy airplanes, our Army airplanes, thousands in number, and would then have to land its 100,000 men at some place on our shores in the face our Army airplanes, thousands in number, and would then have to land its 100,000 men at some place on our shores in the face of a large part of the 400,000 men of the mobile army which the War Department states it will soon be able to put into the field on the outbreak of war. The mere statement of the above proves the absurdity of the Stimson statement; but if a man of his military experience in France during the World War is capable of writing this it is easy to forgive the ordinary newspaper reader who really thinks that the Japanese could land 50,000 men in San Diego and deprive him of his Hollywood movies.

writing this it is easy to forgive the ordinary newspaper reader who really thinks that the Japanese could land 50,000 men in San Diego and deprive him of his Hollywood movies.

Had Mr. Stimson given a little study to ocean tonnage and the speed of ships he would not only have learned what Major Eliot has pointed out: That 200,000 is the maximum force which the tonnage of any country or pair of countries outside of England could move to our shores, he would never have written that 100,000 men could have been landed in 7 days after its war fleet had dodged our innocent and unsuspecting Navy. Had he taken the list of ships of more than 20,000 tons, for example, he would have found that Germany has only 12, and only a part of these are capable of crossing the ocean in 7 days under the most favorable weather conditions. If one interprets Mr. Stimson's words to mean that the transports containing the 100,000 men would come along with the fleet, then fleet and transports would be kept to the speed of the slowest merchant vessel. Taking Major Eliot's measure of 4 tons to every soldier plus 8 tons for his equipment, medical supplies, gas, tanks, motorcars, head-quarters equipment, etc., Mr. Stimson's force of 100,000 would require 1,200,000 tons of shipping or three-fifths of Germany's entire seagoing shipping of 2,000 tons or over. Such an armada might "evade" the United States Navy, but in that case the Navy would have to be sound asleep indeed, for the assembling of no less than 300 transports plus the entire German Navy and their

leisurely voyage across the ocean would certainly put the Navy Department on notice that something was going to happen in the course of 10 or 12 days.

The same thing would be true if England should undertake to raid our shores. On the 24th of November 1937, 1,545 British cargo vessels of more than 2,000 tons were at sea, and 705 were in harbor, with less than 300 more unaccounted for. The drawing in of enough of these 1,500 ships at sea to make up the necesing in of enough of these 1,500 ships at sea to make up the necessary transport fleet would make any country aware of what was happening, whether ourselves or Italy or Germany, weeks before the event. The Stimson type of alarmist invariably gives the impression that the invaders, whether Japanese or European, could suddenly turn up on our coasts in great numbers without ever having been discovered en route and reported by wireless or naval airplanes. And what would 100,000 men do if landed at Norfolk or Boston or Charleston or Savannah? The smaller the harbor the worse off they would be; for, as Major Eliot also points out, they would have to bring with them lighters, armored barges, movable piers, cranes, base equipment, reserve stores, ammunition, and special landing devices. How fast could a transport fleet move towing all these impedimenta? Major General Hagood declares that there are not more than 5 ports in the United States at which an enemy could find the harbor equipment necessary to unload the huge artillery, the great combat tanks, the vast amount of ammunition for the artillery, etc. Few ships of the merchant type have adequate cranes for any such service. Here the difficulty is that the average American still things in terms of the Civil War or our War with Spain; in the latter we landed Shafter's army upon a beach on a couple in the latter we landed Shafter's army upon a beach on a couple of fine days without a hostile shot being fired, and equipped them with a few antiquated cannon. The army of Shafter bears no relation whatsoever to the army of 1939.

If further proof of this is necessary, the reader should recall some of the facts of our peaceful invasion of France. That required a stupendous effort. We controlled the Atlantic, but it took quired a stupendous effort. We controlled the Atlantic, but it took us from May 1917, to November 1, 1918, to move 2,032,883 troops. Of these only 884,647 crossed under the American flag. Yet we used 599 merchant vessels, 116 captured enemy ships, and 87 forcibly requisitioned Dutch vessels. In addition we gradually put into service some 700 vessels—900 up to July 1, 1919—built after the war began. Yet British ships transported for us 1,095,258 men. In July 1918, alone were we able to transport 300,000 men in a month. General Hagood asserts that not on a single day up to the time of the armistice did we land more than single day up to the time of the armistice did we land more than 25,000 tons of supplies and equipment, although we needed 40,000 tons daily to keep the Army going—the Allies made good the deficiency. This is the more striking because we had only just begun to land airplanes and cannon when the war ended. If this is all we could do with those gigantic efforts, what could Japan do with only 637 ships in its entire merchant fieet, with double the distance to cover going and coming? What Germany, with only 2,321 ships of all kinds and sizes? I have no space to waste on those who assert that if 100,000 soldiers got a foothold in one of our important cities they could maintain themselves and manufacture all the supplies they needed; I refer them to Munchausen. single day up to the time of the armistice did we land more than Munchausen.

Next, let us consider a little bit further Mr. Stimson's hypothetical defeat of the American Fleet. Admiral Sims once stated to me and others that if we went to war with Japan, our fleet could reach the main Japanese island, could fire a few rounds at the coast and kill whoever happened to get in the way of our shells, and then turn round and come back. "But, Admiral," said I, "what would the Japanese Fleet be doing to us during this time?" "If they know their business," he replied, "and I am sure that they do, they would be hiding behind one of their 1,000 islands and waiting for us to go home. They know as well as we do that we could not stay off their coast so why should they risk any of their battleships in a their coast so why should they risk any of their battleships in a combat with a superior force when we should have to retire of our own volition?" I spoke of our having many tankers, colliers, and cargo boats capable of bringing supplies. He waved that aside. "A battleship fleet," he said, "is tied down to its base and has a radius of not over 2.500 miles." He added that in his judgment all the money spent upon the fortification of Hawaii might just as well have been thrown into the Pacific Ocean, and he scoffed at the idea that the Lavancean New could save reach our Collifornia coest and that the Japanese Navy could ever reach our California coast and bring with it fuel enough to get there, to maneuver and fight, and then to return 7,000 miles to its home.

All writers on the offensive range of modern fleets agree that that cannot be put above 2,500 miles. Denlinger and Gary in their War in the Pacific put it at 2,000 miles. In this connection it must be remembered that we do not know today that any of the new German battleships carries sufficient fuel to cross the Atlantic. Secretary of the Navy Daniels after examining the captured German ships before they were sunk at Scapa Flow publicly stated on his return that not a single German cruiser or battleship had bunker capacity to have enabled it to attack any American harbor. Yet the American people were frightened into believing in the propaganda years that Germany was all prepared to rush into one of our harbors and carry off our women and our wealth.

What this chaotic situation calls for is plainly a study of the whole question of national defense, including the effectiveness or ineffectiveness of our present services, the dangers of invasion, and the question of what we are prepared to defend and should be prepared to defend. In this connection Congress might remember that the national-defense plank of the Democratic platform of

1932 called for: "A Navy and Army adequate for national defense based on a survey of all facts affecting the existing establishments that the people in time of peace may not be burdened by an expenditure fast appraching \$1,000,000,000 annually." Others besides the writer have been urging this for some time, among them Raymond Clapper, of the Scripps-Howard newspapers, and Gen. Hugh S. Johnson. Mr. Clapper urges a temporary joint committee of the House and Senate to undertake an intelligent and balanced consideration of a general program. I should prefer and balanced consideration of a general program. I should pleafer
a body constituted like the Howell Commission, representing all
points of view. General Johnson declares that the War Department has been "politicalized" and "demoralized," that "what is
needed here is an independent commission of Congress and outside experts to study this mix-up and suggest a solution before we are too far launched upon spending billions for defense." He has scored General Arnold for his refusal to answer in public the question what specific dangers the General Staff had in mind when it endorsed the great new aviation proposals. "To dub as military secrets conjectures as to just who may attack us, when, where, how, and what strength is pure hokum." He is opposed to keeping secret broad aspects of military plans and policies in a democracy

and what strength is pure howum. He is opposed to keeping secret broad aspects of military plans and policies in a democracy and says that you cannot do it.

In this study of our national defense it is vital to bear in mind the imminent danger that the rising tide of military and naval preparedness will in itself drive us well along the road to fascism. The proposal to subordinate all further expansion of our electrical-power industry to the possible needs of our military machine in wartime speaks for itself. The voting by Congress of \$12,000,000 for "educational" orders last year, which the President asks be increased to \$32,000,000 this year, is a most dangerous precedent. It not only violates for the first time the rule of not awarding Federal contracts save on competitive bidding, but, by inducing corporations to install new machinery and equipment for producing goods for military purposes and to enlarge their plants, will make them yearly supplicants for more and more orders to justify their capital outlays and to keep their additional employees at work. "Education" of this kind may never end.

What will it avail us to arm to the utmost limit, to subordinate our national and industrial life to preparations for war, if thereby we lose our democratic soul—that soul we are supposed to preserve by pouring out armament expenditures without end?

to preserve by pouring out armament expenditures without end?

The Star-Spangled Banner is a Living Heritage Glorifying Sacred Rights of Free Men

EXTENSION OF REMARKS

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

Mr. CRAWFORD. Mr. Speaker, Americans have been blessed with a beautiful and meaningful national anthem. It is recognized as such not only on our own shores but also abroad.

And the Star-Spangled Banner in triumph shall wave O'er the land of the free and the home of the brave.

Those sacred words describe a nation that is the envy of the peoples of the world today.

Born in the midst of a struggle for freedom, they stir the hearts of Americans when they are read or sung. It is a testimony to bravery, a testimony to freedom, and a testimony that in God in heaven do we place our trust.

Henry Ward Beecher said, "Our flag carries American ideas, American history, and American feelings."

The same might be said of our national anthem, The Star-Spangled Banner, which is really our flag song. In describing our flag, we may state that it, too carries American ideas, history, and feelings.

Nationals of other countries are jealous of the liberties gained by the freemen memorialized by Francis Scott Key. Love of flag and love of national anthem are among the keystones of a strong union of people. That is realized by those un-American agitators who are at the moment working with bee-hive industry to reduce the fires of patriotism in America. They seek to remove the flag of the United States from its prominent place in public gatherings. They would likewise remove it from public buildings. This is not done by force, but by intentional oversight. They would eliminate the singing of the national anthem from schools and public gatherings on the excuse that it is difficult to sing and that it is a "war song."

FALSE PROPHETS OF PATRIOTISM BUSY

These movements, which periodically appear, emanate from the cesspools of un-Americanism. Unfortunately, wellmeaning citizens are taken in by these palavering false prophets of patriotism and unconsciously lend their support against those things so dearly purchased by their own

Only recently in the United States, there has been a renewed cry against The Star-Spangled Banner, on the ground that it was difficult to sing. In this futile attempt to cool the ardor of Americans for their beloved anthem, on the basis of its being difficult to sing, these people defeat their own argument by their claim because both English and American historians have shown beyond all doubt that the tune to which we now sing the poem of Francis Scott Key was one of the most popular tunes of the day. Tunes difficult to sing do not gain such great heights of popularity.

Referring to the English use of the tune To Anacreon in Heaven, to which we sing The Star-Spangled Banner, one

writer says,

In England other sets of words were adapted to the air, for the tune became very popular.

The same writer in referring to the popularity of the tune in America said:

Even as early as the eighteenth century, it was known to nearly everyone in the United States.

It is only natural, then, that when Key's inspiring poem made its dramatic appearance after the victory over the British at Baltimore that the words should be adapted to the most popular tune of the day, whether intentionally or unintentionally on the part of Mr. Key. Authorities on music and poetry say, however, it is hardly an accident that the words written by Mr. Key should fit the tune of To Anacreon in Heaven.

There has been much wrangling over the origin of To Anacreon in Heaven. Pages and pages have been written covering the dispute and claims have been made that it was composed by a Frenchman, by an Englishman, by an Irishman, and claim has even been made that it was written by an American.

In these United States, founded by English, German, Irish, and peoples of other descent, there is nothing to be gained by an argument over the composition of the tune. Americans seized the melody and adapted the words of Mr. Key to it and they have kept it for a century and a quarter. The combination of the air and the immortal words written from a small craft in Chesapeake Bay stirs the blood of every American, irrespective of his origin, or the origin of the tune.

SHOULD EXAMINE THE CUP

Perhaps these people who spasmodically raise the cry for the elimination of The Star-Spangled Banner as our national anthem through substitution by some modern concoction should examine the cup from which America had been drinking in the uncertain years of the early 1800's.

We need to go back to 1814 and witness a young nation struggling to maintain its independence of a parent nation. The pendulum of battle had swayed from side to side for 3 years. The British, having landed in the South, were playing havoc with small towns and plantations and swept their way to the Nation's Capital in Washington. The torch was applied to the Capitol Building and the warriors swung toward the President's House, now referred to as the White The heroic deeds of Dolly Madison, who saved for this generation many historic possessions of that building, are another story of patriotism the complaining pesudopatriots of the modern era might do well to study. Having taken the city of Washington, the British determined to set upon Baltimore by land and sea and bring a quick end to their conquest.

The narrative of events leading up to the writing of The Star-Spangled Banner has probably best been furnished by Key's brother-in-law, R. B. Taney, who later became Chief

Justice of the Supreme Court, and these are recorded in the

Library of Congress.

In substance, the narrative is this: After the Battle of Bladensburg, the main body of the British Army passed through Upper Marlborough en route to Baltimore to join in the concerted drive on that city. Plunderers, having left the enemy ranks, were looting homes and stores on the heels of the movement of the army and a Dr. Beanes, previously recognized as hospitable to the British officers, organized a group of vigilantes to pursue the marauders, according to one story, and take them prisoners. This information reached British Army authorities and Dr. Beanes was seized. Another story is that he had them arrested for looting his own home. At any rate, he was taken prisoner.

A FRIEND TO THE RESCUE

History records that the British "did not seem to regard him, and certainly did not treat him, as a prisoner of war, but as one who had deceived and broken his faith to them."

Francis Scott Key was one of Dr. Beanes' closest friends. He was serving as a volunteer in Major Peter's Light Artillery, but prior to the war was an attorney practicing in the Nation's capital.

Friends urged him to obtain the sanction of the Government and go aboard the ship and attempt to secure the release of Dr. Beanes.

Justice Taney wrote:

Mr. Key readily agreed to undertake the mission in his favor and the President (Madison) promptly gave his sanction to it. Orders were immediately issued to the vessel usually employed as a cartel in communications with the fleet in the Chesapeake to be made ready without delay; and Mr. John S. Skinner, who was agent for the Government for flags of truce and exchange of prisoners, and who was well known as such to the officers of the fleet, was directed to accompany Mr. Key. * * * We heard nothing from him until the enemy retreated from Baltimore, which, as well as I can now recollect, was a week or 10 days after he left us; and we were becoming uneasy about him when, to our great joy, he made his appearance at my house on his way to join his family.

What happened between the time Key left the shore off Baltimore until he put in his appearance at the home of

Justice Taney is known to every American.

The British officers, probably as the result of the timely arrival of a letter from wounded British soldiers telling of the kind attention given them previously by Dr. Beanes, turned the doctor over to Key, but, fearing they would carry news of the impending attack on Fort McHenry to the mainland American army, they placed them on another vessel under guard and from that point they witnessed the battle.

SAW STARS AND STRIPES IMPERILED

At the home of Mr. Taney the story of the sight of the battle was vividly described by Key and later recorded by Tanney. Key and Skinner stood on the deck throughout the night, nervously pacing back and forth, again and again watching from the time the British guns spouted out a shell amid flames and billows of smoke to the time the missile crashed on the land—watching breathlessly lest one shot perchance would wreck the powder magazine within the fort. As long as the exchange of cannon fire continued, Key knew the fort had not surrendered. In the glare of fire, recorded in Key's poem, they could see the Stars and Stripes still aloft over the fort.

Suddenly, before morning, firing ceased. Had the fort surrendered, or had the attack been abandoned? Out of contact with the British ships, they had no way of knowing what had caused the cessation of fire. Finally, out of the smoky mist Key's eye caught a beam of early morning light flashing upon the flag, verifying his hopes of victory.

Justice Taney, continuing his narrative of the story told him by Key, wrote:

He told me then that, under the excitement of the time, he had written a song, and handed me a printed copy of The Star-Spangled Banner. When I had read it, and expressed my admiration, I asked how he found time, in the scenes he had

passed through, to compose such a song. He said he commenced it on the deck of their vessel, in the fervor of the moment, when he saw the enemy hastily retreating to their ships, and looked at the flag he had watched for so anxiously as the morning opened; that he had written some lines, or brief notes that would aid him in calling them to mind, upon the back of a letter which he happened to have in his pocket; and for some of the lines, as he proceeded, he was obliged to rely altogether on his memory; and that he finished it in the boat on his way to shore, and wrote it out as it now stands, at the hotel, on the night he reached Baltimore, and immediately after he arrived. He said that on the next morning, he took it to Judge Nicholson, to ask him what he thought of it, that he was so much pleased with it that he immediately sent it to a printer, and directed that copies of it be struck off in hand-bill form.

On September 21, 1814, a week after the battle, The Star-Spangled Banner made its first appearance in the Baltimore American and it was headed by this preface:

DEFENSE OF FORT M'HENRY

The annexed song was composed under the following circumstances. A gentleman had left Baltimore in a flag of truce for the purpose of getting released from the British Fleet a friend of his who had been captured at Marlborough. He went as far as the mouth of the Patuxent and was not permitted to return lest the intended attack on Baltimore should be disclosed. He was, therefore, brought up the bay to the mouth of the Patapsco, where the flag vessel was kept under the guns of a frigate, and he was compelled to witness the bombardment of Fort McHenry, which the admiral had boasted that he would carry in a few hours and that the city must fall. He watched the flag at the fort through the whole day with an anxiety that can be better felt than described, until the night prevented him from seeing it. In the night he watched the bombshells and at early dawn his eye was again greeted by the proudly waving flag of his country.

Authorities generally agree that Ferdinand Durang, a musician, was the first person to take the lead in a group to sing Key's poem. When and where is a matter of dispute. It is important to observe that in both the Baltimore Patriot, which published the poem first on September 20, and in the Baltimore American, which published it the following day, the following notation is made: "Tune—Anacreon in Heaven."

The melody and Key's poem did sweep the east coast, and documents indicate that it reached into the interior States in short order.

Those American citizens who feel impelled to agitate a new anthem should delve into the history of our present national anthem and meditate in silence upon its meaningful words. They should visit the Smithsonian Institution in Washington and pause with bared head before the giant flag—33 feet long and 27 feet wide, with its 15 stars, and view the 11 holes in the emblem which was pierced by shells from the British fleet in Chesapeake Bay. This is the flag that floated over Fort McHenry. This flag, pieced together for our Army by the fingers of Mary Young Pickersgill and her two nieces was the one that inspired Key to write the anthem.

They should then go to Baltimore and stand upon the ramparts of Fort McHenry and, with history book in hand, visualize that great night in American history.

Having gone through this experience, it is not likely any American will further advocate streamlining or tampering with the national anthem. We hope that such persons will be impelled to repeat the invocation contained in the last verse of the poem and thank God in heaven that they stand on American soil where freedom of speech, freedom of worship, and freedom of press are sacred and respected rights of free men, living under The Star-Spangled Banner. They, then, will not eradicate our national anthem.

The Star-Spangled Banner is a living heritage, purchased at an extreme price, and it glorifies those sacred rights of free men rarely found elsewhere on the face of the earth today. The flag it exalts will wave over the land of the free and the home of the brave as long as nations live if we will but revere and respect those principles of government which form the foundation of these great United States.

President Roosevelt's Foreign Policy

EXTENSION OF REMARKS

HON. J. WILL TAYLOR

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 11, 1939

ARTICLE BY FORMER PRESIDENT HERBERT HOOVER

Mr. TAYLOR of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by former President Hoover on the subject of President Roosevelt's foreign policy:

> [From Liberty of April 15, 1939] PRESIDENT ROOSEVELT'S FOREIGN POLICY (By Herbert Hoover)

There is no subject more difficult to discuss rightly than foreign policies. They compound our affections and dislikes as well as our interests and ideals. Few of us will agree upon the weights we attach to every argument or fact. The indignation of every one of us at the ravishing of Czechoslovakia adds difficulty to sober discovery. cussion. But we simply must have conclusions on national policy.

of us at the ravishing of Czechosłovakia adds difficulty to sober discussion. But we simply must have conclusions on national policy. That cannot be side-stepped.

The United States cannot pursue a policy of isolation in the world. We have too many dangers, too many interests, and we have enormous responsibilities. The Monroe Doctrine, with its requirements on our part to defend South America against any Old World invasions, is in itself a negation of any policy of isolation. That area of our international relations was settled for us many years ago, and we have confirmed it repeatedly.

The other large immediate question is our attitudes toward the area of Europe, Asia, and Africa. There are two widely divergent directions which we can take in respect to them at the present time. Neither is isolation. But their destiny is as far apart as the two poles. The one makes for peace in the world, the other envisages force or war.

The first of these is to hold to broad neutrality and thereby exert the moral influence of the United States to lessen the causes of controversy and war in Europe and Asia. That method proceeds through peace treaties; through diplomatic effort; through encouragement to meet at the council table; through arbitration; through promotion of international law; through the establishment of such agreements as the Kellogg Pact, the Hague Tribunal, a properly reorganized Court of International Justice; through promotion of large discrements imprised on the property of a payles; and through promotion of large discrements as the first of a payles; and through promotion of large discrements as the Kellogg Pact, the Hague Tribunal, a properly reorganized Court of International Justice; through promotion of large discrements as the Kellogg Pact, and the promotion of large discrements as the Kellogg Pact, and the promotion of large discrements as the Kellogg Pact, and the promotion of large discrements as the Kellogg Pact, and the promotion of large discrements as the first part of payles; and through cou agreements as the kellogg Fact, the Hague Tribunal, a properly reorganized Court of International Justice; through promotion of land disarmament, limitation of navies; and through control of air-craft and submarine misuse; through dignified protest at persecu-tions; through moral refusal to recognize gains of wrongdoing; through mobilization of world public opinion against transgressors;

through mobilization of world public opinion against transgressors; and especially through economic cooperation can world strains be reduced. All these are the constructive processes of peace. They build for peace and good will. They may not always succeed, or hold for long at a time; but while they do hold they prevent war and they uphold the standards of international conduct.

The second direction that we could take is to depart from neutrality in the controversies between other nations and to exert the physical force of the United States on one side of a conflict. That method proceeds through declarations of support, through alliances which shift the balances of power in the Old World, or through threats, or through economic pressures, such as punitive tariffs, or through economic sanctions, or through military force, and finally through war. None of these are processes of peace.

All in this category of actions are provocative actions. They have hitherto always cracked up in war itself. They make also for division of the world by hate and friction. They solve nothing. They render any service through the first category almost impossible.

It is my belief that the first category of relations represents the

It is my belief that the first category of relations represents the long view and the realistic view; that the second category represents the short view and the emotional view. For if civilization is to be preserved and to prosper, it will be through the first category of international relations, not by wars and threats of

wars.

The League of Nations was a heroic attempt to build peace by associating all nations, whether democracies, kingdoms, or dictatorships. Its purpose was to replace the theory of balances of power and military alliances which had invariably plunged the world into war. It was wrecked on several rocks. The first was the prompt building of balances of power and military alliances by certain nations—ideas utterly antagonistic to the whole concept of the League. The second was that it attempted to combine these two categories of international relations; that is, force and the processes of making peace. There were other reasons for

failure, but these two are pertinent to the situation today. The League also proved to have great values where it exerted itself in making peace and not attempting force.

League also proved to have great values where it exerted itself in making peace and not attempting force.

During the whole history of our country, except that period of 3 years between entering into the Great War and up to our rejection of the League of Nations, our policies have been of the first category in our relations to European and Asiatic nations.

Beginning a period of 14 months ago, Mr. Roosevelt has shown a certain sequence of steps in the development of a change in these traditional American policies in respect to Europe and Asia. The full extent of the President's proposed change in policies has not been made public. His private statements to the General Staff and to the Senate Military Affairs Committee are naturally not officially available. He has given some public indication of them in his proposal "to quarantine dictators"; his message to Congress proposing that America should determine who are aggressors against other nations in Europe and Asia and apply to them methods stronger than words and short of war; and the reported statement to the Senate Military Committee that the American frontiers were some place in Europe. The expressions of Ambassador Bullitt certainly warrant the European democracies in the belief that they may look to the United States for some sort of aid. These expressions are vague enough but at least indicate a radical departure from the categories of peaceful processes into the categories of force.

The Baltimore Sun sums it up as "the prospect of revolutionary change in the role played by the United States on the world stage." Any such change in policies should be frankly submitted to and confirmed by the American people.

The time to debate a momentous change which involves peace and war is before we enter the paths of force. After we have traveled that path for a while debate is silenced as moral treason.

I have seen too much of international life and friction not to

I have seen too much of international life and friction not to I have seen too much of international life and inction not to know that the world changes and that the scene shifts, and that other policies may be necessary. But our job is to examine the situation with which we are faced now. And this is an appraisal of the outlook now and the policies which should be pursued by

Before we examine the reasons for adopting one course or the other, let me clear some underbrush as to some conclusions that

we generally agree upon.

1. We all agree that we must have adequate defense to hold the

1. We all agree that we must have adequate defense to hold the Western Hemisphere against military attack from overseas in any combination. Whatever our Army and Navy say is necessary for this purpose we will make any sacrifice to provide. We have no quarrel with proper defense programs for this purpose.

2. Most of us intensely dislike every color of nazi-ism, fascism, socialism, and communism. They are the negation of every ideal that we hold. They are the suppression of all liberty. In Germany the persecution of the Jews, the attitudes toward the Christian faiths; in Russia the wholesale executions, the destruction of Hebrew as well as Christian worship, the ruthless starvation of millions of peasants when resources were available to save them—all of them outrage our every sense of justice. While we stand it in the name of free speech, we resent the Bund, the Communist and Socialist Parties in the United States taking advantage of our liberties of free speech and free assembly to preach doctrines which would destroy these very liberties.

It is not with any approval of these un-American activities that

would destroy these very liberties.

It is not with any approval of these un-American activities that we reserve the question as to whether America should send her sons to Europe to die in a war against these ideologies, or that we should enter into measures that may lead to that end.

3. There is no objection or any legal prohibition against England or France buying airplanes or munitions in the United States. What we are concerned with are what changes in our foreign relations have surrounded these otherwise purely commercial transactions. mercial transactions

mercial transactions.

Those who advocate that we should depart from neutrality and join nations in Europe and Asia with processes of force base it on one or all of three different grounds:

First. They claim that we have an obligation and a duty to maintain liberty throughout the world.

Second. They insist specifically that if the democracies of England and France are attacked we must come to their support, not only to maintain liberty but in fear that were they overcome we would be the next victim.

Third. They insist that if we throw or threaten to throw our weight now with France and England, they will not be attacked at all.

weight now with France and England, they will not be attacked at all.

The problem is not so simple or the conclusions so certain as this description would assume. At this moment most of the proponents of these policies deny that they want us to go to war. Maybe not, but they want us to act warlike, and we need to look down this alley to see where it ends. Propaganda is built up that way. As it goes along some time we may get to the stage where our emotions will be forced by the cry that we are quitters and cowards or have let down those who have relied upon our vague expressions. expressions.

Most of us are sympathetic with these countries, but a vast and resolute majority of us are against being drawn into war.

Before we start on these departures from the processes of peace into the path of force there are several major questions to consider.

LXXXIV-App--89

1. The basic premise of many of these assertions about the situation in Europe is open to question.

The American people are deluged with propaganda and unreliable reports. Despite all contrary appearances the forces pressing to war which would necessarily involve the Western European democracies are at the date of this writing not as strong as the forces pressing to avoid war. No one is so foolish as to say that there is not an immensity of combustible materials in Europe. But the universal knowledge of them and the experience of the last war make men far more cautious than they were in the year 1914. Furthermore, most competent observers agree that Germany and

Italy have no present notion of making military attack upon the

British and French.

Moreover, England and France can, in the belief of competent observers, amply defend themselves against attack. No one can deny that the superiority in land fortifications of the French and British make them impregnable from any land force that can be brought to bear against them. They have three times the naval strength of the dictators. They have the industrial resources, the men, and the money to either buy or to build superior air fleets if they wish to organize themselves for these purposes. Their populations, their empires, and their natural resources give them ample manpower and far greater reserves of manufacturing capacity and of war materials.

The relative positions of England and France to their possible opponents are far stronger today than they were in 1914.

No competent observer believes that the dictatorships, singly or

in combination, could successfully attack the Western Hemisphere even if they were inclined to try it, which they are not. And this applies both before and after the next European war, if any. They ould be far weaker after the next war than today, no matter what the outcome.

Altogether, while the situation in Europe requires watching as to its effects upon us, yet those who are promoting American entanglements in Europe are ringing the alarm bells of American dangers entirely too hard.

dangers entirely too hard.

2. From an American point of view, the reason we would enter into these paths of force is purely ideological. We want no economic advantages. We have no territorial expansion. There need be no fear that we cannot defeat any attempt of foreign dictatorships in encroachment upon the Western Hemisphere. The appeal is solely on the grounds of saving liberty, either abroad or at home. Thus it becomes an appeal to idealism pure and simple. While Frederick and Frederick and Frederick and Frederick of stands idealism. while England and France are countries of stanch idealism for liberty, they are naturally long-established imperialistic democracies, controlling millions of subject races. Germany and Italy are imperialistic states also seeking possessions for trade and raw materials. Italy obviously never received the territorial possessions promised but her by England and Prance and Pr promised her by England and France under the treaty of 1915 by which she entered the Great War. England and France, on the other hand, do not wish to surrender any of their possessions. In other words, there is here a conflict between "haves" and "have nots" nots

without taking any position on the right or wrong of these controversies, we can at least conclude that their differences are not wholly ones of idealism for liberty alone.

3. Particularly is the case of Italy a good example of where right and wrong are beyond our determination. Americans should be slow to deny the justice of her claims under the war treaties. We were not a party to them, but we do become a party to this controversy if we line up to support France against Italy. As a matter of fact, the equitable settlement of that controversy would contribute more to the world's peace than any other step that could be taken this day. In any event, it all emphasizes that it is not liberty alone which is at stake.

be taken this day. In any event, it all emphasizes that it is not liberty alone which is at stake.

4. These exponents of vague use of force in association with European democracies would be much more logical, much more frank and open, and, in fact, much more effective in their purpose, if they would straightforwardly advocate a formal military alliance right away. That would need have the approval of Congress, and our people could have something to say about it. Their purpose is, either ignorantly or in fact, to get us so involved that we would have to join in war if it came. If we had a frank and open military alliance we would possibly have something to say about controversies in Europe which might lead us into war. We have no such voice under these vague proposals.

A test that these exponents of abandonment of processes of peace for processes of force might apply to their own thinking is just this:

Are they prepared to openly advocate military alliance with

Are they prepared to openly advocate military alliance with

European democracies?
5. Those who propose even a vague alliance of force with England and France should inform the American people how they are land and France should inform the American people how they are going to avoid marrying the alliance of France with Communist Russia. France is committed lock, stock, and barrel to Communist Russia. They should also explain fully why the United States should assume, for instance, that Italy is our enemy. For 20 years Russia has tried to undermine our Government; Italy has done no such thing. Italy has been a firm friend of the United States ever since our country was born. Moreover, they should explain how far the United States will go to guarantee the possessions and policies of England and France in respect to their subjective people in every part of the world. That is what it would mean. It is not necessary to go into the merits or demerits of these important phases to at least indicate the labyrinth of commitment we may be venturing into.

6. Another question enters into this problem, and that is, how long these destructive ideologies, especially the most aggressive ones in Germany and Russia, can last. It is my belief that they have reached their high point.

The common people in both Germany and Italy are equally as terrified at being drawn into war as are the people of other countries. Their economic systems are showing signs of degenerating weakness. Having enjoyed liberal institutions, the vast majority of their people have constant desire and hope for return of greater liberty. Public opinion is making itself felt despite the restraints. Communism in Russia is rapidly disclosing itself as a purely gangster government. And the gangsters are quarreling.

Patience on the part of the democracies might well see a considerable part of these dangers decrease from these internal pressures.

siderable part of these dangers decrease from the pressures.

7. It is proposed that we take upon ourselves the job of determining and aiding to stop aggressors in the world. The theory and practice of stopping aggression is a difficult and costly role. That was to be one of the functions of the League of Nations. But the League was supposed to combine the intelligence of all nations outside the controversy and to make judgment. The League split repeatedly upon the facts of who was the aggressor. It seems a difficult role for America to undertake alone, and for many reasons. One of them is that warlike acts are the result of long antecedent history of mixed rights and wrongs. Another of our difficulties would be that we are composed of all nationalities, some of whom will be clamoring for their fatherlands on both our difficulties would be that we are composed of all nationalities, some of whom will be clamoring for their fatherlands on both sides of every single case that comes up. It would add sadly to the divisions of an already divided people. We would also become, even more than today, the battleground of every foreign propa-

ganda on earth. Moreover, the whole theory of stopping aggression is in fact an attempt to maintain the status quo in national boundaries all over the world. We need only to look back even 100 years of history to see how many fights we could get into. In fact, we have been aggressive in our time. Otherwise parts of the Rocky Mountains and California would belong to Mexico today.

We will be told that the told determine the control of the

and California would belong to Mexico today.

We will be told that the job of determining the aggressor is easy because we know today who the world's aggressors are. And we are told we can stop them with more than words and less than war. There is no other nation in the world who would believe that this can be done and keep from provoking war for long. It is certain that the highly realistic democracies in Europe will make no such declarations of national policy.

But over it all is something more important. We cannot become the world's policemen unless we are prepared to sacrifice millions of American lives and probably some day see all the world against us. In time they would envisage us as the world's greatest bully, not as the world's greatest idealist.

not as the world's greatest idealist.

8. We ought, in coming to conclusions, to recollect our own experience with the Great War. We went into that war for many reasons, including direct war upon American citizens and ships. perience with the Great War. We went into that war for many reasons, including direct war upon American citizens and ships. Above all, we hoped and believed that we were going to "make the world safe for democracy." It was to be a "war to end war." No one will deny that we failed in these latter hopes. The violence of the peace treaties and the destruction of war created these brutal dictatorships. Many students of European affairs, including those of our former allies, hold that political action by some of our former allies in Europe greatly contributed to the death of the peace-loving democracies, such as Germany, which sprang up after the war. Whether this be true or not, it must be obvious that America has not the power to impose a course of action upon the nations of Europe which would end war for the future or would make the world safe for democracy. All European history is a treadmill of readjusting boundaries among mixed populations. It is a treadmill of war for power and mastery. It is certain that we engage ourselves in these age-old controversies the moment we throw our might into European balances of power.

9. We should also examine the question of where we will be after even another world war to save democracy. We should consider what would likely happen to us if we become engaged in another such war, whether we win or lose. I recently stated:

"Our first purpose is to maintain liberty in America. If civilization based on liberty fails in the United States, it is gone from the earth. We must safeguard that, not only in our own interest but in the interest of the world.

"Personal liberty and free economic life are not built for modern war. A great war today is a mobilization of the winds.

"Personal liberty and free economic life are not built for modern war. A great war today is a mobilization of the whole people. That means democracy must temporarily surrender to dictatorship, no matter what one may call it, in order that we may bend our full energies to war.

"It means that our country must be mobilized into practically a Fascist state. It would be so organized. It went some distance in the last great war, although we did not use that term at the time. It would have gone much further if the war had extended

"I speak of this not from hearsay but as one who participated in the economic organization of the Great War. I saw the rise of opposition to demobilization of the interests which benefited, and I have seen the attempts to restore these measures ever since. "Today the lowered vitality of free enterprise, the necessity to subordinate or repudiate our enormous peacetime national debt to make way for finance of a new war, together with the ideas of economic power which impregnate our Government, all drive to the improbability of after-war demobilization of centralized power.

"If it were that or the loss of our national independence it would not be too great a price. But let us at least recognize that a war to save liberty would probably destroy liberty. In my view, another great war would make dictatorship universal.

"Even if we escaped this result, yet the sacrifice of our sons and the moral and economic destruction are a bitter prospect to

contemplate. Surely we learned this from the last war."

These are but a part of the reasons which can be advanced for our keeping neutral on European controversies.

our keeping neutral on European controversies.

In conclusion, the question of our foreign relationships rises far above partisanship. And those citizens who hold views on either side should not be charged with politics, pacifism, or militarism. We are discussing the sacrifice of life of millions of our sons and we are discussing the lives of women and children. We are discussing the future of our Republic and the future of liberty.

What have not been stated yet are sound reasons which at the present time warrant us from departure from our traditional policies. On thing is certain: This Nation should be taken into full confidence as to what Washington is doing and proposing. And we will then debate it further.

Beyond all this is an even greater question: What can the United States do within the processes of peace in contribution to peace today?

peace today?

The world has many staggering problems. One is reduction of the armament which is impoverishing people everywhere and which builds only toward disaster. Another is to secure immunity of women and children from hideous attack by blockade and from the air. The witness of that might indeed enrage us into war. Another is to secure relief of millions from religious and racial persecution. That persecution, most dreadfully directed excepts the Jews results not only in their sufferings but it brutaland racial persecution. That persecution, most dreadfully directed against the Jews, results not only in their sufferings but it brutalizes the people of any country where this cry is raised. Another problem is to end the present economic war and secure economic progress for the world. Economic suffering drives nations to exploitation of others and to war.

Is not contribution to solution of these and many other problems a larger purpose for America in the field of foreign relations? There are great things we could do to bring peace and tolerance and prosperity to the world—to add to humanity and to lessen brutality. But that is possible only if we hold to our neutrality. And that question must be settled before we can begin upon constructive processes of peace.

Reconstruction of New England Following Tornado and Floods of 1938

EXTENSION OF REMARKS

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, April 10, 1939

ARTICLES APPEARING IN THE NEW YORK HERALD TRIBUNE

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from a newspaper account of the tornado and flood which visited New England last September:

[From the New York Herald Tribune, of April 3, 1939]

FIFTY THOUSAND WORK TO SALVAGE TIMBER NEW ENGLAND HURRICANE FELLED—FEDERAL GOVERNMENT, STATES, AND TOWNS, HURL THEIR FORCES INTO BIGGEST LUMBERING JOB IN AREA'S HISTORY TO SAVE WOOD, HALT FIRE HAZARD

(This is the first in a series of articles on the reconstruction of New England, following the floods and hurricane of 1938.)

(By Allen Raymond)

(By Alien Raymond)

The greatest lumbering operation in the history of New England is under way today, and will continue until June 30, as a result of the hurricane of September 21, 1938, which made a shambles of New England's forests. This effort to salvage as much as possible of the fallen timber is being accompanied by an equally ambitious project in the reduction of an acute fire hazard, which is conceded to exist today in many sections of Connecticut, Massachusetts, New Hampshire, and Vermont as a result of the blowing down of millions of trees which used to be a pride of the region. the region.

Into these two operations of recovery the Federal Government, Into these two operations of recovery the Federal Government, the States, and hundreds of local governments have thrown a working force of more than 25,000 men. Timber contractors have added another 25,000. Their log-laden trucks go rumbling over the hills of New Hampshire. New-trimmed timber drops by the millions of feet into ponds for storage. The stream of rotary saws and the shouts of the workmen can be heard today in thousands of woodlots.

Yet nobody who knows the historic economics of the New Eng-Yet nobody who knows the historic economics of the New England farm land, or recalls the dark and silent splendor of piney temples now vanished from the granite mountains of the region, can look at this industry of salvage and safety without a sense of irreparable loss. Nobody knows the monetary value of that loss. Nobody can ever pay for the elms that are gone from the village common and the college campus, and it will take another hundred years to replace them.

Experts from the United States Department of Forestry have figured that there are 2,405,000,000 board feet of lumber that was downed in the disaster in the six New England States. The Northeastern Timber Salvage Administration, a Federal corporation.

downed in the disaster in the six New England States. The North-eastern Timber Salvage Administration, a Federal corporation which is directing the salvage, has placed a price of \$12 to \$22 a 1,000 board feet on what is purchased from woodlot owners, prices ranging according to species and grade.

That might make the worth of the fallen timber something like

That might make the worth of the fallen timber something like \$30,000,000, and the men on the salvage job say about half of it is salvageable. They have obtained a credit of \$15,000,000 from the Reconstruction Finance Corporation, with which to conduct their operation of buying what they can, saving and selling it in such a way as to disrupt price levels within the timber industry as little

operation of buying what they can, saving and selling it in such a way as to disrupt price levels within the timber industry as little as possible.

They do not expect to get nearly one-half of the timber that is technically savable. In Maine the timber downed is estimated at 50,000,000 board feet, in Vermont at 260,000,000, in Rhode Island at 60,000,000 hoard feet, in Vermont at 260,000,000, in Massachusetts at 880,000,000, and in Connecticut at 150,000,000.

The amount of timber estimated as salvageable by States is: Maine, 45,000,000; Vermont, 110,000,000; Rhode Island, 40,000,000; New Hampshire, 620,000,000; Massachusetts, 400,000,000, and Connecticut, 50,000,000, or a total of 1,265,000,000 feet.

On the day the great blow occurred, Congress was not in session, and the job of salvage quickly was shown to be one which no private industry, nor the States and communities themselves could handle. Only a single organization, adequately manned and financed by the Federal Government, with local cooperation could get what lumber was savable off the hills before decay set in, and give to the owners of it what monetary reparation of their loss might be given without disrupting price levels. Ferdinand A. Silcox, Chief of the United States Forest Service, was a leader among the group of men from the Reconstruction Finance Corporation, the Federal Surplus Commodities Corporation and other Federal agencies who worked out the present timber salvage administration.

The Civilian Conservation Corporation the Reconstruction finance

ministration.

The Civilian Conservation Corps, the Works Progress Administration, the forestry services of the States concerned and of the Nation, all cooperated to man the job. The aims of the Northeastern Timber Salvage Administration, or "Netsa," as abbreviated in the woods, have been two from the beginning; first, salvage; second, fire prevention. The mechanics of salvage has been to offer timber owners 90 percent of specified prices on their lumber delivered at receiving points set up by the administration, some of which are called "wet" points—because they are ponds—and others "dry" stations, because they are sawmills.

"Netsa" proposes to process some of the timber and hold the

"Netsa" proposes to process some of the timber and hold the rest in wet storage, and get rid of it on the market gradually over the next 5 years. If the 10 percent of their offered prices to woodland owners does any more than pay the overhead on the operation, the owners will receive the balance. The administration sets itself up in this respect as a hard-boiled business corporation, and hopes to pay out.

poration, and hopes to pay out.

Up to March 11 the N. E. T. S. A. had set up 593 receiving stations for timber in New England, of which 223 were ponds and 370 were sawmills. Distribution by States was as follows:

Maine, 34 wet stations and 3 dry; New Hampshire, 97 wet and 83 dry; Vermont, 8 wet and 32 dry; Massachusetts, 56 wet and 98 dry; Connecticut, 22 wet and 120 dry; Rhode Island, 6 wet and 34 dry. Beyond that the administration was negotiating for 16 more ponds and 79 more sawmills.

Into those receiving stations, as of March 11, the administration had taken the following amounts of timber, weighing and scaling it and paying for it: Maine, 25,000,000 board feet; New Hampshire, 106,000,000; Vermont, 15,000,000; Massachusetts, 36,000,000; Connecticut, 2,000,000, and Rhode Island, 1,000,000.

The amount of timber for which "Netsa" had made contract with

The amount of timber for which "Netsa" had made contract with woodland owners, State by State, on March 11, follows: Maine, 81,000,000; New Hampshire, 627,000,000; Vermont, 114,000,000; Massachusetts, 250,000,000; Connecticut, 29,000,000; and Rhode Island, 11,000,000.

The N. E. T. S. A. has estimated that probably 15 percent of the mature timber of all the States except Maine has been blown down. The area of desolation covers about 15,000,000 acres, or 35 percent of the area of New England, and within that area of destruction the trees are down in such numbers and such tangles over 600,000 acres as to constitute this section a "severe fire hazard." The damage has affected the physical valuation of 904 towns in 51 counties. Tracts completely razed vary in size from a fraction of an acre to 1,000 acres.

Of the wood that is downed, 97.5 percent is softwood and 2.5 percent hardwood. Of the softwoods, spruce, hemlock, and Norway pine constitute the bulk. Of the hardwoods, Vermont and New Hampshire have lost mostly maple, with yellow and white birch and some basswood.

In Vermont it is estimated that 20 percent of the normally tapped maple trees are gone. In the southern States there has been a loss of considerable oak.

According to "Netsa" officials cooperation of local authorities with their work has been "wonderful." Lumber associations, formarized recommentations of the property of the proper ernors' salvage committees, town committees, local banks, farm associations, and the Farm Security Administration have all cooperated. There has been some criticism that the rates paid timber are not such as to pay the owner of a few lost trees to bring them in. New Hampshire has created an advisory council and passed special truck and zoning regulations to aid nonresident contractors in their work. Massachusetts and Vermont have bills before the legislature for similar aid.

Regardless of what is salvaged, the real extent of the loss will not be known for years, if ever, and will be continuing. It is the farm woodlot on the hill in Vermont and New Hampshire that has paid the taxes for many a farmer. When money was scarce these old farm woodlands have enabled hundreds of boys from the Green and White Mountains to go to Dartmouth and Harvard to

get their educations.

Work at reduction of fire hazards has proceeded apace with the timber salvage for the last 5 months and will continue for a long time. The Civilian Conservation Corps has provided about 4,000 men for the job of clearing slash from perilous points, and the W. P. A. forces on similar jobs have varied between 10,000 and 15,000 men in the six States. Plans are now being worked out under a \$5,000,000 W. P. A. deficiency appropriation further to survey the area's problem and decide what areas the C. C. C. camps can most economically cover; what areas the W. P. A. can cover from centers of population; and into what areas the Forest Service

can place 50-man crews under their direct supervision.

Twelve new fire towers, two in Maine, five in New Hampshire, and five in Vermont, are now being built and will be observation and five in Vermont, are now being built and will be observation points before summer. A special forest fire telephone alarm system has been strengthened at strategic points by the addition of more than 100 miles of telephone wire, and all repair work on fire protection telephone lines is said to be completed or nearing completion. State and National foresters, in cooperation with local governments, have worked out an interlocking fire-fighting system covering the entire region of hazard and special training in fighting forest fires has been given to C. C. and W. P. A.

crews in large numbers.

This hazard reduction work, based on the manpower now available from the C. C. C. and W. P. A., will be completed in Maine in 7 months, according to "Netsa" officials. In New Hampshire, even if present forces are maintained, it will take 8 years and 4 months to complete; in Vermont, 15 months; in Massachusetts, 4 months; in

complete; in Vermont, 15 months; in Massachusetts, 4 months; in Rhode Island, 3 months; and Connecticut, 2 years and 10 months. Naturally, the "Netsa" officials hope that the work may be speeded by increase of forces, dependent largely on W. P. A. appropriations. "Netsa" officials are anxious that no undue alarm be spread concerning the nature of what they have called "extreme fire hazard." "To say that a serious potential fire hazard will not exist in the hurricane area of New England during the fast-approaching fire season would be foolish," according to Leslie S. Bean, director of the administration in Boston. "But to say that New England will burn up from the first cigarette tossed carelessly from a car window is equally foolish. Any large metropolitan area constitutes a potential fire hazard, but none of us thinks it is going to be consumed by a conflagration."

What New England communities, in cooperation with the Federa Government, have done to safeguard themselves during the coming fire season against admitted menace is to organize the greatest

ing fire season against admitted menace is to organize the greatest fire-prevention and fire-fighting force in the history of the region, and those in command believe these measures adequate.

[From the New York Herald Tribune of April 5, 1939 NEW ENGLAND DISASTER CLEAN-UP CARRIED ON MAINLY BY W. P. A. THOUSANDS IN STATES STRUCK BY HURRICANE STILL LABOR TO CLEAR Forests and Roads of Debris; Scores of Towns Face Economic

(This is the third in a series of articles on the reconstruction of New England following the floods and hurricane of 1938.)

(By Allen Raymond)

The mobilized man power of the United States Works Progress Administration has carried the major share of the load of reconstruction in New England, following the disaster of September 21, 1938. This has been true not merely in the immediate job which had to be done at the height of the storm, the saving of lives and property, and the limitation of the scope of that misfortune, at times by heroism.

at times by heroism.

It was the W. P. A. that did the bulk of the job of clearing up enough of the debris to make the roads passable and the towns presentable as the floods receded and the winds died down. It has been the W. P. A. to which towns in dire financial straits and State administrations pledged to economy have turned for the continuing job of public repair work in the months that have passed. It is the W. P. A., with its youthful ally, the Civilian Conservation Corps, which has provided brain, brawn, and the necessary funds to do much of the task of forest salvage and fire prevention, in cooperation with other Federal agencies.

Direct and indirect damage caused by the storm to New England's public and private property has been estimated by the

Travelers Insurance Co., of Hartford, Conn., at \$400,000,000. A firm of engineers employed by the Massachusetts Department of Public Works has set down the direct and traceable damage at \$200,000. While the six little States have been rich compared to some sections of the country, they have their depressed areas, and the storm wrought much of its harshest damage in the areas least able to bear it. able to bear it.

MANY TOWNS FACE CRISIS

There is a crisis in local government approaching in many New England communities because of the piling of the hurricane on top of previous adverse economic factors, and the question of who is going to pay for the accustomed community services, if they are to be continued, hangs in the balance. When the storm subsided, there was no question as to who was doing the job of immediate restoration, and which agency was prepared to do it. That agency was the Federal administration. Its major lieutenants were on the job, preparing to fight the floods before they came.

For 48 hours before the disaster the newspapers in western and central Massachusetts had been predicting a flood approaching the high crests of 1936. John J. McDonough, State W. P. A. administrator, since named New England director, was out in the field,

trator, since named New England director, was out in the neid, mobilizing his forces.

When the storm came and Colonel McDonough had to get back by automobile to headquarters in Boston, W. P. A. workers literally sawed a path for his car through the trees that blocked the streets from Fitchburg to Massachusetts Bay. By the following noon the W. P. A. had 80,000 of its 130,000 workers diverted from normal projects to the clean-up of the State. Staff work was done by candlelight. Communications were by amateur wireless, and the round-up of workers was done with the aid of the police.

The Federal Government allotted \$5,000,000 to flood-repair work in Massachusetts, and within a month after the storm 521 projects

in Massachusetts, and within a month after the storm 521 projects had been approved, with a cost to the local governments of about \$1,000,000 and a cost to the Federal Government of \$3,916,000. The greatest damage to public property was to roads and bridges, particularly in the shore areas from Rhode Island to Buzzards Bay, and inland, west of Worcester County, where hundreds of miles of highway were washed out or buried under sand and debris. The roads are in splendid shape today, but work upon these and public parks and buildings will consume a large part of the W. P. A. energies through 1939. There are 6,000 W. P. A. workers in Massachusetts alone engaged in cleaning out woods close to the big towns, where fire hazard is greatest. close to the big towns, where fire hazard is greatest.

The destruction of taxable values in the small towns, particularly along the eastern Connecticut, Rhode Island, and Massachusetts coast, in central Massachusetts and in southern New Hampshire and southern Vermont is one of the outstanding regional problems, visible to anyone traveling through the area who talks to the town officials. There must be reorganization of some communities, more State or Federal aid, or such curtailment of local government services as the people have never seen.

The problem has been recognized to some extent in Massachu-setts, where a bill has been introduced in the legislature to refund setts, where a bill has been introduced in the legislature to retinal \$3,000,000 a year of State taxes to between 50 or 60 Massachusetts towns hardest hit by disaster. Among the towns which suffered the most severe losses are Athol, Ware, Orange, Southbridge, Holden, Gilbertsville, Brookfield, Chicopee, Hadley, Amherst, North Adams, Adams, Lee, and Lenox in the central and western parts of the

State.

On the south shore, severe losses, eating into the capacity of the town governments to give service have been sustained by Westport, Fairhaven, Mattapoisett, Marion, Falmouth, Bourne, and Gay Head. Chilmark, on Martha's Vineyard, is almost wiped out.

In many such places, the work of rehabilitation can hardly be said to have been begun, beyond the immediate W. P. A. or local cleanup of debris. According to Lemuel LeBaron Dexter, town moderator of Mattapoisett, that community has lost \$800,000 or 30 percent of its taxable values. At Crescent Beach, Mass., 188 homes of 210 summer places have vanished. At Wareham, Mass., according to Ralph F. Seaver, assessor, the loss of or severe damage to 675 homes and 295 garages have cut the town's valuation by about \$1,173,000. Fairhaven has lost 500 buildings at an estimated value of about \$2,000,000.

Many of these towns will be able to pull through without State or Federal aid by budgetary belt tightening or the hoisting of local taxation, but in many others repairs must wait, and the continuance of normal services on the basis heretofore known is in jeopardy. State and town planning committees, particularly disjeopardy. State and town planning committees, particularly dis-aster emergency committees, formed throughout New England since the hurricane, have been calling for increased zoning by small towns to take advantage of the destruction of much beach slum property. It has been pointed out that lands which might be made valuable over the course of years to the people as a whole may now be condemned very cheaply, particularly along the Rhode Island and Massachusetts southern shores.

At town meetings in this region, however, since the great destruction, the taxpayers have proved far more conscious of the loss they have received than of any desirability for town improvements. Zoning has been fought back along Buzzards Bay because it might hamper private enterprise in restoring taxable property. Proposals for the acquisition of beach sites have been defeated.

THE PROPERTY OF THE PROPERTY OF THE PERSON O

Flood Control and Hurricane Rehabilitation in New England

EXTENSION OF REMARKS

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1939

ARTICLES APPEARING IN THE NEW YORK HERALD TRIBUNE

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from a newspaper account of the tornado and flood which visited New England last September:

[From the New York Herald Tribune of April 6, 1939]

MASSACHUSETTS IS TAKING LEAD FOR NEW ENGLAND FLOOD CONTROL MOVES FOR FEDERAL GOVERNMENT AGREEMENT AS VERMONT, NEW HAMPSHIRE, AND CONNECTICUT CONTINUE TO BALK ON DAM PROJECTS

(This is the fourth in a series of articles on the reconstruction of New England following the floods and hurricane of 1938.)

(By Allen Raymond)

Spurred to action by the vast losses incurred in the floods of September 1938, the State of Massachusetts has taken the lead among the four New England States most subject to flood menace in reaching an agreement with Federal officials, whereby the United in reaching an agreement with Federal officials, whereby the United States Government may start to work on the long-projected series of control dams for the region. Vermont, New Hampshire, and Connecticut still are balking, just as the Federal Government balked when the four States signed their interstate compacts in 1937 and agreed to do the job by themselves without the aid of Washington. Immediately after the latest flood the department of public works in Massachusetts engaged the engineering firm of Moore & Haller, Inc., in Cambridge, Mass., to conduct a survey of damages from the rising waters, the condition in which their recession had left the streams of the State, and needful remedial measures.

The engineers found that damage by floods in New England and Massachusetts had increased with each succeeding disaster in 1927.

Massachusetts had increased with each succeeding disaster in 1927, 1936, and 1938, and that the condition of the streams was such at the beginning of this year as to present an even more serious peril to Massachusetts this spring, in case the heavy snows to the north were melted by unusually early rainfalls.

FLOOD LOSSES INCREASE

The flood of 1927, they found, caused damage to New England of about \$40,000,000, of which \$6,000,000 was incurred by Massachusetts. In 1936 the damage jumped to \$70,000,000 for New England, with \$36,000,000 losses for Massachusetts. In 1938 they reckoned the flood damage at \$200,000,000 for New England and \$50,000,000 for Massachusetts alone. The high spot of their report was brief but pointed. was brief but pointed.

was brief but pointed.

"The rivers and streams of Massachusetts," they said, "are no longer capable of carrying normal freshets because of damage done in the 1938 flood. Stream clearance and removal of debris are urgent and vital. A central State authority should be vested with all power to exercise control over the location, construction, and operation of all dams. The flood problem can be solved by a total investment of less than the damages of the 1938 flood. Industries in western Massachusetts can no longer operate in a normal way without the elimination of the flood hazard."

What the Massachusetts legislators beneath the sacred codish

what the Massachusetts legislators, beneath the sacred codfish, heard from the experts they had been hearing for some time from the manufacturers and mayors from Worcester to Fitchburg. Governor Leverett Saltonstall was more amenable to conciliation with the Federal Government than some of the other New England Governors. United States Senator David I. Walski, Democrat, who always has been elected by aid of a large Republican block of votes, was an astute and capable mediator.

A formula was devised whereby the Federal Government agreed A formula was devised whereby the Federal Government agreed to give concurrent civil and criminal jurisdiction to the State over lands acquired for flood-control reservoirs, and Governor Saltonstall sent to the legislature the enabling act to let the Federal Government acquire the properties. Senator Walsh informed the legislators that his understanding was that these flood-control dams would be for a single purpose and not for generating power. Leaders of the power industry in Massachusetts, averse to any New England T. V. A., were not objecting to the dams proposed to be built in the Bay State initially, holding the view that the sites themselves are incapable of developing competitive power.

ISSUE BEFORE LEGISLATURE

While the matter is still before the legislature, it is believed that the way is being cleared to build four valuable reservoirs.

They are planned at Birch Hill, on Millers River; Knightville, on the Westfield River; Tully, on Tully Brook; and Naukeag, on Lower Millers River. The legislature also had before it, with the blessing of Governor Saltonstall, an appropriation bill asking expenditure of \$5,000,000 for clearance of streams by the department of public works, so they may carry their usual freshets without overflowing. While that sum is less than the \$7,644,100 sum recommended by the engineers, another \$1,000,000 was made available for this purpose in the first emergency appropriations, made immediately after the disaster during the administration of former Gov. Charles F. Hurley.

The problem of Connecticut flood control is tied up closely to the building of reservoirs in Vermont. At Montpelier, Vt., Gov. George D. Aiken still stands pat, with the support of his legislature, in the decision to fight any acquisition of land for flood control purposes within the State, by the Federal Government, except by agreement between the State and National Governments as to terms. He has charged that the Federal administration's proposals for flood-control dams actually mask an intent to use the dams for the development of power, and though friendly with experiments of municipal-power-plant operation in his State, he insists he is "opposed to having the flood-control program dominated by any agency, Federal or private, which is looking for financial returns from the sale of power."

ENABLING ACT INTRODUCED

Governor Aiken has introduced into the legislature an enabling act to permit the Federal Government to acquire sites for flood-control dams in Vermont by agreement with its Governor, following preliminary authorization of the State board of public works. Such an agreement, he maintains, is necessary to protect the State in maintaining the taxable values of its own lands, and if the Federal Government is sincere in its desire for flood control will raise no obstacle to it. So far, he maintains, the Federal Government has sought to build only one dam, at Union Village, Vt., and Vermont's consent has been given. and Vermont's consent has been given.

Massachusetts got the jump on all other States shortly after the hurricane, when Governor Hurley called a special session of the legislature and authorized the expenditure of more than \$19,000,000. The proposed spending of this money in the closing days of the Hurley administration precipitated a State-wide scandal. So great were the number of complaints, chiefly from the Massachusetts Federation of Taxpayers' Associations, that Attorney General Paul A. Dever in November ordered the State comptroller to halt all payments on 70 contracts authorized by the department of public works calling for the expenditure of more than \$14,000,000.

EXPENDITURES SCHEDULED

The work, however, as expected to continue through much of 1939, will include expenditure of \$8,750,000 for local and county highways and bridges, \$5,500,000 for State highways and bridges, \$1,000,000 for stream clearance, \$3,432,414 for State departments and institutions, and \$750,000 for the metropolitan district commission, in and around Boston.

[From the New York Herald-Tribune of April 7, 1939]

FOUR HUNDRED MILLION DOLLARS STORM DAMAGE EQUALS TOURIST TRADE INCOME—NEW ENGLAND RUSHES TO REPAIR RESORT FACILITIES FOR SUMMER VISITORS; VAST IMPROVEMENTS ARE UNDER WAY AT SEVERAL BEACHES

(This is the fifth in a series of articles on the reconstruction of New England, following the floods and hurricane of 1938.)

(By Allen Raymond)

The recreation industry of New England, providing summer and winter sport for people from all over the United States, is one of the major sources of income for the six little Northeastern States, and the money brought into the territory annually by visitors on vacation and tour has been estimated conservatively at \$400,000,000. That figure is the same as the Travelers Insurance Company's estimate of damages to the region, caused by the floods, hurricane, and tidal ways of 1038

estimate of damages to the region, caused by the floods, hurricane, and tidal wave of 1938.

The losses to summer cottages, hotels, yachting and fishing fleets and summer camps in the woods and mountains, spectacular as they were, hardly have dented the physical plant of this recreation business, which is in the hands of thousands of small operators. Private enterprise, aided here and there by public legislation, financing and subsidy, has been hard at work for months getting ready for the visitors of 1939, and despite some handicaps is looking forward to a prespectus season this summer.

ing forward to a prosperous season this summer.

That optimism hangs on several pegs. New England is experiencing a rising tide of industrial activity, with sales of electricity to industry each month about 5 percent above the corresponding month of 1938. The orders come from other sections of the country, and when these other sections are making money, it is figured, New England travel will absorb its share. The region believes the New York World's Fair will be a fillip to automobile travel in New England. It has heard also that after a slow start the winter recreation season in Florida and other southern towns was a good one. New England's summer resort receipts have tended to follow the winter recreation curve in the South.

[From the New York Herald-Tribune of April 4, 1939] HURRICANE BILL OF UTILITIES PUT AT \$20,000,000—RAPID AID TO NEW ENGLAND AFTER DISASTER CREATED GOOD WILL FOR COMPANIES

(This is the second in a series of articles on the reconstruction of New England following the flood and hurricane of 1938.)

(By Allen Raymond)

(By Allen Raymond)

The repair bills for the public utilities of New England, the railroads, the telephone and telegraph, electric light and power companies, as a result of the floods and hurricane that swept that region on September 21, 1933, amounted to more than \$20,000,000, but officials of the major companies do not believe today that all that was lost. Drawing upon all their resources and all the skills and loyalties of their personnel, these companies set up such records for speed in restoration of service to an afflicted people that thousands of letters and editorials of thanks and congratuation have flowed into their offices since the days of disaster.

The people of New England had a taste of what it was like to be without lights, telephones, radios, refrigeration—heat, in many instances—and transportation, and as they struggled about the wreckage of their communities they had visible evidence of what the utilities were doing in the great common misfortune.

They saw crews of "trouble shooters" dropped by plane into their towns from points as far west as the Mississippi and as far south as Georgia, to be followed by trucks and supplies for repairs as fast as they could be rolled in from outside New England over railroads and roads that never before had been so torn to pieces as they were in that storm. The fight to restore communications was so literally a battle that officers of the United States War Department have gone over the organizational scheme and results with officials of the New England Telephone & Telegraph Co., as part of their studies for coping with war-time conditions. & Telegraph Co., as part of their studies for coping with war-time conditions.

JOB DONE QUICKLY

The job was done quickly. Going over the repairs and checking them for permanency may take another year and a half. But once the services essential were restored all the big companies capitalized on their feats in their advertising, and the story of what they did in the first emergency is far from forgotten.

The rehabilitation of a shattered telephone system was accomplished by the New England Telephone & Telegraph Co. in 28 days. To do that it drew upon the national facilities of the Bell Telephone System and the ready stores of its great provider, the Western Electric Co.

A quick check-up on the morning after the storm revealed that more than 300,000 of the system's 1,223,000 telephones in five of the six New England States—in all but Maine—were out of commission and 350 communities were completely isolated, insofar as telephone service went, from the outside world. That outside world, teeming with people who had New England connections, was trying so hard to telephone into the distress area that demands on the stricken service were 70 percent above normal. A later check-up showed that the number of telephones first put out of service was more than 400,000.

As fast as emergency crews of repairmen could be rushed into the field they were so rushed. There were 398 crews of repairmen, totaling 1,371 men, brought into the region from beyond its borders, provided for the New England Telephone & Telegraph Co. by its affiliates elsewhere. These trouble shooters, with their local allies, found that 31,292 toll and local poles were down, and the writes series which messages had flown were tangled in the wires across which messages had flown were tangled in shattered trees, buried under debris, sunk in swollen and roaring rivers, and caught in the wreckage of thousands of buildings. There were 216 offices of the company temporarily isolated that September 22.

REPAIR CREWS WORK RAPIDLY

The repair crews went to work. Within 9 days every isolated The repair crews went to work. Within 9 days every isolated telephone exchange had been brought back into service. At the end of 10 days individual residence and business telephones were being restored to usage at the rate of 25,000 daily. To do this job, the crews laid 490 miles of new cables, installed 2,189 miles of new copper wire, 7,276 miles of new iron wire, and 6,743 miles of drop wire. They patched up old poles, built up new ones, and in sundry critical situations drew deep on the resources of skill

At Chicopee Falls, Mass., where the main cable route linking up towns in Vermont with regions to the south was disrupted because a bridge had crashed into the Chicopee River—at the time a torrent—the repair crews tried dropping a line across the river from an airplane. The line snapped on a rock in midstream. Then they called in a Coast Guard crew with a Lyle gun, and a line was shot

across the stream. On this line they dragged across a new cable.

The repair bill for the 50 companies of the New England Power
Association, providing light and power to communities from Burlington, Vt., to the Connecticut and Massachusetts shores, has been
set down by company officials at \$3,402,200.

Like the associated telephone companies, the power and light Like the associated telephone companies, the power and light companies drew upon skilled repair forces from companies in New York, New Jersey, Pennsylvania, Ohio, Michigan, Maryland, West Virginia, and Georgia. Men came in by plane in their working clothes, equipped only with hand tools and climbing irons. Their heavier tools followed by truck over the roads. In each truck were two drivers, so the trucks kept rolling when one was sleeping. All hands rolled up overtime in plenty.

At midnight, September 21, 88.4 percent of the system's 607,054 customers, or 536,555, were without electrical service. By mid-

night, September 30, the number without service had shrunk to 117,249, or 19.3 percent of the whole. By October 14, the service was back to normal, with only 150 customers throughout the

region reporting trouble.

To do this job the associated companies used 4,637 men in the field, equipped with 446 trucks and 778 automobiles. They laid 1,228 miles of wire; replaced 9,452 poles, installed 19,972 new crossarms, 254,793 mechanical splicers and connectors, 918 transformers. 5,869 meters, and 56,622 insulators.

The storm cost the Boston Edison Co. alone more than \$1,000,000,

according to Frank D. Comerford, its president. On September 21, 292,000 of the company's 437,000 customers were without service. Within 6 days all but 9.03 percent of the customers had their service back, and the complete repair job was finished October 6. The storm cost the New York, New Haven & Hartford Railroad a

The storm cost the New York, New Haven & Hartford Rallroad a repair bill of \$3,604,000, according to its president, Howard S. Palmer. On the night of September 21, the company found that 75 miles of its track either had been lifted from the roadbed by tidal waves or flood, or twisted, washed out, covered with sand, stone, trees, or other debris. More than 5,000,000 feet of the road's telephone signal system was down. Many freight stations and passenger depots were unroofed, flooded, or demolished. Thirty-one bridges, 200 culverts were washed out, moved from their abutments, and either completely demolished or so hadly damaged as to be unuseither completely demolished or so badly damaged as to be unusable without repairs.

The railroad threw an emergency force of 5,000 men into the task

of restoration. These men, including engineers, linemen, trackmen, pile drivers, divers, skilled and unskilled laborers, worked in three shifts, 24 hours daily, till service could be restored. In 2 days they restored a partial passenger service between Boston and New York, with detours by bus around areas that still were flooded. In 6 days through freight service was restored between New York

and the more important New England centers.

SERVICE RESTORED IN 13 DAYS

In 13 days, through rail-passenger service was restored on the shore line between New York and Boston, which had borne the brunt of the tidal wave, and where a steamboat lay across the tracks of the flooded and burned-out station at New London, Conn.

The Boston & Maine has a similar story of accomplishment in time of disaster, to which its officials point with pride. Emergency repairs cost the road \$2,252,746. They called up an emergency crew of 3,000 men to set the road to rights.

crew of 3,000 men to set the road to rights.

These men went to work on heavily damaged shops at Concord, N. H., on dock properties in Boston, and demolished engine houses in Stoneham and New Bedford, Mass. They found flood damage heavy on the Fitchburg & New Hampshire division and somewhat smaller on the Portland & Terminal division. Damage was done at more than 300 separate points, with 27 bridges or culverts destroyed, 206 major wash-outs, 22 landslides, and 45 "submerged properties." 206 major wash-outs, 22 landslides, and 45 "submerged properties." The main line between Gardner and North Adams, Mass., suffered heavily, with 5 of its major bridges damaged and 3 of them requiring complete rebuilding. The major wash-out was near Millers Falls, Mass., where Millers River changed its course and took out the roadbed for more than 1,400 feet.

A landslide near Zoar, Mass., derailed a freight train.

Reviewing the repair job, the Boston & Maine reports that 977 miles of railroad were closed the first day, including 593 miles of its main line. The road restored 672 miles of track to service in 7 days and 816 miles in 15 days. The main line of the Fitchburg division was reopened October 23, and restoration of all mileage scheduled for repair was complete by December 7.

was reopened October 25, and restoration of an inneage scheduled for repair was complete by December 7.

The reconstruction of bridges for permanency is still going on, though most of the work is completed. It has been a big job, entailing 1,407,000 man-hours of labor through December 31, 1938. Filling and riprap used to repair the roadbeds have totaled 16,884

RAILROAD LINE HARD HIT

The Boston & Albany Railroad, hard hit in the flood of 1927, suffered even more severely in the flood of 1938. An official volunteered \$1,300,000 as a rough estimate of damage. The line was damaged over most of its 118 miles between East Brookfield, Mass., and Chatham Center, N. Y., and on about 92 miles of branch line, totaling about 60 percent of the mileage of the road.

It lost six main-line bridges, at East Brookfield and Huntington,

Mass.; at East Chatham, Chatham Center, and Chatham, N. Y.

It had hundreds of wash-outs. There were 4 at West Brookfield, Mass. The road lost 2 bridges on its Ware River branch, 1 at North Adams, Mass., on the North Adams branch, and at Red Bridge, Mass., where the Quabaug and Swift Rivers enter the Chicopee, the line was completely destroyed. It lost freight houses at South Spencer, North Brookfield, Barre Plains, Coldbrook, Wil-

at South Spencer, North Brookfield, Barre Plains, Coldbrook, Williamsville, and Old Furnace, Mass., and 12 other freight houses were badly damaged. At its piers in East Boston, Mass., the road lost a 148-foot wall, 18 pier doors, and 15,400 square feet of roofing. With temporary trestles put up at some of the bridge sites, service on the road was practically normal after October 10, 1938, but its rebuilding is still going on. Such is the story of the major utilities in New England. Similar damages—sometimes even heavier, in proportion to their means—were suffered by some 50 little telephone companies in the New England towns, which have been independent, though linked with the Bell system. In general, throughout the region, there has been but one political repercussion affecting the telephone and lighting companies as a result of the storm.

In the Massachusetts Legislature a bill was introduced to require them to place more of their lines underground. The com-

Section and Business Section 2

panies estimated that the job could be completed in 9 years at a cost of \$55,000,000, as sought by the sponsors of the bill, but they countered with the argument that floods have proven quite as disastrous to lines in underground conduits as to lines on poles. The bill was believed to be doomed. Officers of the companies seem unanimous in the opinion that public feeling between the communities served and the companies is more cordial than before the disaster, and that speedy restoration of service, at high cost, was a sound investment in goodwill.

Preparation for Industry Through Education

EXTENSION OF REMARKS

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 11, 1939

ADDRESS DELIVERED AT THE SUMMER MEETING OF THE SEVENTEENTH ANNUAL CONFERENCE ON PRINTING EDUCATION BY HON. JAMES J. DAVIS, OF PENNSYLVANIA

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address by the distinguished senior Senator from Pennsylvania (Mr. DAVIS), delivered before the summer meeting of the Seventeenth Annual Conference on Printing Education at the Washington Hotel in Washington last year, entitled "Preparation for Industry Through Education."

I was a member of the same school board with Senator Davis for 20 years, and this message bears out the principles we have discussed over a long period of time. I wish to commend the point of view expressed in the Handbook on Curriculum, a study issued by the Department of Education of the State of Oregon in 1937, from which Senator Davis has quoted at some length. The entire article is informative and in line with progressive educational principles.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

It is an honor which I greatly appreciate to be called in for conference with you. I am always glad to have a part in the development of practical ideals of education. Knowing of the splendid work that you have been doing these many years, I take this opportunity to congratulate you most heartily on your achievements. As one who has been dealing with practical problems all my life, I like to know that you are having great success along the same lines which have engaged my attention.

lems all my life, I like to know that you are having great success along the same lines which have engaged my attention.

My education has been very largely in the school of experience. My matriculation fee was 50 cents a night for night school, my college yell has been "Rah, Rah, Rah! Work, Work, Work!" and my diploma has been one job after another. I landed in a small Pennsylvania town in April 1881 from my native Wales, and by Memorial Day, May 30, I had a job when I was not quite 8 years of age. That job was driving cows from the local hotel to pasture and back again. Early in the morning the cows had to be brought in from the pasture so that they might be milked to provide fresh milk for 6 o'clock breakfast. Those were days when we had the real daylight saving. By getting up with the sun and going to work we found we got quite a bit accomplished. I usually got my breakfast in addition to a couple of dollars a month for my work as a cowherder. Then I got started in the shoe-shining business. My father said it was the Welsh custom for the oldest son to shine his parent's shoes on Saturday so that they might be in good condition when they went to church on Sunday.

I got this job, and having learned how to use the brush and rags I took my services as a bootblack wherever they would bring me work. I kept adding to my trade education by becoming a newsboy. I carried papers and delivered telegrams, and there was scarcely any sort of an errand which I was not called upon to perform, from delivering love notes to death notices. These jobs permitted me to go to school for a while, but in my eleventh year I began my career in the mill in a practical way. My first job in the mill was picking nails. A number of boys were engaged at this task of picking out the headless nails. Often our fingernalls bled at this task, for it was hard on the hands. From our foreman I learned that a nail without a head is as useless as a company without one. I learned that management is absolutely

nails bled at this task, for it was hard on the hands. From our foreman I learned that a nail without a head is as useless as a company without one. I learned that management is absolutely necessary to prevent chaos and confusion and that order is the first law of life. I came to learn that someone must have the final authority, and through these years of experience, together with those that were to follow, I learned that successful community life depends as much on the intelligence of the directing heads of business as on the industry and loyalty of the workers. From these early trades I finally gained the experience necessary to be-

come a puddler's helper, and at last a puddler in my own right and at my own furnace. Always I have had practical work to do, and I admire those who have learned to do practical work successfully.

successfully.

I have tried to carry the practical spirit into the fraternal and governmental activities of my life. Our school at Mooseheart, which is on your accredited list, was conceived with the purpose of bringing practical educational opportunities to orphan children of members of our order. Mooseheart has for 25 years been carrying on in a practical way. It has embodied the ideals which now are coming to such prominence on the educational horizon. For example, I will call your attention to the Handbook on Curriculum study issued by the department of education of the State of Oregon last year. I wish to quote from a part of it:

"The point of view accepted throughout this handbook is that the curriculum comprises the sum total of all the experiences had by the child. The tacit assumption back of this point of view is

by the child. The tacit assumption back of this point of view is that experience does provide the basis for learning. Instead of identifying the educational process with memorization of a number of facts which may or not have significant meaning for the child, learning is now considered to have taken place only when the child has been confronted with these facts in such form and manner that when he reads to them he obtains significant meanings. child has been confronted with these facts in such form and manner that when he reacts to them he obtains significant meanings, understandings, or insights as a consequence of that experience. Many situations and activities outside the usual course of study have been recognized to be fraught with more potential educative experience than were to be found in the formal curriculum of the school. Likewise, the out-of-school activities of the child have become of major educational importance, particularly those in which he express requirements.

which he engages voluntarily."

In the Moose we have been saying for a long time that education should be of the head, hand, and heart. It should be of the whole of the individual and not just a part. It should gather up all of a person's experience and not just a part. Education should help a person find lessons and opportunities for self-improvement

everywhere

I have always believed that our schools would be more efficient if we would quit trying to cram too much into the heads of students, who, in some cases, lack the mental equipment to absorb it all. If students who do not take to books as a fish does to water could be brought into the environment of learning through doing treatient tasks of least way would have more people proceed to could be brought into the environment of learning through doing practical tasks, at least we would have more people prepared to take care of themselves in the world and better able to get a job. I have not come to that rarifed state of mind which some educators are supposed to represent where education for making a living is regarded as beneath the dignity of true scholarship. I say that this country today needs a scholarship which will help put the 14,000,000 unemployed back to work and to train the oncoming generations how to take care of themselves on a basis of abundance rather than that of the now prevailing scarcity. I say this country reeds teachers who think of education in terms of helping their students keep out of bread lines as well as in the educational headlines. I say this country needs students who are thinking about the future as well as about the past and who will not be content with their diplomas until they know that they stand for an opportunity to go out as accredited breadwinners.

There is no problem in this country so desperately pressing as

opportunity to go out as accredited breadwinners.

There is no problem in this country so desperately pressing as that of unemployment and if education and educators have nothing to offer for its solution, we have indeed come to sorry times. Personally, I am glad to be here this evening because as a group I think you have something practical and helpful to offer a distressed world. I believe education and religion come to a high point where they join forces in the prayer of the Master Teacher who taught his disciples to pray: "Give us this day our daily bread."

One of the primary problems of education is to teach our people.

one of the primary problems of education is to teach our people how to share their blessings and opportunities. The man who cannot pass on to others what he has always remains poor. In our modern world material is only wealth when you get rid of it. Neither the Pennsylvania miner nor the Alabama cotton picker can eat the products which their hands bring from the earth. The miner cannot eat the coal; the cotton picker cannot eat the cotton. If coal and cotton are to mean food and clothing they must be passed on to others for money. They must be sold. Wealth in the modern world does not consist in the possession of particular materials. It results from a flow of goods on the commercial highroads of the world. If the traffic on those commercial highroads becomes jammed or blocked, material ceases to be wealth. This means that the Brazilian has to burn his coffee, the Kansan and the Canadian burn their wheat, the Texan turns wealth. This means that the Brazilian has to burn his coffee, the Kansan and the Canadian burn their wheat, the Texan turns under his cotton, the Iowan kills his pigs, and the Pennsylvania coal miner is laid off his job and goes on relief or goes hungry. Our commercial highroads are blocked and jammed today. They have been in a bad way ever since the World War. They are in danger of becoming worse in the threat of a second World War. If we are to keep business going and commerce active, we must rid the world of war and the terrible fear which it brings. Education and religion must combine to teach us the lessons of peace and plenty. peace and plenty

Science, inventive genius, and education have helped us build the machines of our new age; they must now go forward to complete the job and teach us how to live in peace and plenty with the machines which have been created. It has often been said that the machine is both the glory and the scandal of our age. It is the task of education to help men wipe out the scandal and increase the glory and one of its first steps in this will be to bring a common realization that machines by themselves are

neither good nor bad, but the responsibility for their proper use remains with those who use them. This means that our modern problems of technological development are primarily spiritual and social. Our primary duty is to build within us the standards of character and social responsibility which will enable us to use machines so that they will not longer be a scandal but will increasingly be the glory of our age.

Early during my experience in the mill I heard much about the Marxian doctrines. I talked these theories over with my father, who was a practical man. He told me that these theories were impractical because if put into action, they would destroy individual initiative. I have met with these issues all along the way but my observation is that no country has succeeded under this form of government and I am not ready to substitute them for the way of life we have known.

I have had an excellent opportunity to see the harsh conditions

I have had an excellent opportunity to see the harsh conditions which our present system of economics and government permits. I know the forces which are making for radicalism in the United States. I have seen trades wiped out and those who worked in them turned out on the street without any protection whatsoever. I have seen middle-aged men thrown on the scrap heap of indus-I have seen middle-aged men thrown on the scrap heap of industry as though they were so much worn-out furniture or antiquated machinery. I know the hot passion which leaps up in the heart of a man when he has an experience like this. I know how necessary it is that industry and government shall work together to protect workers from the shock of sudden unemployment. Although machines make new jobs they also deprive men of jobs and the man who is caught in the slump of unemployment between one trade which is dying and another being born must have protection while he is in the middle. I have voted for the social legislation which has this purpose. I have voted for every relief and work-relief appropriation. However, I have consistently pointed out that if these appropriations were not used in such a way as to encourage business and reemployment, they would bring no permanent solution of our problem. Moreover, I am utterly opposed to the use of relief money for partisan political purposes. I have repeatedly said that I know of nothing worse than to use relief funds as a political club, compelling a man to abandon his individual party affiliations before he can qualify to receive assistance from his government.

In conclusion I wish to extend my very best wishes to your

In conclusion I wish to extend my very best wishes to your National Graphic Arts Education Guild. You have taken up your work where the memory of man could not any longer bear the burden. Henry Noel Humphreys in his magnificent History of the Art of Printing a half a century ago pointed out how knowledge was transmitted from generation to generation by the priestly caste who treasured in memory all the classical learning of that ancient time. Nothing was handed down which could not be remembered for there were no hieroglyphics no alphabet and no ancient time. Nothing was handed down which could not be re-membered for there were no hieroglyphics, no alphabet, and no printing in that early age. This requirement, that all knowledge to be transmitted must be committed to memory, limited new learning and stultified the mind. The past was honored while the present and the future were largely ignored. It was not until men began to engage in trade and commerce and voyages on the Mediterranean that our western European heritage of printing, first by hand and then by press, was initiated. That was a great day. When man learned to write and to print, it was no longer necessary to limit knowledge to the narrow boundaries of memory, for it could be handed down to the future in permanent records. Thus a great increase of knowledge was permitted and wherever the printed word has gone, from that time to this, mankind has profited from the extension of knowledge and the creation of new mental horizons. I congratulate you on your honorable profession.

You lead the world in learning by doing.

Operation of National Labor Relations Act

EXTENSION OF REMARKS

HON, LEWIS B. SCHWELLENBACH OF WASHINGTON

IN THE SENATE OF THE UNITED STATES Tuesday, April 11, 1939

ARTICLE FROM OCTOBER ISSUE OF FORTUNE AND EDITORIAL FROM THE EMPORIA GAZETTE OF OCTOBER 23, 1938

Mr. SCHWELLENBACH. Mr. President, in view of the continued discussion of the National Labor Relations Act, I ask leave to submit for the RECORD a very carefully prepared article on the operations of the act as administered by the National Labor Relations Board. The article appeared in the last October issue of the magazine Fortune.

Rather than indicate in any detail the nature of the magazine which published the article or the nature of the article itself, I include for publication in the RECORD, at the head of the article, an editorial which appeared October 23, 1938, in

the Emporia Gazette and was written by the editor of that famous paper, William Allen White. Also, along with Mr. White's editorial I include the brief comment of the editors of Fortune in the October number, in which they state the frame of mind in which the facts regarding the Labor Relations Act and its administration were sought by members of the Fortune staff.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Emporia Gazette of October 23, 1938]

AN AMAZING RECORD

Fortune is the highest priced magazine in America, and probably in the world. It is the de luxe publication of our country. It contains the advertising of all the powerful industrialists, the

It contains the advertising of all the powerful industrialists, the big business boys—the swank, important captains of our commerce. Yet, as those things go, Fortune might be called the organ of our benevolent plutocracy. Its class consciousness is tempered by reason and often guided by intelligence.

These remarks are called forth by the record which Fortune published in its October number. It revealed an appalling story—one of cruelty amounting to wickedness, injustice merging to crime—a record which was taken from the findings of the National Labor Relations Board. It is worth untold millions to this land to have that record appear in Fortune. No public service that has been done by any other single newspaper or magazine this year will bring so much genuine good to this country as to have the plutocratic subscribers of Fortune read this amazing record of testimony under oath, set out officially by the National Labor Relations Board.

Labor Relations Board.

Mr. Luce, the owner of Fortune, is entitled to a medal for his distinguished service. The record he has published is fair, is timely, and it must have taken a considerable amount of moral and financial courage to print it in Fortune. That records hould have been always and graduated to Eviture because of and mancial courage to print it in Fortune. That record should be circulated by the millions, and credited to Fortune because of the status of Fortune. For all America should read that Fortune record. It is significant and deeply important that America should know the truth. Only as she knows the truth as set forth in this Fortune article will public opinion be free to march on.

[From the column of editorial comment in the October issue of Fortune]

Fortune]

Of all the varied subjects in this issue of Fortune, the most controversial is certainly the National Labor Relations Board, described on page 52. It is so controversial that it inevitably brings up anew the question of editorial objectivity, which we have talked about on this page before. In assigning itself a subject like the Labor Board, Fortune never knows in advance what its conclusions are going to be. True, we approach all our assignments with a broad general bias (call it a preference for democracy, individual freedom, and the profit system) and we know that this bias will usually land us on one side of the fence or the other. But we don't know which side—until all the facts are in. Facts, in our view, are not inherently controversial, and it is in fact gathering that Fortune lays claim to being as impartial as the facts themselves.

selves.

That's the mood in which we started looking into the Labor Board. And we soon found ourselves holding on for dear life. The facts are there, all right, but they are so obscured by passions that few people have ever managed to get them out whole. Fortune's staff members had hardly stepped out of Rockefeller Center before they heard themselves called Communists from one side and capitalist stooges from the other—on no evidence but their show of curiosity. Wherever their search led them, "heat lay in the very sod." Nevertheless, we got the facts, and our bias (especially that in favor of democracy) has led us to certain conclusions about them, which you may learn of by turning to page 52 and reading the story. These conclusions may well make a lot of fair-minded people pretty sore. If so, it will probably be because they have not studied the Labor Board and the act it was created to enforce. Which in turn is because most of the information about the Board has hitherto been so heatedly and incompletely disseminated. pletely disseminated.

THE G- D- LABOR BOARD

"Great credit must be given to those employers who have led the way toward the acceptance of this law. Their calm voices have been most effective in overcoming the irrational fears which agitators have sought to cultivate. Such employers serve themselves and their country well." (Joseph Warren Madden, Chairman, N. L. R. B.)

"* * we are addressing ourselves now to public enemy No.

1. Fear of the inquisitorial activities of this agency (the National Labor Relations Board) has spread like a blight over management, workers, and investors of capital. The administration of the National Labor Relations Act has been such as to snuff out the fires of industry and send millions of workers into the line of the unemployed." (Senator Edward R. Burke, of Nebraska, be-fore the United States Chamber of Commerce, May 1938.)

"My arm will be palsied and my tongue will be silenced before I will ever compromise with a seceding movement or a common foe * * *. We will mobilize all our political and economic strength in an uncompromising fight until this Board (N. L. R. B.) is

driven from power * * *. The Board is a travesty on justice." (William Green, President, American Federation of Labor, before the Massachusetts State Federation, August 1938.)

"The largest draw-back to good industrial relations is, of course, the Wagner Act * * *. He [the employer] can only be heard the wagner act " ". He [the employer] can only be heard when he is summoned, and he knows before he goes that there is no record of a single decision where he has had a ghost of a show. So what! In the history of jurisprudence in the United States everyone has been equal under the law until the Wagner Act dispelled this privilege." (William S. Knudsen, President, General Motors Corporation, before the United States Chamber of Comperce May 1938) merce, May 1938.)
Thus the most bitterly contested of all New Deal legislation

draws its opposition from politics, organized labor, and industry. And included in this essential paradox there are other paradoxes without precedent in labor history. There is the spectacle of an American Federation of Labor president matching the indignation of a General Motors Corporation president; of a labor law condemned for its demoralizing effect on labor; of an attack on labor legislation led by employers with a record for beneficent pater-

Against the National Labor Relations Act (N. L. R. A.) itself its business critics return a scathing indictment. It is patently one-sided—exclusively a labor law. It prejudges the employer to be a scoundrel without rights in equity. It penalizes him for even a mild expression of personal opinion, but it provides no penalties for fraud, coercion, or violence on the part of a hotheaded labor minority. It sets up a Board that is at one and the same time judge, jury, and prosecutor, and provides no real opportunity for an impartial court review of the Board's decisions. The Board's findings of fact are held to be conclusive if supported by evidence—which may be interpreted to mean any evidence whatsoever. It violates the right of free speech, the rights of property, the inviolability of a contract. It promotes lawlessness, destroys discipline, and encourages strikes against society. It is in short a dangerous intrusion of radical bureaucracy into private enterprise. Against the National Labor Relations Act (N. L. R. A.) itself its

Against the National Labor Relations Board (N. L. R. B.) they are no less incensed. They find it biased, incompetent, and visionary. They point to the deliberate inconsistency of board decisions that have adversely cited the Consolidated Edison Co. of decisions that have adversely cited the Consolidated Edison Co. of New York for promoting collective bargaining and adversely cited the Republic Steel Corporation for discouraging collective bargaining. They bring up the case of the Kentucky Firebrick Co., which was ordered to reinstate, with back pay in full, 30 strikers involved in a violent riot; the Fansteel Metallurgical Corporation, which was required to reinstate, without prejudice to their seniority rights, the sit-down strikers who seized its North Chicago plant and held it for more than a week against a sheriff's posse; the National Electric Products Corporation, which was ordered to ignore a contract with an American Federation of Labor union and hold an election of its employees to select a proper bargaining agency (an election won by the A. F. of L.)—and this in the face of a district court decision that the original A. F. of L. contract was valid and binding.

They cite an Oregon yarn-manufacturing company that was held to have violated the law because it followed the advice of the State conciliation board in an attempt to settle a strike; an Ohio equipment company to whose employees the Board denied all collective-bargaining privileges for 6 months at the request

an Ohio equipment company to whose employees the Board denied all collective-bargaining privileges for 6 months at the request of a minority C. I. O. union; and a North Carolina textile mill that was held to have violated the law because it failed to protect a union organizer from the violence of a local mob formed, in part, by its employees. Behind these seemingly illogical and inconsistent activities the average "informed observer" feels that there is a strong C. I. O. bias, a vicious and subversive political philosophy, and a dangerous threat to the entire industrial structure of the United States.

This point of view toward the N. L. R. A., as most of its critics will usually admit quite frankly, is colored by emotion. But emotion is not confined to opponents of the act. It seems to be an inevitable part of any approach to industrial relations.

to be an inevitable part of any approach to industrial relations. It is the single common denominator of such conflicting points of view as those of the paternalistic employer, the militant labor leader, the firmly entrenched president of an old-line international, the rank-and-file worker.

The result is that industrial relations have achieved the unreasoning bitterness of a holy war. They have become a battlefield of slogans and shibboleths, of coercion and propaganda, of intimidation and mutual accusation, of guerrilla warfare and strikes. It is this battlefield that the N. L. R. B. has invaded—intending, according to its sponsors, to "smooth out obstructions to the free flow of commerce"—succeeding, according to its opponents, in makflow of commerce"—succeeding, according to its opponents, in making an already intolerable situation infinitely worse. Drawn up on one side is an almost solid phalanx of United States industry led by the National Association of Manufacturers and the United States Chamber of Commerce, and at the moment heavily supported by the leaders of the A. F. of L. On the other side is the C. I. O. and what is probably a majority of the rank and file of organized labor.

Now confusion characterizes this strife, and the chief reason for the confusion is the fact that two issues are almost inextricably involved. There is first the issue of whether the right of collecinvolved. There is first the issue of whether the right of collective bargaining ought to be encouraged and protected by law. And then there is the issue of whether the National Labor Relations Act is a desirable piece of legislation and whether the National Labor Relations Board is a desirable governmental body. It is ap-

parent that no progress can be made in clarifying the situation unless these two issues are considered in turn and separately. The man who believes—on or off the record—that unionization is a bad man who believes—on or off the record—that unionization is a bad thing, or the man who is against collective bargaining by independent unions for all, or a substantial portion of American labor—such are per se against the N. L. R. A. But the antithetical position is not so clear. It is not clear because this legislation, which was designed primarily to protect a right, has become automatically (as well as by virtue of its preamble) legislation to promote and encourage a practice. Therefore those who accept the principle of collective bargaining do not necessarily agree in their attitude toward the N. L. R. A., depending upon whether they think collective bargaining ought to be encouraged or whether they think it should merely be accepted as a precessary and perhaps even temporatory.

should merely be accepted as a necessary and perhaps even temporary evil, they may be for the act or against it.

The latter group, which asserts itself as for collective bargaining in some sense, and at the same time against the act and the Board, is especially important; and we shall return to it

Broatherolgistes

presently for a closer scrutiny.

It is the purpose of this article, however, to study the N. L. R. A.; and for this purpose it will be necessary to beg all of the above controversy. Collective bargaining is not our present concern. If you are against it, your most logical course is to move for the outright repeal of the N. L. R. A.; and falling that, your next move is to make it ineffective or incorrective by movement. for the outright repeal of the N. L. R. A.; and failing that, your next move is to make it ineffective or inoperative by amendment. But what if you accept it, whether actively or passively? In that light the soundness of the act and the effectiveness of the Board require your examination; indeed it is only in that light that they can sensibly be examined. What follows, therefore, is an estimate of the N. L. R. A. as an instrument for collective bargaining. How well is it accomplishing its announced purpose? Is it being competently administered? How does it work? And should it—from the collective-bargaining point of view—be amended? be amended?

be amended?

The National Labor Relations Act was drafted by Senator Robert F. Wagner of New York with the cooperation of the A. F. of L.—
at that time a united, if somewhat discordant, labor family. It was passed by Congress in June 1935 and was granted a certification of legitimacy by the Supreme Court in April 1937 in a court-room charged with political dynamite. The Board is heir to a fairly long line of tentative labor administration, including the National War Labor Board and the boards set up by the Railway Labor Acts of 1926 and 1934. Its modus operandi—its "judge, jury, and prosecutor" pattern—stems from a wide variety of quasijudicial, administrative agencies operating in fields in which highly specialized knowledge and information are held to be necessary specialized knowledge and information are held to be necessary both for investigation and for judicial determination. These go both for investigation and for judicial determination. These go back to the Interstate Commerce Commission and include the Securities and Exchange Commission as well as the Federal Trade Commission, whose procedure the N. L. R. B.'s closely resemble. Its immediate ancestor is a former N. L. R. B. created by congressional resolution to administer the cryptic section 7a of the ill-starred N. I. P. A. N. I. R. A.

Perhaps because it is frequently confused with its labor-law ancestors, most of which combined mediation, arbitration, and a statement of labor's rights in a single shotgun prescription, more probably because it is almost always publicly discussed in the raised voice of special pleading, the N. L. R. A. is the least understood, most frequently misinterpreted piece of New Deal legislation. But an unbelievably small number of those who argue its merits from either side of the fence have bothered to read the 4.600 words that form its text.

merits from either side of the fence have bothered to read the 4,600 words that form its text.

Actually it is, in its stated purpose and its draftsmanship, one of the simplest and most forthright laws of the land. It does not create, as is frequently assumed, a mediation board, although members of its staff have at times performed some valuable, if strictly informal, mediation services. Mediation is left to State mediation officers and to the United States Department of Labor under its able Director of Conciliation, John R. Steelman. It is not in itself concerned with waves or hours or working conditions. not in itself concerned with wages or hours or working conditions. These again are left to various State agencies and to the new Federal Wage and Hour Act. The sole concern of the N. L. R. A. is the right of employees to organize and to bargain collectively with their employers.

with their employers.

The preamble to the N. L. R. A. states its purpose. "It is hereby declared to be the policy of the United States to eliminate the causes of certain substantial obstructions to the free flow of commerce * * * by encouraging the practice and procedure of collective bargaining and by protecting the exercise by workers of full freedom of association, self-organization, and designation of representatives of their own choosing. * * *"

freedom of association, self-organization, and designation of representatives of their own choosing. * * *"

To make this policy effective the act defines five unfair labor practices. In lay terms, if you are an employer, you are not allowed to participate in any way in the formation or administration of a labor union. You can't use your power of hiring and firing to discourage or encourage membership in a labor union. You can't discriminate in any way against an employee because he testifies before the Board or files charges against you. You must bargain in good faith with whatever representatives a majority of your employees choose to represent them, although you are not required to reach an agreement. And you must do nothing (according to the catch-all section 8 (1)) "to interfere with, restrain, or coerce [your employees] in the exercise of [their] right to self-organization, to form, join, or assist labor organizations, [and] to bargain collectively. * * *"

In other words, however kindly and paternalistic your motives may be, you must, according to the act, lay off. And if you accept

this general prohibition at its face value, and go into the bargaining conference in good faith, the chances are that while your troubles with labor may not be over, you will at least have no

trouble with the N. L. R. A.

Since you are required to bargain in good faith with the representatives selected by a majority of your employees, the question naturally arises as to what constitutes a "majority," or more properly what unit or units within your company should have the properly what unit or units within your company should have the right to select separate bargaining representatives. Should you deal with representatives acting for all the workers in your plant or corporation or with the representatives of separate crafts or departments? On this point the act is far from specific, perhaps because at the time it was drafted the bitter A. F. of L. split was still an intramural fight. It refers to "a unit appropriate" for bargaining purposes and leaves it to the discretion of the Board to decide "in each case whether in order to insure to employees the decide "in each case whether, in order to insure to employees the full benefit of their right to self-organization and to collective bargaining * * * the unit appropriate * * * shall be the gaining * * * the unit appropriate * * * shall be the employer unit, craft unit, plant unit, or subdivision thereof." And it empowers the Board to investigate and if necessary hold secret

it empowers the Board to investigate and if necessary hold secret elections among the workers involved to find out what organization or organizations they want to have represent them.

It is obvious that broad discretionary powers are given to the Board in establishing bargaining units as well as in detecting unfair labor practices, even though its decisions on all complaint cases are subject to review by the Federal courts, which have sole authority to enforce its orders. Industry and the A. F. of I. believe that these discretionary powers are far too great. The Board contends that the act cannot be fairly administered without them—that industrial relations are essentially human relations and that their infinite variation in detail can never be fully codified.

There are many ways of measuring the success of a quasi-judi-

that their infinite variation in detail can never be fully codified. There are many ways of measuring the success of a quasi-judicial administrative agency. There is the superficial legal yardstick that measures its success by its litigation record. By this yardstick the N. L. R. B. has been phenomenally successful. Its score in the Supreme Court of the United States is 12 to 0; and in the circuit courts of appeal the score on September 1 stood at 34 to 14 (at least 6 of the Board's 14 reverses will probably be appealed to the Supreme Court). But a far sounder yardstick—perhaps the only true yardstick—is the Board's record in making effective the declared purpose of the N. L. R. A., which is, as already stated, to protect the right to bargain collectively. It is that record, in its strictest sense, that we are examining.

already stated, to protect the right to bargain collectively. It is that record, in its strictest sense, that we are examining. It is generally conceded that the Labor Board is the hardest working Government agency in Washington. One reason is that the Board and its employees live with their jobs. Another is the sheer volume of work that has piled up since 1937 when the Supreme Court unexpectedly handed down the Jones & Laughlin decision, which convinced industry and labor that the N. L. R. A. was

the law of the land.

the law of the land.

Between October 1935, when the first N. L. R. B. hearing was held, and July 1, 1938, some 16,200 cases involving about 3,900,000 employees were brought to the Board by workers and labor organizations. More than three-quarters of these cases were officially closed during that period. Of these, about 16 percent were dismissed by the Board or by its regional directors, approximately 25 percent were withdrawn, and an additional 54 percent were settled by mutual agreement. Only some 5 percent of all the charges filed required a formal hearing before a trial examiner.

The Board that is conducting this staggasting experiment in his

The Board that is conducting this staggering experiment in hu-man relations is composed of three men who receive \$10,000 a year apiece and are required, somewhat needlessly, to engage in no other vocation or avocation. The chairman is a tired, soft-spoken, 48-year-old ex-law school dean from Pittsburgh, named Joseph Warren Madden. He came to Washington with a sound legal background (he personally argued the Jones & Laughlin test case before the Supreme Court), a genuinely judicial temperament, few, if any, New Deal connections, and faith in the essential fairness and hon-New Deal connections, and faith in the essential fairness and honesty of both industry and labor—a faith that had survived his successful chairmanship of the three-man arbitration board that settled the Pittsburgh streetcar dispute in 1934. His first official act was a reassuring speech to business. Shortly thereafter, presiding at one of the first Board hearings, that of the Fruehauf Trailer Co. in Detroit, he heard testimony to the effect that a Pinkerton detective had been hired to work in the factory, become a member of the union, and in time union treasurer, report on all union activity in the plant, and, wherever possible, influence union policies. in the plant, and, wherever possible, influence union policies.

Further testimony developed the point that the Pinkerton man had also embezzled union funds. Madden, thoroughly shocked, brought company counsel to their feet when he announced that the

company ought to damn well make the loss good. The statement was accepted as proof of Madden's prejudice and bias.

A month later he concluded a speech before the Congress of American Industry in New York with the words: "Under these conditions it is remarkable that among the leaders of the newly organized groups there are as few hotheads and zealots as there are. And to the extent that new leadership is unwise it seems to me that to the extent that new leadership is unwise, it seems to me that the cure is as obvious as the cause. Let the employer make known by word and conduct to his workmen that they have the right to organize and meet without interference, that any employee may act like a man and take a man's part in the determination of his affairs, and sound leadership will inevitably emerge. If this be not a sound prediction, the whole basis of American democracy is false."

There was a slight flutter of applause.

The two other members of the Board, Edwin S. Smith and Donald Wakefield Smith, are known to Washington correspondents as the Smith brothers—a fact that annoys them both. Perhaps

the only thing they have in common is William Green's dislike. Edwin Smith, a Harvard graduate whom Green calls "impossible," is a former Boston personnel director and Massachusetts commissioner of labor and industries and is a hold-over from the original sioner of labor and industries and is a hold-over from the original N. L. R. B. Practically and academically his labor-relations background is broader than that of his two colleagues. He is the Board's only businessman, only nonlawyer, and only dissenter (he has dissented in 12 of the Board's thousand decisions); is generally considered its "radical" member. To the charge that the Board is pro-C. I. O. he says: "This just factually isn't so. Read the two annual reports. * * * The Board is not trying to remake history. But (in determining appropriate bargaining units) we are obligated to determine the best interests of the majority in a plant. To some extent it is qualitative, of course—one kind of right against another * * *"

Donald Wakefield Smith, who is sometimes known as Donald Duck, and whom William Green calls "unqualified," is the only Board member who is said to owe his appointment to political influence. (His sponsor was Senator Guffer, of Pennsylvania.) He was originally appointed to fill the unexpired term of John M. Carmody, but he was reappointed in August for a 5-year term over A. F. of L. opposition.

He is the son of a steelworker and the nephew of Charles Cadman, composer of From the Land of the Sky Blue Water. He won a scholarship that took him through the University of Pittsburgh, then received a law degree from Georgetown. At the time of his appointment he was practicing law in Philadelphia, specializing in labor and immigration cases. Donald Smith is the Board's youngest (39), least tactful, and most talkative member.

But the Board is considerably more than three men. It is also But the Board is considerably more than three men. It is associated its staff—regional directors, field attorneys, review attorneys, littingation attorneys, field examiners, trial examiners—some 800 men and women probing deep into the sore wounds of industrial discord from Hawaii to Maine. It is Charles Fahy, its general counsel, a Georgia Catholic who served at the front as a naval counsel, a Georgia Catholic who served at the front as a naval air pilot in the war and cracked up one night in a bomber near Dunkerque; who practiced law in Washington and helped carry the famous Wan third-degree case to the Supreme Court in association with John W. Davis (whom he next met as the opposing counsel in the N. L. R. B.'s Associated Press case before the same Court some 13 years later); who went to New Mexico for his health and found a new social interest in the land cases of the Pueblo Indians; who came back to Washington as a Solicitor for the Department of the Interior and was later chairman of the Petroleum Administrative Board who has the chairman of the Petroleum Administrative Board, who has the enviable distinction of having argued seven cases before the Supreme Court—and won them all.

Supreme Court—and won them all.

It is Robert Watts, Army Reserve officer and associate general counsel, from Maine, Bates College, and Yale Law School; who looks a little like a young King Cole and who was one of United States District Attorney Buckner's bright young men in the gaudy twenties in Manhattan; who went to Europe for Mr. Mellon's Treasury Department in 1929 on secret-service work in connection with smuggling operations; who left a lucrative corporate practice in New York to become special counsel to the old Labor Board; who, in the early days when injunction suits threatened to bring the Board's work to a standstill, flew 6,000 miles a month; and who has argued before every circuit court of appeals in the country.

appeals in the country.

It is George Pratt, its chief trial examiner, from Harvard Law School and a conservative corporation law firm in Kansas City, who has the manner and charm of a member of the Racquet Club in good standing and who surprised both his family and himself by taking an active part in the reform attack on the Pendergast mataking an active part in the reform attack on the Pendergast machine in a dynamite, time-bomb, tommy-gun Kansas City election; who took his first job with the Board as regional director in Kansas City because there didn't seem to be anyone else to handle it; and who has since served the Board in almost every capacity—as attorney, trouble shooter, and trial examiner.

It is Bennett Schauffler, regional director in Philadelphia, who makes Philadelphia businessmen like the act because they like and report him, and it is Filmers Herrich regional director in Normal Report of the Communication of the Pendergast mass content of the Pendergast mass content of the Pendergast mass characteristics of the Pendergast mass c

respect him; and it is Elinore Herrick, regional director in New York, who doesn't much seem to care whether businessmen like her or not, although a surprisingly large minority do; and it is Philip Phillips, regional director in Cincinnati, who makes south-ern Ohio businessmen obey the law and see red.

ern Ohio businessmen obey the law and see red.

And most characteristically of all, the Board is a group of amazingly young men—which is not a matter of chance but a deliberate Board policy. Board staff salaries are low. Seasoned men of real ability must have a highly developed social consciousness to be willing to accept them. Too often the choice lies between brilliant, unseasoned men a few years out of college and political hacks to whom a job with the Board would represent a juicy plum. As between the two the Board votes for youth—which is one reason the Board's public relations are very bad and its litigation record very good indeed. On the last day of the Bethlehem Steel hearing, before Assistant Chief Trial Examiner Frank Bloom in Washington, when evidence that would normally have required some 3 months of hearings was stipulated into the record in 3 hours, the assembled might of the great New York law firm of Cravath, de Gersdorff, Swaine & Wood—counsel, associate counsel, and assistants—found itself opposed by one skinny youth, a Virginian named Earle Shawe, looking for all the world youth, a Virginian named Earle Shawe, looking for all the world like a high-school valedictorian—a circumstance that, paralleled in innumerable Board hearings, is not good for the Board's public relations.

Industrial warfare creates raw wounds; investigations, attempts up." In a New York town the Board's attorneys were greeted with a brass band. But in Wallace, Idaho, the "goddam Communists" couldn't buy a meal. The Civic and Commerce Association of Montevideo, Minn., wrote: "May we offer you our full cooperation in this matter and express the hope that if we can be of assistance to you you will feel perfectly free to call on us." But during an Indiana hearing the regional attorney was poisoned twice in the same restaurant; in Steubenville, Ohio, the trial examiner was hanged in effigy; and in Newton, Iowa, Gov. Nelson G. Kraschel said: "You can tell the cockeyed world that there will be no Labor Board hearings in the military district of Iowa."

This element of the unpredictable, the essentially human, carries over into the hearing room. Testimony ranges from broad farce

over into the hearing room. Testimony ranges from broad farce to sheer horror. In the case of Metro-Goldwyn-Mayer Studios and the Motion Picture Producers Association, in Los Angeles in the fall of 1937, Grover Jones, veteran Hollywood writer, entertained a hilarious courtroom for 2 days with the raw material of a new

Once in a Lifetime.

"Mr. Jones. They wanted 80 Indians, and I got the job only because I knew how to put on what they called bolamania, burnt umber and raw umber mixed. But they made me a chief. That meant I didn't have to go naked. I could wear a suit, you see. And at that time I was convinced I was fairly smart. So there were

meant I didn't have to go naked. I could wear a suit, you see. And at that time I was convinced I was fairly smart. So there were now 81 Indians. I had never seen a camera during all those months, because I was always in the background waiting over in the back of the hill for the call to come over the hill on the horses to rescue the child. And I had never been on horses. So we sat on these horses, each confiding in the other, and none had ever been on horses, except we were all hungry. Finally the man said, 'Now, look, when you hear shooting I want you all to come over the hill, and I want some of you to fall off the horses.' Well, in those days they paid \$3 extra for a man who would fall off a horse, because it is quite a stunt. So we waited until finally we got the call to come over the hill, and somebody shot a gun off, and 81 Indians fell off their horses. So I gave up acting * * *."

But in a case in Alabama a month before the melodrama was more authentic and considerably less funny.

A union organizer (who was testifying to an attack on union headquarters): "About that time they were rushing the stairway * * we put a table against the door. A portion of the glass door was exposed above the table, and bricks began to come through the glass * * * (a newspaper reporter phoned at this point). I said, 'They're tearing the building down. They're tearing the offices apart and beating our men up * * * if it is possible for you, I don't know how much longer I will be able to talk, send in some State police, if you can, because,' I said, 'T can't talk to you any longer.' I threw the phone down and by that time it was my turn to run the gantle * * I fell half way and rolled the rest. After I hit the street I was kicked from both sides into the gutter and a fellow was standing on top of me. I heard somebody say, 'That's enough, let him up.' I fell half way and rolled the rest. After I hit the street I was kicked from both sides into the gutter and a fellow was standing on top of me. I heard somebody say, 'That's enough, let him up.' Two fellows picked me up, one had hold of each arm, and another fellow knocked me out of their arms. They were dragging me out of the crowd and one fellow was trying to choke me, had his arm around my neck, and while he was choking me a police officer did come up and say, 'I will take him.'"

From the record of another hearing comes the testimony of an employee:

From the record of another hearing comes the testimony of an employee:

"Q. You had been shot?

"A. Yes * * * I was under the table lying flat for 10 minutes * * * I heard a man from outside say, 'God, they're not blanks; they're bullets.'"

In North Carolina the mayor of a mill town who was also a mill employee, led a mob of 200 people to the house of a union organizer. The mayor's brother testified:

"And Mr. — (town alderman) said 'If anyone in the bunch will go with me down to [the organizer's] house I'll stick a match to the house and burn them up like rats, kids and all.'"

Testifying at a hearing in Michigan last year a witness described a labor riot in part, as follows:

"Mr. — (a member of the general executive board of his

restriving at a hearing in Michigan last year a witness described a labor riot in part, as follows:

"Mr. — (a member of the general executive board of his union) was attacked by four or five men who kicked him in the general region of his stomach and plugged him from the rear * * * and he was finally forced to the cement over to my left and there a separate individual grabbed him by each foot and by each hand, and his legs were spread apart and his body was twisted over toward the east, and then other men proceeded to kick him in the crotch and groin and left kidneys and around the head and also to gore him with their heels in the abdomen. (And later) * * * And the girls were at a loss to know apparently what to do, and then one girl near me was kicked in the stomach, and vomitted at my feet. * * * I stayed there until practically all the literature had been gathered from the ground and until the girls had been pushed back on the trolley and the trolley had gone and it became very quiet around there and relatively still."

And at a hearing in New York State a strikebreaker described the aftermath of a labor riot as follows:

"I met [the president of the company] in the plant about an hour or two afterward. He had been taking pictures, moving

pictures, and I really believe it was a very good stunt on [his] part because he took some nice pictures and showed how my men were showered with bricks. I believe he published some in the papers afterward showing how the peaceful pickets molested those who wanted to go to work. In fact, he identified some of these employees of his, that were on strike, throwing bricks and showering rocks on these peaceful chaps I had, wanting to go to work [a union witness described the strikebreakers as being 'about the toughest bunch of men I ever laid eyes on, half of them had scars from ear to ear on their faces'] * *. [The president] talked about the pictures. He said he had photographs about the assault and my people had done wonderful work and started to congratulate me * * * he congratulated me on the brilliant work I had done, and I said I didn't see anything brilliant about it, the men had gotten into the plant the best way they could while they were under a shower of bricks, and he was taking pictures of it. Naturally he had them published showing peaceful pickets, America, a free land, all that stuff. Naturally, it wasn't bad stuff, because those peaceful pickets were certainly raising the devil * * * *."

Excerpts such as the above, lifted from millions of words of testimony, prove nothing in themselves. But they are quoted here to provide a glimpse of the background of violence, melodrama, and sheer absurdity against which industry and labor and the bright young men of the N. L. R. B. are acting out their parts in what Fortune last November called "one of the greatest mass movements in our history * * * comparable * * * to the great trek westward, beginning in the Mississippi Valley and ending on the Pacific coast." And it is against this background that the Board's record and technique and judicial integrity must be judged.

With the color and the fireworks and the human element de-

With the color and the fireworks and the human element deleted, here's how the Board works in principle at least. Any employee or labor organization may go to any one of the 22 regional offices and file a charge of unfair labor practices. A field examiner then investigates the case, talking to the employer and employees concerned. Some 40 percent of all cases that the Board has disposed of have been either withdrawn or dismissed at this point because of lack of evidence or foundation in fact—which helps explain why so few cases that go to a formal hearing are helps explain why so few cases that go to a formal hearing are decided in favor of the employer. If the investigator and the regional director find substantial evidence to support the emregional director find substantial evidence to support the employees' contention, they usually make an effort to encourage a settlement without issuing a complaint. Among the many cases involving strikes that were informally and amicably disposed of at this point were those of the Postal Telegraph Co., at Detroit, and the International Shoe Co. If the employer, however, refuses to comply with the Board's request to clean house, the regional director part issues a complaint of this reddeful the unfolker. director next issues a complaint citing in detail the unfair practices with which he is charged.

director next issues a complaint citing in detail the unitar practices with which he is charged.

If the employer still refuses to bring himself within the Board's interpretation of the law, he is given a limited length of time in which to answer the complaint, and a hearing is scheduled before a trial examiner appointed by the Washington office. This differentiation between the prosecuting and investigating functions of the Board, which are handled by members of the regional staff, and the judicial function handled by Washington, is deliberate. It is a practical way of avoiding unintentional collusion between Board attorneys and Board examiners. At the hearing (only some 5 percent of all cases so far closed ever reached this stage) the employer may call his witnesses and cross-examine witnesses for the Board; and any labor unions interested in the controversy may intervene. Among others the Borden Co. case, involving some \$35,000 in back pay to discharged employees, was settled during the hearing. Following the hearing the trial examiner usually files what is known as an "intermediate report", and everyone concerned is given time to file objections. The report and the objections are reviewed first by the Board's own review section in Washington and finally by the Board itself. The employer may as a rule argue his case orally. A number of companies have been given a clean bill of health upon review—among them the Solvay Process Co., the United Fruit Co., and the General Chemical Co., and substantial portions of other complaints have been dismissed. But as industry contends, only a few cases are dismissed in full after a hearing. after a hearing.

after a hearing.

If the Board finds the employer guilty as charged, he is again urged to bring himself within the law without further litigation. If he refuses, the Board then petitions a circuit court of appeals for a court order directing the employer to conform with the Board's cease-and-desist order. At this time the employee has the right to have his case reviewed by a court. It is only when the circuit court of appeals upholds the Board's order—it may be from 1 to more than 2 years after the filing of the original charge—that the employer comes under legal compulsion to obey the law. His only further appeal is to the Supreme Court.

In recent months there has been an increasing tendency to comply with the Board's recommendations or orders and to cooperate with the Board's attorneys in speeding up hearings. But this was

ply with the Board's recommendations or orders and to cooperate with the Board's attorneys in speeding up hearings. But this was not always so. Until the Supreme Court upheld the N. L. R. A. in April 1937, the better part of the Board's time and effort was taken up in fighting injunction suits seeking to prevent hearings. The movement grew like a snowball rolling downhill. Nearly a hundred such suits were instituted. And as a result the Board was practically stymied for nearly 2 years after the passage of the act. One of the classic cases is that of the Bradley Lumber Co., of Warren, Ark., in which the Board was forced to undertake four

collateral lawsuits, winning each one, in its fight to conduct a

Three days after the Schechter decision of the Supreme Court invalidated the N. I. R. A. the Bradley Lumber Co. announced a 60-hour week instead of the 44-hour week then in force, and at the same time cut wages substantially. As Associate General Counsel Robert Watts told a Senate subcommittee, there had never been a union in the plant; but the Bradley employees themselves now formed a local lodge of the Brotherhood of Carpenters and wrote to the American Federation of Labor for a charter, which in due course was granted. The company answered by firing more than 70 men and dispossessing a number from their company-owned houses. When discharged employees looked for work in neighboring States they found their names blacklisted and some were told that the Southern Pine Association would see that they never drew another pay check in the South. The new lodge filed a charge with the N. L. R. B. asking, in effect, "What can the Government do for us?" The Board investigated and a complaint Government do for us?" The Board investigated and a complaint was issued. The company applied to a United States district court for a restraining order to prevent the Board from conducting a hearing. The order was refused. It appealed to a United States circuit court. Again the order was refused. And early in 1936 Robert Watts and his assistant, David Shaw, arrived in Warren to prepare for a hearing. Their first difficulty was in finding hotel rooms. Their next difficulty was in remaining when they had found them. Several days after their arrival a delegation called on them with some advice and a petition. The petition, signed by the mayor, the sheriff, the marshal, and every other local peace officer, stated that in the opinion of the undersigned there was nothing to the charge. The advice was, in effect, to get the hell out of town and not come back.

Watts and Shaw stayed. At the hearing that began a few days later, several exhibits had been offered in evidence when the sheriff arrived somewhat breathless, stalked up to the bench and served each member of the Board staff with a restraining order—signed by a county judge. Here was presented one of the most incredible situations in the history of litigation in the United States. Either the Board must proceed and enforce the law, or an Arkansas county judge's authority must be recognized as superior to that of Congress and the duly constituted courts of the United States.

In the emergency Watts telephoned to Washington and recom-

the United States.

In the emergency Watts telephoned to Washington and recommended that the hearing be transferred to New Orleans. At daybreak next morning he loaded his witnesses and participants into a chartered bus "and at that time I must say in defiance of the order of the learned county chancelor" removed them to New Orleans where the hearing proceeded in due course. Following the Supreme Court decisions of April 1937, the Bradley Lumber case was finally settled and the company paid some \$15,000 in back wases.

Superficially no two cases handled by the Labor Board are alike; and in every case there are two sides—two opposing interpreta-tions of fact—which is one reason why Labor Board decisions are without meaning to the casual observer. But if you care to do a little digging and a little analyzing, logic and a pattern begin

to emerge.

to emerge.

Board cases may be divided roughly into two general groups: "complaint" cases involving unfair labor practices and "representation" cases, which are concerned with the proper unit for collective bargaining and the labor organization that should represent the unit. Then there are the highly publicized "contract" cases involving the upsetting of contracts already made between an employer and a union. These are actually both representation and complaint cases.

The complaint cases cover violations of the five subsections

representation and complaint cases.

The complaint cases cover violations of the five subsections of section 8 of the act—coercion, employer influence over a union, discriminatory discharge because of union activity, discrimination because of an employee's appearance before the Board, failure on the part of the company to bargain in good faith. Most complaint cases involve violations of two or more sections. But to clarify the subject each section should be considered separately.

separately.

Among the most frequently criticized findings are those concerned with "catchall" section 8 (1), prohibiting interference Among the most frequently criticized findings are those concerned with "catchall" section 8 (1), prohibiting interference with, restraint, or coercion of employees in the exercise of their rights. It was written into the N. L. R. A. because its sponsors realized the fact that only a small number of the means by which labor may be coerced, consciously or unconsciously on the part of the employer, could be foreseen and codified; and it is one of the reasons the act is so hard to evade. Testimony has developed hundreds of such incidents.

The president of the Titan Metal Manufacturing Co. (machinery parts) declared to his employees in a signed letter, "The American Federation of Labor at the present time is behind legislation which will decrease the working week to 30 hours and thus reduce your average pay check still more, increase your company's costs, and eventually force a real 'closed shop' where the noise of production has died away; where machinery hummed, spiders will spin their webs; where the tread of industrious workmen has given way to the creep of cowardly rats."

creep of cowardly rats."

Mayor Ezra Davis, of Cookeville, Tenn., came to the plant of his good friends the Washington Manufacturing Co. (work clothes), and after the head forewoman in the sewing room had shut off the power, made a speech, in which he said, "I was in Louisville during the big flood. And I saw a union leader there wearing diamonds as big as marbles." The Ford Motor Co. distributed cards throughout its River Rouge plant containing attacks on labor unions under the heading "Fordisms." ("Figure it out for yourself, If you go

into the union they have got you—but what have you got?") The vice president of the Washington, Virginia & Maryland Coach Co. attended a union meeting wearing a bus driver's cap. The Clover Fork Coal Co. bought four kegs of beer for an antiunion "yellow dog" parade. Remington Rand hung a "For sale" sign on its Ilion plant. And in far-off Alaska the Alaska Juneau Gold Mining Co. persuaded food stores of the town to cut off credit to strikers.

persuaded rood stores of the town to cut off credit to strikers.

Because of these and other actions these companies were held to have been in violation of section 8 (1). Obviously under this section it is relatively easy for an employer, acting in all good fath, to find himself in violation of the law. A casual conversation with an old employee, a vehement letter to a local paper attacking unions, the actions of an overzealous foreman—any of these may be judged illegal. However, the N. L. R. A. prescribes no penalties for unfair labor practices. The net result of 8 (1) violations is an order not to do it again.

violations is an order not to do it again.

The so-called "company union" was management's first gesture toward better industrial relations. It survived to become one of toward better industrial relations. It survived to become one of its strongest weapons in repelling organization by "outsiders," and an estimated 70 percent of all employer-promoted unions in existence when the N. L. R. A. was passed were formed following the enactment of the N. I. R. A., section 7a, which encouraged

labor organization.

labor organization.

The formation of a typical company union usually went something like this: The boys out in the plant are getting a little restive. There's some talk of organization among the hotter heads. And there's a report that one of those s. o. b.'s from the union has been hanging around the gates at lunch time. Well, we've already given the boys everything except our shirts; they've got the best pay and the best working conditions in the industry. But if they want a union, why we'll give them a union, damn it. So a meeting is called of some of the sounder elements in the plant and someone makes a speech pointing out that unions collect heavy dues to line the pockets of a bunch of agitators, and all they accomplish is to stir up discord because that's the only way they can justify their existence.

A company union on the other hand won't cost the boys a cent. They can elect their own representatives to sit in on a joint management-employee committee. They can hold meetings in a company conference room and on company time. And one of the

pany conference room and on company time. And one of the front-office stenographers will take down their minutes. Presently a rough draft of the proposed set-up, prepared by the legal depart-ment, is offered for discussion and in due course adopted, and the

boys have a union.

boys have a union.

In its best form the company union led to greater harmony between employer and employee. It gave the employee a greater understanding of management's problems; and it provided a basis for consultation, if not actual bargaining. In this form it was very much like the "student council" system in vogue in schools and colleges. In its more protean form, however, it was little more than a thinly disguised defense against outside organization. And in either case it vitlated, to a degree, the economic bargaining power of the employee.

power of the employee.

When the N. L. R. A. was upheld by the Supreme Court there was an immediate effort by company unions to change themselves. into unions without apparent company domination. Industrial-relations experts found their services in demand. And the National Association of Manufacturers, never heretofore a spokesman for union labor, carried a sympathetic article in its Labor Relations Bulletin entitled "Independent Unions," offering advice on how to change an "employee representation plan" into an "independent union."

pendent union."

Section 8 (2) forbids an employer to interfere in any way with the formation or administration of any labor organization (defined as an organization existing for the purpose of dealing with employers concerning grievances, wages, etc.) or to contribute financial or other support to it. Is it possible for a union limited to a single company or plant to exist without some measure of employer interference or influence? Theoretically, the answer is "yes." Practically such a union would, in time, very probably come under some degree of employer influence. And most complaint cases involving section 8 (2) have resulted in cease-and-desist orders. But in these cases, as in so many others that come before the Board, the real issues are frequently clouded by emotion, by community hysteria, and by a distrust of unionization itself. And many Board decisions, soundly arrived at from the point of view of collective bargaining, have appeared arbitrary and inconsistent to the casual observer.

inconsistent to the casual observer.

It is hard to conceive of a more difficult assignment than to administer section 8 (3) of the N. L. R. A. without a margin of error. Section 8 (3) says in substance that the power to hire or fire or to control an employee's status cannot be used to discour-

fire or to control an employee's status cannot be used to discourage or to encourage membership in a union—unless your company is operating under a valid closed-shop contract. Otherwise, the Board has declared in no uncertain terms that the act does not affect the employer's right to hire and fire as he sees fit.

He may select or reject men on the basis of age, efficiency, race, or religion. He may hire or fire them because he likes or dislikes the color of their hair or the way they treat their wives or their political beliefs. The only restriction on his free choice is that he cannot hire or fire a man because of union activity.

But no man is ever discharged without at least a nominal reason; and since the validating of the National Labor Relations Act

son; and since the validating of the National Labor Relations Act by the Supreme Court in 1937, it is very unusual for an employer admittedly to discharge a man on the basis of his union activities. On the other hand, in any group of men there are a certain number of chronic shirkers, looking for any excuse to avoid hard work. The Board is therefore faced continually with the problem of sepaMinimum and Annie Company

rating the black sheep from the white; and it is sometimes almost impossible to secure conclusive proof as to the true motive behind a discharge. In the Jones & Laughlin Steel Corporation case a worker was discharged for leaving a key on a bench. In the case of the Pacific Greyhound bus lines a driver was discharged for causing an accident involving a \$55 damage claim. In the Federal Bearings Co. case a girl was discharged for causing a disturbance and

using obscene language in the washroom.

In all of these cases the Board ordered the reinstatement of the discharged employees, although in no case was there more than inferential evidence. The Board found that: The man who left a key on a bench had worked for Jones & Laughlin for 15 years as a crane operator, and it was not unusual for a craneman to forget his key; he was active in union affairs; and the company had at that time adopted a strong antiunion policy. The Greyhound bus driver had an excellent safety record, but he was an active unionist; the company did not as a rule discharge a man for this kind of accident, if his record was good; and, again, the company had shown a strong preference for one union over another. The girl discharged for creating a disturbance in the factory washroom had come directly from an interview with her foreman, who had said, "Why don't you get wise to yourself and take that damn [union] button off?" And, as the Board held, "A factory washroom is not a place where decorum in the use of language is commonly observed."

In the Willard Hotel core it was a contraction of the contraction o

In the Willard Hotel case it was claimed that Garland P. Webb, waiter, was fired not for union activity but because he served a breakfast tray on which the ham was thinly sliced, warm apple-sauce (specially requested) was served in the wrong dish, and there was no butter. Soberly Board Members Madden, Smith, and Smith remarked: "As to whether the warm applesauce was correctly served in a peacock china dish when the rest of the meal was served on gold-band china, there is a conflict not only between the testimony offered on behalf of the Board and that on behalf of the respondent, but also as between two of the respondent's witnesses." When he was questioned as to the absence of butter, Garland Webb, waiter, replied: "It was the morning after New Year's Eve. All the other room-service waiters were off." The Board ordered his reinstate-

The return of discharged employees under a Board order is bad for discipline, particularly if the employee has been honestly discharged for cause. And it is almost certainly true that the Board has made mistakes in ordering the return of certain employees, a

has made mistakes in ordering the return of certain employees, a fact that the Board would probably be the first to admit. However, the fact remains that in few cases has the Board ordered the reinstatement of an employee where it has not found evidence of definite antiunion activity on the part of the employer.

One of the few cases not following this rule is that of the Star, of Seattle, Wash. The Star had agreed to bargain with the Newspaper Guild as the union representing its editorial and circulation department workers. But shortly after the Newspaper Guild left the A. F. of L. and joined the C. I. O. the Star received a visit from a representative of Dave Beck's powerful A. F. of L. Teamsters Union. The visitor, Shaw by name, told the Star that if the 20 guild members employed in the circulation department did not join the Teamsters Union or were not replaced by members of the union, the teamsters would refuse to deliver the paper the following morning. teamsters would refuse to deliver the paper the following morning. The Star asked for time to settle the matter. Shaw, secure in his knowledge of Beck's power over Seattle, refused. The management of the paper then gave Shaw permission to address a meeting of the circulation department employees in the plant. A secret vote was taken, and the gulld members voted unanimously not to become teamsters. The teamsters refused to handle the paper. The management then asked the guild if it would guarantee distribution. The guild members refused because delivery was outside their jurisdiction, and as one of them admitted, a Dave Beck goon squad jurisdiction, and as one of them admitted, a Dave Beck goon squad was at that moment picketing the trucking entrance to the plant. Faced with the certainty that the Star could not find its way to Seattle doorsteps unless it capitulated, the management then informed Shaw, who was still waiting in the office, that the teamsters could replace the guild members in the circulation department. However, instead of being discharged the 20 guild members were given temporary positions in other departments. The Star was delivered the following morning. But at 10:30 the entire guild membership welked out on strike. The Star was definitely closed membership walked out on strike. The Star was definitely closed

When the case was brought before the N. L. R. B., the Board had little discretion. Under the law it was obliged to find for the 20 deposed Guild members and order their reinstatement in their deposed Guild members and order their reinstatement in their former jobs; the newspaper, through no fault of its own, had been coerced into a violation of the act. For by moving 20 Guild members from jobs in which they were reasonably secure and giving them admittedly temporary jobs in other departments the management had definitely changed their employment status because of their union affiliations. In its decision the Board stated that the newspaper was in "an unenviable position," a triumph of understatement. However, the decision was upheld in the circuit court. What are the rights before the Board of a worker who has vio-

What are the rights before the Board of a worker who has vio-What are the rights before the Board of a worker who has vio-lated the law? Here again the Board has made decisions that have been vigorously attacked. In the case of the Fansteel Metallurgical Corporation the Board ordered the reinstatement of a group of sit-down strikers who had seized its South Chicago plant. (This decision was reversed last July by a circuit court of appeals but will be appealed to the Supreme Court.) In the case of the Ken-tucky Firebrick Co. the Board ordered the reinstatement of 30 out of 31 striking employees who the company claimed had engaged in of 31 striking employees who, the company claimed, had engaged in violent battle with nonstrikers—a battle in which a number of people were wounded. (A circuit court upheld the Board last Junc.) The Board's decisions on this point are based more nearly upon a rule of thumb than has been found possible in administering other sections of the act. If a worker is apparently guilty of a felony, it is the practice of the Board not to order his reinstatement. If he is guilty of a misdemeanor during the heat of labor discord, the Board has ruled that he should retain all of his rights as an employee. employee.

employee.

A recent action on section 8 (3) which made the headlines is that of a young man named Harold Kirkman who has never worked for the American Rolling Mill Co. but whom the Board's attorneys currently trying the Armco case in Catlettsburg, Ky., wish to see so employed. It seems probable on the basis of the record that young Kirkman was discriminated against on the basis of his father's union activity. And it is true that the act says that there shall be no discrimination as to hire or tenure of employment because of union activities. However, it seems at the moment very unlikely that the Board's attorneys can make such a case hold up.

a case hold up.

a case hold up.

There have not been many complaints issued under section 8 (4), which declares it to be illegal to discriminate against an employee because he has filed a charge or appeared before the Board as a witness. In one case, that of the Friedman-Harry Marks Clothing Co., the president of the company is reported to have said, "She may have been laid off before, but she is discharged now, running down there and causing all this trouble." But section 8 (5), which covers a refusal to bargain collectively, is frequently invoked. Most commonly, refusal to bargain involves an employer's refusal to recognize a union or talk with its representatives. These cases are as a rule fairly cut and dried. More difficult are cases in which the defense is entered that the employer is in doubt as to whom he should bargain with. Most difficult of all are those in which a definition of bargaining is employer is in doubt as to whom he should bargain with. Most difficult of all are those in which a definition of bargaining is attempted. The classic case is that of the St. Joseph Stock Yards Co. in which the Board held that discussion is not a substitute for negotiation. Bargaining must be carried on in good faith. But bargaining is not interpreted to mean that an agreement must be reached. If an agreement is reached, however, it must be made offective and binding

made effective and binding.

In seeking to understand the paradox of William Green and why the A. F. of L. officially hates the N. L. R. B. we come to the Board's handling of its so-called unit cases (sec. 9b); not that this is necessarily the real reason for Mr. Green's anger but that it is a persistent source of irritation.

Even it John L. Lewis had not picked up his markles and walked.

Even if John L. Lewis had not picked up his marbles and walked out of the A. F. of L., taking a big portion of A. F. of L. brains with him, section 9b would have been a ticklish problem. Estabwith him, section 9b would have been a ticklish problem. Establishing the appropriate unit for bargaining is something like setting freight rates under the I. C. C. And as the Board remarked in its first annual report, "the complexity of modern industry, transportation, and communication, and the diverse forms which organization among employees has taken, preclude the application of rigid rules." Through thick and thin, hell and high water, the Board has maintained this principle—flexibility must rule its unit decisions.

unit decisions.

Three typical examples, if any unit cases may be called typical, serve to illustrate the main yardsticks.

First. What is the present union set-up—in the company to be considered and in the industry as a whole? In the case of the Huth & James Shoe Co., in Milwaukee, the A. F. of L. wanted to split the employees up into eight units of cutters, fitters, lasters, sole leatherers, bottomers, finishers, wood heelers, and packers. The Board decided in favor of an industrial unit, arguing that "the shoe manufacturing industry today is virtually without craft unions." * * * In this case the A. F. of L. union involved admitted all plant employees to membership and was prepared to bargain for them.

admitted all plant employees to membership and was prepared to bargain for them.

Second. What is the geographical and the functional set-up of the company and the industry? The "little cigar" department in American Tobacco could have become a part of the main bargaining unit of the factory. The Board said: "The little cigar department is really a factory within a factory. It could as well be operated entirely independent of the rest of the Reidsville plant."

Third. What type of work and degree of skill is involved? The "live traffic" employees of R. C. A. Communications were set up by the Board as a separate bargaining unit. In its decisions the Board said, "The live-traffic employees are engaged in work of a highly skilled nature and have qualifications and duties different from those of the office employees. Most of them have received a technical training of a distinctive type which distinguishes them from the other workers of the company."

The problem of the appropriate unit reaches its acute stage in

the other workers of the company."

The problem of the appropriate unit reaches its acute stage in cases in which both A. F. of L. and C. I. O. unions are involved and are not in agreement. The Board first met the problem directly in the case of the Globe Machine & Stamping Co., of Cleveland. The dispute was between the United Automobile Workers and various A. F. of L. unions, and the policy the Board created is still known as the Globe doctrine. It rules, so far as the majority of the Board is concerned, in all doubtful cases where other considerations are held to be equally balanced. In essence the Globe doctrine is simply to let the men decide for themselves—that is, to hold a separate election in each proposed unit for a choice as between the industrial plant-wide unit and the particular craft unit involved. It is the reverse of the principle that the State cannot secede from the union. Thus in the Globe case the Board ordered separate elections to be held in the two units claimed by A. F. of L. unions. (The elections were won by the C. I. O. industrial union in each of

the two craft units as well as in the rest of the plant.) Important the two craft units as well as in the rest of the plant.) Important as it may be as a yardstick, it should be remembered, however, that the Globe doctrine is only applied in cases in which "other considerations are evenly balanced." (For further application of the Globe doctrine see the Worthington Pump & Machinery Corporation, Schick Dry Shaver Co., and the Combustion Engineering Co., decisions in all of which Edwin S. Smith delivered a dissenting opinion. Mr. Smith stresses the importance of majority rule—except where there is a definite past history of craft bargaining.)

A particular blow to William Green's peace of mind was delivered as the control of t

opinion. Mr. Smith stresses the importance of majority rule—except where there is a definite past history of craft bargaining.)

A particular blow to William Green's peace of mind was delivered by the Board's recent decision establishing longshoremen in Pacific coast ports as an appropriate unit. The decision was based on the fact that close and detailed bargaining had been carried on for some time between Pacific coast longshoremen and a single employers' association; but it was violently attacked by the A. F. of L. The unit was, the Board held, a reflection of the organization of the employers. "Since the essential working rules are on a coast-wide basis, and since port differences occur only in nonessential matters, the argument against a coast unit, based on working rules, does not carry much weight." Which explains in part the A. F. of L.'s political desertion of the N. L. R. A and its recent violent press attacks on the act and on the Board.

But at best this is only a partial explanation. There are two additional reasons that are far more fundamental—one, emotional; the other coldly pragmatic. The emotional reason is that the high command of the A. F. of L. simply can't accept the fact that the Board recognizes the existence of the C. I. O. as part of a dual labor movement in this country. Mr. Green has accused the Board of giving to an "insurgent" group "the rights of belligerents." The second reason lies in the fundamental difference between the A. F. of L. and the C. I. O. conceptions of unionization. The controlling voice in the A. F. of L. has been for years a group of skilled and semiskilled craft unions with high wage scales maintained in part by the deliberate limiting of the labor market in their fields. These wage scales were only possible because a relatively small part of American labor was organized. It is obvious that the average wage of American labor cannot be raised to the levels now enjoyed by the privileged A. F. of L. unions without inflation. Therefore, it is and always has been raised to the levels now enjoyed by the privileged A. F. of L. unions without inflation. Therefore, it is and always has been to the advantage of these A. F. of L. craft unions to limit the labor movement in the United States to a relatively small and select group.

Included until recently in the A. F. of L., however, were a number of powerful industrial unions suffering from none of the inhibitions that limited the A. F. of L.'s organization policies. This dissenting group had split with the A. F. of L. in principle long before the division became apparent. But the final break was probably precipitated by personal friction and the unwillingness of the A. F. of L. high command to accept the financial risks involved in the

organization of industrial unions.

organization of industrial unions.

It is probable that the present A. F. of L. leadership, if it thought that far ahead, expected to be able, under the protection of the N. L. R. A. to skim off the cream of unionization in the form of additional craft unions strategically placed in the mass-production industries. The C. I. O. beat the A. F. of L. to the gun, and as a result of the warfare that followed the Board stands before the country indicted for a C. I. O. bias. A poll of public opinion taken in August of this year indicated that 92 percent of those people who believed that the Board had shown bias toward any particular labor organization felt that it was prejudiced in favor of the C. I. O.

The record, however, does not bear out this impression. From

The record, however, does not bear out this impression. From The record, however, does not bear out this impression. From the time of its inception until June 30, 1938, the Board was called on to determine the appropriate unit for collective bargaining in 112 cases in which both A. F. of L. and C. I. O. unions participated. These 112 cases may be divided logically under three headings: (1) Forty-one cases that express the very essence of the A. F. of L. C. I. O. controversy. This classification includes cases in which the Board was called on to decide as between craft and industrial units. a unit for several plants and a unit for one plant, separate departa unit for several plants and a unit for one plant, separate departmental units and a single plant unit. (2) Seventeen cases in which A. F. of L. and C. I. O. agreed as to the general outline of the unit and disagreed only over such minor details as the exclusion or inclusion of certain marginal groups. (3) Fifty-four cases in which there was no dispute as to the appropriate unit, and the problem was simply to certify the union that could show a majority membership, either before or after a general election.

In neither perore or after a general election.

In neither group 2 nor group 3 did Board decisions have serious consequences for either side. Therefore, the Board's rulings as between the two types of unionization can be narrowed down to the 41 cases of group 1. The record as of July 1, 1938, shows that in these 41 cases the Board upheld the main contention of the A. F. of L. 21 times and found for the C. I. O. only 16 times. There follows a tabulation of Board decisions in the 112 cases.

III. Complete agreement as to the appropriate unit......

In the supercharged atmosphere in which the Labor Board operates it is sometimes the relatively routine things that stir up the most trouble. There is, for instance, the group of Board decisions referred to as "contract" cases. They are considered as a separate group largely because they have attracted wide public attention. The Board may declare a contract invalid (1) because it was made with a company-dominated union; or (2) because its execution constituted in itself an unjet labor practice unduly. execution constituted in itself an unfair labor practice, unduly

favoring one union over another.

There were 93 cases up to June 30 in which the Board had to consider existing contracts. In 35 of these it declared the contracts invalid. In each case charges of unfair labor practices were filed and sustained. Twenty-eight contracts were declared invalid because they were made with company-dominated unions in vio-lation of the law. The first and best known of these is that of the Clinton Cotton Mills and the "Clinton Friendship Association," which was formed soon after the 1934 textile strike came to an end. which was formed soon after the 1934 textile strike came to an end. The Board ordered that all recognition be withdrawn from the "Friendship" and declared the contract void. Of the seven remaining contracts declared invalid all involved the A. F. of L. In six cases charges were filed by C. I. O. unions; in one by a railroad brotherhood. These are the cases that have made the headlines, and of these the National Electric Products Corporation case has been most frequently cited. The company signed a closed-shop and of these the National Electric Products Corporation case has been most frequently cited. The company signed a closed-shop contract with the A. F. of L. union at the height of a C. I. O. organizing campaign. The Board decision said in part that the company "by urging, persuading, and warning its employees to join the brotherhood (A. F. of L.) and to refrain from joining the united (C. I. O.) and by threatening them with discharge if they failed to comply * * has engaged and is engaging in unfair labor practices * * "." Following the Board decision, which called for an election, came a sudden wave of name calling and pose thumbing. "Petty hursesurgers would be dictators puffed-in called for an election, came a sudden wave of name calling and nose thumbing. "Petty bureaucrats, would-be dictators, puffed-up commissars, prejudicially minded muddiers of the waters," said Dan Tracy, of the brotherhood, speaking of the Board. "Theirs is the mean conventional service of men without scientific method or social vision * * *" And the company attorney remarked "It would serve no good purpose to comment on our surprise at the attitude of the N. L. R. B. which we assumed had been set up by Congress as a neutral agency for the settlement of disputes."

The net result hardly justified the furor that had been aroused. The Board election was won by the A. F. of L., 918 to 685. The C. I. O. charged undue influence by the company during the election, but young James Carey, president of the United, wrote to the Board: "In the interest of the labor movement and true collective bargaining we waive our right to file exception in this case, although we have sufficient grounds to do so."

Proposals to amend the N. L. R. A. can almost be said to have started before the act was passed; in fact, most of the amendments currently suggested were considered by the Education and

ments currently suggested were considered by the Education and Labor Committee of the Senate when Senator Wagner's bill was first presented. The proposed amendments are in general of two kinds: One seeks to limit the power of the Board, another to "equalize" the act—that is, to make it a two-way law restricting

labor, as well as management.

labor, as well as management.

The supporters of the first group base their argument, when it is presented in good faith, on the grounds that 3 years of experimentation with a new law is bound to uncover weaknesses that can be corrected by a reconsideration of the problem. At the time of going to press with this issue of Fortune, the A. F. of L.'s amendments have not yet been fully drafted, but proposals have been announced. The A. F. of L. according to General Counsel Joseph Padway, would limit the Board's right to invalidate contracts between the employer and a union. It would make it obligatory on the Board to recognize craft unions wherever the workers gatory on the Board to recognize craft unions wherever the workers in a unit ask for them. It would permit employers to express an opinion to their employees about the relative merits of two comopinion to their employees about the relative merits of two competing unions. It would authorize court review of Board decisions certifying a union as exclusive bargaining agent. It would allow court review of fact, as well as law. And if possible, it would remove the Board's judicial functions completely, vesting them in a new and completely independent bureau.

The National Association of Manufacturers, on the other hand, has concentrated on amendments to equally the set. It would

The National Association of Manufacturers, on the other hand, has concentrated on amendments to equalize the act. It would provide that employees should not be subject to coercion from any source. And it would absolve the employer from dealing with labor organizations guilty of any one of a long list of major and minor misdemeanors in the course of a strike. Almost any reasonable person is apt to find the National Association of Manufacturers proposed amendments, at first glance, a highly desirable improvement on the present act. They apparently are designed to restrain admitted abuses on the part of labor and make the act a two-way instrument—fair and just to everyone concerned. Another frequently proposed amendment provides that unions Another frequently proposed amendment provides that unions guilty of violence in any form should no longer be protected in their rights to organize and bargain with the employer. Still

Samura and Barrensude and

another proposes that the employer should be allowed to file unfair practice charges against a labor union.

The merit of any particular amendment cannot be decided without reference to the purpose for which it was intended. And the purpose for which it was intended is often, in the nature of things, extremely difficult to define. This is not the place to weigh the pros and cons of the dozens of amendments that have been suggested, and the dozens more that are in the offing, or to examine the motives of their sponsors. But reference to the original definitions upon which this article was premised (p. 54) will make clear the various attitudes applying to most of the amendments that have been proposed. There it was pointed out that those who are actively against collective bargaining are logically against the N. L. R. A. and all its works; and hence that, short of outright repeal, their only course is to amend the act into ineffectuality. Just how big this group is, it is impossible to say, because in the temper of the times many if not most of those who are actively against collective bargaining prefer (a) to keep The merit of any particular amendment cannot be decided withsay, because in the temper of the times many if not most of those who are actively against collective bargaining prefer (a) to keep their thoughts to themselves, or (b) to give lip service to the principle temporarily. It is necessary to suppose, however, that the group is relatively large. And it is a certainty that it will do everything in its power to obstruct collective bargaining, whether secretly or overtly.

But all employers do not belong to this group by any means. And there are two other groups that merit particular attention. The first was defined on page 54 as accepting and engaging in collective bargaining but at the same time as unwilling to agree that collective bargaining ought to be the pattern for all industrial relations, and as being opposed to its promotion by law. When this position is honestly held, it involves opposition to the act combined with acceptance of collective bargaining as a practical matter.

This is a logical position, though not a particularly strong one, and the group in question is relatively small. It merges, however, into a much larger group which takes the same position but without the logic. These persons stoutly declare that they are for collective bargaining but assert with equal vehemence that they are against the act and the Board. The A. F. of L., which finds itself in this position, may in view of the craft union versus industrial union dispute, plead an exception. But in any case the logic of the record that we have just examined bears down heavily on the rest of the group. The Labor Board, created for the unique purpose of protecting and encouraging collective bargaining, has proceeded to its task with a singleness of purpose that is rarely hoped for in governmental bodies and still more rarely achieved. And as a result the motives of anyone who declares himself in favor of its purposes but against it in fact are logically and practically suspect. This is a logical position, though not a particularly strong one, practically suspect.

practically suspect.

In the light of these considerations the problem of amending the N. L. R. A. can be better understood. It is clear that from the point of view of those who actively believe in collective bargaining, to the extent that they are willing that it should be encouraged by law, little if any amendment to the act is needed. Almost all suggestions for amendments have been put forward from other motives: for instance, from an honest desire to improve industrial relations generally by making the law a two-way law; from an honest desire to obtain a better acceptance of the act among employers by (let us say) dividing the function of the law; from an honest desire to obtain a better acceptance of the act among employers by (let us say) dividing the function of the Board into two agencies, the one judicial, the other administrative and fact gathering; or, at another extreme, from an honest desire to kill the effectiveness of the law entirely. But finally it is necessary to point out that, from the standpoint of the sponsor of collective bargaining, almost all amendments so far proposed, from whatever motives, would have the effect of impeding, or slowing down, or in some way complicating the progress of collective bargaining per se. lective bargaining per se.

Before throwing the N. L. R. A. back onto the floors of Congress for revision, it is necessary for industry and labor alike to ponder these distinctions and to determine their courses accordingly. The balance is a critical one—no less than industrial peace or war. And nothing can so easily upset the balance as confusion concerning the motives and purposes involved.

concerning the motives and purposes involved.

The purpose of all so-called labor legislation is to equalize to some degree the bargaining powers of the employer and employee. The late Chief Justice Taft of the Supreme Court of the United State, in a decision in 1921, defined the need for unionization perhaps as effectively as it has ever been expressed: "They (labor unions) were organized out of the necessities of the situation. A single employee was helpless in dealing with an employer. He was dependent ordinarily on his daily wage for the maintenance of himself and family. If the employer refused to pay him the wages that he thought fair, he was, nevertheless, unable to leave the employ and to resist arbitrary and unfair treatment. Union was essential to give laborers opportunity to deal on equality with their employer. They united to exert influence upon him and to leave him in a body in order by this inconvenience to induce him to make better terms with them. They were withholding their labor of economic value to make him pay what they thought it was worth. The right to combine for such a lawful purpose has in many years not been denied by any court."

The National Labor Relations Act in its present form for the

The National Labor Relations Act in its present form for the first time in the history of the United States assures labor a right that, as Mr. Justice Taft said, "has in many years not been denied

by any court." It does that successfully; it does very little more; but that it should be fully empowered to do if it is to remain the law of the land.

A Tribute From the Colorado State Senate

EXTENSION OF REMARKS

HON. EDWARD T. TAYLOR

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 11, 1939

LETTER FROM COLORADO STATE SENATE

Mr. TAYLOR of Colorado. Mr. Speaker, prior to my coming to Congress, I was honored by being elected to the Colorado State Senate three terms. Our Colorado Senate is composed of 35 members. We naturally became exceedingly well acquainted with one another and had a community of interest in trying to serve the welfare of our beloved Centennial State.

My service in that body was not only very interesting, instructive, and congenial, but it was also a happy experience. It will always be a treasured recollection. I have felt an interest in the subsequent lives of each of my associates and have naturally watched the membership and the proceedings of that body with interest from that time to this.

So, when on yesterday my colleague [Mr. Martin] on behalf of the present Colorado State Senate, presented me with a most gorgeous silver gavel as a courteous token of the unanimous good will of that body, I could not express how much I appreciated that tribute. I want to first thank my colleague [Mr. Martin] for his most complimentary and

generous tribute to me.

Since becoming chairman of the Appropriations Committee of the House something over 2 years ago, I have been honored by receiving quite a large number of gavels from widely distributed localities. And all of them are emblematic of the place from which they come and indicative of what they represent, composing an exceedingly interesting and attractive collection of tokens. Nevertheless, I frankly say that this gavel from the Colorado State Senate comes from home and really touches my heartstrings a little more than any of the others.

I will be delighted to occasionally use this and various other gavels in presiding over the great committee of which I have the honor of being chairman, and will take pride in calling the attention of the 40 members to what these

emblems represent.

I will cherish them, and especially this one, from now on until I reach the end of the trail down the Western Slope of Life.

I want to publicly express to the Colorado State Senate, and to each of its members, my profound gratitude and sincere appreciation of this expression of their kindliness in such an impressive and permanent way. I gratefully thank each member of the senate personally, and the body collectively, for this public expression of approval.

I only hope that during whatever time may be allotted to me in the years to come, nothing may ever occur that will in any way detract from the most cordial spirit that is exemplified by this gavel and the resolutions that were

adopted in connection with it.

Colorado has honored me much more and much longer than I ever in my younger days dreamed would be possible. Actions like the Colorado State Senate has taken in this matter are not only encouraging and most heartily appreciated by the recipient, but they are an inspiration to the youth of our State to strive to accomplish something worth while in the world, to be of service to our Commonwealth, and to lead a life that may be helpful to the generations to come.

I am pleased to insert a copy of the personal tribute, signed by each of the Senators, that accompanied the gavel in addition to the resolution, as follows:

To Congressman Edward T. Taylor, State of Colorado, Fourth District:

Best wishes from each one of us; And we are hoping, too, That you will like the gift we picked Especially for you.

Especially for you.

From: State senators, State of Colorado, thirty-second general

assembly.

igned) Jno. C. Vivian, Lieutenant Governor; M. J. Walsh, secretary; Frank R. Smith, sergeant at arms; Wayne N. Aspinall; D. E. Hunter; John W. Shawcroft; Duncan Lamont; Averill C. Johnson; Walter L. Bain; Grant Sanders; J. Price Briscoe; Fred M. Swisher; Rulolph Johnson; Moses E. Smith; Harry M. McKinney; Ed A. Whitaker; Charles P. Murphy; Geo. A. Glenn, M. D.; Burt Ragan; Joseph P. Constantine; James H. McDonald; Robert F. Rockwell; W. H. Twining; D. L. Williams; Sam T. Taylor; Leo J. Crowley; Willard B. Preston; David Elliot; Curtis P. Ritchie; Donald J. Gilliam; Edw. J. Keating; Juan Noriega; M. E. Latimer; Robert G. Bosworth; Dave Johnston. (Ralph J. Cummings and Harold H. Davies absent because of illness.)

On Partisanship and Politics Against Trade Treaties

EXTENSION OF REMARKS

HON. WADE H. KITCHENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 11, 1939

Mr. KITCHENS. Mr. Speaker, as 1940 approaches I suppose we must expect an alarming increase in the number of wild words, ingenious arguments, and unreliable statistics with which partisanship displaces fair and objective consideration of public questions.

The narrowly partisan Republican leaders are looking for an issue—any issue—on which they can ride back into power. It is not so easy. The tariff is a subject upon which facts

can be confused and made more confounded.

They are for economy, for instance, until they are asked where to begin. We will recall, however, that many of their Members in this House owe their election to promises to take the lid off and throw it away on behalf of bigger pensions, bigger relief pay, and what not. They can point to the other fellow's mistakes but they cannot get together on a constructive program. They can tear down but cannot construct.

The other day there appeared in the Record another speech by the distinguished gentleman from Massachusetts [Mr. Treadway], in which he announced that the Republicans intend to go back and resurrect the tariff as an issue. He says he believes in reciprocity, but not our kind. In other words, he believes in a reciprocity in name only, which is not reciprocity. From his discussion one gets the impression that his reciprocity program calls for an orgy of swapping free-list items. Think of it. A reciprocity of free-list items.

This matter is so important to the best welfare of all the people it should never be a partisan issue at all, and a Republican, who has any regard for his party's record, should be the last to make it so. For otherwise he will find himself not only in conflict with the facts, but in conflict with the judgment and declared conviction of such staunch Republicans as Col. Frank Knox, the party's candidate for Vice President in 1936, Charles P. Taft, Henry L. Stimson, Secretary of State in a Republican administration, such Republican tariff authorities as William S. Culbertson and Robert L. O'Brien, both former members of the Tariff Commission, and a long list of others whose party standing cannot be challenged. He will find himself in conflict with such outstanding Republican newspapers as the New York Herald Tribune and the Chicago Daily News and the Kansas City Star and the San Francisco Chronicle. But above all, as I have said, he will find himself in conflict with the

facts, and with the only intelligent, fair approach to this tariff question.

THE SAME OLD DISCREDITED THEME

The gentleman's theme is the familiar one, easily demolished by reference to the facts, that the American farmer is being ruined by Secretary Hull's trade agreements program because it is letting in great quantities of foreign farm products to compete with his own.

To prove his point he makes a list of what he calls major farm products, and it appears in the Record of March 23 in the form of a table. It shows that on these 16 farm products "protected" by high tariffs under the Hawley-Smoot Act the trade agreements have made reductions in duty in favor of foreign countries, in return for concessions by them, running

up to 50 percent of the 1930 rates.

The gentleman from Massachusetts [Mr. Treadway] did not bother to tell us what actually happened to these 16 products in actual practice under the reduced duties. He used his table to support his charge that the trade-agreements program is ruining American agriculture, on no better authority than the fact that some duties had been reduced in certain agreements on these particular commodities which he included in his list. The implication was plain, and it was intended to be, that in each instance the domestic market had been flooded with foreign goods as a result of the reduction.

The table inserted in the Record by the gentleman from Massachusetts includes cattle, hogs, pork and pork products, whole milk, cream, cheese, live poultry, eggs, honey, barley, oats, rye, apples, cherries, and potatoes. It tells us the extent of the duty reduction effected by one or more of the agreements and then depends on implication to support the gentleman's sweeping and absurd and utterly unfounded charges.

THE FACTS WHICH DISPROVE CHARGES

Let us see what actually happened in the calendar year 1938 as to these 16 commodities and then go back and compare it with what happened in the days of glory when Mr. Hoover and the Republicans were "protecting" the farmer.

Let us examine my colleague's list of products on which the American farmer has been sold down the river. To satisfy my curiosity I obtained the official import and export figures of the Department of Commerce covering the calendar year 1938 and earlier years. And I propose to tell you what the gentleman from Massachusetts failed to tell you.

WHAT ABOUT CATTLE?

He starts his list with cattle. Imports of cattle on which duties had been reduced by the trade agreements declined sharply in 1938, whereas imports of cattle paying the Hawley-Smoot rate of 1930 sharply increased. More than half of all cattle imported during the year paid duty at the Hawley-Smoot rate because they were of classifications on which no concession had been granted. As for the others, they came in at precisely the same rates of duty as those fixed in the Fordney-McCumber Act of 1922, of which the gentleman boasted that it afforded protection to the farmers.

Our concessions to Canada in the trade agreements had merely restored those rates, which had been raised to even greater heights by the Hawley-Smoot tariff of 1930. And we not only kept the Fordney-McCumber duty but limited the number of cattle that could come in under it by definite quotas. When or if these quotas are exceeded, the excess must pay the Hawley-Smoot rates. Certainly, cattlemen and

dairymen will not discard common sense.

Second on his list is swine, on which the duty was cut, in the new agreement with Canada, from 2 cents a pound to 1 cent a pound. We imported swine last year to the value of \$4,660, while we exported \$15,054 worth. In 1931, under the Hawley-Smoot Act, we imported more than twice as many hogs as we did in 1938. Certainly, people interested in hogs will not be sidetracked, and made to forget.

Now for fresh and chilled pork. Here we come to a bigger item. We imported \$670,585 worth in 1938, and it all came in under the rates of Mr. Treadway's beloved Hawley-Smoot Act of 1930. In the new trade agreement with Canada we did reduce the rate from 2½ cents per

pound to 1½ cents per pound. All we have to judge by as to the effect of that reduction are the figures for January of this year, because the agreement did not go into effect until January 1. These show that we imported during January just \$26,376 worth of pork, or less than one-twenty-fifth of our annual imports last year under the Hawley-Smoot rates. As against these imports, we sold abroad last year pork to the value of \$1,332,008, and lard, which the gentleman from Massachusetts [Mr. Treadway] does not mention, to the value of \$18,294,922.

Moreover, under the new United Kingdom agreement, which Canada's cooperation made possible, the British tariff on lard is removed entirely. I appeal to people interested in pork and lard not to forget and to use their common sense.

Mr. Treadway's last item in his list of meats is bacon, hams, and shoulders. The only reduction in duty on those items made by any trade agreement is in the new Canadian agreement. It reduces the rate from 3½ cents to 2 cents per pound, the reduction to apply only to hams that are not cooked, bened, or canned. Nine-tenths of our 1938 imports of bacon, ham, and shoulders came from Poland and adjacent countries and came in under the full rates of the Hawley-Smoot Act. The great bulk of these imports consisted of tinned hams, and the only concessions on bacon, hams, and shoulders of any sort that in the new Canadian agreement does not apply to tinned hams and will not affect this trade. People must think some for themselves or they will be misled for political purposes.

Under the new agreement with the United Kingdom, we not only get complete elimination of the duty on our wheat and lard, but concessions on many other agricultural products of which Britain takes large quantities. Among these are hams, bacon, and shoulders, for which the import quota was raised by some 13,000,000 pounds. So, people, let us think.

IMPORTS OF DAIRY PRODUCTS SMALL

The largest item on Mr. Treadway's list, measured by the value of imports, turns out to be cheese. The Department of Commerce reports that we imported cheese in 1938 to the extent of \$11,542,015. That seemed to be a lot of cheese, and I wondered about it until I turned back to the figures for the year 1931, when the Republicans had been in power for an unbroken period of nearly 11 years, during which they had thrice raised the tariff.

And what happened in the cheese market that year? Although the depression had been on for 2 years, and although the Republicans had "protected" the American laborer so well he had no wages, the farmer until his wheat was selling at 30 cents a bushel and his corn at 15 cents, we imported into this Republican paradise more than \$14,000,000 worth of cheese. The exact figures for 1931 are \$14,726,376. That was under the beneficent Hawley-Smoot Act which the gentleman from Massachusetts held out to us the other day as the salvation of the farmer, if only we would go back to it. Farmers, dairymen, let us think, and let us not forget.

Take milk and cream. The burden of the story we heard the other day, with its misleading table of farm products on which duties had been lowered, was that milk and cream producers were being ruined by heavy importations of milk and cream from abroad. What actually happened in 1938? I have gone to some little trouble in getting the facts, although not interested, except to keep the record straight.

Milk came into this country to the value of exactly \$1,435 and cream to that of \$7,650. Now go back to the days of the Hawley-Smoot Act, and we find that in 1931 we imported just 69 times as much milk as in 1938 under the trade agreements, and more than 16 times as much cream. There is protection for you, although I must admit that even in the year 1931 the imports of milk and cream were not large enough to affect the income of the dairy farmer, because they were so small even then. But the change, if you insist on measuring advantage by the smallness of imports, was all in favor of the trade agreements. And in the same year, 1938, in which our imports of milk and cream combined were only \$9,085, we exported those

products to the value of four times that figure. Yet some of us may forget and be deceived.

Take eggs in the shell, the reduction of duty on which also alarmed the gentleman from Massachusetts [Mr. Treadway] and other opponents of trade agreements. Imports last year came to just \$43,983, while we exported to the value of \$620,806. That surely is not selling the American farmer down the river. In 1931, under the Hawley-Smoot Act, we imported \$12,000 worth more than we did last year. Oh, farmers, think. Use your brains.

LARGE QUANTITIES OF GRAINS EXPORTED

Now let us examine Mr. Treadway's list of those grains on which Secretary Hull and his helpers are supposed to have ganged up in negotiating these agreements.

First on his list comes barley. It seems we made some concessions on that item in one or two of the agreements, cutting the rate from 20 cents a bushel to 15. Apparently our negotiators, anxious as they are alleged to have been to ruin the American farmer and give away his domestic market, slipped up on this one. For imports of barley during 1938 were just \$70,773, while our exports—what the American farmer disposed of in foreign markets—came to \$9,136,000. Oh, for use by farmers of some gray matter now.

FRUITS ON AN EXPORT BASIS

But oats. Look at what they did to oats, says the gentleman from Massachusetts [Mr. Treadway]. The duty was reduced from 16 cents a bushel to 8 cents, and in 1938 this flooded the American market with foreign oats to the value of exactly \$4,729. In the same year we sold abroad American oats to the value of \$2,726,066. When the Republicans were protecting the farmer in 1931 oats came in from abroad to the value, not of \$4,729, but of about 20 times that amount, or \$92,272. Farmers, oh, farmers, please do not forget.

"A POCKET FULL OF RYE" IMPORTED IN 1938

This brings us to rye, third and last grain on the gentleman's list of 16 major farm products for which the trade agreements are supposed to have ruined the American market. And I ask you to hold your breath for just a moment until I give you the figures. These trade agreement fellows, headed by Hon. Cordell Hull, dickered away 20 percent of the protection for rye, cutting the rate from 15 cents a bushel to 12 cents. And the dastardly foreigners came swarming in with—guess how much? Exactly two bushels during the whole of the year 1938. Two bushels of rye valued at \$3. Meanwhile the American rye grower was selling \$2,298,603 worth of his rye in foreign markets. Farmers, if you are ever deceived once, profit by it.

That exhausts the gentleman's list of grains the growers of which have been victimized, he charges, by the tradeagreements program.

FRUITS ON AN EXPORT BASIS

I find two fruits on his list of 16 major farm products, apples and cherries. He complains that the duty on foreign apples has been cut in the agreements from 25 cents to 15 cents a bushel and he would have you believe that the American apple market has been ruined by the resulting importations. What are the facts? In 1938 apples were imported into this country to the extent of just \$44,063 worth, as against \$53,559 in 1931, in the days of the Republicans and the Hawley-Smoot Act. And in the same year 1938 our American growers were selling apples abroad to the value of \$14,700,890. You apple growers of America should remember and never forget.

The same with cherries, another item on the gentleman's list of 16. We imported \$132,503 worth in 1938 and nearly six times that much, or \$751,018 worth, in 1931. And the same with honey, also on his list. Imports of honey and dextrose last year were \$20,928, whereas we exported \$237,329 worth of honey alone. How can we be made blind to all these facts? Only imbeciles will be made to disregard them.

The gentleman is concerned also about the potato market because we reduced the duty on certain kinds of potatoes. In 1938 we imported potatoes to a total value of \$581,299, whereas in 1931 under the Hawley-Smoot Act we imported \$3,125,664 worth, nearly six times as much. And in 1938 we exported almost three times as many dollars' worth of potatoes as were brought into this country. You people in Maine, Vermont, New Hampshire, and the Dakotas must not forget.

I submit that the gentleman either is exceedingly careless, not to say heedless, of the facts, or he has an amazing contempt for the intelligence of the American farmer.

Of the 16 commodities that he has specially selected to show the disastrous effects of the trade-agreements program on agriculture, we exported in 1938 approximately \$44,000,000 worth and imported nearly \$10,000,000 worth less, or \$34,000,000.

AMERICAN FARMERS GREATLY BENEFITED BY TRADE AGREEMENTS

Of course this is only one side of the picture. The other is stated by the Bureau of Agricultural Economics of the Department of Agriculture, which approaches these questions without bias. If it has any bias at all it is a bias in favor of the American farmer. And what does it say of the effect of the trade-agreements program? In a report published in December the Bureau found that—

available data on foreign trade in agricultural products indicate that trade agreements have substantially benefited American farmers. Agricultural exports to countries with which trade agreements were in effect in 1937 have risen many times more rapidly than those to other countries. The trade agreements have been drawn up in such a way as to prevent imports of commodities competitive with domestic farm products from disturbing American markets. The four agreements concluded during 1938, especially that with the United Kingdom should greatly increase the extent to which farmers benefit from the trade-agreements program.

The Bureau of Agricultural Economics is staffed by experts who are permanent employees and officials of the Government, regardless of whether Democrats or Republicans are in power. They are not so free as the gentleman from Massachusetts to make sweeping statements with no foundation in fact. The conclusion they came to and that I have just quoted is bulwarked by tables showing that whereas our total agricultural exports to all other countries increased during the fiscal year 1937-38 by only 3 percent over the fiscal year 1935-36, our agricultural exports to the 16 countries with which agreements were in effect during that year increased by no less than 53 percent, representing a gain of \$102,000,000. And in the same year agricultural imports from the agreement countries actually fell by 3 percent while imports of agricultural products from all other countries increased by 4 percent.

Remember that these exports of American farm products not only brought in \$102,000,000 in cash from foreign countries, but by reducing the surplus contributed by so much to preventing a worse decline than took place in the all-important domestic market.

When we leave out cotton, of which exports have declined for reasons not directly related to tariffs, we find that our other agricultural exports increased during this period by no less than 108 percent to agreement countries, while to all other countries the increase was only 38 percent.

I cannot believe that even the most hide-bound champion of Hawley-Smootism could be deceived by the table put into the Record January 30 by the gentleman from California [Mr. Gearhart] and approvingly referred to and endorsed here the other day by the gentleman from Massachusetts.

It was a table put out by a discredited organization, as far as representing agriculture is concerned, called the Raw Materials National Council; it purported to show that in 1937 the importations of agricultural products into this country were of a volume sufficient to have provided profitable use for no less than 87,000,000 acres of American land, assuming these products had been home-grown, irrespective of cost.

Even a cursory examination of that table demonstrates its complete absurdity. It is the sort of thing that has been used, and will be again, to deceive the American farmer and the American public. I predict that you will hear re-

peatedly, in the course of partisan discussion and oratory in the next 18 months, that we have let in enough agricultural products from foreign lands to displace 87,000,000 American acres that might otherwise have been profitably used.

The report of the Secretary of Agriculture for 1938 discusses agricultural imports and acreage displacement, as follows:

These consist mostly of noncompetitive things, such as silk, rubber, bananas, tea, and coffee. Among the competing products that we import, the most important are sugar, flaxseed, and wool, which can be produced on the whole more cheaply in foreign countries than in the United States. All told, however, we import, of crops that could be grown in the United States, the equivalent of the production of only 10,000,000 to 15,000,000 American acres. Our exports-producing acreage is much greater. Any further restriction of our agricultural imports would react adversely on our exports. What we import enables foreign countries to buy our exports; if they could not sell and buy here they would sell and buy elsewhere.

This maximum of 15,000,000 acres is a far cry from the fallacious claims of 87,000,000 acres. It is estimated that when our agricultural exports were at their height they represented the employment of some 75,000,000 acres. It is conservatively estimated that about 40,000,000 acres are now employed in producing for export. Secretary Wallace states that trade agreements alone have accounted for regaining from five to ten million acres. Here and now that sort of thing should be examined for what it is and once and for all squashed.

GROWING PETROLEUM BY FARMERS AND SWALLOWING REPUBLICAN GAS

Now let us take just one item in this fabulous list—this hypothetical acreage displacement of imports. Remember that this table is made to appear as a displacement of agricultural products. To our surprise we find petroleum listed. Yes, petroleum products are apparently included as an agricultural product by an opposition which is hard pressed for a case. It may be in line with Hoover's recommendation of "oxygen of opposition." The imports for that year are inaccurately stated as 60,000,000 barrels, and we are not told that about 27,000,000 barrels came in bonded for supplies of vessels or for manufacture and export, to the benefit of American workers. In the same year our exports of petroleum products amounted to more than 164,000,000 barrels.

Now, what does the ingenious clairvoyant author of this table do with his 60,000,000 barrels of imported petroleum? He translates it into acres and finds that if it had been produced from corn, rye, artichokes, potatoes, or sawdust, here at home, it would have required 25,200,000 acres to produce. I marvel at the late hours, the profound thought, the intensity of interest, necessary to the calculation.

He has the grace to add a footnote explaining how he arrived at this figure. It says:

Displacement of acreage by crude petroleum figured on the basis of power alcohol required to replace such imports.

One, so reasoning, is wasting his time fooling with statistics. He should be writing mystery stories or turning out Hollywood farce comedies. He should be in some place where his imagination would be appreciated.

If he is right in this argument; if the gentleman from California, and the gentleman from Massachusetts who quoted him with so much respect be right, then we should blow up every oil well in Texas and Arkansas and California and Oklahoma and Pennsylvania and Ohio and Illinois, and all the other oil-producing States and make them quit robbing the American farmer of his market for power alcohol. Will the American farmer be deceived by such deductive and seductive reasoning? If so, I shall lower my estimate of his common sense.

Equally absurd is the showing of acreage displacement of imported chemicals, leather gloves, shoes, and other manufactured products. Why are the imports of steel, metals, coal, and clay products, and even toys included in a table headed "Foreign Crops Displace American Farm Products"? I do not believe American farmers are as

gullible as the author of this masterpiece of propaganda believes. Just think of steel, metals, coal, clay, and toys listed as crops or farm products. Farmers, I call upon you to use your brains as well as your muscles.

SHOULD WE RETURN TO HAWLEY-SMOOT INSANITY?

I have as much respect as any man for the achievements of industrial chemistry, and I am convinced that it is destined to accomplish great things in finding new uses for our farm crops, both old and new. But an argument against the trade-agreements program based on the proposition that we should quit using petroleum and instead run our automobiles with power alcohol, at this stage of development, is too false and ridiculous to merit serious discussion. And I cite it merely as an example of the lengths to which blind partisanship will go and the means to which it is willing to resort.

The trade-agreements program is not a panacea, not a cureall. It cannot wipe out the millions of acres of new wheat and cotton land in other countries and it cannot nullify the paralyzing effects of the constant threat of war and disaster that hangs over the world. It cannot remove in a day so many trade obstructions defensively erected to our high tariffs. But it is a constructive, healing influence in the world trade, in the bread-and-butter world that concerns us all. And if ever the nations return to sanity and peace this program and the spirit behind it will be found by historians to have made its great contribution.

Let me close by quoting the words of one of our great independent newspapers—a newspaper that has not hesitated to attack the New Deal and the Democratic Party when it could not agree with certain policies but whose course through the years has entitled it to the respect of Americans regardless of party. Said the St. Louis Post Dispatch in an editorial on March 3 of this year:

The announcement that Republican leaders in Congress plan to make repeal or emasculation of the reciprocal-trade treaties a major issue in 1940 is keenly disappointing. From the standpoint of opportunistic politics it may be a sound move, but by standards of statesmanship it is palpable demagogy.

If a return to the Hawley-Smoot insanity is the best we can be a force from prairing Papublicanism it is evident that the post in the standard of the post in the standard of the post in the standard of the post of the post

hope for from reviving Republicanism, it is evident that the party has less than nothing to offer in the way of the restoration of a sound economy.

Sound economy.

Senator McNary and Representative Martin, minority leaders in their respective Houses, make it clear they believe that repeal of the reciprocal-trade pacts would be a popular issue with the farmers. Admittedly, the farmers have been led to believe in certain cases that a slight increase in agricultural imports, principally from Canada, has depressed domestic prices. Governor Heil picked up some votes on this issue in his campaign for chief executive of Wisconsin.

But we venture the assertion that there is not one agricultural

executive of Wisconsin.

But we venture the assertion that there is not one agricultural economist of note in the United States but will say that over the long haul the reciprocal-trade program is highly beneficial to the farmer. It has been shown that a lowering of farm tariffs by the reciprocal-trade pacts has been a trifling factor in the fall of agricultural prices. There is one Republican leader who has been doing some hard thinking and frank talking about farm tariffs. Col. Frank Knox says:

"To attempt to help the farmer by promising him higher and higher tariffs on his products is naught but a red herring drawn across the trail to divert him from attack on the excessively high

across the trail to divert him from attack on the excessively high tariff rates on domestic manufactures. * * * The only time tariff rates on domestic manufactures. * * * The only time a tariff on domestic farm products can be of the slightest use to the American farmer is during a season of unusual drought, or crop shortage from some other causes, and then it is always at the expense of the American consumer."

The deep-rooted illness of American agriculture will never be cured by farm tariffs, or by subsidies. It can be cured only by reasonable steps to subject the commodities the farmer must buy to regulation by the same world forces which set the prices of the commodities the farmer produces.

The fairest and most feasible approach to this end is Secretary.

The fairest and most feasible approach to this end is Secretary Hull's reciprocal trade program. We believe the farmer, given time to think the matter through, will recognize the anti-trade-treaty propaganda for the red herring that it is.

Mr. Speaker, as I stated in my remarks of April 3, the American farmer, laborer, and consumer should beware, be cautious, be on his guard, and take careful heed, use his common sense, because partisan politics may influence, if not warp, his judgment if he does not.

National Rivers and Harbors Congress

EXTENSION OF REMARKS

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 11, 1939

RESOLUTIONS ADOPTED BY THE NATIONAL RIVERS AND HARBORS CONGRESS

Mr. ANGELL. Mr. Speaker, the Thirty-fourth Annual Convention of the National Rivers and Harbors Congress was held in Washington, D. C., March 23-24, 1939. This organization is composed of outstanding leaders in the United States who are interested in the program of development and improvement and conservation and effective utilization of our water resources and particularly the development of rivers, harbors, and waterways for transportation purposes and national defense

Our distinguished colleague, Mr. Dewey Short, is the president of the association.

The National Rivers and Harbors Congress at this convention adopted certain resolutions which are of great interest to the Members of the Congress. Among others, it went on record as favoring an effective program for the development of our national waterways, flood-control, reclamation, and conservation projects, and resolved that these activities be continued as functions of the Army Engineer Corps under the Secretary of War and the supervision of the Chief of Engineers, that adequate funds be provided for the continuation of such projects, that our navigable waterways ever be deemed public highways, freed from tolls, and that cognizance of the national-defense value of such waterways and the American marine be strengthened for national defense and commerce.

It also adopted a resolution opposing legislation having for its purpose the attempt on the part of the Federal Government to claim ownership of submerged lands, title to which throughout our history has been recognized to be in the several States of the Union wherein such lands lie.

The resolutions adopted by the National Rivers and Harbors Congress are as follows:

RESOLUTIONS UNANIMOUSLY ADOPTED BY THE THIRTY-FOURTH AN-NUAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, WASHINGTON, D. C., MARCH 23-24, 1939

This congress, a national organization representing every State in the Union, the Territories and insular possessions of the United States, reaffirms resolutions adopted at its 1938 sessions and reasserts its interest in the development, improvement, conservation, and utilization of our rivers, harbors, waterways, and water resources and in all matters relating thereto, and adopts the following resolutions while assembled in its thirty-fourth annual convention at Washington, D. C., March 23-24, 1939:

FUNCTIONS OF THE CORPS OF ENGINEERS OF THE UNITED STATES ARMY We recommend that hereafter all duties now performed by the Chief of Engineers under the direction of the Secretary of War shall be functions of the Engineer Corps, United States Army, and its head to be administered under the direction of the Secretary of War and the supervision of the Chief of Engineers, except as otherwise specifically provided by act of Congress.

RIVER AND HARBOR LEGISLATION We recommend the passage of a new river and harbor bill at the present session of Congress to include both the authorization of complete projects and the approval of plans for certain large comprehensive projects with partial authorizations for initiating these larger projects for which complete authorization may not be advisable at this time. This legislation is urged in order that our waterway development program be kept in pace with our rapidly expanding business requirements and that additional navigation facilities may be provided to meet the growing demands of commerce and may be provided to meet the growing demands of commerce and industry and in such connection we emphasize the importance of completing as early as possible the connecting links in the intra-coastal and inland waterway systems.

PLANNING AND EXECUTION OF IMPROVEMENTS OF OUR WATER RESOURCES FOR NAVIGATION, FLOOD CONTROL, AND ALLIED PURPOSES

We recommend that all planning and execution of public improvements of our water resources for navigation, flood control,

and allied purposes continue as in the past to be under the jurisdiction of the War Department as a function of the Corps of Engineers, in cooperation with other existing Federal agencies. Similarly the operation and maintenance of navigation improvements and the prevention of their injury by commercial wastes or pollution should be a duty of the corps. We reaffirm our faith and confidence in the Corps of Engineers whose devotion to this Nation confidence in the Corps of Engineers whose devotion to this Nation and loyalty to the Chief Executive have made possible the orderly and efficient development of the greatest waterway and flood-control projects on earth. In their many years of experience they have met several emergencies, such as during the latest depression when work on highly useful projects designed by them provided employment to hundreds, even thousands, that would otherwise have been on relief. Furthermore we believe that only through the plans developed by the Corps of Engineers can we secure a consistent and coordinated improvement of our water resources.

APPROPRIATIONS

We recommend that the Congress of the United States assure ample annual appropriations to advance the construction of authorample annual appropriations to advance the construction of authorized projects for river and harbor improvements and flood control in the interest of providing works of lasting value to the public and of furnishing widespread employment. We believe that such work is one of the best means of giving direct employment to a large number of skilled and unskilled workers and indirect employment to many basic industries of our Nation. We believe the 1939–40 Budget estimates for navigation and flood control are entirely too low and should be increased by the administration in accordance with the recommendations of the Corps of Engineers before the nonmilitary appropriation bill reaches the floors of Congress.

HYDROELECTRIC POWER

We recommend that where plans call for the development of We recommend that where plans call for the development of hydroelectric power in connection with the construction of a dam for flood control, the planning and execution of such dam and the generation of electric power involved shall be under the jurisdiction of the agency responsible for the project and the power shall be turned over at the switchboard to the Federal Power Commission for distribution and sale. We believe that Federal planning, execution, operation, and maintenance of public improvements relating solely to the distribution and sale of electric power should be under the jurisdiction of the Federal Power Commission.

IRRIGATION

We believe that Federal planning, execution, operation, and maintenance of public improvements relating solely to irrigation should continue under the jurisdiction of the Interior De-

SOIL CONSERVATION AND REFORESTATION

We believe that Federal planning, execution, operation, and maintenance of public improvements relating to the prevention of soil erosion and to reforestation, including such estimates of run-off and water-flow retardation in the various watersheds concerned as are considered to have useful or practical values, should continue under the jurisdiction of the Department of Agriculture.

NATIONAL DEFENSE

For many years European nations have recognized the national defense value of their inland waterways. Experience during the World War justified their recognition. In this country existing World War justified their recognition. In this country existing waterways connect strategic areas and plans for more direct and improved connections have been made. It is accordingly urged that Congress consider this added value of our waterways when acting upon legislation and appropriations for navigation improvements. At this time when the greater portion of the civilized world is being forced to place national defense above all other issues it is fitting that we consider the great defense value of our water routes for transporting bulk commodities from production to manufacturing areas to supplement and relieve other means of transportation which are sorely overburdened in national-defense transportation which are sorely overburdened in national-defense emergencies.

FOR NAVIGABLE WATERWAYS

We emphasize the traditional policy of free navigable water-ways in the United States and we recommend that our waterways be deemed public highways and remain free forever. The suggested tonnage tax or tolls in any form on water-borne commerce is particularly obnoxious to us. We are unalterably opposed to the control and regulation of the water transport services upon the inland waterways, intercoastal, coastwise, and lake areas by any regulatory commission.

AMERICAN MERCHANT MARINE

We believe that an American merchant marine, sufficient to promote our commerce and effectively aid in our national defense, is essential to the public welfare, and we recommend that Federal aid necessary to maintain and increase our merchant marine be

OWNERSHIP OF SUBMERGED LANDS

OWNERSHIP OF SUBMERGED LANDS

Enactment by the Congress of the United States of any legislation attempting to assert or claim title or rights to any land or bottoms or minerals thereunder not presently owned by the United States under any waters or waterways is repugnant to the National Rivers and Harbors Congress, as it will deprive present owners and claimants of property rights without due process of law, many of these bottoms being owned by some States and in other instances is the property of individuals. We particularly condemn legislation now pending in Congress known as Senate Joint Resolution 24 and all similar legislation. We further condemn same as an invasion of

States' rights, a violation of those rights guaranteed to property owners by the Constitution.

FLOOD-CONTROL RESERVOIRS

In order to insure the maximum protection of life and property from the destructiveness of floods, reservoirs, built for flood control under the provisions of flood-control legislation, should be designed and operated so that such reservoirs cannot be used for any purpose other than flood control until, in the judgment of the Army engineers, flood protection has been fully safeguarded.

APPROPRIATION RIDERS

We oppose as unsound policy any limitation in appropriation bills which may curtail, delay, or invalidate the construction of rivers and harbors or flood-control projects already authorized by Congress.

ARKANSAS RIVER NAVIGATION

ARKANSAS RIVER NAVIGATION

We urge early completion of the economic survey of the Arkansas River for navigation. Though the Arkansas is one of the major tributaries of the Mississippi system, it is yet the only one not now navigable. Traversing the States of Arkansas, Missouri, Oklahoma, Kansas, Texas, New Mexico, and Colorado, the Arkansas Valley is one of America's great storehouses of natural wealth. Here, in the region of the highest average rail-freight cost in the Union, is deposited 95 percent of our bauxite clay, half our lead and zinc, one of our major sources of petroleum and petroleum products, and one of our most extensive high-grade coal deposits, including the largest deposit of anthracite coal outside of Pennsylvania. The Arkansas region includes America's greatest winter-wheat acreage and one of our major cotton areas. Here are mountains of gray iron and manganese yet untouched, the world's greatest potash field, the only dependable source of helium gas within the continental limits of the United States, vast deposits of glass sand, wide pools of asphalt, extensive areas of commercial salt, tripoli, marble, granite, and limestone—resources essential to our economic welfare and our national life. We anticipate the day when a navigable Arkansas will complement the Mississippi River system.

RECLAMATION REQUIRED TO REHABILITATE 100,000 FARM FAMILIES

The National Rivers and Harbors Congress urges that adequate funds be provided to enable the Bureau of Reclamation, Department of the Interior, to expedite the construction of soundly conceived reclamation projects, in order to provide greatly needed irrigated land for more than 100,000 farm families—half a million persons—uprooted by circumstances beyond their control, who have moved into the arid and semiarid States seeking irrigated land for opportunities to make a pew start in life and each pecual because selfopportunities to make a new start in life and again become selfsupporting.

Unless these families are reestablished promptly they will add heavily to relief rolls and their situation become hopeless, while the solution of their problem lies in the "planned settlement on new reclamation and irrigation projects." And that a rehabilitation program, with sufficient appropriations, be instituted promptly to conserve and utilize water supplies in the Great Plains area.

Let's Sing Our National Songs

EXTENSION OF REMARKS

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, a philosopher one time said, "I care not who writes the Nation's laws, if I may listen to its songs." It may be that we who occupy legislative halls need to take second place in the great work of influencing the thoughts and action of our fellow citizens. In these turbulent and trying days the stack of mail on the desk of every Congressman is loaded down with suggested plans for remaking our society, inspiring patriotism, inducing love of country, and saving the Nation through a sort of mental therapy from the destructive germs of "isms" which fill the air. Patriotic organizations suggest the teaching of American history, or the study of the Constitution, or the making of pilgrimages to our national shrines, or our rededication to the Bill of Rights, or other proposals designed to have desired effects upon our patriotic ideals. Some of these plans are good, and I approve of them; however, I want to offer another which is not new because it has been offered before. It seems too simple to be effective, and yet I believe it is as effective or more so than some of the other plans proposed.

My suggestion is that we have more of the singing of our patriotic songs in the schools and in all groups where it can properly be done. A national poll recently revealed the astounding fact that only 1 out of 8 citizens claimed to know the words of our national anthem. From my observation, I doubt whether 12 percent of our adult citizens know half of the words of our national anthem. Because of this astonishing lack a great newspaper recently printed the words and music of The Star-Spangled Banner and distributed free many thousands of copies. That was an act of public service which I commend and would like to see other publishers copy.

While we have only one national anthem formally adopted as such, we have several patriotic songs, any one of which is worthy to be the national anthem. Besides The Star-Spangled Banner, which I wish every school boy and girl and every adult citizen knew, we have Catherine Lee Bates' America the Beautiful and the anthem America, with two sets of words to the same tune. Thus with these three titles we have the equivalent of four great patriotic songs. To know and appreciate these should be the noble aim of all American citizens. In America the Beautiful, by Catherine Lee Bates, we have a gloriously descriptive picture of our country from the grey Atlantic to the sunny Pacific. Besides description, there is historical delineation, prophetic insight, and prayer, all embodied in the words of this song. To understand the song completely is to know and appreciate American history. These are the words:

O beautiful for spacious skies, For amber waves of grain, For purple mountain majesties Above the fruited plain! America! America! God shed His grace on thee And crown thy good with brotherhood From sea to shining sea!

O beautiful for pilgrim feet,
Whose stern, impassioned stress
A thoroughfare for freedom beat
Across the wilderness!
America! America!
God mend thine every flaw,
Confirm thy soul in self-control,
Thy liberty in law!

O beautiful for heroes proved In liberating strife, Who more than self their country loved, And mercy more than life! America! America! May God thy gold refine, 'Till all success be nobleness, And every gain divine!

O beautiful for patriot dream
That sees beyond the years
Thine alabaster cities gleam
Undimmed by human tears!
America! America!
God shed His grace on thee
And crown thy good with brotherhood
From sea to shining sea!

The Star-Spangled Banner has been officially adopted as the national anthem. Its stirring words and martial music make it appropriately a war song. It was hatched from a cannonball like an eagle from an egg. To know the author, the words, and the circumstances under which the song was written is a truly patriotic lesson. These are the words of the national anthem:

Oh say, can you see by the dawn's early light,
What so proudly we hailed at the twilight's last gleaming—
Whose broad stripes and bright stars, thro' the perilous fight
O'er the ramparts we watched were so gallantly streaming?
And the rocket's red glare, the bombs bursting in air,
Gave proof thro' the night that our flag was still there;
Oh say, does that star-spangled banner yet wave
O'er the land of the free and the home of the brave?

On the shore dimly seen thro' the mists of the deep, Where the foe's haughty host in dread silence reposes, What is that which the breeze, o'er the towering steep, As it fitfully blows, half conceals, half discloses? Now it catches the gleam of the morning's first beam, In full glory reflected now shines on the stream. 'Tis the star-spangled banner, oh, long may it wave O'er the land of the free and the home of the brave!

Oh, thus be it ever when free men shall stand,
Between their loved homes and the war's desolation!
Blest with vict'ry and peace, may the heav'n rescued land
Praise the Pow'r that hath made and preserved us a nation!
Then conquer we must, when our cause it is just,
And this be our motto: "In God is our trust."
And the star-spangled banner in triumph shall wave
O'er the land of the free and the home of the brave.

For many years it has been the custom of service clubs, and fraternal, civic, and patriotic organizations, to sing "America," or at least one stanza of it, to open their sessions. It is a good practice. The pity is that not more time is taken and more stanzas sung. But "America" has more than one set of words. The following words written by Samuel Smith are commonly thought of as our national hymn:

My country, 'tis of thee, Sweet land of liberty, Of thee I sing; Land where my fathers died, Land of the pilgrims' pride, From every mountain side Let freedom ring.

My native country, thee, Land of the noble free— Thy name I love; I love thy rocks and rills, Thy woods and templed hills; My heart with rapture thrills Like that above.

Let music swell the breeze,
And ring from all the trees,
Sweet freedom's song;
Let mortal tongues awake,
Let all that breathe partake,
Let rocks their silence break—
The sound prolong.

Our fathers' God, to Thee, Author of liberty, To Thee I sing; Long may our land be bright With freedom's holy light; Protect us by Thy might, Great God, our King.

At the special meeting of Congress, in joint session, on March 4, 1939, when we celebrated the one hundred and fiftieth birthday of this great national lawmaking body, we had here some notable singers, one of whom sang the other words of America, which he thought appropriate for the occasion. The interesting thing was that some of the Members of Congress were strangers to those words and misunderstood what he sang. These are the other words of America written by Lowell Mason:

God bless our native land, Firm may she ever stand Through storm and night, When the wild tempests rave. Ruler of wind and wave, Do Thou our country save By Thy great might.

For her our prayers shall rise To God above the skies On Him we wait; Thou who art ever nigh Guarding with watchful eye, To Thee aloud we cry, God save the state!

Not for this land alone But be God's mercies shown From shore to shore, And may the Nation see That men should brothers be, And form one family The wide world o'er.

In the schools of our land may these memorable words be learned and these stirring songs be sung with pride and pleasure by America's future citizens. If this be done, we need have little fear about the quality and spirit of those future citizens.

APPENDIX TO THE CONGRESSIONAL RECORD

Progress in Flood Control

EXTENSION OF REMARKS

HON. WILL M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 12, 1939

ADDRESS OF HON. WILL M. WHITTINGTON, OF MISSISSIPPI, BEFORE THE FORTY-FOURTH ANNUAL CONVENTION OF THE OHIO VALLEY IMPROVEMENT ASSOCIATION, PITTS-BURGH, PA.

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered on Tuesday, April 11, 1939, at the Forty-fourth Annual Convention of the Ohio Valley Improvement Association, Pittsburgh, Pa., to wit:

It is appropriate to speak of the progress in flood control in Pittsburgh. For 86 years continuous flood records have been kept. During this period there occurred 97 floods, of which 10 were major or large floods

The Pittsburgh Flood Commission was organized following the disastrous flood of 1907. Intensive investigations were made. A report was published. Reservoirs were proposed. Nothing tangible resulted, but the work of the commission awakened public opinion. The Corps of Engineers of the United States, during the years from 1924 to 1929, conducted an independent study of flood protection on the Allegheny. Monographical and upper Obio Pivers. This

tion on the Allegheny, Monongahela, and upper Ohio Rivers. This report was not published. Designs for some 11 storage reservoirs on tributaries on headwaters of the Allegheny and Monongahela Rivers were developed. The report of the Corps of Engineers was made available to the engineers of the Pittsburgh Flood Commission, and in 1930 that commission made another report, reviewing and comparing previous investigations.

The promoters of the commission were men of vision. While return was not accomplished and while the commission.

The promoters of the commission were men of vision. While actual protection was not accomplished, and while the commission was handicapped, the work of the commission was not in vain. The leaders knew that while the press and the people forget when the floods have passed, the danger still existed. They continued their fight. Nothing was done. On St. Patrick's Day in March 1936, the maximum flood of record came rushing down from both the Allegheny and Monongahela Rivers at the same time. Much of the "golden triangle" was overflowed to a depth of 15 feet. Portions of Pittsburgh were inundated by as much as 20 feet of water. The damages totaled about \$50,000,000. National interest was focused upon the situation.

There was a serious flood in New England at the same time. The sufferings and the destructions of these two floods served to stir the people of the Nation and crystallized public sentiment for flood control. Without the Pittsburgh flood the act of 1936 would have been impossible. The destruction in the Ohio Valley was not in vain. Great improvements in a democracy are not

would have been impossible. The destruction in the Ohio Valley was not in vain. Great improvements in a democracy are not undertaken as a result of previous wisdom but are adopted because of necessity. Pittsburgh, therefore, is largely responsible for the first national flood-control act ever adopted by Congress.

Nine reservoirs were approved for the protection of the Pittsburgh area. Within a year the greatest flood of all times occurred in the lower Ohio Valley. The crest was 11½ feet lower at Pittsburgh than in 1936 but the highest of record at Cincinnati and Louisville. The construction of the protective works for the city of Pittsburgh was emphasized.

Pittsburgh was emphasized.

It is a source of satisfaction that the Tygart Reservoir for both navigation and flood control has now been completed and that the Tionesta and Crooked Creek Reservoirs are almost half completed. Meantime the Mahoning Creek Reservoir has been begun and the extensive channel improvement works at Johnstown are well under way. Funds have been allocated to Conemaugh and to Loyalhanna Creek Reservoirs.

In this city and on this delightful occasion I gladly pay tribute to the Pittsburgh leaders who advocated national flood control through long, disappointing, and discouraging years. I trust that the people of Pittsburgh and Pennsylvania, while others quibble, will continue to cooperate with the Corps of Engineers of the United States Army so that flood protection may be provided for the people and property of this city.

FORWARD STEP

The act of June 22, 1936, was a step in the right direction. The act of June 22, 1936, was a step in the right direction. It was an excellent beginning, but it did not meet the general demand. The constructive feature of the act was the establishment of a national policy. While others advocated delay, while additional planning was urged, a policy was established. Flood-control works, including levees and river walls for downstream protection, and reservoirs for upstream control, were placed under the Corps of Engineers of the United States Army. Water retardation, soil conservation, and reforestation were placed under the Department of Agriculture. Downstream works were supplemented by upstream conservation. conservation.

There has been no conflict. The two Departments have cooperated. Flood-control works and conservation have been coordinated. The act of August 28, 1937, provided primarily for emergency projects in the lower Ohio Valley, following the great flood of that year. The constructive plans of the War Department and the Department of Agriculture were strengthened, but the country demanded flood protection for the entire Ohio Valley and for the Notice. Nation.

ACT OF 1938

After exhaustive hearings in 1937 and 1938 by the Flood Control Committee of the House of Representatives, the Flood Control Act of 1938 was finally passed. It is the most comprehensive legislation to provide flood control ever passed by this or any other country. Three hundred and seventy-five million dollars was authorized to

be expended over a period of 5 years.

No new agencies were established, but existing agencies, familiar with the problems involved, that have been planning for years and that have devoted years not only to planning but to construction, were utilized in the policy declared in the act of 1938, as they were in the act of 1936.

The act of 1938 continues and expands the policy adopted in the

acts of 1936 and 1937.

AUTHORIZATIONS

The act provides for flood-control works in the principal drainage basins of the Nation, including the Connecticut, the Ohio, the upper Mississippi, the Missouri, the White, the Arkansas, and the Red Rivers, and including the Santa Ana River Basin in the Los Angeles area and the Willamette River Basin in the Pacific Northwest.

PROGRAM

For 10 years the Corps of Engineers had conducted studies and investigations. Local agencies, like the Pittsburgh Flood Commission, had supplemented the engineering studies of the Corps of Engineers. There was universal sentiment that it was time for action; there had been enough planning. Congress and the country had thought the matter through. A definite program was adopted. Sound flood-control works were authorized and the execution of the planning and of the construction was placed in the Corps of Engineers of the United States Army. There was a definite plan for each river basin. All of the projects

authorized will fit into that plan. Authorizations were made to initiate the plans, but each project authorized will fit into the comprehensive plan approved. Funds cannot be diverted from one basin to another; they must be spent where they are authorized or they cannot be spent at all.

The problem is attacked on all fronts. Flood walls and river walls are authorized for priority and emergency protection. Reservoirs on the tributaries are authorized to detain the waters at their source. Wherever power can be developed, provision is made for such power. Wherever there is conservation, conservation is provided for.

The principle of local contribution is recognized and reaffirmed, but such contribution is confined to local protective works consisting primarily of levees and flood walls. All flood-control act, including the Mississippi River Flood Control Acts, provide that the local interests must furnish the rights-of-way for levees and flood walls.

Under the act of 1936 some 44 reservoirs were authorized. About six are under construction. Under the act of 1936 the local interests were required to furnish the lands and rights-of-way for reservoirs. There were two partial exceptions—the local contribution was reduced in the Pittsburgh area and in the New England area. In these areas, the local contribution for reservoirs. bution was reduced in the Pittsburgh area and in the New England area. In these areas the local contribution for reservoirs was less than in any other areas of the United States. There was general agreement that, except in the Pittsburgh area, in the New England area, and in certain semiarid regions in the West, where the costs of rights-of-way were negligible, a reservoir system for flood control would not be constructed.

The act of 1938, therefore, for the first time, provides that reservoirs for flood control shall be constructed at the expense of the Federal Government. Authorizations are made for reservoirs in the several drainage basins. They will be constructed in the order of their priority, as selected by the Chief of Engineers. Many reservoirs are eligible. The reservoirs, therefore, will be first constructed where the local interests cooperate most generally.

The act of 1938, as it passed the House, provided that the Federal

The act of 1938, as it passed the House, provided that the Federal Government was to pay 70 percent of the costs of lands, easements, and rights-of-way for reservoirs and dams for flood control. As finally passed, it provides for the payment of 100 percent from the Federal Treasury. If the argument for the Government paying the greater part of the cost of reservoirs is sound, the argument for paying all of the costs is much more sound. paying all of the costs is much more sound.

For my part I have advocated for years that if reservoirs are to be utilized in solving the problem of national flood control, they will never be generally constructed unless the Federal Government assumes the entire costs.

EXHAUSTIVE HEARINGS

Loose statements have been made that no hearings on the con-struction of reservoirs at the cost of the Federal Government were struction of reservoirs at the cost of the Federal Government were conducted. At all hearings on flood-control projects, including the Mississippi River Flood Control Acts of 1928 and 1936, and including hearings on the National Flood Control Acts of 1936, 1937, and 1938, advocates of national flood control at national expense have appeared before the Flood Control Committee. For 10 years champions from various parts of the United States have appeared not not be all of down and recovery but for least parts of the control protection. only in behalf of dams and reservoirs but for local protective works

at Federal expense. During the hearings on the flood-control bill of 1938, and previously, there were advocates, including representatives from New England, Oklahoma, and other States who appeared and advocated dams and reservoirs at the expense of the National

There is not much difference between 70 percent and 100 percent, particularly when the 100 percent is better safeguarded for the Federal Treasury than the 70 percent.

Federal Treasury than the 70 percent.

Reservoirs in one State protect another State. Reservoirs in one county protect another county. I repeat, therefore, that a reservoir system for flood control will never be constructed unless the costs are borne by the Federal Treasury.

As I have stated, the requirements for local contribution in other areas were modified for the benefit of Pittsburgh, Pa., Hartford, Conn., and Lowell, Mass., in the act of 1936. A further modification with the same yardstick for every basin is a constructive step. Pittsburgh, one of the most prosperous and wealthy of American cities, will continue to pay indirectly for flood protection, but under the act of 1938 the same yardstick will apply to Pittsburgh that applies to all other sections of the country. to Pittsburgh that applies to all other sections of the country

POWER

Pen stocks may be installed under the act of 1936, but the act of 1938 goes a step further. It provides that pen stocks shall be installed whenever approved by the Secretary of War, upon the recommendation of the Chief of Engineers and the Federal Power Commission. Substantially all of the reservoirs adopted in the Flood Control Act of 1938 are primarily for flood control. Generally, reservoirs for power and flood control are incompatible. An empty reservoir is necessary to detain floodwaters. A full reservoir is necessary to develop power.

It must always be remembered that the Chief of Engineers selects the reservoirs that are to be constructed, and approves the order and priority of their construction. There should be no conflict between the Federal Power Commission and the Chief of Engineers. Pen stocks may be installed under the act of 1936, but the

Engineers.

The apprehension with respect to the Government engaging in power development as a result of the 100 percent costs of dams and reservoirs is without foundation. With the exception of two, and possibly four, of all of the dams authorized in all of the basins, no possibly four, of an of the dains attorized in an of the basins, no provision is made for power. Moreover, there is no provision for the generation of power. If power is to be developed at any dam authorized in the act, with two and possibly four exceptions, if will be necessary for the plans to be changed and approved by Congress. There is no provision in the act that provides for superseding any existing State law with respect to the use or appropriation of waters. tion of waters.

NATIONAL, NOT SECTIONAL

Many erroneous ideas are current and often incorrect statements are made with respect to flood control and navigation improvements. It is asserted that some regions have been favored and others have been neglected. I believe that Federal expenditures should be generally distributed. I advocate that consideration be given to all sections of our country.

The Ohio and Mississippi Rivers have been improved for navigation since 1824, but prior to 1917 flood control along the lower Mississippi River was incidental to navigation, and prior to 1936 the Federal Government had constructed substantially no flood-control works along the Ohio River. Meantime the people in the lower Mississippi Valley had themselves expended from \$350,000,000 to \$400,000,000 to protect their lives and property from the accumulated floodwaters of two-thirds of the entire country.

The total expenditures for navigation along the lower Mississippi River by the Federal Government from the beginning up to June 30, 1938, amounted to \$124,000,000, while \$361,000,000 had been expended for navigation along the upper Mississipi River \$250,-000,000, along the Illinois River \$28,000,000, and along the Missouri River \$161,000,000, while there had been expended in the construction of the Fort Peck Dam, primarily for navigation, with incidental flood-central herefits.

River \$161,000,000, while there had been expended in the construction of the Fort Peck Dam, primarily for navigation, with incidental flood-control benefits, approximately \$95,000,000.

Substantially no expenditures have been made by the local interests for flood protection in the Ohio Valley or along the Connecticut and Merrimack Rivers, but the Federal Government during the same period had expended for navigation along the Ohio River and its tributaries, including the Allegheny and Monongahela Rivers, 2271,000,000.

There are located in the Ohio Basin the greatest industrial enterprises on earth, and the time has arrived for the Nation to protect the lives and property of the people in the Ohio and other valleys of the Nation, just as the Federal Government has heretofore promoted the improvement of rivers and harbors for navigation.

EMOTIONALISM-STATE RIGHTS

Loose statements have been made and repeated that the Flood Control Act of 1938, and especially the provisions for construction of flood-control reservoirs at national expense, is revolutionary. The authorization for condemnation without the consent of the States has been loudly denounced. Much emotionalism has been indulged in. Ambitious statesmen and near statesmen have seized the opportunity for political and partisan purposes.

The doctrine of State rights has been invoked. This term is often used as a cloak to cover purposes that would otherwise command but little respect. The use of the term with regard to the act of 1938 is running true to form. I repeat, as I have heretofore stated, that much hollow bombast surrounds the alleged invasion of State rights. I hail from the State of Jefferson Davis.

Mississippians have ever stood for State rights. The very name of Jefferson Davis is synonymous with State rights.

Again, as a citizen of the alluvial valley of the lower Mississippi River, I have lived under the perpetual menace of floods. I know the awful meaning of the menace. I am naturally sympathetic with flood problems in Pennsylvania and New England, although the problems in these areas are much smaller than the problems confront those who dwell in the valley of the father of rivers, as well as the father of floods.

It has been said that the power to acquire lands and rights-ofway for reservoirs is an invasion of State rights. The spokesman for State rights is Gov. George D. Aiken, of Vermont. It has been alleged that the power to condemn without the consent of the State is an invasion of State rights.

There is a State sovereignty, but there is also a national sov ereignty. If flood control along navigable rivers is a national problem to be solved by the Federal Government, it must follow as the night the day that the Federal Government is sovereign in the solution of the problem. If flood control is a national problem, the Federal Government must have the power of eminent domain

as the night the day that the Federal Government is sovereign in the solution of the problem. If flood control is a national problem, the Federal Government must have the power of eminent domain to build dams and to construct reservoirs, and at the same time to protect the Federal Treasury. It is unthinkable that utility companies, that railroad companies, and other public-service corporations in Mississippi, Vermont, and Pennsylvania have the power of eminent domain and that power be denied to the United States in the exercise of its Federal function of flood control to protect the lives and property of the people of the Nation.

There is nothing new, novel, or revolutionary about the power to acquire property either by condemnation or purchase without the consent of the States. The War Department has had such power for 60 years in navigation works along the Ohio River, and in all river and harbor work. The power to condemn is an inherent power of the sovereignty of any government—local, State, or national. The Federal Government has the power to condemn. It has been decided by the Supreme Court of the United States that the Federal Government may acquire property for Federal functions without the consent of the States. The position of Gov. George D. Alken, as he champions States' rights, and as he calls upon the rugged mountaineers of the Green Mountain State to appropriate the munificent sum of \$67,500 to repel Federal invasion of States' rights, is nothing short of amusing.

When the Vermont Yankees disapproved of the economic system of the South, Green Mountain soldiers came, without an invitation, into Mississippi, and they insisted that Mississippi conform to their ideas of States' rights, and they were careless with the use of both fire and sword. They did not hesitate to go to war to change the economic system of the South and to challenge the advocacy of States' rights, Mississippians. In effect, Vermont said in 1861, "To hell with States' rights." I am not saying that Vermont was wrong. Mississippi m

that when Vermonters have thought the matter through the United States will finally have to force \$11,000,000 down Governor Aiken's throat against his will. I really have a suspicion that his policies will ultimately rise above his principles and thus permit him to take the \$11,000,000 without local contribution that is now offered by the United States. How could a New England Yankee do otherwise?

otherwise?

But, seriously, the flood-control reservoirs authorized in New England are for flood control. Under existing law no governmental agency can develop hydroelectric energy there without further legislation by Congress. Moreover, under existing law, if Congress does make provision in the future for the development of hydroelectric energy, the States and municipalities would be given preference as licensees to develop power at such flood-control projects. The right, therefore, of Vermont and of the municipalities of Vermont, in the event the Federal Government, without expense to the Citizens of the Green Mountain State should provide in the future zens of the Green Mountain State, should provide in the future for the development of hydroelectric power, is expressly protected. If Congress has the power to pass flood-control legislation, it must

have the inherent power to construct the works. If the Federal Government is to pay the entire costs of the reservoirs, the Federal Government should have power to protect the Federal Treasury by condemning in the event excessive damages are demanded.

TITLE TO RESERVOIRS

It is said that the title to reservoirs in the Federal Government is an invasion of States' rights. The title to the Tygart Dam in West Virginia is in the Federal Government. The title to the Parker Dam, the Grand Coulee Dam, the Bonneville Dam, the Fort Peck Dam, and all of the dams in the Tennessee Valley is in the United States. All of the projects mentioned provide for title in the Federal Government without the consent of the States. All public improvements made at the sole costs of the United States

provide, as I recall, that title shall be vested in the Federal Government. The title to farm-security and farm-tenant projects is in the United States. The title to forest and submarginal lands is in the Federal Government in Pennsylvania, Vermont, and other States. Under the Reclamation Act the title to reservoirs for reclamation is in the Federal Government. The act was passed more than 35 years ago; and there have been constructed, as I am advised by the Bureau of Reclamation, some 30 storage reservoirs for reclamation, while 35 are now in process of construction. The title to every one of these reservoirs is in the United States.

Congress has passed legislation to construct reservoirs for the control of floods. The localities in which the reservoirs are to be constructed will not pay the costs of the rights-of-way. The States will not furnish the rights-of-way if protection is for another State. The program, therefore, without the power to condemn in the Federal Government would be they are former. rale government would be thwarted. Cities below the dam in another State would be left to the fury of the floods without the power in the Federal Government to condemn for the construction of reservoirs in States where they are located.

It is time for reason to supplant emotionalism and for constructive

vision to replace hollow bombast.

POLICY OF PURCHASE AND REIMBURSEMENT

While the Federal Government has the inherent power to condemn, it also has the power to purchase. It has been the policy of the Chief of Engineers to purchase and not to condemn. Ordinarily the Federal Government will not construct public works unless desired by local interests. The Governor of Vermont will have no occasion to spend the munificent war chest of \$67,500 provided by the Green Mountain boys in the Vermont Legislature. It has been the policy of the Corps of Engineers in river and harbor and flood-control works to cooperate with the States and with the local interests. It has been their policy to do no work where the local people oppose such work unless such work is essential in the general oppose such work unless such work is essential in the general interest.

In Farm Security projects in forestry and reforestation areas it has been the policy of the Federal Government to compensate the local taxing units for lands taken from the tax rolls where title is in the Federal Government. I advocate the extension of such a policy to lands acquired by the Federal Government for the con-

struction of reservoirs.

Reservoirs mean, as I have stated, the taking of lands in one area for the benefit of lands in another. Adequate reimbursement should be made for the loss of local taxes.

COOPERATION

Flood control is national; it is not sectional. It is not a partisan issue. It is an economic problem. All parties agree as to the policy. Congress has passed legislation. It has authorized appropriations, but authorizations are not self-executing. Much work remains to be done. Spokesmen for flood control and navigation must be on guard. The Ohio Valley Improvement Association has rendered splendid aid and is in a position to render greater service in the future. Public sentiment must be promoted and fostered that will result in adequate appropriations for the construction of authorized works. authorized works.

EMPLOYMENT

FOR years I have advocated public improvements to relieve unemployment. I stand for works that are constructive. I advocate improvements that are beneficial. We are still battling with the problem of unemployment. I believe that one of the best ways to solve the problem is to provide for sound and permanent public works. The country has been sold on flood protection. I congratulate the city of Pittsburgh and the Commonwealth of Pennsylvania, while others obstruct, upon the spirit of cooperation that obtains between the State and the Federal Government in the execution of flood-control works so essential to the safety and prosperity of the people. This cooperation stands as an example to prosperity of the people. This cooperation stands as an example to the other States of the Union. I commend the spirit. Vision and patriotism have been put above ambition and partisanship. I trust Pennsylvania will continue to put the safety of her people above partisan politics.

Effects of Persecutions of Jews

EXTENSION OF REMARKS

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 12, 1939

ARTICLE BY HON. JOSEPH A. CONRY

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by a former distinguished Member of the House, Hon. Joseph A. Conry:

I was appointed Russian imperial consul at Boston in the fall of 1909, occupying that post until the recognition of the Soviets on November 16, 1933.

commission is a beautifully engraved document in French with the imposing heading, "By Order of His Majesty, Nicholas II, Emperor and Autocrat of all the Russias, King of Poland, Grand Duke of Finland, etc., notice is given the world of the appointment of the Honorable Joseph A. Conry as Russian consul, who is to be respected accordingly."

Following this document came an exequator from the State Department at Washington signed by Philander C. Knox, Secretary of State, saying that I was acceptable to the United States and advising all officials to take notice.

advising all officials to take notice.

I had never been in Russia, therefore addressed myself to the job of reading every book in the Boston Public Library devoted to the history, geography, and social life of the land of the Czars. The next summer I visited Russia, making a complete tour of all the principal cities, visiting the galleries, museums, libraries, and important officials in military and civil service, turning myself into a human interrogation point, in order to secure all information with respect to the people and institutions of the land occupying one-sixth of the world.

It was my first grand experience in world politics leaving im-

one-sixth of the world.

It was my first grand experience in world politics, leaving impressions growing into thoughts and opinions maturing after years of observation and study.

Count Oxensterna, Swedish philosopher and chancellor, 1583-1654, for many years a controlling personage in European affairs, advised young men entering diplomacy, "Go forth, my son, and see by what fools the world is governed."

I knew Big Tim Sullivan, the celebrated Tammany Congressman, father of the Sullivan law forbidding pistol carrying without a permit. Tim was of opinion that men could be hired in New York to do murder for \$50.

I was not shocked to be told in Russia that men were ready for murder on the mere promise of protection. Life is cheap among

for murder on the mere promise of protection. Life is cheap among men accustomed to wars. The Russo-Japanese War had ended a few years before my arrival in Russia. It was a bad ending for the empire, but gave joy and satisfaction to the agitators and assassins, always acrobatic in their arguments.

The almost universal demand was for change. A representative form of government, with a duma, was sought by some, others wanted communism, still others were for nihilism.

In Europe the Government of the Czar was known as absolutism tempered by assassination. Michael Bakunin, founder of nihilism. tempered by assassination. Michael Bakunin, founder of nihilism, proclaimed the theories of his group—the accepted doctrine of the Soviets today. Bakunin said: "Our first work must be the annihilation of everything as it now exists. The Old World must be destroyed and replaced by a new one. When you have freed your mind from the fear of God, and that childish respect for the fiction of right, then all the remaining chains that bind you—property, marriage, morality, and justice will snap asunder like threads."

Bakunin was a bitter anti-Semitic. While all factions were ravenous for change, all agreed on hating the Jews. Jewish pogroms were arranged with attention to details befitting a political convention. Pogrom meant mass murder of undesirable neighbors, with license to loot.

This intense bitterness of feeling toward the Jew was new and

This intense bitterness of feeling toward the Jew was new and mystifying to me. At home in Boston the Jews were respected in our local life, and in the larger business and political life of the city men like Leopold Morse and A. Shuman enjoyed complete confidence of all our citizens.

As a result of discussions with educated Russians I decided that jealousy of a superior mental power was the feeding root of all the hatred. Since the dawn of human history the Jew has been dis-persed among the various peoples of the world in every century, arousing hatred and admiration, contradictions amazing and admirable. Nowhere have they been surpassed in vitality or versatility. From the embers of the fires of persecution have grown their philosophers and poets, musicians, and millionaires, blazing with warmth and enthusiasm.

Although many Americans are reluctant to believe it, and the Russian would never admit it, it is a fact that the Jew worships brains and ability even more than the power and skill of making money, their acknowledged kingdom. So I could trace some reason for the vicious abuse of the Jew by the Russian to fear of future domination; to beat this in advance brute force was to overcome meantal power.

mental power.

Anti-Jewish action naturally invited reprisal, and from different cities of the world powerful propaganda was let loose against Russia.

It is an appalling fact, worthy the notice of the historian, that the growth of nihilism went step by step with the growth of the pogroms. In 1831 Alexander II was assassinated by the nihilists, and in that year 167 cities in Russia were visited by outbursts of savagery against the Jews in which the butchery rivaled that of the American Indian.

Having gained by practical experience my knowledge of conditions in Russia, I was prepared for the agitation which began here in America in 1911 against Moscovy, ending in December of that year with the adoption of resolutions by Congress terminating the treaty of "amity, commerce, and navigation" under which the two countries had lived since 1832.

This treaty had been directed in St. Petersburg by two men of

This treaty had been drafted in St. Petersburg by two men of international fame. James Buchanan, the American envoy and later President, represented the United States. The Russian envoy was Count Nesselrode, for 40 years director of Russian foreign affairs,

but more intimately known to history as maintaining the most luxurious table with service of exquisite food beyond all in Europe. Modernists will smile at the use of the solemn words opening the paper, "In the name of the Most Holy and Indivisible Trinity."

paper, "In the name of the Most Holy and Indivisible Trinity."

The abrogation of this treaty was accomplished as a result of the world-wide agitation against Russia started by Jews and carried on by Jewish sympathizers, mainly non-Jews. One of the articles quoted on the floor of Congress came from the pen of Michael Davitt, well known throughout the world as leader of the Irish group in the British House of Commons.

Davitt had written a book, Within the Pale, in which he feelingly described the bardships of the Jews in Russia. The work was the

described the hardships of the Jews in Russia. The work was the inspiration of one who knew the sufferings of his own people and did not hesitate to express sympathy to his fellow men undergoing equal agony under similar conditions. The Irish who knew and endured British brutality could well appreciate the Jewish sufferings, being always ready with a word of encouragement if no more

John Boyle O'Reilly, beloved Boston poet, paid his tribute to the Jews long before Michael Davitt wrote his book. O'Reilly said: "I cannot find of my own experience the reason for prejudice against the Jews as a race. * * * From personal experience, I should say it was wholly racial and commercial. * * I know three men who are my ideals of mercantile honor, integrity, and business character; one is a Christian and two are Jews.

character; one is a Christian and two are Jews.

"I do not know how to dispel the anti-Jewish prejudice, except by expressing my own respect, honor, and affection for the greatest race, taking its vicissitudes and achievements, its numbers and its glories, that ever existed."

Congress had spoken for America 28 years ago. I then declared the Jewish problem had become a universal issue. I had witnessed the power and influence of Irish agitation directed at England, and it was not hard to understand that Jewish agitation directed at Russia would prove equally effective. The Czar's power was overthrown with the appearance of final relief. The Soviet triumph can hardly be called a great victory for the Jew but is an improvement over old conditions. over old conditions.

Today the Jew faces his crucial test. Hitler's brutal treatment of the Jew, with his apparent determination to exterminate the

race, has brought down more curses on the head of the despot than his attempted destruction of small states. Hitler in his conduct is more ruthless than the imperial Russians. Hitler openly promulgates the decrees ordering the Jews to leave the country while his Government confiscates their property. That which was done by the lowest in Russia is done today by the highest in Germany. The pogrom conspiracy of Russia is superseded by the official seal of the swastika.

The result is inevitable. World opinion is against Hitler. His rescue will be effected only by his opponents who in their stupidity will once more illustrate Ovensterna's epigram, "See by what fools the world is governed."

The Munich pact made Hitler the formidable leader of all

Europe. The natural and probable consequences of that pact have followed in perfect order.

And it may be noted that England has "muddled" once more. She blundered in her engagements with the Jews on Palestine. And now it is reported that England wants the United States to join with France and Russia in protecting the small states of Central Europe.

No more egregious act of folly could be suggested. The Soviets are secretly in sympathy with Hitler. England may try it so far as a military alliance is concerned, but there is little likelihood that

as a military alliance is concerned, but there is little likelihood that such a plan would gather any support in the United States. It is only a short time since Japan went into Manchuria, a flagrant violation of the Kellogg treaty and so recognized by every party to it. Our State Department made a vigorous protest to every signatory to the Kellogg Pact and with direct appeal to England. Sir John Simon admitted the truth of everything submitted to him by our Government, but was of opinion England would not act inasmuch as the violations complained of had occurred several months before. England was not at all idealistic in this affair but

act inasmuch as the violations complained of had occurred several months before. England was not at all idealistic in this affair, but considered it a practical matter. Perhaps this incident is not entirely forgotten in Washington, and it may be mentioned when discussing England's invitation to join with her in protecting the

cussing England's invitation to join with her in protecting the small states of Central Europe.

We want no dealings with Soviet Russia, having had our experience. After the abdication of Nicholas the United States did everything that genius could suggest to help Russia. At the creation of the Kerensky government our Government made liberal contributions to the Russian treasury. Boris Bakmetleff was permitted to occupy the Embassy building of the Russian Empire on Sixteenth Street until 1922, when, on complaint of some Senators, he took his departure. For many years Soviet sympathizers harassed each administration to recognize Moscow, but without success. The classic answer was made by President Coolidge in his message to Congress December 6, 1923, when he said, among other things:

things:

"I do not propose to barter away for the privileges of trade cherished rights of humanity, nor to make merchandise of any American principles. Whenever there appears any disposition to compensate our citizens who were despoiled and to recognize the debt contracted with our Government not by the Czar but by the newly formed Republic of Russia; when the spirit of enmity to our institutions is abated our country ought to be the first to go to the economic and moral rescue of Russia."

This final rebuff was emphasized by Secretary of State Hughes, who said a few weeks later in answer to a Soviet request to

discuss the subject of recognition, "When the Soviet authorities are ready to repeal their decrees repudiating Russia's obligations to this country and appropriately recognize them they can do so." This advised action by Secretary Hughes has never been taken. Year after year the Soviet lobbyists kept open house in Washington, employing all the well-known tricks of entertainment of

anyone presumed to have some influence with the administration. In the fall of 1933 success appeared. President Roosevelt invited the President of the Soviets to send a representative to Washington "to explore all questions outstanding between our countries." The invitation was accepted, and in November Mr. Litvinoff, Commissar

of Foreign Affairs, was received at the White House by the President. By November 16 all negotiations had been completed, the Soviets were recognized, and the President joined with Mr. Litvinoff in an

official statement, saying:

"There has taken place an exchange of views with regard to the method of settling all outstanding questions of indebtedness and claims that permits us to hope for a speedy and satisfactory solution of these questions, which both Governments desire to have out of the way as soon as possible."

The Soviets confiscated property of American citizens valued at

more than \$600,000,000 and have steadfastly refused to pay a dollar on account of this gigantic theft. Two classes of our citizens were primarily responsible for American recognition of the Soviets. First, those who held defaulted Russian bonds or who had suffered by Soviet confiscation. These men had legitimate claims against Soviets, and assurances innumerable, even extravagant, had been made that all these claims would be paid immediately that recogni-tion was a fact. The other group represented the "parlor pinks," those intellectuals who thought they saw in communism a new life and wanted to cheer the experiment. This group was not strong in numbers, but they represented the intellectuals and were disinterested.

They rejoiced when Mr. William C. Bullitt was selected as our

They rejoiced when Mr. William C. Bullitt was selected as our first Ambassador, a man who is the perfect type of that profession with his inherited charm of manner, polished by fine breeding, complete education in the science of statesmanship perfected by practical experience in the State Department under President Wilson, owner of plenty of money, and a sincere believer at that time in the Soviet ideology. But a short term in Moscow served to distillusion Mr. Bullitt completely. The Soviets appointed Mr. Troyanovsky as Ambassador and he at once moved into the mansion on Sixteenth Street, property of the former Russian Imperial Government. ernment.

While the Soviets repudiated all obligations of former Russian Governments, it had no hesitation in claiming all benefits from such prior obligations. Washington was treated to a spectacle of extravagant entertainment never equaled in its history when the

Soviets got under way.

Thousands were invited to the home of the "Hammer and Sickle," where caviar and champagne were served by way of ghastly contrast with the starving millions in Russia. It was estimated that one of these receptions cost \$50,000 for food, flowers, and drink, all spent with the hope of creating a favorable American public opinion. But no word ever came about the payment of debts due despoiled

Moscow encouraged communistic activities in America in direct defiance of its treaty obligation of November 16, 1933. This treaty had been so flagrantly violated before it was 2 years old the State Department complained, on August 26, 1935, of the violations, with admonition of "most serious consequences" if Moscow did not mend

its ways.

A few months later Mr. Bullitt, with clearer insight into the infirmities of sovietism, quit Moscow in disgust and became Ambassador to France. The Embassy at Moscow was cut down as evidence that the United States did not approve of Soviet

interpretations of obligations of honor.

Six years have passed with tarnish growing thicker on the the Soviet shield. Troyanovsky has been recalled to explain the fail-ure of his Bacchanalian feasts to buy American support. The American Embassy at Moscow remained vacant for a long time until Mr. Davies agreed to see what he could do. He retired with disgust.

On March 10 the President appointed Laurence A. Steinhardt of

On March 10 the President appointed Laurence A. Steinhardt of New York, a highly competent man with successful experience in the diplomatic service, to look over conditions in Moscow and as American Ambassador see what can be done with the Soviets.

Some recent agitators in America have sought to hold the Jews responsible for communism in the Soviet state. One of these noisy agitators stated that out of 59 members of the Central Committee Group of the Soviets, 56 were Jews. Intelligent investigation disclosed only 5 Jews in that body.

The Jew has been frequently abused because he took up money

closed only 5 Jews in that body.

The Jew has been frequently abused because he took up money lending as an occupation. The fact is that he went into that business in self-defense. He was barred from agriculture in almost every country, as he was forbidden to own land, and industry was equally hostile by not allowing him to join guilds. As a matter of course he was barred from all military and civil service.

Long years ago the church frowned on money lending for interest, but it was never able to forbid the need of money, which need the Jew supplied. The Jew is a firm believer in the rights of property, so he will give no support to a state which deprives the individual from holding property.

from holding property.

It may be observed that when President Roosevelt sent William Phillips, our Ambassador to Italy, to consult with Mussolini in respect to a haven for the Jewish refugees from Germany, Mussolini, with a sardonic smile, suggested that they be sent to live with Stalin. No better evidence may be offered to show Jewish aversion to communism than the fact that they refuse to consider Soviet Russia as a refuge in their fearful plight.

Hitler's downfall will be brought about by Jewish shrewdness,

skill, and power of propaganda.

England will emerge from the melee a sorry sight. The effort to get the United States into some sort of a deal is a failure in advance. From Manchuria to Munich is but a step in diplomatic history. The United States is familiar with every inch of the history. The United States is infinial water of the ground. While we will be deluged with propaganda in every conceivable form, we probably can absorb it. Dismiss the silly and digest the sensible.

America will have no part in the physical quarrels of any of the European states. Our sympathy will go to the distressed, and to them such aid as may be extended will be cheerfully given, but no military power from America except such material as may be bought and paid for on the cash-and-carry system.

Our memories of manpower supplied to make the world safe for democracy—and the subsequent taunts of "Shylock!"—will make America reluctant to repeat the experiment of entering a war to end war. Our own problems claim all our attention, which should not be diverted by those who would plungs us into a foreign war.

National Housing Act

EXTENSION OF REMARKS

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 12, 1939

Mr. MICHAEL J. KENNEDY. Mr. Speaker, Members of the House, I am very much interested in H. R. 5324, a bill to amend the National Housing Act, which is now before us for consideration. This act has been widely acclaimed as being of vital assistance to the building industry as a whole, as well as to its affiliated trades. The primary purpose of the act is. of course, to aid the home owner, and I am glad to note that from my own observation in my city it has more than fulfilled the Government's expectations in this respect. But more than that, it has been a tremendous source of employment to thousands of men and women whose livelihood is dependent upon the building-trades industry, including contractors, subcontractors, manufacturers of supplies and materials, and other industries closely associated. It has been of great assistance also to the banks throughout the country by virtue of the Federal Government's guaranty of loans made under the F. H. A. plan, all of which has permitted capital to flow more freely for utilization in aiding the small-business man to engage in the rehabilitation of his particular business.

In short, this act has been as a whole a most effective means of restoring confidence to the building industry in general. It is my purpose, therefore, to vote today in favor of this bill which extends certain functions of the National Housing Act under title I for a period of 2 more years and amends certain other parts of the bill. I intend to vote in favor of these changes along the lines recommended by the Committee on Banking and Currency, which is thoroughly familiar with any weaknesses in the bill which may require correction, as they have made a very able study of this program since its origin.

Title I of this act has undoubtedly been of assistance to the greatest number of people. This section of the act was designed primarily to help the little fellow. It provides for loans for modernization and repair and new construction loans up to \$2,500. In my particular district this section of the bill has been a most welcome source of employment, providing many months of work, because of the capital made available to the wage earner for the improvement of his home and simultaneously his standard of living, who in turn was happy to be able to provide jobs where jobs were needed. I am in favor also of the new provision embodied in this bill which has been recommended by the committee authorizing the Administrator to make an annual premium charge for the insurance not in excess of 1 percent of the original amount of the loan. I am of the opinion that this is a very fair charge to be placed on the lending institutions, as I quite concur in the committee's premise that if the Government is to continue to insure this class of loans there should be

some contribution made by the lending institutions toward defraying the expense of its operations.

The 25-year amortization period for small homes now provided under title II is also a most advantageous improvement. This provision is particularly helpful to the lower income group, because it serves to approximate their average rental payments.

I am very hopeful that the building program under the advantages offered by this act, as amended, will continue to gain in momentum, because every factor that is helpful to industry devolves benefits upon labor. We must, therefore, continue to take this means to encourage the construction industry, ever mindful of the vital position it occupies in our hopes for recovery. This act, I am confident, will ultimately accomplish this purpose and will continue to reflect credit upon the Congress, the administration, and the agency charged with administering the act.

I am very glad, therefore, to cast my vote in favor of extending the National Housing Act for 2 additional years.

National Labor Relations Act

EXTENSION OF REMARKS

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 12, 1939

ADDRESS BY A. GRAVES WILLIAMS, PRESIDENT OF THE OHIO CHAMBER OF COMMERCE

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by A. Graves Williams, president, Ohio Chamber of Commerce, before the Ohio congressional delegation and Ohio businessmen in Washington, D. C., March 31, 1939:

Mr. Toastmaster, our distinguished Members of Congress from the great State of Ohio, businessmen of Ohio, I deeply appre-ciate the compliment implied in asking me to address this notable

gathering tonight.

gathering tonight.

I am presented to you as the president of the Ohio Chamber of Commerce. May I introduce myself further to say that I am a manufacturer of women's low-priced footwear, shoes to sell at \$2 per pair in the retail stores of the country. I started in business in 1921, after having seen service in the World War and having enjoyed to the fullest one or two of those dizzy years in the lives of youth right after that World War.

I started in business as millions of young Americans have started, at the bottom—with nothing—and had the good fortune to be able to take advantage of that great opportunity which has been presented to so many young Americans in the past—that opportunity to work and progress.

opportunity to work and progress.

My daily tasks include the solution of many perplexities in catering to the whims of women—making their shoes for them—as well as the thousand and one problems which must be faced as well as the thousand and one problems which must be faced by any small, medium, or large manufacturing institution today.

I am asked to speak to you for us businessmen of the State of Ohio relative to the Wagner Act and the grave need for amending it as it stands today.

If I could get one point over to you early, I think it will help me in expressing my thoughts in this discussion.

That is, "the National Labor Relations Act is a thoroughly bad bloom of largeleting and without doubt has contributed more im-

plece of legislation, and without doubt has contributed more impediment to business recovery and stability than any other single piece of legislation upon our Federal statute books today."

I ask no brief for this statement, because I am firmly convinced that this is the truth, and I believe that most employers of labor and a great percentage of employees will agree with me. Therefore the question is, "What shall be done about it?"

The position of business in Ohio, as expressed by the Ohio Cham-

ber of Commerce, may easily be summed up by quoting from our recommendations to Governor Bricker and the General Assembly of Ohio in January 1939: "The Ohio Chamber of Commerce is opposed to any Ohio or Federal labor-relations legislation that does not—"(1) Assure equal responsibility for both employer and employee

organizations.

(2) Give equality before the law to all.
(3) Separate the function of prosecution, fact finding, and adiudication

"(4) Give the courts the right to review the findings of fact.
"(5) Proh:bit the compulsory closed shop and check-off." Let's examine those five points.

1. ASSURE EQUAL RESPONSIBILITY FOR BOTH EMPLOYER AND EMPLOYEE ORGANIZATIONS

Surely that sounds fair enough. Just what do we mean? "There can be no permanent solution of labor problems so long as the law places restraint upon one party to the employer-employee relationship and leaves the other party free of all restraint." The Wagner Act makes it legally fair to tie the hands of employers by restricting their action but permits employee organizations, their members, their organizers, to do anything.

The employer is prohibited from coercing his employees in any manner. He is forbidden to interfere with an employee's right to organize and he must bargain collectively.

On the other hand, the labor organizer may coerce, threaten, or intimidate in order to foster union organization, whether an employee's

intimidate in order to foster union organization, whether an employee desires it or not.

There is no doubt but that the union organizer has taken advantage of the license given him under the Wagner Act in this respect. The country has witnessed since the National Labor Relations Act went into effect a wave of sit-down strikes and other strikes involving violence and intimidation such as it has never before seen, and to think that in not one of its decisions or public utterances by its members has the National Labor Relations Board taken a stand against such conduct on the part of unions and their members.

Quite the contrary, the Board has encouraged and fostered such

lawlessness, for in numerous decisions it has ordered employers to reinstate—and in many cases with back pay—employees who engaged in sit-down strikes and other forms of unlawful conduct, violence, and ruthlessness during the course of disputes with

their employers.

Such encouragement by the National Labor Relations Board continued until the Supreme Court of the United States in its decision of February 27, 1939, said "You must stop."

There is danger, however, that many people will feel that the decision of the Supreme Court in this important matter has renamed the supreme Court in this important matter has renamed to the Supreme Court in this supreme Court in this supreme Court unnecessary congressional revision of the National Labor Relations Act.
On the contrary, the decisions of the Court have emphasized

the necessity of congressional action, for these decisions deal only with one or two outstanding situations which have arisen in the course of the administration of the act.

There are many defects in the act and its administration which deny equal responsibility for both employer and employee organizations, which are not in any way corrected by the decisions of the Court.

We businessmen of Ohio do not feel that such rank injustice

can continue.

2. GIVE EQUALITY BEFORE THE LAW TO ALL

There cannot be any public confidence in the National Labor Relations Act unless all persons stand equally before the law and its administrative agencies with full and equal rights to fair hearing and impartial decision.

Today there is a Nation-wide public demand for the correction

Today there is a Nation-wide public demand for the correction of the obviously one-sided and prejudiced operation of the Wagner Act. The report of the American Institute of Public Opinion, published on November 13, 1938, indicated that 70 percent of the general public wanted the National Labor Relations Act revised. Even Mr. William Green, president of the American Federation of Labor, publicly asserts that the act does not assure equality before the law for all, and he is clamoring for its amendment.

In the March 18 issue of Liberty Mr. Green has the following to say: "Here is an agency which was to have only the limited duties of an impartial umpire. After study, our executive council declares: 'It possesses more power than does any other governmental board now in existence. As for wholesale use of this power the Board and its subsidiaries in 3 years have passed on 16,500 cases, involving almost 4,000,000 workers. It has taken jurisdiction over a great portion of the vast industry of America. Congress gave the National Labor Relations Board no such mandate. I do not believe the people of America want any board to have such power. Public and labor interests alike demand correction of this situation.'"

If any one of you legislators here should make a speech in Congress regarding union activity or pertaining to the National Labor Relations Act, we as employers would become law violators, should we be so bold as to post your speech on the bulletin boards in our plants for employees to read, or should we go so far as to offer your speech—part of the Congressional Record—to our employees for their perusal. Surely, gentlemen, after having worked with men for years in an intimate manner, shouldn't we be free to converse with them regarding labor relations, as well as other relations?

In the Muskin Shoe Co. case the National Labor Relations Board ruled that it was an unfair labor practice for an employer to distribute reprints from the Congressional Record. The Board has definitely ruled that an employer has no right to present his side of a case in a labor dispute.

Let me read to you from the Portsmouth (Ohio) Daily Times of March 18, 1939, regarding the inquisition the Labor Board is conducting against the American Rolling Mill Co., one of the finest institutions in the world from a standpoint of industrial relations. This particular Labor Board persecution has been going on for at least 1 year:

"The next charge to be defended, it is understood, is the Harold Kirkman case. In this case Kirkman, it is charged, was black-listed and refused a job because his father, Guy Kirkman, is active in C. I. O. matters. The elder Kirkman is employed at Armoo.

The Labor Board is asking that Harold be given a job with back pay from the time he first applied for a job."

Think of it, gentlemen, employers are not only held responsible

for their own employees but they are likewise held responsible for those who are not their own employees.

3. SEPARATE THE FUNCTIONS OF PROSECUTION, FACT FINDING, AND ADJUDICATION

Have you ever been a party to a Labor Board hearing? Well, I have, and that is just one ordeal that I do not care to repeat very soon. After a manufacturer has been through one such hearing there is always a club over his head in order to avoid any such future persecution.

Let's visualize a courtroom—an employer is haled before the bar of justice. In the judge's seat sits an examiner, who to all intents and purposes is the judge. He is an employee of the National Labor Relations Board, and his findings are subject to review by that Board and to change as the Board sees fit.

On the other side of the courtroom from you sits the attorney for the Labor Board.

for the Labor Board. He has the same boss as the judge—the National Labor Relations Board—and on the Labor Board attorney's right usually sits the counsel for the complaining union, and they

work hand in glove.
On the other side of the room you sit with your attorney. are no reasonable restrictions as to hearing, the admission of testimony, the subpenaing of witnesses, so as to assure fair and full consideration, which is a matter of common right under our American form of government.

can form of government.

The customary rules of evidence do not apply, hearsay evidence in many cases is given more weight and consideration than testimony by actual witnesses themselves.

You as an employer soon realize that you are on the spot and you simply take your licking and like it. There has been in most cases a general attitude that the employer is guilty until proven innocent.

The permission of hearsay evidence and even gossip having been allowed makes the hearing voluminous and in many cases requires weeks and even months for a hearing to be conducted.

To add to the employer's woes, he has been required to pay \$1.10 for each sheet of a transcript of these hearings, while the Labor Board has paid but 18 cents.

Many employers and organizations of employees adversely

Labor Board has paid but 18 cents.

Many employers and organizations of employees adversely affected by decisions of the Labor Board cannot afford the burden of long drawn out and expensive litigation. As it is today, the Wagner Act may be used as a punitive and oppressive instrument. I honestly believe you could not find one single employer of labor in the United States who has been on trial before the Labor Board, who could admit to having had a fair trial.

4. GIVE THE COURTS THE RIGHT TO REVIEW THE FINDINGS OF FACTS

Under the Wagner Act it is specifically provided that our Federal courts must accept the facts as found by the Labor Board, and the Labor Board is prosecutor, fact finder, and judge.

It further specifically states that the findings of facts shall be taken as final. Therefore, if this is literally construed by our Federal courts, there is very little opportunity indeed for reversal of Labor Board findings. of Labor Board findings

of Labor Board findings.

Let's inquire into this particular situation. We have a bureau or an agency which employs the judge, employs the prosecutor, pays little or no attention to the rules of evidence, but makes its own rules, cooperates and works with the union attorney, and passes upon the misdeeds of the employers of this country.

Then the National Labor Relations Board reviews the proceedings, and if it doesn't like the examiner's findings, it changes them and issues an order as to the degree of guilt of the employer, and in most cases, "yes" in nine hundred and ninety-nine out of a thousand cases, the employer is guilty. Guilty of at least all of which he has been accused and perhaps more.

The employer as his next step may appeal to our Federal courts, who are specifically denied by the Wagner Act the right to inquire into the Labor Board finding the facts.

I place this question before you seriously: "Does this sound like jurisprudence as we know it in America?"

Gentlemen, the employer has as much chance as the proverbial snowball in hell.

snowball in hell.

5. PROHIBIT THE COMPULSORY CLOSED SHOP AND CHECK-OFF

The check-off arrangement under which employers deduct union dues from the wages of employees and turn them over to the labor organization should be forbidden.

If a labor organization cannot exist on the merits of its services and its benefit to employees and secure their voluntary affiliation and financial support, why should the ofttimes unpleasant and unfair duty of collection of union dues be forced upon the employer?

Any workman should have full freedom of choice as to whether or not he shall join a labor organization as to whether or not he will continue to belong to such an organization and as to whether or not he will pay dues.

Labor unions should sell the advantages of their organizations

Labor unions should sell the advantages of their organizations to individuals, and show that it is advantageous for the employee to be a member of their organization, just the same as it is necessary for the Elks, Eagles, and the Odd Fellows and many others to promote the advantages of fraternal organizations.

The law should not permit any arrangement under which either the employer or employee organizations or the two acting in unison can compel the continued membership of an employee in a labor organization or his financial support in order for that employee to hold his job. The closed shop and the check-off are

thoroughly un-American institutions, because by right of the Constitution any man is guaranteed such freedom of choice. Gentlemen, we businessmen of Ohio are unanimous in demand-

ing that the Wagner Act be so amended as to be fair, impartial, and workable. We demand that the administration of the Wagner Act, as it may be amended, be by an agency that is so selected

ner Act, as it may be amended, be by an agency that is so selected as to guarantee justice for all.

We are facing today one of the most critical periods in the entire history of modern civilization. We find Europe in a turmoil, undeclared war in the Far East, and unstable economic cenditions in practically all parts of the world. Democracy is floundering, while dictators are flourishing in Europe, the Far East, and Latin America.

Although we who have the love of this country deep at heart, and sincerely believe that our type of government and economic

Although we who have the love of this country deep at hear, and sincerely believe that our type of government and economic society is the best yet devised by man, nevertheless, we must realize that it may be impossible for our Nation to continue its present form of society with eleven or twelve million unemployed, and with a Government that is going on year after year spending more money than it receives in revenue.

We must likewise recognize that enterprise cannot flourish under excessive tax burden and restrictive laws. Without flourishing enterprise how are we to furnish employment? How are we to

provide taxable income?

For 6 years now an effort has been made here in Washington to legislate prosperity into existence, and such legislated prosperity in reality has amounted to just about doubling our national debt and enormously increasing our State and local indebtedness.

Look at it as you may through liberal eyes, middle-of-the-road

eyes, or conservative eyes, our national debt is far too great. If any of you as an individual are in as bad shape financially as your Government, I am sure that you are not enjoying many restful

nights.

At a time when government needs business most, and at a time when business needs sound government, business has been put in a strait jacket and the straps have been continually tightened until today it is difficult for business to function without unin-

tentionally violating some Federal law.

The United States became the world's leading nation in a comparatively short space of time, because God not only gave to us a grand country to develop, but because He also gave to our citizens an indomitable pioneer spirit, a will to do, and incentive

to accomplish. Let's take a look at that word "incentive." Let's examine it in our own individual lives. After all, business or government is

other than a group of individuals.

What has incentive done for you? It has inspired you to put forth your best effort, either all of the time, or upon most occasions in order that you might accomplish your immediate objectives. Perhaps that incentive might have been material wealth, political power or advancement, spiritual solace, or improvement of the mind. Nevertheless, the will to achieve was created by the desire for gain in some manner or other.

we have both individual incentive and group

incentive.

When you burden the individual or the group with such restrictive law or overwhelming taxation that you either curb or destroy incentive, then you have taken the steam from the locomotive while going at full speed, and the train gradually slows down and

eventually comes to a stop.

At this critical time in the history of this country government must have the moral and financial support of business. Labor likewise must have the confidence and cooperation of business. But if business continues to be throttled and so subjected to burdensome legislation, even unfair legislation, and to ever-mount-

ourdensome legislation, even uniair legislation, and to ever-mounting taxation, you will continue to stifle incentive and kill business.

Let me ask each of you men assembled here: When do you put forth your best effort? Is it when you are discouraged, sick, and blue, with no ray of hope, or is it when you are optimistic, full of pep, and raring to go because you have an opportunity to accomplish something worth while?

There is one other thought I wish to express for your consider-

From its inception, this country of ours has been one of freedom. We have had comparatively few laws, especially those which applied to the individual in his pursuit of health, wealth, and happiness We saw our prohibition amendment an utter failure because it told us individuals to do something which we felt interfered with our personal freedom and upon which the opinion of the country was

very evenly divided.

Do we as Americans want our individual lives regulated to the

extent that they are being regulated today? Personally I doubt it.

Let us take management and its regulation. We will all admit
that there are many different kinds of management, good, bad, and indifferent, just the same as there are varying degrees of ability to play the piano.

On one side of the road is a manufacturer whose institution is

On one side of the foad is a manufacturer whose institution is successful, and his people are receiving a high return for their labor. Right across the road there is an identical manufacturer, who is less successful and whose labor receives a less return for their efforts. A difference in management, in human nature. We know men identified with the labor movement who are conscientious, honorable, and well informed as to the problems of management as well as the problems of labor. On the other hand, we know men identified with the labor movement who would resort to any means foul or fair to gain their chlestive polection. to any means, foul or fair, to gain their objective.

Can legislation correct or legislate the differences in the ability of men to manage business, lead a labor movement, or perform any given task? I don't believe that legislation will ever correct such situations any more than it will make a tidy, neat housekeeper out of a woman who is naturally a sloppy, indifferent housekeeper. God made us all, and He made us all different. He will continue to provide scarcity and plenty; He will give us rain and sunshine, dust storms, and floods.

He put us on this earth to think and to labor, to have joys and sorrows to have privilege and hardship. He made our abilities

sorrows, to have privilege and hardship. He made our abilities different in order to solve or not to solve different problems.

Go back in history as long as it is written and you will find legislators endeavoring to control the laws of God by laws of man; and, gentlemen, isn't it time that our lawmakers realize that in attempting to legislate laws of nature they have undertaken an insurmountable task?

I have digressed somewhat from the specific discussion at hand, but it is seldom that an ordinary shoemaker has the opportunity to espouse any of his pet theories before such distinguished guests.

Statistics of the Department of Labor show that there were 1,856

strikes in industry in 1934, 2,014 in 1935, 2,172 in 1936, and 4,740 in 1937. This dropped back to 2,350 in 1938, which was by far more than any year between 1921 and 1933. It was also a year of indus-

trial recession.

Surely the object of Government intervention in labor relations should be to promote peace and justice. The National Labor Relations Act has failed miserably to obtain any such end, and as a matter of fact the National Labor Relations Board is not even

matter of fact the National Labor Relations Board is not even allowed to work for either peace or justice.

It does not mediate, it does not arbitrate, it does not examine the merits of the dispute, it does not provide a procedure for doing any of these things. Actually what happens is that the Wagner Act forces the employer into a bargaining conference which he cannot leave unless he violates the law, while his employees may go on strike for any reason they may wish and commit almost any violence to gain their end, and do it lawfully.

The remedy is to reorganize the whole thing so as to create in fact rather than in name a National Labor Relations Board.

Such a reorganization, or, let us say, such amendment, should—First. Assure equal responsibility for both employer and employee organizations.

Second. Give equality before the law to all

Second. Give equality before the law to all. Third. Separate the function of prosecution, fact finding, and adjudication.

Fourth. Give the courts the right to review the findings of facts.

Fifth. Prohibit the compulsory closed shop and check-off. Gentlemen, do you recall the time when businessmen—and by that I mean manufacturers, merchants, bankers, professional men, men engaged in all sorts of honest endeavor—were held in rather high esteem in this country?

Remember, success stories were the order of the day in such magazines as the American, System, and the American Boy. Do you remember the works of Horatio Alger, where a poor boy always had an opportunity to become president of a large corporation or of the United States. Both presidents were held in high esteem in those

Let's recall, as I mention their names, the unbelievable accomplishments of such men as George Washington, Benjamin Franklin, Thomas Jefferson, Abraham Lincoln, Charles Goodyear, Eli Whitney, J. J. Hill, the empire builder, Andrew Carnegie, Thomas A. Edison, John D. Rockefeller, Henry Ford, to say nothing of millions of Americans of even lesser accomplishment but who all went hand in hand to make this country great.

You can never make me believe that such men as these were enemies of labor.

enemies of labor.

I do not believe today that modern businessmen schooled in modern business practice have any desire whatever to oppress their fellow workmen or return to him any less share of the profits of industry than is rightfully his.

Good, sound, harmonious, successful labor relations are nothing new in this country; they have been practiced successfully for years by industrial institutions, large and small.

Read the history of such companies as Procter & Gamble, American Rolling Mills, Standard Oil of New Jersey, Endicott-Johnson Corporation, the Eastman Kodak Co., and on and on, large and small. In thousands of industrial plants throughout this great land of ours management and labor have marched hand in hand up the ladder of success for many years, and without the assistance of the interference of the National Labor Relations Act. In my own institution, the Williams Manufacturing Co., makers

In my own institution, the Williams Manufacturing Co., makers of women's shoes and employing 1,100 men and women, I know each person in the institution by his or her first name; their problems are brought to me, our problems are taken to them, and in a few short years prior to 1935, during the worst depression this country has ever known, we literally raised ourselves by our boot straps from nothing to something through harmonious labor relationship.

There are just as many potential Henry Fords, Thomas A. Edisons, John D. Rockefellers in this country today in our high schools, our colleges and in our industry.

colleges, and in our industry.

These unknown men have the ability, the stamina, the spirit to lead this country forward, but they are held in leash today by the straitjacket of Federal legislation. They do not have the proper treatment.

If you, our representatives here in Washington, will open your eyes, go into action, cut the red tape, and remove the shackles from business and businessmen, I firmly believe that they would furnish

the energetic leadership necessary to revitalize this country and to lead agriculture, labor, and business out of this hopeless morass into a future of bigger and better things for all.

Compulsory Pay Deductions

EXTENSION OF REMARKS

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 12, 1939

LETTER FROM JAMES B. YANCEY, PRESIDENT, LOCAL 113, UNITED FEDERAL WORKERS OF AMERICA

Mr. SHAFER of Michigan. Mr. Speaker, under permission to extend my remarks, I include a letter from James B. Yancey, president of Local 113 of the United Federal Workers of America, relating to the practice of the Veterans' Administration in making compulsory deductions from the pay of employees of veterans' facilities for quarters, subsistence, and laundry.

The letter follows:

NORTH LITTLE ROCK, ARK., April 6, 1939.

Hon. Paul W. Shafer,

House Office Building, Washington, D. C.

Dear Sir: While desiring no controversy with the Administrator of Veterans' Affairs, Local No. 113, United Federal Workers of America, feel that his letter to you of March 20, 1939, and which appears in the Appendix of the Congressional Record of March 27,

1939, page 1183, needs, in a spirit of fairness, clarification.

The Administrator's letter was written with reference to your remarks on the floor of the House February 8 which appears on page 1253 of the Congressional Record of the same date. It will page 1253 of the Congressional Record of the same date. It will be noted, however, that no mention was made about the letter by Hon. Albert J. Engel, which appears under your Extension of Remarks on page 431 of the Appendix of the Congressional Record of February 8. The Engel letter is a true picture of the situation.

Deductions for quarters, subsistence, and laundry are compulsory mainly for nurses and attendants—the latter being the lowest paid group in the service and many of whom work far more than and group if the service and many of whom work far more than 8 hours per day. We are asking for no advantage. The attendant service is necessary to the operation of the hospital—equally as necessary to the hospital service as mail carriers to the Postal Service. Yet, we do object to being exploited by the Government

Itself.

In computing deductions for quarters, the Administration, according to the Administrator's letter, "takes into consideration the condition of the quarters, size, convenience thereof, etc.," rather than taking into consideration the cost to the Government. It seems that he views the rental from the standpoint of a realtor renting for profit. He mentions "conditions of the quarters" as one consideration for fixing rentals, yet for more than 2 years after an attendants' quarters at this facility was condemned as unfit for use the usual Veterans' Administration rentals were deducted.

unfit for use the usual Veterans' Administration rentals were deducted.

The largest attendants' quarters at this facility, a stucco structure, consists of 32 sleeping rooms and is occupied by 64 men—or at least rental is deducted from 64 men, at \$8 per month each, or a total of \$512 per month. Prior to the reduction in 1934, spoken of by the Administrator, these rooms rented for \$20 each or \$10 per occupant. Taking the present figure, it seems that 25 percent, or \$128 per month, would be an ample retirement fund—\$100 for upkeep and \$2 per man for heat, lights, and water, or \$128 per month would be a high estimate for this service since heat is furnished from a central heating plant for the entire facility. But with these fixed charges there is a profit of \$156, or rive. But with these fixed charges there is a profit of \$156, or approximately \$2.50 per man per month. In the spirit of fairness it seems that the Government would be willing to lose a few dollars rather than profit from low-paid workers who need all their already low wage in the support of their families.

There is another smaller attendants' quarters here which was built about 40 years ago when this was an Army post. The nurses' quarters housing approximately 40 nurses or other female employees, at \$12.50 per room, with maid service, is an old struc-

employees, at \$12.50 per room, with maid service, is an old structure, remodeled.

With reference to the subsistence charge the Administrator points out that, "The actual cost of food is not the only item to be figured in arriving at a fair charge. Other items enter into cost, such as fuel, preparation and serving of food, and other service charges." This is admitted, but it must be borne in mind that the kitchen, kitchen equipment, etc., is provided and maintained primarily for the beneficiaries. Could the attendant service be dispensed with entirely these services and this equipment would necessarily have to be maintained with no appreciable decrease in equipment or help. The attendant personnel is approximately 15

percent of the patient census. We fail to grasp the great differential between food which costs about 30 cents per day and its service to 15 percent of the partakers at 75 cents per day. At 50 cents per day the Government would more than break even, since the cost of equipment and preparation for the attendants is merely incidental. Further, we fail to grasp the justice of the subsistence deduction when on leave away from the facility.

The Administrator contends that 50 percent of the attendant personnel must live on the station. We contend that since there is a day and night shift always on duty that a much smaller percentage would be sufficient. Since a large number of the attendants have moved their families to the vicinity of the facility and are of easy access, there seems to be no necessity to require 50 percent to pay for rooms. We believe that the 10 percent provided for in H. R. 3829 would be sufficient and that this number would voluntarily accept quarters and subsistence.

We feel that since the turn-back to the Treasury from the appropriation has exceeded the average of \$7,000,000 annually that we are justified in asking that these deductions be eliminated for at least 90 percent of attendant personnel and supplied at least cost

least 90 percent of attendant personnel and supplied at least cost

to the others.

We desire to express our appreciation for your interest in our behalf and will ask your continued support for our legislative program.

United Federal Workers of America, Local No. 113, By James B. Yancey, *President*. [SEAL]

Are "We," the American People, Being Projected Into War

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 12, 1939

EDITORIAL FROM THE NEW YORK JOURNAL-AMERICAN OF APRIL 11, 1939

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Journal-American of Tuesday, April 11, 1939:

[From the New York Journal-American of April 11, 1939] ARE "WE," THE AMERICAN PEOPLE, BEING PROJECTED INTO WAR?

"I'll be back in the fall if we don't have war," said President Roosevelt, smilingly waving a farewell from his private car leaving

Warm Springs, Ga.
Presumably "we" means nothing other than "we, the people of the United States."

the United States."

If the President had meant that there would be war in Europe before fall he would naturally have said "If "they' don't have war."
But he did not say "they," he said "we."
And that "we" will be interpreted not only by all Americans, but by all foreign people, as meaning "war" for the United States.
It is almost inconceivable that the President of the United States should be thinking of putting his country into a general world war which, at the present moment, does not exist.

It is alarming and astounding that the President of the United States should be talking of such a war when we are at peace with every country in the world, when neither our territories nor our honor have been attacked, and when the minds of Congress and the people are centered on some of the gravest domestic problems that have ever confronted us.

the people are centered on some of the gravest domestic problems that have ever confronted us.

Is it possible that the "we" of the President means that we are already allied secretly to imperialist England, socialist France, and maybe even to "red" Russia?

Does that "we" mean that the independence and isolation of the

Does that "we" mean that the independence and isolation of the United States have been sold over our heads, and that President Roosevelt is following in the footsteps of President Wilson, whose egotism and ambitions projected us into the World War?

It is hardly credible, and yet President Roosevelt's "If we don't have war" is not susceptible of any other interpretation.

"We" definitely does not mean "they."

That fateful "we" will be interpreted in every European chancellery as an announcement that America is militaristically lined up with France and England in the coming struggle for power and loot in Europe and Asia.

That particular "we" is the culmination of a series of acts of international busybodyism which has dismayed the peace-loving American people.

American people.

Is it not humanly possible for this administration to mind its own American business?

The administration has attacked Japan for the closed door policy in Manchukuo, although England is the nation which would be adversely affected, and figures show that the United States has

exported more goods to Manchukuo in the past year than ever before.

Senator NyE revealed that vital fact in a speech in the Senate

recently

The administration attacked Italy about the conquest of Abyssinia—which is deplorable perhaps—but which is none of America's business

The administration now attacks Italy about the Albanian expedi-

The administration now attacks Italy about the Albanian expedition—which is also none of America's business.

President Roosevelt and Secretary Hull attack every country whose policy they do not personally agree with. They forget that they are America's public officials, and that the people of the United States want to keep out of European conflicts.

The "we" speeches and "we" attitude of mind on that part of our public officials are engendering bitter antagonisms in European countries with which we have no disputes.

"We, the people of the United States," which are the first words of the preamble to our Constitution, does not mean "We, the people of Europe, Asia, and Africa, as well as of America."

The American people have given our international meddling officials in Washington proof over and over again—in Congress, on the radio, in the public prints, in public assemblies and in the Gallup poll, and the other accurate and reliable tests—that we want no alliances with European countries.

That we will have no war except a war of defense.

That we will not transport our youth abroad again to be slaugh-

That we will not transport our youth abroad again to be slaugh-tered in causes that are not ours.

That we wish to remain at peace with all the world.

That when the American people say "we," we do not mean Frenchmen, Englishmen, Chinese, Albanians, or Russians.

It is only fair to the American people to ask President Roosevelt to explain candidly to the country what his "we" meant.

This is no time for dark and dubious sayings on the part of those men whom we have placed in the seats of executive power.

May we good Americans, plain Americans, loyal Americans, gen-

uine Americans, all pull together for a peace for our country and our people, not for meddling in alien wars, for alien peoples and alien policies.

A Puritan in Babylon

EXTENSION OF REMARKS

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 12, 1939

EDITORIAL BY HON. L. B. JOHNSON, OF RANDOLPH, VT.

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Hon. Luther B. Johnson, of Randolph, Vt., long-time friend and neighbor of the Coolidge family, living in a town nearby Plymouth; for years the editor of the Herald and News; former chairman of Vermont's State Board of Education; late county senator; native Vermonter, who takes exception to William Allen White's evaluation of President Coolidge in his book A Puritan in Babylon, and says:

A PURITAN IN BABYLON

This is the engaging title of William Allen White's recently issued life of Calvin Coolidge and the American political history of Coolidge's lifetime. White is a well-known author, a Kansan, with wide experience in public life and thorough acquaintanceship with the leading public figures of his day. He made a painstaking search of almost everything that promised information of any sort concerning the subject of his biography. On several occasions he met Mr. Coolidge, was entertained by him and Mrs. Coolidge, studied the quaint personality of the then President at close range, and tried—probably with as little success as others had—to plumb the depths of his mind.

Most New Englanders—Vermonters especially—will find it hard to finish a careful reading of the White production. Like many westerners who are reared in an atmosphere of prejudice against New England people and their institutions, White has let this feeling have full sway in his treatment of the most highly honored of This is the engaging title of William Allen White's recently issued

New England people and their institutions, White has let this feeling have full sway in his treatment of the most highly honored of its sons in recent years. His biography reeks with jabs and stabs at New England's reputed parsimony, smallness, trickiness, coldness, sourness, self-seeking, dumbness, and all the other faults and weaknesses of which they have ever been accused. The author finds these in abundance in his subject and plays them up in a most disagreeable and exaggerated manner. To offset, he gives Mr Coclidge credit for a great many virtues, acts of wisdom, and for good judgment, cleanness of heart, impeccable honesty, loyalty to every friend, devotion to his family.

But he smears his subject with almost incessant dabs, which, actually analyzed, are little more than criticisms of personal mannerisms or could be explained by the undoubted preference of Cool-

idge for silence or laconic utterance when freedom of speech was ourted or desired by those about him for their own entertainment or satisfaction. It is regrettable that a work which represents so much thought and labor on the part of the author is so out of balance in its carrying power to the reader. The student of biography who a generation hence depends upon A Puritan in Babylon

raphy who a generation hence depends upon a Puritan in Badylon for a true picture of Coolidge and his times will be led far astray. In respect to Grace Goodhue Coolidge, on the other hand, Author White can hardly say enough in praise. To him she was the same gracious, likable, always-at-ease person—and in these respects the write can hardry say shough in praise. To film site was the saile gracious, likable, always-at-ease person—and in these respects the complete foil to her silent and sometimes uncongenial husband—that she was to everyone else. She, too, Mr. White, was a Vermont product, but not once do you give Vermont credit for her rare qualities, though you find in the things you criticize in Mr. Coolidge the elements that came from his Vermont soil and heritage. In this respect also you are unfair to us of their native State. You are trying to smear Coolidge and his New England background. Your use of the term "Puritan" is derogatory both to him and to his native heath. It implies what was not the truth respecting him. While the biography gives intimate details of Mr. Coolidge's everyday life with the evident purpose to play up his eccentricities, it cannot and does not obscure the fact that he was a remarkable man in many respects—if advancement in public favor measures merit in proper degree. The mere record that, starting in life without backing or influence, he rose steadily, step by step, from humble position in his city to membership in both branches of the Massachusetts Legislature, to the lieutenant governorship, to two highly

chusetts Legislature, to the lieutenant governorship, to two highly successful terms as Governor, to the Vice Presidency, and finally to the Presidency of this great country, is one that cannot be explained by lack of capacity, by cheap political trickery, by the favor of powerful mentors, or by sheer luck. It speaks for itself,

favor of powerful mentors, or by sheer luck. It speaks for itself, confounding all detractors.

The Coolidges, to be sure, were a peculiar people; but they had strength of will, of purpose, of character, of conscience, of ability. Mr. White's own work demonstrates this by the chronicle of their accomplishment. When Lincoln's biographers write of him they do not sneer at his tall, angular form, his high-pitched voice, his other personal peculiarities, but rather they make these popular and attractive in him. Nor do they attribute them to his low Kentucky breeding and environment. Mr. White could have learned from them. Even the very great have their oddities and weaknesses. But their qualities of strength and virtue blot these out. Nobody who ever wrote of Benjamin Franklin ascribed his shortcomings—and he had them—to puritanic New England, from which he came, or used them to deprecate the State of his birth.

or used them to deprecate the State of his birth.

Mr. White seeks to hold Mr. Coolidge responsible for not putting the brakes onto the wild speculation in securities and other heralds the brakes onto the wild speculation in securities and other heralds of economic distress which preceded the collapse of 1929. Clearly neither he nor Congress could do much about it. Nor did it appear, up to the end of his Presidential term, that it was an ominous sign. Better economists than Mr. Coolidge, the very best there were, assured him and the broad public that it was merely an accomplishment of the greatest wave of prosperity the country had ever enjoyed. They were honestly mistaken.

This biographer asserts that Coolidge was "playing horse" when he issued his cryptic announcement, "I do not choose to run," in 1927; that he was acting coyly in the hope and expectation that the nomination would be thrust upon him to his immense personal gratification; that when this little trick failed and Hoover was chosen it brought Coolidge bitter disappointment, and that he entered enforced private life against his desire and very unhappy.

This may all be true; there are various opinions about it; but evidence is quite insufficient to convict him of such a "mousy"

This may all be true; there are various opinions about it; but evidence is quite insufficient to convict him of such a "mousy" act, and a friendly biographer should not have given it credence. Mr. Coolidge had had his fill of public life. All the honor in it had come to him, and he probably was aware that 4 years more had come to him, and he probably was aware that 4 years more would bring him more trouble than gratification. He had a splendid record to retire upon; why risk it further? Also he had countenanced the canvass of Mr. Hoover, a member of his Cabinet, though he never declared in favor of anybody—quite unlike most Presidents, who seek to name their successors. Coolidge stood pat by his declaration and kept hands off in spite of tremendous pressure. At any time he could have had the renomination by merely nodding his head. His refusal to do so counts for more than more surming.

merely nodding his head. His refusal to do so counts for more than mere surmise.

There is nothing in A Puritan in Babylon to indicate that William Allen White ever came to Plymouth, Vt., to seek first-hand material concerning the ancestral home and youth environment of Calvin Coolidge. Indeed, from his captious attitude toward these, as well as Vermont and Vermonters in general, it is fair to assume that he did not; for if he had come and received there the impressions that many visitors carry away he would have made generous use of the material at hand. Conditions at Plymouth are no source of pride or satisfaction to Vermonters. Neither the homestead, the little village, nor the cemetery where lie the Coolidge dead of several generations measure up to what they should as an American little village, nor the cemetery where he the Coolinge dead of several generations measure up to what they should as an American shrine. We do not need to say more; the facts are well known. Something should be done about it. Something has been attempted, but for reasons not clearly understood the movement bogged down. Although much time has been lost and interest, once keen, has waned, it is not too late for needed improvements to be made. Upon whom rests the initiative?

In his minute search for whatever he could find bearing upon the record and character of Calvin Coolidge, it is strange that Author White overlooked one public utterance by the then President which placed him among the immortals. It was made at Bennington in September 1928; a short, simple, heartfelt, eloquent tribute to a State and people whom he knew well. In depth of feeling and force of expression it rivals Lincoln's Gettysburg Address. Yet Mr. White either missed it or did not suit his taste or purpose. Here it is:
"Vermont is a State I love.
"I could not look upon the peaks of Ascutney, Killington, or Mansfield without being moved in a way that no other scene could move me

Mansfield without being moved in a way that no other scene could move me.

"It was here that I first saw the light of day, here I received my bride, here my dead lie pillowed upon the everlasting hills.

"I love Vermont because of her hills and valleys, her scenery and invigorating climate, but, most of all, because of her indomitable people. They are a race of pioneers who almost beggared themselves for others. If the spirit of liberty should vanish in the Union and our institutions should languish, it could all be restored by the generous store held by the people in this brave little State of Vermont."

T. V. A. Investigation-Not Full and Complete

EXTENSION OF REMARKS .

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 12, 1939

RADIO ADDRESS BY HON. CHARLES A. WOLVERTON, OF NEW JERSEY, APRIL 6, 1939

Mr. WOLVERTON of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following radio speech which I delivered over the national network of the Columbia Broadcasting System from station WCAU, Philadelphia, Pa., on Thursday afternoon, April 6,

Earlier this week the joint committee of Congress, charged 1 year ago with the duty of investigating the Tennessee Valley Authority, presented its report to the House and Senate. Indeed, the committee presented two reports—one on behalf of the majority and a dissenting report which sharply challenged a number of the major conclusions of the former. As one of the members of the committee, I joined with Senator James J. Davis, of Pennsylvania, and Representative Thomas A. Jenkins, of Ohio, in making this dissenting report. ing report.

Before describing to you this afternoon the reasons which pre-Before describing to you this afternoon the reasons which prevented us from concurring in the report of the majority, it might be well to give you briefly some of the background of this Tennessee Valley Authority investigation. You will recall that the Tennessee Valley Authority is a board of three members, created shortly after the New Deal commenced in 1933, to supervise and administer a gigantic development program on the Tennessee River. This program envisioned construction of a number of dams along that river for purposes of flood control and making the Tennessee River navigable, but also for the production of hydroelectric power. Agricultural and industrial development of the Tennessee Valley also was included in the purposes of the legislation. legislation.

legislation.

Extraordinary powers and prerogatives were given to this threeman board or authority. Indeed, never before—or for that matter since—has the Federal Government created such an agency. President Roosevelt aptly described the T. V. A. in a message to Congress when he termed it "a corporation clothed with the power of Government but possessed of the flexibility and initiative of a private enterprise." It was this dual nature of the T. V. A. which brought it into difficulties and led to the so-called investigation just completed. gation just completed.

although a creature of Congress—dependent on Congress for its money and its authority—yet this agency undertook to act like a privately owned corporation, seeking to avoid those requirements and safeguards for the public protection and welfare which common sense demands be thrown around every governmental agency. But, though two of the three T. V. A. directors named by the President wished the freedom of a private enterprise for their agency, they failed to live up to those obligations and responsibilities which fall on privately conducted business.

This anomalous situation led to dissension within the T. V. A.—

sponsibilities which fall on privately conducted business. This anomalous situation led to dissension within the T. V. A.—dissension which reached the public ears last winter. It was brought to a head when Dr. Arthur E. Morgan, Chairman of the T. V. A., publicly criticized the conduct of his two fellow directors, David Lilienthal and Harcourt Morgan. Dr. Morgan—named to the T. V. A. chairmanship by President Roosevelt—pointed out a number of irregularities in the conduct of that agency. Dr. Morgan was dismissed as T. V. A. Chairman. In addition there already had been widespread dissatisfaction with the manner in which this Tennessee Valley experiment was being conducted. For one thing, neither Congress nor the public knew very much about the financial details of the operation. Since T. V. A. was in the nature of an

experiment, it was desirable that everything pertinent about its operations, its successes, and failures should be publicly known.

So last April Congress voted to create a joint committee of House and Senate to make, and I quote from the resolution, "a full and complete investigation of the administration of the Tennessee Valley Authority, including some 20 points of inquiry, but," and again I quote, "not excluding any other matters pertaining to the administration and policies" of T. V. A.

As a member of that committee, I regret to report to you that this was not done. The committee did not make "a full and complete investigation of the administration of the Tennessee Valley Author-

investigation of the administration of the Tennessee Valley Authority." From the beginning of the investigation Senator Davis, Representative Jenkins, and myself endeavored to cooperate in every resentative Jenkins, and myself endeavored to cooperate in every possible way with the other members in a sincere effort to bring out the facts and develop all pertinent matters. Our only objective was to make it possible for Congress and the American people to be in a position to know the serious implications and grave possible economic and social consequences which may follow if the Tennessee Valley Authority is continuously allowed to pursue a policy of unhampered expansion, experimentation, and spending without application of the proper controls and safeguards.

application of the proper controls and safeguards.

Thus we believe it was the responsibility of the committee to investigate the economic feasibility of many of the major objectives set up in the T. V. A. Act. This was not done.

We believed it was within the authority of the committee to investigate whether and to what extent, if any, private interests had been invited or investigate whether and to what extent, if any, private interests had been invited or investigate whether and to what extent, if any, private interests had been invited or investigate through the organization and opera-

been injured or jeopardized through the organization and opera-tions of T. V. A. This was not done.

We believed that the committee should have undertaken to ascertain whether, and to what extent, if any, counties, townships, municipalities, and local communities had been injured by the

T. V. A. program. This was not done.

We believed that careful consideration should have been given to the unemployment problem created by the manufacture of hydroelectric power in a region where coal is plentiful and coal mining the basis of a livelihood for many people. This was not

done. Furthermore, we believed that a substantial part of the committee's work should have been to conduct an investigation, by trained accountants, independent of the T. V. A. and other Government departments, of the financial transactions directly and indirectly affecting T. V. A. The importance of this undertaking readily can be seen when it is realized that an audit of the fiscal affairs of T. V. A. by the General Accounting Office showed exceptions were taken to \$20,000,000 of T. V. A. expenditures of which only about \$14,000,000 has been cleared. The committee did not have before it at any time audit reports of T. V. A. for 1935, 1936, 1937, and 1938. Think of that! No audit reports for 4 years out of 5. of 5

The committee did not undertake an audit of the T. V. A. because

The committee did not undertake an audit of the T. V. A. because the majority objected on the ground of a lack of funds. Even the present T. V. A. comptroller, appointed after the investigating committee was created, said he was "appalled" when he examined the accounts of the T. V. A.

Those of us who dissented from the majority report also believed that some 50 witnesses, including high-ranking officers of the T. V. A. and the Government, should be called before the committee for questioning and cross-examination. We submitted such a list of names. But the hearings were ended without the appearance of these witnesses. The committee, for instance, did not even have an opportunity to question and cross-examine its own engineer on a report he had made because the majority were in such a hurry to end the inquiry.

and the inquiry.

Nor was any effort made aggressively to inquire into such important matters as land acquisitions, purchase of materials, letting of contracts, overlapping of functions and activities, unnecessary personnel, favoritism in the appointment and advancement of employees, and the fixing of salaries not commensurate with previous experience or work performed. The expenditures for these purposes has amounted to millions of dollars.

Moreover, the efforts of these wishes wished a real investigation were

has amounted to millions of dollars.

Moreover, the efforts of those who wished a real investigation were further hampered by fear among T. V. A. employees to speak of matters and things that called for an inquiry. There is evidence in the record of this investigation of tactics smacking of Soviet Russia wherein one of the T. V. A. lawyers put another T. V. A. official through a severe grilling on suspicion that he had talked with the former Chairman of the T. V. A., Dr. Morgan, about matters under investigation. investigation.

Yet despite the inadequacy of this investigation, despite all the handicaps placed in the way of those seeking the truth, conditions were revealed in T. V. A. that merit severe condemnation and tions were revealed in T. V. A. that merit severe condemnation and call for correction. For example, we found out that T. V. A. assumes to be above and beyond general Federal laws enacted by Congress to control governmental agencies. We found that T. V. A. officials refused to recognize the civil-service law as having any application to the employment and dismissal of employees. As a result of that, favoritism of a most vicious type has been prevalent in the T. V. A. We found that T. V. A. had not been candid, with either Congress or the public, regarding its operations. Exaggeration marked many of its reports and releases.

But far more serious, we found that the administration of the T. V. A. in many particulars had been inefficient and wasteful. We

T. V. A. in many particulars had been inefficient and wasteful. We found that frequently it had been arbitrary, dictatorial, and unbusinesslike. We found that in many instances T. V. A. had completely ignored the rights of the States in which it operates and had impinged upon their sovereignty almost to the point where there is ground for the charge that the T. V. A. was endeavoring

to set up a super-State in the Tennessee Valley. As I have indicated, we also found the accounting methods of the T. V. A. cated, we a indefensible.

Furthermore, we found that the power program of the T. V. A

Indefensible.

Furthermore, we found that the power program of the T. V. A., under the present rates charged consumers of electricity, does not pay its way. We found that the actual expense to the Government is and will be, unless the rates are changed, far beyond the revenues and, that thus, electricity is being furnished to consumers in the Tennessee Valley area by T. V. A. at less than cost and that the difference is being paid by the taxpayers of the rest of the country. We found that attempts of T. V. A. to establish the so-called "yardstick," of which you have heard so much, are wholly futile. Contentions that the rates now fixed by T. V. A. constitute a "yardstick" are wholly false and propaganda about this "yardstick" is a grave misrepresentation.

I have only scratched the surface, even of the high lights of the T. V. A. investigation. Time at my disposal grows short and I cannot for that reason make reference to other important matters that would be of interest to you. I conclude by stating that those who presented the minority report proposed a constructive program for the future development of this gigantic T. V. A. experiment. We recommended a sweeping reorganization which would eliminate the waste and inefficiency which now mark the T. V. A. and which would serve the public welfare without doing irreparable harm to private enterprise and economic recovery. Adoption of our program would go far toward restoring confidence and creating jobs in private industry for our present army of unemployed. I regret that the time now remaining prevents my giving you details of that program but I shall be happy to send you a copy of the minority T. V. A. report if you will write me, care of the House of Representatives Office Building, in Washington.

What Is Happening to Our Agriculture?

EXTENSION OF REMARKS

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 12, 1939

ARTICLE BY HON. GEORGE N. PEEK

Mr. WOODRUFF of Michigan. Mr. Speaker, under permission to revise and extend my remarks in the RECORD, there is inserted herewith an article from the National Grange Monthly of September 1938 by Hon. George N. Peek:

[From the National Grange Monthly of September 1938] WHAT IS HAPPENING TO OUR AGRICULTURE?-STERN FACTS AMERICAN FARMERS MUST FACE

(By Hon. George N. Peek)

In the June issue of The Nation's Agriculture, official organ of the In the June issue of The Nation's Agriculture, official organ of the American Farm Bureau Federation, there appeared an article, Trade Agreements and the Farmer, by Prof. Francis Bowes Sayre, Assistant Secretary of State, in charge of the administration's trade-agreements program, and former adviser to the Siamese Government in foreign affairs. His article seeks to justify the administration's foreign-trade policy as it affects agriculture. Professor Sayre paints a glowing picture. Unfortunately, there is another side to the story, one which Professor Sayre does not tell. In considering his article and this are it should be kent in mind that at no time since 1920.

one which Professor Sayre does not tell. In considering his article and this one it should be kept in mind that at no time since 1920 have farm prices as a whole attained parity.

Professor Sayre's assertions are along five general lines, and they are in general misleading; they do not accurately reflect the facts. Theories and facts do not jibe in this case. For example, after stating that one of the major purposes behind the enactment of the Trade Agreements Act of 1934 was the restoration of foreign markets for our agriculture, which Congress believed, Professor Sayre asserts:

Sayre asserts:

"(1) That trade agreements are definitely helping American farmers to win back vital foreign markets.

"That they are helping farmers to win back larger domestic markets through increasing the purchasing power of our industrial workers

"That enlarged foreign markets for American industrial prod-ucts mean increased employment and higher wages for American workmen and increased domestic markets for agricultural products."

FIGURES REFUTE SAYRE'S STATEMENTS

Official figures seem to refute these statements. (See table I.) Imports of agricultural products in 1937 amounted to \$2,042,686,-998 while our agricultural exports amounted to \$1,019,252,622; an excess of imports over exports of \$1,023,434,376. Our agricultural imports in 1937 exceeded our agricultural imports in 1937 exceeded our agricultural imports in 1937 exceeded our agricultural exports in 1937 exceeded our agricultural exports in 1934 by \$117,803,622; in other words, we increased agricultural imports \$954,000,000 and only increased agricultural exports \$117,000,000. Is this a good trade for agriculture?

How the trade agreements are working to increase the purchasing power of our industrial workers and increase domestic markets for agricultural products is hard to understand, when we consider that according to the figures of the American Federation of Labor our average unemployment stands at more than 11,000,000 so far this year, compared with an average of less than 9,500,000 for 1935, 1936, and 1937. This in the face of the fact that our industrial exports increased from 1936 to 1937 *751,398,629; and in 1937 were \$1,076,977,629 more than in 1934.

1937 were \$1,076,977,629 more than in 1934.

Is it not fair to conclude that increased imports create more unemployment than increased exports create employment? Our increase in industrial exports may be credited to the rearmament program of European and Oriental nations more than to the trade-agreements program of the United States. Professor Sayre says:

"(2) That, while foreign-trade statistics may not interest the average farmer, increased income does. That in 1937 cash farm income, exclusive of benefit payments, amounted to \$8,154,000,000."

Taking Professor Sayre's figures of a little over \$8,000,000,000 income for farmers in 1937, exclusive of benefit payments, this is still about \$2,000,000,000 less than the yearly average from 1924-29, which in turn was a period of subparity farm prices and of great farm distress particularly in the grain and livestock areas. Farm income, like industrial income, depends upon volume of sales mulincome, like industrial income, depends upon volume of sales mulincome, like industrial income, depends upon volume of sales multiplied by the unit price. If we are to have restricted production the price must be high to offset decreased volume. Farmers should not be satisfied with exchanging \$2,000,000,000 or more in income for \$500,000,000 in Government checks, and they will not be for long. These statistics will interest the average farmer. Professor Sayre declares:

"(3) That two factors account for most of the increase in important."

imports:
"One, the droughts of 1934 and 1936, which necessitated larger imports to supplement our domestic supplies and which have come

in over our tariff wall.

"Two, that economic recovery, which caused a vast increase in the demand for imported noncompetitive raw materials, also strengthened the demand for many dutiable imports; that imports have, in general, come in over our tariff wall."

As to the effects of the droughts, no one minimizes that, but it must be admitted that the effect on 100-percent production could not have been as great as it was on reduced production directly or indirectly forced on the farmer. Further, Professor Sayre's argument does not take into account the added effect on farm imports of restricting production in the United States and then failing to stop and even encouraging the importation of competitive forms. stop, and even encouraging, the importation of competitive farm

Professor Sayre here admits that foreign trade follows prosperity and does not create it. It is true, of course, that demand "for imported noncompetitive raw materials" is created by our own prosperity and industrial activity. It does not, however, create either. To contend that it does, as some of our internationalists do, is to contend that the tail wags the dog.

UNITED STATES AS WORLD'S DUMPING GROUND

Professor Sayre says, "Imports increase when the prices of farm products are high and fall off when farm income declines," or, in other words, low-wage countries can jump over our tariff walls when our prices are high but cannot do so when they are low. The effect of imports is, therefore, to keep prices down. Not even the most ardent free trader would claim that low tariffs or free trade will hold up American prices. His arguments for support of the present trade-agreement policy mean only one thing—the administration does not want high farm prices. They propose to keep the United States the dumping ground for low-wage countries, both agricul-tural and industrial.

High wages and high prices must be related if a sustained prosperity is the objective. We cannot have one without the other. It should be remembered that of our total imports roughly twothirds are on the free list now, including "imported noncompetitive raw materials," and the attack of the administration is upon the farm and manufactured products now enjoying a degree of tariff protection against competitive imports.

It is impossible to say just what the trade agreements have done to our foreign trade because we give away all the reductions made in any agreement to all the rest of the world except Germany and recently Austria. We do know that agricultural imports have increased much faster than agricultural exports, and that industrial exports have increased faster than agricultural exports or industrial imports. (See tables I and II.) Professor Sayre further declares:

"(4) That nothing could be further from the truth than the belief that the benefit of concessions granted in a trade agree-ment is extended automatically to other nations, and that the M. F. N. policy has been the American policy ever since the days of George Washington.

"That the tariff concessions granted in any trade agreement are confined to those products of which the country in question is the principal or important source of supply."

Now let us get straight once and for all what "most-favored-

nation" treatment means. Most-favored nation treatment means that we promise to nations with whom we make commercial agreements that we will extend to them as favorable treatment with respect to tariff duties, port charges, and the like, as we do to any other country, and they in turn promise to give corresponding treatment to our goods. Sometimes, however, two nations make

tariff and other bargains whereby they extend special tariff and other concessions to each other on a quid pro quo basis.

The result is that there are two types of favored-nation policy:
(1) The conditional most-favored-nation and (2) the unconditional most-favored-nation policy and the unconditional most-favored-nation policy and the unconditional most-favored-nation policy and the unconditional most-favored-nation policy is an important distinction which is not always recognized or understood.

Under the conditional most-favored-nation policy, we stand prepared to give concessions to any third nation, conditioned upon corresponding concessions to us. But under the unconditional most-favored-nation policy, we automatically extend the concessions to every nation in the world, except Germany, without demanding specific concessions from them.

In theory the unconditional most-favored-nation principle is designed to reduce tariff and other barriers to trade. In practice, however, it does not seem to work that way, and it is noteworthy that the attempt of many nations to make it the basis of their foreign-trade policies has been accompanied by the increasing use of devices such as quota systems, exchange controls, trick classifications of commodities, and so forth, which in effect defeat the purpose of the unconditional most-favored-nation theory and lead to a multiplication of the very trade barriers which were to be reduced. At my last count there were more than 400 bilateral agreements between different countries from the benefits of which we were excluded.

CONGRESS IS NOT CONSULTED

The most-favored-nation clause has been taken by most Americans as not a very important specimen of diplomatic phraseology. Since the adoption of the Hull policies this innocent and apparently innocuous clause has unfortunately entered into the life of every American. For through these clauses a general reduction is being American. For through these clauses a general reduction is being brought about in the American tariff without the main question of lowering the tariff having been presented either to the people or to the Congress. Also, we weaken our trading position with each and every country in the world upon the consummation of every agreement we make.

Notwithstanding Professor Sayre's misleading contentions, our country followed the conditional most-favored-nation plan from 1789 until 1923 when an unconditional most-favored-nation treaty was made with Germany. The United States withdrew most-

1789 until 1923 when an unconditional most-favored-nation treaty was made with Germany. The United States withdrew most-favored-nation treatment from Germany in 1935. (This treatment was also withdrawn from Austria last May.) A few other unconditional treaties followed. But now this administration gives the benefits of any reductions it makes to any one country to every other country in the world, except Germany and Austria, whether or not it is obliged to do so by treaty. A case in point is Great Britain and the Ottawa agreements. Our Tariff Commission found that the preferences given by those agreements to British dominions constituted discrimination against the United States. But that the preferences given by those agreements to British dominions constituted discrimination against the United States. But Professor Sayre ignores that finding, and the administration acquiesces in this huge discrimination against us on the part of Great Britain and the British dominions. A similar discrimination against us exists as a result of the preferential Anglo-Argentine agreement; the Tariff Commission has had knowledge of many others, but for reasons of policy has not made them public. Nevertheless, Great Britain and her dominions get the benefit of every reduction we make to any country in the world and so does every other nation except Germany and Austria. This is not trading; it is a one-sided program of general tariff reduction; and it is being carried out without reference to the constitutional and traditional prerogatives of Congress in tariff matters.

Professor Sayre's claim that the tariff concessions granted in any

Professor Sayre's claim that the tariff concessions granted in any agreement are confined to those products of which the country in question is the principal source of our total importations is simply, to express it baldly, not so. For example, take cement. The tariff on cement was cut in the Belgian agreement but Belgium was by no means the principal source of supply when this agreement was made. Denmark, United Kingdom, France, and Germany were also important suppliers. In 1928, 1929, and 1930 Belgium was the principal supplier. In 1931 it was Denmark; in 1932 it was the United Kingdom; in 1933 again it was Denmark. But Denmark and the United Kingdom, in fact, all the world, except Germany, got the reductions in tariffs made to Belgium. Take manganese ore as another example. The duty upon it was re-Professor Sayre's claim that the tariff concessions granted in any Germany, got the reductions in tariis made to Beigium. Take manganese ore as another example. The duty upon it was reduced in the agreement with Brazil. Brazil supplied less than 15 percent of our manganese imports, the bulk of which comes from Soviet Russia, Gold Coast, and British India, all of which became the major beneficiaries through generalization of the concession on manganese to Brazil. In the last year Brazil has supplied us with only about 7 percent of our imports.

One more example is matches, the duty upon which was reduced in the Swedish and Finnish agreements. We import matches from Sweden, Finland, Estonia, Soviet Russia, Netherlands, Germany, and Japan. Russia is the principal beneficiary in matches of our unconditional policy and was first as a foreign supplier in 1935 and 1936.

and 1936.

In some isolated cases concessions were made even to countries which supplied little or none of the commodity—and then the reductions in tariff were passed on to all the rest of the world, except Germany. Let us consider Professor Sayre's next point:

"(5) That farmers have suffered under a system of mounting tariffs whereby they have been forced to pay high prices for goods they buy and are crippled by the loss of foreign markets through reduced foreign purchasing power.

LXXXIV—App—91

"What farmers need is increased foreign markets and reduced tariffs."

It is true that farmers have been and now are selling their major crops at world prices and that they pay protected prices for what they buy. What has the administration done about that? Their principal accomplishment has been to reduce tariffs, to loan money, and to pay farmers to restrict production, and this in the face of Mr. Roosevelt's promises in 1932. Farmers are still selling at world prices and buying at protected prices. Gen. Hugh Johnson and I first called attention to the disastrous effect of this condition in 1921 in a brief called "Equality for Agriculture." We have proclaimed it widely ever since. There are two possible remedies (1) Take the farmer into the protective system, or (2) Reduce all America to the wage levels and living standards of the rest of the world. Many of the including the American Form Bureau Federaworld. Many of us, including the American Farm Bureau Federation in the past, have favored the first remedy. Professor Sayre apparently favors the second.

What farmers need is the full benefit of the domestic market What farmers need is the full benefit of the domestic market at American prices for American consumption and tariffs or other exclusive devices to support the American wage levels, prices, and the American standard of living. It is not true that foreigners have lacked purchasing power. The figures refute that theory. It is not necessary to go into detail of what happened to the credits we extended during the war or in the period of the twenties which followed. Foreigners have had purchasing power or excess dollar credits to the extent of \$5,800,000,000 from 1934 to 1937, inclusive. They have not used these dollar credits to pay debts or to buy our farm products but rather to buy their own and our securities—to create bank balances to buy machinery and our securities—to create bank balances, to buy machinery for producing for themselves and to purchase war supplies. Now, on the same outworn theory, the administration proposes create more dollar credits by giving foreigners our domestic markets. What is to become of our own people? Is it not time that we stop listening to theories and take a good look at facts?

SUMMING IT UP

Professor Sayre uses a multitude of figures, confined to isolated examples in an attempt to prove that the trade agreements have helped agricultural exports. His examples are confined largely to fresh vegetables, oranges, grapefruit, fresh pears, dried apricots, canned fruits, fresh apples, milled rice. The examples are largely limited to specialty crops grown only for market in limited sections of the country. They do not include the principal products of the great grain, livestock, dairy, and cotton sections from which a very large portion of the farmers' total income is derived. Reserved. cent compilations of concessions received on leading American agricultural export products—cotton, tobacco, wheat, and wheat flour, normally among our most important agricultural exports disclose that

Cotton: No duty reductions or enlarged quotas have been gained, with the exception of the duty reduction on linters in the new with the exception of the duty reduction on linters in the new Czechoslovakian treaty. Cotton exports, however, fell from the 10-year average (1924-33) of 7,969,000 bales to 5,728,000 bales in 1937. Meanwhile Brazil, India, Egypt, and other cotton-growing countries took advantage of our activities to replace us in our former markets and to increase vastly their cwn cotton production. World production outside of the United States increased from a yearly average of 11,195,000 bales (1924-33) to 17,813,000 bales in 1937.

Wheat and flour: The Dutch purchase undertaking in the Netherlands agreement is contingent upon a world price of our wheat and in any case it is only about one-fifth or less of our normal exports to the Netherlands prior to the depression. The Swiss quota amounts to about 4,000,000 bushels. Evidently these two concessions cannot absorb any substantial part of our normal wheat surplus. The duty reductions by Canada and Cuba are meaningless for obvious regions.

surplus. The duty reductions by Canada and Cuba are meaning-less, for obvious reasons.

Tobacco: The French purchase agreement of 20,500,000 pounds of leaf tobacco is only slightly more than our volume of exports to France during the fiscal year 1934–35 and 1935–36 and considerably less than exports to that country in any recent year prior to 1934–35. Duty reductions by Colombia and Cuba were secured, but these countries have never been important markets for our techesors. tobacco.

Thus for these three leading export agricultural products no important concessions have been gained through the trade-agreements program. A number of duty reductions and quotas have been secured for pork and hog products, but now we have no export surplus of these commodities. The only products which may have gained greater export outlets by the trade-agreements program are certain specialty fruits and vegetables in some cases, as above indicated. The figures in table I show what is happening with leading products. We are taking the American farmer out of the foreign market and putting the foreign farmer into the American market. The same is true of many industrial products—shoes, textiles, and pottery, for example.

tiles, and pottery, for example.

The administration's trade-agreement program is a subtle device for bringing about a general reduction in tariffs without the approval of Congress or of the American people. It was so intended although not disclosed for months after the act passed Congress. It was admitted by an administration's spokesman, Dr. Henry C. Grady, formerly chairman of the Trade Agreements Committee and now a member of the Tariff Commission, in this language:
"Our objective is the general amelioration of the world situa-

"We have already lowered many rates, which have been generalized to other countries. When we shall have gone the rounds of most of the important countries of the world, reducing in each case most of the important countries of the world, reducing in each case the duties on commodities of which it is the principal or important source, we shall have lowered our tariffs on a great many items where the case for lowering is justified. As a result of extending these reductions to virtually all countries, we will obtain, it would seem, what the proponents of unilateral tariff reduction desire; but we will do it more carefully and scientifically than is possible by legislative action. * * *

"This new policy is of an importance that can hardly be exagrerated. We are to a greater degree than ever before meshing our

gerated. We are to a greater degree than ever before meshing our domestic economy into world economy."

domestic economy into world economy."

Let those who favor such a policy line up. Let us get the issue out in the open. Every other important trading nation in the world long ago abandoned a low tariff policy. Even England, the greatest trading nation in the world, the mother of free trade, now, with one-third the population of the United States, collects over \$1,000,000,000 in duties annually compared with our \$400,000,000 and has adopted a policy of high protection for British Empire agriculture. In 1929 British and United States revenues from custom duties each closely approached \$600,000,000. In 1937 the British revenues from this source had increased to more than \$1,000,000,000, while the United States had declined to less than \$500,000,000. The administration is applying the theory of free trade fust a generation too late. trade just a generation too late.

trade just a generation too late.

The administration's policy, in effect, consciously or unconsciously, is an attack upon the American farmer. It is also an attack on the American home, farm and urban. Our standards of living depend economically upon the American wage and price levels, and rate of employment and production at these levels. When wage and price levels and employment decline, as we have seen them do more than once in the current decade, our standards of living go with them. No one would claim that public or private relief would do more than provide meager subsistence. For all major groups of our people and for the support of our homes, productive work and continuous employment at American wage and price levels, fairly related one to the other, are essential. To and price levels, fairly related one to the other, are essential. To all home makers this is important. To none is it more important than to the farmers and to the farm women in whose hands lie the making and preservation of the American home.

TABLE I

	1934	1935	1936	1937
Total agricultural exports. Total agricultural im-	\$901, 449, 000	\$914, 691, 000	\$894, 704, 000	\$1, 019, 252, 622
ports	1, 088, 280, 000 1, 198, 686, 000 547, 723, 000	1, 328, 390, 000	1, 524, 265, 000	2, 275, 663, 629

Taking a few of the principal products which account for a large part of American agriculture, we see in some detail how the policy is working for foreign farmers as well as against American farmers.

¹Imports cannot yet be broken down under "agricultural" and "industrial" by countries, since this break-down is not yet available by countries. However, total imports can be segregated by trade-agreement and non-trade-agreement countries, as follows:

Quota Bill for Sugar

EXTENSION OF REMARKS

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1939

Mr. IGLESIAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement which has, for its purpose, the defense of the interests of the people of Puerto Rico in connection with the Farmers Association of the island. The other day the Washington Post printed a dispatch by the Associated Press stating that President Roosevelt had expressed his opposition to the sugar quotas in Senator Ellender's bill. He expressed the idea that such a measure will bring a condition that may destroy the economy of Puerto Rico, Hawaii, and the Virgin Islands if such bill be approved by the House.

In connection with this matter I am inserting herewith a full statement that reads as follows:

Re Discriminations against Puerto Rico in the matter of sugar quotas under the Jones-Costigan Act, the Sugar Act of 1937, and Senate bill 69

To Hon. SANTIAGO IGLESIAS,

Resident Commissioner of Puerto Rico, Washington, D. C.:
On behalf of the Farmers Association of Puerto Rico, of which
we are authorized representatives, we submit to you the present
memorandum in support of the stronger opposition on your part
toward the procedure established under Senate bill 69, known as the
Ellender bill, for the determination of sugar quotas for the domestic

The Ellender bill increases from 55.59 to 60 percent the par-The Eliender bill increases from 55.99 to 60 percent the participation of the domestic sugar-producing areas, from the total amount of sugar needed to meet the requirements of consumers in the United States. We consider this amendment very reasonable and absolutely necessary under existing conditions, but we should object to the method of prorating this 60 percent of the sugar requirements among the different domestic sugar-producing areas which, under this bill, is changed as follows:

Area	Percentage under Sugar Act of 1937	Percentage under Senate bill 69
Domestic beet sugar	41. 72 11. 31 25. 25 21. 48 . 24	44. 72 12. 31 23. 25 19. 48 . 24

This means that Puerto Rico is not only denied a reasonable share

This means that Puerto Rico is not only denied a reasonable share in the increase of nearly 300,000 tons for the domestic sugar producers as a whole, but also that Puerto Rico would be penalized with a reduction of 17,072 tons of its present sugar quota.

It has been stated that it was not the intention of the sponsors of this bill to reduce the present sugar quota to Puerto Rico and Hawaii; but even if such intention is materialized, it would only mean the perpetuation of past discriminations against Puerto Rico, the present economic conditions of which are so desperate.

The enclosed table shows the unfair treatment to which Puerto Rico has been submitted under the sugar-restricting legislation. It compares the last unrestricted crop year with the sugar quotas

as fixed under the Jones-Costigan Act, the Sugar Act of 1937, and as apportioned under the Ellender bill (S. 69), approved by the

You will notice by this table how the authorized marketing quotas of the mainland areas have been steadily increased, while the quota for Puerto Rico under both the Jones-Costigan Act and the Sugar Act of 1937 was not even maintained unchanged but was slightly reduced. This situation is not corrected by merely keeping unchanged, under the Ellender bill, the present Puerto Rico sugar quota as fixed under the provisions of the Sugar Act of 1937, which now seems to be the attitude of the sponsors of the bill as expressed by Senator Tydings in the Senate (Congressional Record, March 27, 1939, p. 3324). The only reasonable, fair, and equitable way of handling any change in the present domestic sugar quotas is by prorating between the different domestic sugar-producing areas any additional amount of sugar resulting by the increase in the percentage from the sugar-consumption requirements to be covered by the domestic producing areas.

by the domestic producing areas.

Senate bill 69, as approved by the Senate, not only raises the quotas for the mainland sugarcane producers of Florida and Louisiana as to represent 91.9 percent in excess of the original quotas established in 1934 but it also raises the quota for the beet area, so that, according to the bill, it will get 17.3 percent in excess of the original quota of 1934. On the other hand, the situation of Puerto Rico is unbearable, as its quota under the terms of the bill represents a reduction of 2.1 percent when compared with 1934 (when the quota system was established). As to Hawaii, the reduction is 0.6 percent.

In other words, the establishment of the quota system and subsequent legislation by Congress, including Senate bill 69, has:

	Pe	ercent
(a)	Raised the mainland quota for sugarcane in	91.9
(b)	Raised the beet quota in	17.3
(c)	Reduced the Puerto Rico quota in	2.1
(d)	Reduced the Hawaiian quota in	. 6
		10000

We thus insist that the 21.48 "percentum" of Puerto Rico be maintained, as it is under the Sugar Act of 1937; anything to the contrary would constitute an unbearable discrimination against Puerto Rico.

In the year 1934, when the Jones-Costigan Act was enacted, Puerto Rico reached a peak production of 1,113,697 short tons, and

its capacity for sugar production was not then, and has never been, taken into consideration. This same policy was not followed with the other domestic areas whose quotas had been fixed in as much sugar as they have been producing, and in some cases in more than their actual sugar output. The authorized production for 1939, including sugar for the island's local consumption, is 845,000 tons, but there is enough cane in the fields to render a production of 1,150,000 tons. This means that 2,400,000 tons of sugarcane, equivalent to 300,000 tons of sugar, will not be harvested, and, consequently, that more than 25 percent of the employees regularly engaged in the industry would remain idle, and thus the island's unemployment problem would be seriously aggravated.

Such a situation was not felt in the last 2 years of restriction as long as the excess cane was permitted to be harvested and processed, but now the grinding of surplus cane is forbidden under the act.

under the act

These conditions naturally reflect on the mainland as the trade has been materially reduced and will continue to be reduced to unexpected figures.

In order to correct this serious situation, the island's sugar quota should be substantially increased.

Puerto Rico should also be allowed this year to grind all of Puerto Rico should also be allowed this year to grind all of its surplus sugar cane, not only because it would serve the double purpose of taking care of the problem of increasing unemployment and building up the necessary sugar resources for the event of a national emergency—but also because it will prevent the ruin of many small individual growers who planted cane, induced by rulings of the Secretary of Agriculture, which at the time of harvesting were practically nullified by certain administrative orders and procedures, with the ultimate result that at least three-fourths of these growers' cane could not be harvested and processed, and their investments therein will never be recovered. covered.

As a solution to this very difficult situation we also recommend an additional amendment to Senate bill No. 69, to the effect that in the Territory of Puerto Rico, 1939 surplus sugarcane could be harvested and converted into surplus sugar.

JUAN B. GARCÍA MÉNDEZ, Member, Senate of Puerto Rico. M. GONZÁLES QUIÑONES, Secretary, Farmers Association of Puerto Rico.

Comparison of sugar quotas for domestic areas as established under the Jones-Costigan Act, the Sugar Act of 1937, and Senate bill 69, as passed in the Senate

[In terms of short tons]

Area	Last unre- stricted crop year	Quotas as orginally established under the Jones-Costi- gan Act, 1934	Difference	1939 sugar quotas	1934 sugar quotas	Quotas as proposed under bill S. 69	Difference in tons of sugar	Percentage increase or decrease is of 1934 quotas
Domestic beet sugar	1, 756, 918	1, 550, 000	-206, 918	1, 566, 719	1, 550, 000	1, 812, 605	+268, 605	+17.3
Mainland cane sugar	250, 815	260, 000	+9, 185	424, 727	260, 000	498, 953	+238, 953	+91.9
Puerto Rico sugar	1, 113, 697	807, 312	-306, 385	806, 642	807, 312	789, 570	-17, 072	-2.1
Hawaii sugar	936, 000	948, 264	+12, 264	948, 218	948, 264	942, 376	-5, 842	6

The only fair method of prorating between the domestic sugar-producing areas the increase from 55.59 percent to 60 percent of the national sugar requirements as proposed under Senate bill 69 (Ellender bill) is as follows:

Area	Percentage established under Sugar Act of 1937	1939 quotas based on 55.59 percent under Sugar Act of 1937	Quotas based on 60 percent (S. 69) under same appor- tionment as Sugar Act of 1937	Change due to increasing domestic per- centage from 55.59 to 60 percent
Domestic beet sugar	Percent 41, 72 11, 31 21, 48 25, 25 , 24	Tons 1, 566, 719 424, 727 806, 642 948, 218 9, 013	Tons 1, 691, 008 458, 421 870, 634 1, 023, 441 9, 728	Tons +124, 289 +33, 694 +63, 992 +75, 223 +715
Total domestic	100.00	3, 755, 319	4, 053, 232	+297, 913

Federal Housing Act

EXTENSION OF REMARKS

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 12, 1939

Mr. SABATH. Mr. Speaker, in my desire to expedite the passage of the bill (H. R. 5324) to amend the Federal Housing Act, to extend the life of that splendid Administration, I did not explain the detailed action of the Rules Committee in the consideration of the rule to bring the bill to the floor. At this time I wish to say that there was only a few days' delay in reporting the rule making this legislation in order. and I desire to go on record in asserting that neither I nor the Rules Committee unnecessarily delayed the consideration of the bill as charged and indicated in the many letters and telegrams which I have received during the last few days.

Mr. Speaker, the last draft of the bill as agreed upon was introduced on March 24 and it was reported to the House by the Banking and Currency Committee on March 25. On March 26 or 27 the chairman of the committee, Mr. Steagall, asked for a hearing before the Rules Committee for a rule, which was granted, and both he and the gentleman from Missouri [Mr. Williams] were heard by the committee on March 29, but the hearing was not concluded that day. Being obliged to leave for Chicago, I authorized the gentleman from Georgia [Mr. Cox] to proceed with the hearing, but unfortunately no action was taken. On my return to Washington on Monday, April 10, I immediately called a meeting of the Rules Committee, and after a short hearing a rule was granted for the consideration of the bill. The rule was reported to the House the same day, and under the rules of the House I called it up on the floor the following day and the bill was immediately considered upon the adoption of the rule. Final action on the bill was not had until today. I therefore feel that the complaints that the Rules Committee unnecessarily delayed granting a rule for this bill are unjustified and unwarranted. The facts are that very few bills receive the speedy consideration as was given this bill.

Mr. Speaker, as one who originally advocated W. P. A. legislation and supported the extension of the act and voted for all of its strengthing provisions, I feel that it is manifestly unfair that word should have been sent out that I have willfully delayed consideration of the bill. Personally I am proud of the splendid accomplishments of the Federal Housing Administration. I am pleased that nearly all of the Republicans finally voted for the bill. The criticism that came from the Republican side and from a few Democrats was not against the administration, but of one project in St. Louis, with which I am not familiar, and perhaps one or two others. As chairman of the Select Committee to Investigate Real Estate Bondholders' Reorganizations and the activities of some mortgage and development corporations, I called attention to the excessive loans and valuations which had been placed on properties. I also pointed out that millions upon millions had been lost by real-estate bondholders, and naturally it has been my aim to prevent such abuses in the future.

Mr. Speaker and gentlemen of the House, I am satisfied that the Federal Housing Administration, on the whole, acted prudently and safeguarded the interests of the Government. Under the Federal Housing Act it has been possible to insure mortgage loans on small homes construction to the number of 363,906 and has made possible the repair and improvement of properties to the number of 1.833.162, or a combined total of 2,197,068 new and improved homes. So far the losses to the

Government are practically nil.

For political reasons charges have been made that the Government is competing with private business. I know that in private the very gentlemen making these charges have admitted, and it must be conceded by any one familiar with the good that has been accomplished by the Federal Housing Administration that such is not the case. This legislation has helped the builders, bankers, and insurance companies, and has put tens of thousands of men to work. As to the charges of some who say it has only been helpful to those in large centers, I would suggest that they read the hearings and examine the testimony of those from the rural sections of our country. They would find that it has been a tremendous help to those in the rural and farming sections in that it has enabled them to improve their homes, recondition their buildings and barns, and, in general, as admitted by the most rabid Republican newspapers, has accomplished a great deal for every section of our country. To enlighten the membership and the country at large I desire to place in the RECORD an editorial of the New York Herald Tribune of March 18, 1939, and one appearing in the Washington Post of April 7, 1939. I do not wish to encumber the RECORD but I could include hundreds of editorials appearing in the press throughout the country, giving credit to the administration for the good that has been accomplished by this New Deal legislation.

[From the New York Herald Tribune of March 18, 1939] MORE LIFE FOR THE F. H. A.

A.—Federal Housing Authority—which has been

The F. H. A.—Federal Housing Authority—which has been insuring mortgages on many millions of dollars of private homes, will no longer be able to continue this function after June 30, unless, as a result of hearings now being held, Congress decides to prolong the life and extend the operations of this organization. Looking back over various projects sponsored by the Roosevelt administration in the hope of alleviating distress and stimulating recovery, few seem to have worked better and to have been less subject to sound criticism than the F. H. A. It has brought relief to many persons in straitened circumstances. It has steaded the mortgage market. It has brought house owning within the range of many persons who would otherwise not have been able to afford it. Inasmuch as each individual loan is passed been able to afford it. Inasmuch as each individual loan is passed on after the most careful investigation by the lending institution, and the application is then examined by the F. H. A., it means that great care is exercised in the granting of the loans. The original fear that borrowers might take advantage of the Government governity has not materialized.

ernment guaranty has not materialized.

In only one respect has the practice of the F. H. A. departed somewhat from strictly conservative standards. In numerous cases mortgages may be obtained for up to 90 percent of the value of the property. This, in the opinion of some observers, is drawing the line a little thin. True, in numerous instances, when borrowers have sought to obtain 90 percent, they have been granted a lesser sum after the most careful checking and examination. Those who defend the practice of granting up to 90 percent point out that as these F. H. A. insured loans are all made on a basis that provides for substantial payments on account of principal as well as of interest, the situation is different than it would be in the case of the old-style mortgages.

The proposal being discussed before the Senate banking subcommittee calls for doubling the present limit of F. H. A. mortgage insurance, which is \$3,000,000,000. Some of those who testified urged making it easier to refinance old mortgages with F. H. A. aid. In other words, the demand is for a longer and fuller life for the F. H. A. This seems to be a proposal that deserves support without any thought of party considerations.

[From the Washington Post of April 7, 1939] THE F. H. A. RECORD

During March the Federal Housing Administration reports that all its records for home financing were broken. Small-home mort gages accepted for appraisal totaled \$121,700,000 compared with the previous high of \$104,000,000 for last August. By the end of

the previous high of \$104,000,000 for last August. By the end of March home mortgages to the amount of \$1,450,000,000 had been insured, while total insurance, including that on property improvement loans, amounted to \$2,300,000,000.

At the current rate of operations the present \$3,000,000,000 limit upon the amount of outstanding insured mortgages will be reached long before the end of the coming fiscal year. Consequently business and financial interests, with few exceptions, have heartily supported legislation to extend the provisions of the Housing Act and raise the statutory limit of outstanding insurable mortgages. While the F. H. A. asked that this limit be increased to \$6,000,000,000,000, the provision for a \$4,000,000,000 maximum contented in the bill. provision for a \$4,000,000,000 maximum contained in the bill reported out by the House Banking and Currency Committee would enable that organization to operate freely during the coming year. The larger sum was intended to permit F. H. A. to continue indefinitely without further enabling legislation.

Congress should act quickly on this proposal so that the F. H. A. may plan its financing program for the months ahead without being hampered by legislative uncertainties. Since the F. H. A. is not a spending organization there are no considerations of expense to delay action. Moreover, there is no other New Deal agency which has done as much as the F. H. A. to stimulate private business activity in a particularly depressed industry.

Mr. Speaker, in conclusion I wish also to state that what applies to this New Deal organization applies to nearly all of them, viz, the H. O. L. C., C. C. C., U. S. H. A., R. F. C., F. D. I. C., the Export-Import Bank, which has increased our exports, the Wage and Hour Division of the Department of Labor, and as soon as a few enemies of labor cease sniping and sending out false and prejudicial information, the country will begin to appreciate the benefits of the Wagner Labor Act which has helped tremendously in reducing the number of strikes throughout the country. With an end to the friction on the part of labor leaders, I am confident that the Wagner Labor Act will be recognized as a tremendous help in bringing capital and labor to a better and more helpful

Double Our Defense In Strategic Minerals

EXTENSION OF REMARKS OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1939

Mr. CASE of South Dakota. Mr. Speaker, it is understood that within a few days this House will consider House bill 5191, the so-called Faddis bill on strategic minerals. I think that a large majority of the Members of Congress favor strengthening our national defense by the acquisition of stock piles of certain strategic minerals to guard against a critical shortage in a sudden emergency.

In this connection I wish to make available to the membership of the House a most thought-provoking statement by O. L. Brownlee, editorial writer for the Sioux City (Iowa) Tribune, relative to the Faddis bill. It is particularly addressed to the omission, in the Faddis bill, of an appropriate section to provide for the purchase of domestic materials in creating this the desired stock piles. Mr. Brownlee, in company with many Members of Congress, believes that the purchase of domestic materials, insofar as possible, will give us double defense—the stores we actually buy and the stores in the ground whose existence will be proven by the establishment of plants and processes to make them available.

This double defense, Mr. Speaker, will not only give us emergency protection but will mean a declaration of independence for the United States.

To accomplish this double defense various amendments to the Faddis bill have been proposed. After consultation with a great many Members of the House, it seems to me that the following amendment would accomplish the purpose and give us double defense, and thereby strengthen the avowed purposes of the Faddis bill:

PROPOSED "DOUBLE DEFENSE" AMENDMENT TO H. R. 5191

PROPOSED "POUBLE DEFENSE" AMENDMENT TO H. R. 5191
Page 4, line 16, strike out the period and insert "And provided further, That purchases under this act shall be made in accordance with the Buy American Act of March 3, 1933 (47 Stat. 1520), but a reasonable time, not to exceed 1 year, shall be allowed for production and delivery from domestic sources; and in the case of any such material available in the United States, but which has not been developed commercially, the Secretary of War and the Secretary of the Navy may direct the purchase of such material without requiring the vendor to give bond; but nothing herein shall eliminate the requirement that the material delivered shall meet the specifications on which the order was placed."

The adoption of such an amendment, it seems to me, would go a long way toward solving the problems presented in Mr. Brownlee's address, which, under the permission heretofore granted, is submitted herewith:

THE PURCHASE OF STRATEGIC MINERALS

(An address by O. L. Brownlee, chief editorial writer, Sioux City (Iowa) Tribune, over radio station KTRI, March 30, 1939)

Good evening, ladies and gentlemen, I wish briefly and as forcibly as I can to bring your attention to the facts concerning what I consider one of the trickiest bills pending in the Seventy-sixth Congress, a bill which forcibly illustrates how certain vested interests operate to prevent the development of America's natural resources

The bill is known as H. R. 5191, by Congressman Faddis, of Pennsylvania, and it bears a favorable report by the House Committee on Military Affairs.

This bill would appropriate \$100,000,000 to be expended over the next 4 years for the acquisition by Government of reserve stocks of the so-called strategic and critical minerals, such as manganese, chrome ore, tungsten, vanadium, tin, etc., of which this country produces a deficiency. We should have such reserves

as a measure of safety in wartime.

We have adequate supplies of these minerals, except perhaps in the case of tin, in this country, but they never have been developed, because American enterprise cannot produce these minerals and pay an American wage scale in competition with foreign ores produced by peon or slave labor.

ACTIVITY OF STEEL INTERESTS

Up to this time American steel interests have succeeded in persuading Congress not to put adequate tariffs on these minerals so that our American producers could meet foreign competition. Their attitude is explained by the fact that the steel companies own manganese mines in Africa and Brazil, and where they do not actually own competitive mines abroad they prefer to acquire these raw materials by exchanging finished goods for them—in other words, by barter.

That makes the American steel industry dependent upon sources of supply 4,000 to 7,000 miles away for ores without which it cannot operate at all. That is dangerous business under war conditions and imposes an unnecessary burden on the American Navy. We lost one manganese-laden ship, the Cyclops, with 229 officers and men, during the World War, and the blood of those men is on the hands of the industrialists and politicians who have been responsible for preventing the development of our domestic deposits of these minerals.

responsible for preventing the development of our domestic deposits of these minerals.

This Faddis bill provides that the American Government may acquire reserve stocks of these minerals in one or all of three ways, to wit: (1) By granting debtor nations credit on their war debts; (2) by exchanging surplus farm commodities for minerals; (3) by outright purchase. It further provides for future "scientific, technological, and economic investigations" to be made by certain bureaus of Government to determine the quantities and grades of these ores that may exist in the United States.

Now, let me show you the "joker" in this bill. In the first place, the principal foreign suppliers of these minerals, except Russia, do not owe us anything on war account, and certainly Russia will never

not owe us anything on war account, and certainly Russia will never pay us anything. In the second place, the principal suppliers— Russia, Brazil, India, and the African Gold Coast—do not need our surplus farm products-granting that we have any, which I seri-

ously doubt.

The Government bureaus charged with making the proposed investigations already have all the information they need, or they can readily obtain it from private enterprise. This proposal is only designed to delay further the development of American mines and to perpetuate the steel industry's international control of minerals. There remains, then, under this bill, just one way to acquire reserve stocks of these precious minerals which we need, and that

is by outright purchase, and, under the Faddis bill, we'd have to purchase them abroad.

ANOTHER CLEVER "JOKER"

There is another very clever "joker" in this bill. Let me tell you about it. Section 3 of the bill provides "for the storage and maintenance and, where necessary to prevent deterioration, for the rotation of such materials. That word "rotation" is the peg upon which this "joker" hangs. It would make possible the immediate sale to the Government of all stocks of these imported ores now held in bond or in the yeards of the big steal commonly. bond or in the yards of the big steel companies.

This reference to the deterioration of these minerals is a joke

because, when properly sheltered, they do not suffer material deterioration.

Here is the kernel of the thing: Testimony given before the committee which acted on this bill revealed that United States steel companies now have on bonded yards in this country 851,879 tons of manganese, which they have imported, and about 150,000 tons, also imported, on which they have paid the small duty of one-half cent per pound. This is the largest peacetime reserve of these ores we have ever had—maybe the steel companies have been fore-handed and have been anticipating war.

PROFITS FOR SOMEBODY HERE

In other words, the steel companies now have on hand practically enough manganese to operate for a year, even under stress of war, without importing any. There is no emergency that warrants the United States rushing into the world markets to buy more manganese. If war were declared tomorrow, we'd have plenty of time in which to develop our own mines. Under the stimulus of war prices domestic production was pushed up to 345,000 tons yearly capacity in 1917-18.

The steel companies have a good many millions of dollars invested in this huge stock of manganese. Under this "rotation" clause they would be enabled immediately to unload it on the Government, which, of course, would purchase it with borrowed money, thereby freeing their own capital and enabling them to go into the world markets and purchase outright or barter finished steel for more manganese. Meantime domestic development would languish.

The steel industry and the Federal bureaucrats continue to repeat

The seer industry and the rederat but address continue to repeate their claim that American deposits of these ores are low grade. They are low grade in the sense that the conglomerate in which they are found contains a smaller percentage of manganese, tungsten, chrome, etc., than some foreign deposits, but manganese is manganese and tungsten is tungsten and chrome is chrome, and the conditions under which they are found do not change their character. character.

In the case of manganese, I know of no American deposit that shows less than 18 percent of that mineral. The Cuban-American Manganese Co. operates a Cuban deposit containing only 13 percent and has been selling the ore in the United States for years presumably at a profit.

DEVELOP THESE DOMESTIC DEPOSITS

All this is important to Sioux City and to the 23 States in which manganese and these other strategic minerals are found, and especially to South Dakota, for just 200 miles upstream along the Missouri River there is a deposit of manganiferous-bearing ore which private and Government engineers state contains 100,000,000 tons

private and Government engineers state contains 100,000,000 tons of manganese. This is the great Chamberlain deposit.

Development of that one deposit alone would render the United States militarily secure with respect to manganese. It would justify extension of the Missouri River navigation channel from Sioux City to Chamberlain, S. Dak., which would give eastern and central South Dakota and northern Nebraska the benefit of materially reduced freight rates on such items as grain, coal, gasoline, salt, sulfur, lime, etc., amounting to several million dollars annually. Thus it will be seen that our farmers and every line of business

sulfur, lime, etc., amounting to several million dollars annually.

Thus it will be seen that our farmers and every line of business enterprise hereabouts has a stake in the development of South Dakota minerals, and we want the steel industry to know that we resent their policies which tend to prevent development of our natural resources. Mr. Faddis, who halls from a Pennsylvania steel district, is not competent to legislate for the Middle West, and we resent the action of the House Committee on Military Affairs in recommending for passage a bill that is clearly a subversion of the interests of this section of the Nation and of the Nation itself.

We resent as presumptious and un-American any action looking to the suppression of industry and the development of resources

to the suppression of industry and the development of resources which the Lord has placed at our disposal, our streams and forests and our deposits of ores such as are found in the Black Hills. We condemn as unsound the policy of giving pay rolls to Asiatic, Brazillan, and African coolies which properly belong to American workingmen.

Nor are we unmindful of our own relations with these same steel Nor are we unmindful of our own relations with these same steel companies which have taken from the American people in the form of tariff benefits more than \$8,000,000,000 within the past 15 years—\$731,000,000 in 1937 alone. We paid our part of that tariff. It doesn't increase their popularity in this territory when we realize they, like the dog in the manger that couldn't eat hay but wouldn't let the cattle go near it, are fostering policies which interfere with our growth and our development and even our ability to buy more steel products. steel products.

These strategic ores industries make no unreasonable demands upon Congress. All that they ask is equal treatment with steel in the matter of tariffs. An increase in the tariff on manganese of only one-half cent per pound, for instance, would make possible the opening of mines which could turn out at least 200,000 tons of product per year and which directly and indirectly would employ approximately 25,000 heads of families.

Such an increase in the tariff would add only 7 cents to the price of a ton of steel, since it requires only 14 pounds of manganese to make a ton of steel. Think of it! The steel industry won't absorb that little 7 cents per ton when its own benefits in 1937 amounted to \$14.47 per ton.

WHY NOT "EDUCATIONAL ORDERS"?

Acting on the advice of the War and Navy Departments, Congress has enacted legislation authorizing them to place "educational orders" with manufacturers for other items of war equipment. That is done to enable manufacturers to develop machinery and have it in reserve for the making of such items in the event of wartime demand. Why cannot Congress give our domestic mining interests the same kind of treatment? Is it more vital that we have a reserve of machinery to manufacture shells, for instance, than it is that we have a reserve of mines to produce the metal jackets for those shells?

The Senate Committee on Military Affairs, thank goodness, is not so narrow-minded as that of the lower House. The Senate committee has reported out the Thomas bill, which appropriates the same amount of money—\$100,000,000—to buy stock piles of strategic ores, but it specifies that these materials shall be purchased abroad only in amounts that cannot be supplied by American domestic

enterprise.
(Note.—Senate passed Thomas bill without substantial change since date of this address.)

We live in a period of great stress and anxiety in which orthodox principles and practices of Government and business are being challenged by a new set of facts which clearly indicate the importance of changing some of our long-established policies. Many practices which until recently were regarded as sound economically and good business today are actually subversive of the national welfere. welfare

I am only a humble citizen of this great Republic. I do not own a single mineral lease nor a dollar's worth of stock in any mining or steel corporation. But I want to see my country made militarily secure and I want to see all of our people happily and usefully employed producing and utilizing the natural resources with which God has endowed this Nation.

Agricultural Appropriations and Farm Parity **Payments**

EXTENSION OF REMARKS

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1939

RADIO ADDRESSES BY HON. CLARENCE CANNON, OF MIS-SOURI, AND EDWARD A. O'NEAL, PRESIDENT OF THE AMERICAN FARM BUREAU FEDERATION, OVER THE N. B. C. FARM AND HOME HOUR, APRIL 8, 1939

Mr. HOBBS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio addresses delivered on April 8, 1939, by Hon. Clarence Cannon, Representative from Missouri, and President Edward A. O'Neal, of the American Farm Bureau Federation:

RADIO ADDRESS BY HON. CLARENCE CANNON, OF MISSOURI

When in the closing days of the Fifty-fifth Congress it was announced that for the first time in the history of the United States appropriations for all departments of the Government for 2 years had reached a grand total of a billion dollars, headlines flashed the news from coast to coast and editorials in every metropolitan newspaper in the Nation commented apprehensively on a

billion-dollar Congress.

This session of Congress the Committee on Appropriations reported out a bill carrying an appropriation in excess of a billion dollars for 1 year only and for one department of the Government alone—the Department of Agriculture. And the newspapers had

very little to say about it.

A billion dollars for agriculture; but perhaps that is the explana-tion of the lack of editorial interest. For when you come to examine this long bill, with its hundreds of items and millions of dollars, you discover that the term "agricultural appropriation bill" is largely a misnomer and highly misleading, and that while it is known as the agricultural appropriation bill, as a matter of fact, a large part of the money it appropriates is for other than

agricultural purposes.

For example, the bill carries \$6,000,000 for the Weather Bureau, of only incidental service to agriculture, and now maintained chiefly for the benefit of the civil and military air service; \$7,000,000 for the eradication of tuberculosis and kindred stock diseases, pri-marily for the protection of the health of consumers; \$5,000,000 for meat inspection, a service for the exclusive benefit of the packers

and middlemen, through its guaranty of quality and wholesomeness to the general public; approximately \$20,000,000 for the Forestry Service, not even a branch of agriculture, consumed principally in the protection and development of national forests and national resources; \$4,000,000 for the Bureau of Biological Survey, the conservation of wildlife, a national interest, demand for which comes in greater volume and insistence from the city than the country; nearly \$200,000,000 for the Bureau of Public Roads, a most laudable activity, but one in which the farmer is no more interested than any other citizen (in fact, out of this amount a wohlly inadequate sum is provided for farm-to-market roads, connecting the farm with the great system of interview high researches. farm with the great system of interurban highways, for which most of this money is spent); two and a half million dollars for the Food and Drug Administration, which deals with food as it leaves the processors, and not as it leaves the farm, and with cosmetics, etc., of secondary importance on the farm, and, at most, of no more benefit to the farmer than to any other industry; \$10,000,000 for forest roads and trails, spent largely in the national forests and of practically no agricultural benefit whatever; and similar items throughout the bill too numerous to mention.

So when prompted to comment on the size of the agricultural

appropriation bill and the amount it carries, it is well to remember that a large part of it is far from being agricultural, and is to be charged neither to the farmer nor the farm.

But such items serve to make the bill, already of surpassing importance, probably the most widely discussed of all the supply bills, affecting directly and immediately every congressional district, directly or indirectly every interest and industry in the Nation, urban and rural, field and factory, farm and city.

In this connection there is sometimes a tendency to confuse the jurisdiction and functions of two great committees of the House—the Committee on Agriculture, a legislative committee which cannot report appropriations, and the Committee on Appropriations, exclusively an appropriating committee which cannot report legislation. In other words the Committee on Agriculture writes the farm laws, establishes the farm programs. And the Committee on Appropriations furnishes the money to operate those laws and put these farm programs into effect. Without money to run them farm programs are like guns without ammunition or automobiles without gas. And the Committee on Appropriations, in the agricultural appropriation bill, furnishes the ammunition and the gas, supplies the money to make the mare go. In this connection there is sometimes a tendency to confuse mare go.

Let us take a concrete instance. The Seventy-fifth Congress

Let us take a concrete instance. The Seventy-fifth Congress passed the Farm Act of 1938, directing that the farmers of the country be paid parity prices for their products. But the law meant nothing and the farmer's prices were not affected until the Committee on Appropriations put through an appropriation providing the money to make the law operative.

What is a parity price? I suppose so much has been written and said about parity prices, and there has been such exhaustive debate in Congress on farm parity for the last 20 years, that everybody understands that a parity price for wheat, corn, cotton, eggs, and other farm products is a price which will make the farmer's wheat, corn, cotton, and eggs today buy as much as the same wheat, corn, cotton, and eggs would have bought before the war.

war.

Everybody will remember that before the war the price of farm products and the price of manufactured products, wages for farm labor and wages for union labor, were fairly adjusted, and under the price schedules of that day agriculture was on a plane of economic equality with labor and industry. Then came the war and all prices advanced. Farm prices went up. Industrial prices went up. Wage scales went up—went up together to the highest peak in the economic history of the country. And everybody was satisfied, everybody had purchasing power, everybody had enough and to spare, everybody was prosperous—on the farm and in the city. But, with the close of the war, a surprising thing happened—a thing as unfair and unjust and inequitable as it was surprising.

The bottom fell out of farm prices while the prices of everything the farmer had to buy remained at wartime levels. Hogs fell from \$28 to \$2. Wheat went down from \$2.40 to 30 cents. Eggs dropped from 60 cents to 8 cents. And everything else in proportion. Now that would not have been so bad if the price of everything that went up with farm prices had come down with farm prices. But incredible as it may seem, while agriculture was falling labor and industry not only maintained wartime levels but advanced, until today it costs more to ship 45-cent corn than it cost to ship \$1.50 corn in 1920; costs more to ship 9-cent cotton than it cost to ship 35-cent cotton during the war; takes more to buy a binder to cut 60-cent wheat than it took to buy a binder to buy a binder to cut 60-cent wheat than it took to buy a binder to cut \$2.40 wheat. And today, when pork is \$7 and eggs are 20 cents, the union wage scale is higher than when pork was \$28 and

cents, the union wage scale is higher than when pork was \$28 and eggs were 60 cents. Do our friends who wear cotton clothing, and who eat ham and eggs, approve of that discrepancy?

Now, do not misunderstand us. The farmer does not object to increases in either wages or prices. The farmer believes in high wages and high prices. But he submits to all fair-minded Americans that if he pays high wages for the products of labor and high prices for the output of industry he is entitled to an honest wage for his labor and a fair price for his products. That is what a parity is—as fair a price for what the farmer sells as the farmer must pay for what he buys.

And the justice of that contention is so obvious that all polit-

And the justice of that contention is so obvious that all political parties have promised parity in their national platforms. And

the Seventy-fifth Congress at last wrote into law a provision to

But such laws are of no effect until money is provided to make them operative. They are as has been said like guns without ammunition or automobiles without gas. So the Committee on Appropriations last year provided \$212,000,000 and this year reported out \$250,000,000 for parity prices. These amounts are not sufficient to give the farmer full parity but they are steps in the right direction.

direction.

From the \$212,000,000 appropriated last year the farmers of the Nation will receive 11 cents a bushel more for wheat than they have already been paid; 6 cents a bushel more for corn; and nearly 2 cents a pound more for cotton on their 1938 crop, payable this coming September and October. And if the \$250,000,000 appropriation is made they will receive as much or more for their 1939 crop payable in 1940. We had a hard fight on parity in the House, and lost by a vote of 191 to 204. Six votes would have changed it. But if the Senate adds it to the bill and the country supports us we have enough votes to pass it when it comes back to the House in conference and to spare.

and enough votes to pass it when it comes back to the House in conference and to spare.

And industry and labor will profit as well as agriculture. The day these checks reach the farm, the cash registers will begin to ring in every business in the community, orders will start flowing to the factories and labor will be called back on the job. On the other hand, by inverse ratio, when farm prices fall farm buying power drops, factories close, and labor is out of a job. Agriculture and labor and industry are all in the same boat. We must sink or swim together.

or swim together.

And let it never be forgotten that when hogs were \$28 and eggs were 60 cents there was not a single hungry child in America, and when hogs were \$2 and eggs were 8 cents famine stalked like a grim spectre through alley and lane and bread lines formed and

a grim spectre through alley and tane and break soup kitchens opened in every city in the Nation.

My friends, farm parity means business parity. A square deal for agriculture is a square deal for labor and industry. And information of the company of the compan inexorably, farm prosperity evitably, prosperity. irrevocably,

RADIO ADDRESS BY PRESIDENT EDWARD A. O'NEAL, AMERICAN FARM BUREAU FEDERATION

Right now the Farm Bureau is engaged in a new and intense bat

Right now the Farm Bureau is engaged in a new and intense battle for farm equality, and today I want to give you a picture of what is going on in this dramatic fight.

You have just heard Representative Cannon discuss agricultural appropriations and farm parity payments.

I realize that farmers generally are unaware of the farm crisis that has developed in Washington. While you have been busy with spring planting and launching the 1939 farm program, the enemies of agriculture have gone into action. They are following their usual tactics and are seeking to "divide and conquer." They are trying to drive a wedge between city and country. They are trying to split the farm groups, playing cotton farmers off against the producers of other commodities. They are fighting President Roosevelt's export program to open up the markets of the world to American cotton and regain our fair share of the world market for cotton. They are seeking to destroy the prices of farm commodities. They are seeking to destroy the prices of farm commodities. They are seeking to destroy the national farm program which organized agriculture has succeeded in building after its long 15-year fight.

fight.

The situation in Congress has come to a head over two issues. The first of these concerns the appropriation of funds for parity payments and surplus removal. The second deals with the question of keeping our fair share of export markets, especially for cotton. These two issues are at the heart of the general fight the Farm

Bureau is waging.

Bureau is waging.

Congress has recognized the justice of the farmers' cause and has written into the Agricultural Adjustment Act of 1938 the principle of farm parity. But to carry out this principle it must appropriate the funds. Parity payments are the equivalent of the tariff and other artificial benefits granted to industry and labor, which are reflected in the costs of everything the farmer buys. As it did a year ago, the Farm Bureau is leading the fight for parity payments for use next year. But, despite our efforts and the gallant and able leadership of Congressman Cannon and other stalwart friends of agriculture, we were defeated in the House by

stalwart friends of agriculture, we were defeated in the House by a close vote of 204 to 191.

Why did this happen, you are asking? That's a question you should ask of your Representative in Congress.

should ask of your Representative in Congress.

Who stood with us? One hundred and sixty-eight Democrats and 20 Republicans. Who defeated us? Sixty-eight Democrats and 135 Republicans. I was delighted to see that the Representatives from 16 agricultural States voted solidly with the farmers. Ten of these 16 States were in the South. But it was distressing to see that some Congressmen from farm districts voted with the anemies of egriculture against parity for farmers. Who with the enemies of agriculture against parity for farmers. Who is working for you, and who against you, here in Washington? If your Representative or Senator is working against you, let him know where you stand.

Doubtless some Members of Congress, both Democrats and Republicans, honestly felt they were practicing economy. But I am afraid some of them were fighting agriculture under the cloak of economy or sacrificing farmers' interests for their own political advantage.

During the last 6 years payments to farmers have amounted to about \$2,400,000,000. That is a lot of money, but those payments have been a major factor in increasing our farm income during

that period by a total of nearly \$17,000,000,000. The increase in farm income in turn has helped to increase national income by an aggregate of \$102,000,000,000. Surely our business friends would agree that a \$100,000,000,000 return from a two and a half billion-dollar investment compares favorably with the results gained by the most wisely managed corporation.

Now, if in the name of economy such a profitable program is to be wrecked and hamstrung, the outcome will be quite opposite to the fiscal improvement we all want to see. For if farm income and national income go down Treasury revenues will go down, and balancing the Budget will actually be more difficult.

And while our minds are turned to this matter of providing Federal assistance to agriculture, more permanent methods of financing our farm program cught to be considered. Some depend-

financing our farm program cught to be considered. Some dependable source of revenue is urgently needed.

The other engagement now being fought in Congress concerns the surplus problem, especially as it concerns cotton, wheat, dairy products, lard, and fruits and vegetables. It goes to the heart of the whole farm-surplus question. Ever since the McNary-Haugen days of the early 1920's we have struggled to control farm surpluses. Now, as then, we have a domestic price problem and an export market problem. Now, as then, we are fighting to keep world farm prices from wrecking domestic farm prices. We have a farm program now under which 4,000,000 farmers are cooperating which will take care of the surplus when it has a sure chance to operate. take care of the surplus when it has a sure chance to operate. This is the best all-around program farmers have ever had. But our immediate emergency need is to get rid of the enormous surpluses, especially those which piled up during the 2-year period when we had no real production control.

Briefly, our program is as follows:
First. Maintain the Agricultural Adjustment Act of 1938.
Second. Provide \$250,000,000 for parity payments to the five basic crops to be allocated on the basis of the formula in the act.
Third. Provide \$150,000,000 to supplement the funds in section 32

for the use of all commodities in disposing of their surpluses both in the domestic market and in the export markets.

Fourth. Make sure that American agriculture has its fair share of the world market for its export crops.

Fifth. Oppose any attempt to destroy commodity loans and

cheapen farm prices

This program will enable farmers to keep their supplies in balance with demand. It will safeguard farm prices and farm income. If we can keep the loan features and get these parity payments, it will assure to farmers cooperating in the Triple A program returns that will approximate at least 75 percent of parity. If we can also obtain the increased funds for section 32, we can get rid of these accumulated surpluses which are depressing farm prices.

This is not just a farm problem. It is a city problem, too. The truth is that a substantial share of the funds charged to agriculture for disposal of surpluses really goes to feed hungry children whose parents are out of work. In other words, some of the money that is earmarked for agriculture really goes for relief and assumes a burden that under normal business conditions would

be carried by city industry.

Just now cotton is staggering under the weight of a 13,000,000,-bale carry-over and our exports of cotton are down to three and onehalf million bales, less than one-half our normal exports. Every-body recognizes that something must be done to get rid of this enormous surplus of cotton.

enormous surplus of cotton.

To get this cotton picture clear, let's look back a moment at the situation we had in 1932. At that time the carry-over had piled up to 13,000,000 bales, about the same as now. Domestic consumption had fallen to less than 5,000,000 bales—the lowest since 1921. And the price had fallen to 5 cents a pound. At that time all of our cotton sold at the world price.

During the next few years, under the Triple A program, the cotton picture was transformed. The surplus was rapidly reduced and the price increased from 5 cents to 12 cents or more a pound. Domestic consumption increased from 5,000,000 bales to nearly 8,000,000 bales in 1937.

8,000,000 bales in 1937.

But again the picture changed. The effective controls had been thrown out by the Supreme Court's decision in 1936. Acreage jumped up, and production increased. The record crop of 19,000,000 bales filled the warehouses to overflowing once more with

surplus cotton.

Under the weight of this surplus the price of cotton dropped. Only the commodity loan feature of the new farm act kept the price from collapsing to the 1932 level or below. With this loan which has maintained the domestic price at around 8 cents, domestic consumption during the current year is running at the second highest rate since 1929. This proves that the cotton loan, in protecting the domestic price, does not handicap domestic consumption. But the surplus produced the 1927 class covered the sumption. But the surplus produced in 1937 also caused the world price of cotton to fall. As a result the 8.3-cent loan is unexpectedly hampering our exports of cotton.

What we must have is a means of letting our cotton flow freely into the world market, meeting the competition of foreign producers, and at the same time a means of protecting our domestic

The American Farm Bureau Federation is fighting for such a The American Farm Bureau Federation is lighting for such a plan. Our board of directors took action on March 9 urging its adoption. On March 10 we presented our plan to President Roosevelt. Following our recommendation, the President on March 28 proposed a plan for moving American surpluses of cotton into export and make sure of our fair share of the world cotton market. To the South, the world market for cotton is all-important. In the past we have exported a larger part of our cotton crop

than we have used in this country. If the South is not to face economic ruin and its plight seriously endanger the welfare of the entire Nation, our foreign market for cotton must be saved. We believe that such a plan will work for cotton, because a similar plan is already in effect for wheat. The wheat export program at relatively small cost is protecting the American price and giving the wheat producer his fair share of the export market. The wheat growers are heartily supporting this program. Applying the same plan to cotton would be good business for still another reason. To store the huge cotton surplus is costing the Government almost a million dollars a week. Wouldn't it be a good idea to use this money to move the cotton into trade channels? This seems far better than for the cotton industry to ask enormous sums from the United States Treasury which it is impossible to get.

The cotton-export plan, strangely enough, is meeting with strong opposition. Senators have reported that large numbers of telegrams have poured in from the interests who derive their income from handling the cotton of the farmer. Opposition is coming from speculators, from handlers and processors, from American capitalists with investments in foreign cotton. These interests are fighting for more cotton and for cheap cotton, the same as they always have. It is a fight between these interests and the cotton

The question is: Who is talking for the farmers of the South? Foreign cotton interests? Speculators? Cotton buyers? Cotton handlers? Are these groups speaking for the farmers of the South? I leave it to you as cotton farmers. Who has your real interests at heart? Is it the members of these groups? Or is it President Roosevelt and Secretary Wallace and your own American Farm

Bureau Federation?

Senator George has introduced a resolution which forbids the Secretary of Agriculture to sell any of our loan cotton abroad at less than its cost to this Government without the approval of Congress. The practical effect of this resolution would be to prevent the export of any of the 11,000,000 bales under the loan, endanger the loan and cotton prices—and this at a time when our exports are down to less than half of normal. We have registered strongly against this resolution with our Senators.

Our cotton farmers have shown, in every instance, by whole-hearted cooperation in the program, that they are willing to restrict their production to normal domestic consumption and exports. They will do their part. They are asking Congress to do its part. We've got to do something to move our surplus cotton and regain our export market. The purpose of the cotton export plan is to regain our export markets and to safeguard the cotton loan and the domestic cotton price.

is to regain our export markets and to safeguard the cotton loan and the domestic cotton price.

This problem is not wholly one of cotton. It is not limited to any one section or any one commodity. It is a national problem. Farmers from agricultural regions other than the South have a stake in what happens to cotton exports, to cotton loans, and to cotton prices. If cotton export markets are lost, cotton loans are destroyed and the price of cotton is allowed to collapse, what will happen to wheat exports, the wheat loan, and the price of wheat? What will happen to the corn loan, the price of corn and hogs, and our exports of lard? What will happen to the butter stabilization plan and the disposal of surplus butter? Agriculture has fought for 15 years for fair domestic prices for its products. has fought for 15 years for fair domestic prices for its products. Shall we now sit idly by and see the fruits of those efforts wiped out? That is the question before American farmers, and now is the time to answer it—before it is too late. The fight is now on in the Senate. The answer must come from a united agriculture. It is encouraging to note that this morning Senators from various agricultural sections were in session trying to get together on a unified program. This is what we have been striving to

bring about.

Senator James Hamilton Lewis

EXTENSION OF REMARKS

HON. EDWARD A. KELLY OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1939 Mr. KELLY. Mr. Speaker, on Sunday last a noble soldier

of democracy passed into the great beyond; the death of Senator James Hamilton Lewis marks the departure from national politics of one who dedicated his life to the public cause—a great statesman, a soldier, and a diplomat. Born a Virginian, Illinois has been proud of her adopted son, as he served her with merit and distinction. He was among the outstanding and best-known figures in the United States

We who knew him best will always remember his fine character and his eagerness to serve his fellow men; his kindness and gentle manners to his constituency were outstanding features in his life. In his passing I have lost a dear friend, the State of Illinois a loyal and noble son, and the Nation one of the most effective legislators who ever adorned the Senate of the United States.

Peeler Log Embargo

EXTENSION OF REMARKS OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, April 13, 1939

EDITORIAL COMMENTS AND LETTER

Mr. COFFEE of Washington. Mr. Speaker, pending in this Congress is H. R. 3579, introduced by me, the purpose of which is to restrict the exportation of peeler logs and Port Orford cedar. Because of the deep interest in this subject exhibited by clubs, corporations, individuals, commercial organizations, and political groups of the country, particularly in the Pacific Northwest, I am including herein laconic excerpts from newspapers of that area which discuss this measure. I am likewise including herein a letter from Axel Oxholm, managing director of the Pacific Forest Industries, addressed to Col. W. B. Greeley, manager of the West Coast Lumbermen's Association, in which Mr. Oxholm answers certain arguments and observations made by Mr. Greeley with respect to the pending legislation.

The letter is self-explanatory.

EDITORIAL COMMENTS BY WASHINGTON AND OREGON PAPERS IN REGARD TO THE PROPOSED DOUGLAS FIR PEELER-LOG EMBARGO

Many newspapers in Washington and Oregon have expressed themselves editorially on the peeler-log bill, which now is being considered in Congress. If the bill is passed, it will ban the exports of choice Douglas fir plywood logs from Northwest forests. Here are a few quotations:

Longview (Wash.) News: "If Congress does not give heed to this united plea from Northwest workers, we can safely conclude it is deaf and blind to the needs of this portion of the country."

The Dalles (Oreg.) Chronicle: "It certainly would seem like a sound idea to provide jobs for American workmen by restricting the export of these peeler logs."

Portland (Oreg.) Oregonian: "If we kept them (Pacific Northwest plywood logs) at home and converted them into plywood with our own labor, the foreign users would have to come to us for their plywood."

Bellingham (Wash.) Herald: "A ban on the export of our choice logs would be a direct benefit to our own workers and our own

behingham (wash.) Heraid: "A ban on the export of our choice logs would be a direct benefit to our own workers and our own manufacturers. Employment also should begin at home."

Bremerton (Wash.) Searchlight: "The women of Washington have rightly stressed the point that this exportation [of peeler logs] is keeping unemployed hundreds of thousands in the Northwest."

Kelso (Wash.) Kelsonian Tribune: "Germany, Italy, and Japan are the worst offenders. They flood the world market with cheap plywood, using our own logs * * *."

Aberdeen (Wash.) World: "Practically the only ones who find valid reasons to object to the proposed [peeler-log] law now before Congress are the few log exporters who reap profits from this business." business

Centralia (Wash.) Chronicle: "From where does the opposition come? From reactionary individuals and those who desire to 'cut out and get out.'"

[From the Tacoma (Wash.) News Tribune of March 24, 1939] PEELER-LOG EMBARGO

On this page today the News Tribune reproduces a summary of newspaper opinion which shows a remarkable agreement on the proposed peeler-log bill which is now being considered in Congress. This bill has already been widely endorsed. The Tacoma City Council and various organizations in Tacoma have urged our Senators and Representatives to do what they can to pass the measure which would ban the exportation of choice Douglas fir plywood logs. Commendation of the bill has also come from many civic and labor bodies throughout the Northwest.

At the present time some of the choicest logs in the Northwest, which took hundreds of years to grow, are being shipped abroad to be turned into plywood. Some of this plywood is used in war preparations by the Fascist countries. A considerable amount is shipped back here after being made with cheap labor, working long hours, in competition with local industries.

As a result, the situation deprives Northwest workmen of jobs and American capital of return on its investment in the plywood industry, so important a factor in the industrial life of the community.

Such unanimity of opinion from the Northwest ought to convince the authorities at Washington, D. C., that it is a stupid policy to permit the exportation of these choice logs and have them returned in manufactured material to the detriment of our own industry. It is to be hoped that Congress takes speedy action on this proposal, so vital to the Northwest.

Bend (Oreg.) Bulletin: "Fir is not a product of this section, but we have an interest in the development and maintenance of employment in all parts of the Nation, and we have an especial interest in the creation of larger industrial opportunity in the Northwest. Let us support this bill."

Seattle (Wash.) Union Register: "Exports of plywood have dwindled practically to the vanishing point while exports of peeler logs have grown by leaps and bounds. This situation must stop."

Portland (Oreg.) Journal: "Uncle Sam is playing Santa Claus to the world's only surplus of softwood timber suitable for plywood manufacture—the Douglas firs of Oregon and Washington. This

manufacture—the Douglas firs of Oregon and Washington. This measure (peeler-log bill) and others that encourage manufacturers of raw products at home, ought to have support." Eugene (Oreg.) Register-Guard: "* * not merely to protect our own plywood industry but to check the depletion of

Seattle (Wash.) Star: "It certainly is a matter for our Congressmen and Senators to check up on."

Vancouver (Wash.) Columbian: "Certainly if the administration is serious in seeking to return American workmen to the normal channels of trade, it will give heed to the movement for this embargo."

Seattle (Wash.) Post-Intelligencer: "These logs are needed to provide raw materials for the American plywood industry. From every viewpoint the United States should conserve its rapidly dwindling supplies of peeler logs for its own use."

Roseburg (Oreg.) News-Review: "When peeler logs, the finest timber in our forests, are shipped abroad, one of our greatest natural assets is being disposed of without adequate return to the Astoria (Oreg.) Budget: "Why should we ship peeler logs to Germany, Italy, and Japan to help in the construction of bombing planes?"

Olympia (Wash.) News: "You wouldn't catch Germany or Japan selling any of their products in the raw state to the detriment of its industries and workers."

Seaside (Oreg.) Signal: "In any event, it is proper that we should

conserve our diminishing supply of peeler logs."

Aberdeen (Wash.) Post: "Restoration to the Northwest wood-products industries of an annual million-dollar pay roll will result if Congress passes a bill before it prohibiting the exportation of high-grade Douglas fir logs."

Seattle (Wash.) Timber Worker: "The I. W. A. will cooperate to the full in this worthy move to keep this product and this work in this country."

MARCH 27, 1939.

Col. W. B. Greeley, Secretary-Manager, West Coast Lumbermen's Association

Stuart Building, Seattle, Wash.

Dear Colonel Greeley: May I thank you for your courtesy in sending me a copy of your letter of March 24, addressed to certain sending me a copy of your letter of March 24, addressed to certain Senators and Representatives from the Northwest and bearing on the control of log exports? I have just returned from a visit with timber owners, loggers, and log exporters in British Columbia. I have consulted British Columbia officials, and the result of my investigation is, briefly, as follows:

(1) The Douglas fir timber resources of British Columbia are given as 16,000,000,000 feet of accessible timber. The present annual rate of production is one and one-half billion feet. Therefore, the British Columbia timber industries are in a precarious position in regard to raw material.

(2) While no accurate information is available in regard to the accessible stands of high-grade Douglas fir saw timber, it is generally accepted that the Province has less than 4 percent of this class.

(3) The sawmills and plywood mills in British Columbia have for (3) The sawmills and plywood mills in British Columbia have for several years experienced a shortage of high-grade fir logs. The deficiency has been made up by imports from Washington and Oregon. The annual exports to British Columbia have increased of late years. Thus the United States Department of Commerce statistics show that in 1935, 4,000,000 feet of Douglas fir logs were shipped to British Columbia; in 1936, thirteen and one-half million feet; in 1937, thirty-one and one-half million feet; and in 1938, thirty and one-half million feet. While no accurate information is available in regard to the grade of fir logs shipped to Canada, it is common knowledge that a large percentage, if not the bulk, of the logs are high-grade fir logs, and that these logs are imported for the manufacturing of plywood and other high-grade wood products for export. for export.

(4) Canada's exports of high-grade fir logs are to a large extent reexports of American imported logs. This is particularly true in regard to shipments to Germany, since Canada has a trade treaty with that country, whereas the United States has not. According to the report of the British Columbia chief forester, British Columbia

exported 4,000,000 feet of No. 1 logs of a total export of 152,000,000 feet of Douglas fir logs in 1937, the latest figures available.

There are unquestionably certain quantities of medium- and low-grade fir logs shipped to Canada, the reason being an effort on the part of certain log-buying mills in British Columbia to depress the

local log market.

(5) An embargo on American high-grade, Douglas fir log exports would force the Canadian mills to depend on their own resources, thereby bringing their cost of production more in line with that of the American mills. Since Canada would have no high-grade fir logs available for export under these circumstances, there would be no basis for reciprocal agreement with that country. The principal export mills in British Columbia are reported as opposing such agreement.

(6) A private arrangement between loggers in British Columbia, on the one hand, and Oregon and Washington loggers, on the other, would be ineffectual since no control could be exercised over unorganized loggers, of which there are many in both countries.

(7) The Province of British Columbia cannot control exports of

logs cut on Crown-grant timberlands. Control over all log exports from British Columbia is, therefore, a matter for the Parliament in Ottawa, and it will, unquestionably, require a long time to secure action. In the meantime, our markets for finished products in foreign countries continue to dwindle as a result of furnishing our foreign competitors with the raw material they need.

(8) The British Columbia mills ship their finished products, including doors, plywood, lumber, etc., to the United Kingdom on a duty-free basis. The American mills cannot compete with the British Columbia mills in face of this handicap, and in addition the British Columbia mills have appreciable freight advantages

and lower labor cost.

In conclusion, it seems reasonable that the only protection for the Northwest industries would be to stop the exportation of such logs as cannot be furnished by Canada or any other country. I am purposely leaving out the question of conservation, the employment feature, and the question of public welfare involved in this policy, because these facts are well known and well recognized. I will only emphasize that the growing scarcity of high-grade softwood timber in all other parts of the world is the reason why more than a dozen countries call on our ports for high-grade logs. If the Northwest fails to protect its interests in the manner suggested, it will invariably mean a continued decrease in what little export trade is left in finished wood products. The drain on our virgin-timber resources has already been felt by the domestic industries dependent on this raw material for their existence. While the plywood industry is the first industry to be hit on account of the high quality requirements of the raw material used, other and even more important log-using industries in the Northwest will soon be in the same position as our industry now finds itself. In conclusion, it seems reasonable that the only protection for itself.

The fact remains that the United States is the only industrial country permitting an unrestricted export of softwood peeler logs. Even British Columbia exercises strict control over such exports, with the exception of logs cut on Crown-grant lands.

Copies of this letter are being sent to the Senators and Representatives to whom you addressed your communication.

Very sincerely yours,

AXEL H. OXHOLM, Managing Director, Pacific Forest Industries, Inc., Tacoma,

Army Day and Our Soldiers

A well equipped, trained, treated, and paid Service personnel is America's best guaranty of peace.

EXTENSION OF REMARKS

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1939

ADDRESS BY CARL GARDNER ON ARMY DAY, APRIL 6, 1939

Mr. IZAC. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech made on Army Day by Carl Gardner, editor of "Our Army" magazine and national commander of the Regular Veterans' Association:

Twenty-two years ago today, on April 6, 1917, the United States, after standing for oft-repeated violation of its rights and sovereignty by the Central Powers of Europe, who thought America was too cowardly to fight, came to the end of its patience and entered the World War on the side of the allied democratic nations determined to stamp out once and for all aggression on the part of one nation against another.

Developments since the World War have made it clear that, while we did turn the tide of battle and crush, for the time being, while we did turn the tide of battle and crush, for the time being, at least, the powerful forces belched loose upon the world by Germany and her allies, we most certainly did not succeed in eliminating burning desires on the part of one nation for the possessions and properties of others. Very foolishly we thought we had accomplished this purpose, and in the years immediately following the war we permitted our military and naval forces to deteriorate in strength to a state of practical impotency. But we had a rude awakening. We have been shocked out of our lethargy. We have seen communism and other un-American "isms" challenge our institutions, and we have determined to prepare to meet the our institutions, and we have determined to prepare to meet the

challenge.

As we celebrate this Army Day of 1939 we can state proudly that most effective steps have been taken to strengthen the United States Army and to place it in a position to perform its full mission in our scheme of national defense. When these steps are perfected the United States will be able to call to arms on mobilization day a force of over 1,000,000 fighting men. This force will be composed of 220,000 Regular Army officers and men, 75,000 Regular Army Reservists, 210,000 National Guardsmen, and some 500,000 other categories of trained personnel. Six thousand fight-500,000 other categories of trained personnel. Six thousand fighting planes, manned and serviced by some 50,000 officers and enlisted men, will compose a powerful modernized Army Air Force. Adequate protection is being provided for our overseas bases in Panama, Hawaii, Alaska, and Puerto Rico, with increases in personnel and the addition of antiaircraft and coast-defense guns.

These steps toward preparedness will give the American people complete security. They do not decrease in any degree the possibility or probability that our country will enter a war which starts in Europe or Asia, but they do give us a definite guaranty that no war will be fought on the soil of the United States or its posses-

With these steps that have been so wisely taken by our Government to provide the material for an adequately equipped Army, most of you are familiar. But there is another side of our Regular Army which isn't so well known and which is rarely covered in speeches made on Army Day. I refer to the personnel side. I refer to the man behind the gun, the Army private, the Army

noncommissioned officer.

Tremendous advances have been made in our guns, our planes, and our instruments of warfare. The best brains in our military service and in civil life have taxed their ingenuity to construct and perfect machines of war—machines that require educated and intelligent men to man them. Yet very little has been said or done to improve the pay, pensions, and treatment received by the United States Regular Army soldier. Conditions under which he works have not kept pace with developments of the material side

of our Army.

The rate of pay of Army men has not been revised since 1922. The rate of pay of Army men has not been revised since 1922. At that time the pay of the private was cut from \$30 a month to \$21 a month and has remained at that low figure for 17 years. The Army private is probably the lowest paid worker in any industry or profession or calling, and he is a Government employee. Members of the Civilian Conservation Corps are paid \$30 a month, \$9 more than the monthly compensation of the Army's lowest pay grade. And during the past 6 years part of this pay—the reenlistment allowance—has been taken away from all Army enlisted men of all pay grades. But I am glad to say that recently Congress decided that this injustice should continue no longer and has voted to restore this allowance.

Index present pension rates the Army enlisted man who becomes

Under present pension rates the Army enlisted man who becomes physically disabled in the line of duty—no matter if this occurs on foreign soil, in the Philippines, or in China or in Panama—is allowed Just about one-third the pension a similarly disabled veteran of a war would receive. A physically disabled Army enlisted man with 20 or 25, or even 29 years of service, receives no more pension than the disabled recruit with a year of service. Each is given a medical discharge and each must then apply to the Veterans' Bureau for a pittance. Upon death the next of kin of physically disabled Regular Army men are not entitled even to the flag that covers the

In each Army post and station there is operated a store, which is called the post exchange. This exchange sells a variety of items which are of ordinary use and consumption by Army officers and enlisted men and members of their families. Prices are, as a rule, lower than in civilian stores and are, therefore, in keeping with the Army's low pay rates. Up until a few years ago Army personnel were able to buy most of their needs in their own stores—these post exchanges—but in 1936 Congress enacted a law restricting the types of merchandise that might be sold in Army retail stores, and in 1937 these restrictions were further tightened until today the poorly paid Army soldier cannot even buy a suit of civilian clothes in his post exchange. The officer or the noncommissioned officer cannot buy a good radio, a vacuum cleaner, a washing machine, or a set of automobile tires in the average post exchange.

These restrictions were enacted into law by Congress ostensibly because of the theory advanced by local merchants in towns near Army posts, which was that if Army personnel could not purchase certain items in their post exchanges they would, perforce, purchase them from the local civilian stores.

certain items in their post exchanges they would, periorce, purchase them from the local civilian stores.

This theory has proved itself false, because most Army personnel could not afford to pay the full civilian retail price for radios, civilian suits, and washing machines. When they could not buy such items in their own stores, they just didn't buy. This meant not only that they and their families were denied badly needed articles but it also meant that wholesalers and manufacturers lost business and

that workers in factories, on transportation lines, and elsewhere lost work.

Profits from post exchanges are used for the morale and contentment of Army personnel. They buy athletic equipment, bowling alleys, coffee urns, toasters, radios, magazine subscriptions, and many other items for use in Army posts and in organization recreation rooms. The Government does not provide such items. Dry up post-exchange profits, and Army men must go without many

tion rooms. The Government does not provide such items. Dry up post-exchange profits, and Army men must go without many things which make for contentment and morale.

The Secretary of War and the War Department have year after year consistently asked for relief in pay, disability pensions, and other matters, and have annually asked for return of reenlistment allowances. Yet no action has been taken by Congress until this year—and this lack of action has been due to a great extent to the fact that individual Members of Congress have not hitherto been made fully acquainted with the situation of Army personnel and have not had impressed upon them the vital need for amelioration of conditions under which Regular Army men serve.

Lately, however, Army personnel—as well as personnel of all other regular services—have had the benefit of cooperative effort on the part of the Regular Veterans' Association, an organization composed of those who have served or who now serve in the Regular Army, Navy, Marine Corps, and Coast Guard. This association is founded upon patriotic principles similar to those of our war veterans' organizations, but only those who have had 1 year or more of regular enlisted service are eligible to membership.

There are some 5,000,000 men and women in this country eligible for membership in the Regular Veterans' Association and its companion organization, the Regular Veterans' Association and its from these ex-Regulars that the Regular Veterans' Association has drawn membership that has interested itself particularly in the needs of personnel of the Regular Army. This association has taken the unassaliable position that without high morale and contentment among Army personnel the United States Army cannot reach that high state of efficiency which adequate national defense taken the unassailable position that without high morale and contentment among Army personnel the United States Army cannot reach that high state of efficiency which adequate national defense demands—that billions spent upon guns and planes will prove ineffective unless a few dollars are provided as relief to Army personnel. Today we demand the best men for our Army and we demand that these men give their best. They deserve fair and equitable treatment. And we of the Regular Veterans' Association are very proud to say that vitally needed revision of pay and pensions and other matters have received and are receiving the sympathetic attention of such outstanding Members of Congress as Senators Sheppard, Schwartz, and Reynolds and Representatives Izac, Van SHEPPARD, SCHWARTZ, and REYNOLDS and Representatives IZAC, VAN

Most urgently needed legislation at present as far as Army enlisted personnel are concerned are, first, an upward revision of the pay scale, and second, new physical disability pension rates to bring these rates more nearly in line with pensions paid physical disability may retain a line with pensions paid physical disability may retain a line with pensions paid physical disability may retain a line with pensions and retaining all or the pensions are all or the pensions and paid physical disability may retain a line with pensions and paid physical disability may retain a line with pensions and paid physical disability may retain a line with pensions and paid physical disability may retain a line with pensions and paid physical disability pensions are paid physical disability pensions and paid physical disability pension are paid physical disability pensions are paid physical disability pension ically disabled war veterans. I urge all civilian citizens, all ex-Regulars, and all mothers, fathers, sisters, wives, and friends of our Regulars to write their Senators and their Representatives in Congress to urge these Congressmen to give these matters their serious and sympathetic consideration. A letter will be a tre-mendous below

mendous help.

In closing I invite all ex-Regulars, men who have had 1 or more years of service in our Regular Military or Naval Establish-ments, to become affiliated with our association. It is the only

ments, to become affiliated with our association. It is the only association of national prominence that is composed exclusively of Regulars. Headquarters is at 1115 Fifteenth Street NW., Washington, D. C. A letter to the chief of staff will bring full details. The men who have worn the uniform of our country, the men who have taken and obeyed the oath that every enlisted man, whether war or Regular, takes, constitute a bulwark of strength for our Nation. One who has not served in our Army, our Navy, our Marine Corps, or our Coast Guard can never have the same feeling toward his flag and toward his country that the veteran has. The war veteran served his country well. So, too, has the Regular veteran. the Regular veteran.

And on this Army Day let's salute the Regular, the man whose profession is that of bearing arms, the man who makes military service a vocation, who says little but whose patriotism and willingness to die for country are in no respect less than those of the wartime volunteer. It is the Regular who performs the chore of many monotonous routine days of preparation for war, it is the Regular who is thrown into the conflict first and who comes home last.

Yes, they, too, serve and sacrifice.

Yes, they, too, serve and sacrifice.

Federal Housing Act

EXTENSION OF REMARKS

HON. JOHN J. COCHRAN OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1939

Mr. COCHRAN. Mr. Speaker, the amendment which the House has just adopted by a record vote adding a new section to section 207 of the Federal Housing Act is for the purpose of eliminating legitimate write-ups of raw-land values in connection with projects authorized under this section of the act. A careful analysis of the act supports this statement, because the act itself permitted the Federal Housing Administrator to permit such write-ups, making them legitimate under the law, and it is this portion of the act that justified the gentleman from Massachusetts [Mr. GIFFORD] in saying that he did not blame the Federal Housing Administration but the act. In this respect I concur in the opinion of the gentleman from Massachusetts [Mr. GIFFORD]. We cannot blame the Federal Housing Administrator for doing something which we, who are responsible for the law, permitted him to do-in fact, specifically said he could do.

It has been claimed this land write-up is a racket, and it should be stopped regardless of the argument advanced that it is justified. My contention is that if we Members of Congress are responsible for a racket, it is our duty to stop that racket by specific legislation and that is exactly what I desire to accomplish by my amendment, nothing more.

It has been asserted by some that the Federal Housing Administration claims, as do some members of the Banking and Currency Committee, that there has been a misunderstanding in regard to section 207 and to amend it, as I proposed, would make it more difficult for the Administrator to initiate large housing projects.

I cannot conceive how anyone can say that the operation of section 207 is misunderstood, especially if the facts in regard to the two St. Louis projects which have been so much discussed in the committee and on the floor are fully

In voting for the original law I took it for granted that the Congress meant exactly what it said when it provided that 20 percent of the cost was to be advanced by the promoters, while the F. H. A. was to guarantee the mortgage amounting to 80 percent of the cost of the project.

The criticism in the main directed at the two St. Louis projects was because of the write-up in the land values which were accepted and approved by the F. H. A. as part of the 20 percent advanced by the promoters. In my opinion, if the general program is sound, and I think it is, then the F. H. A. will not find it any more difficult to advance a project in a community where additional housing of this character is needed, but, on the contrary, I contend that if the 20 percent advanced by the promoters are sound assets, such as cash and money expended, it will not only be beneficial to the project, but likewise be beneficial in rentals, because it will be reflected in the amount when the time arrives to fix the rentals of the completed apartments.

It is true that the promoters cannot make any money on their 20 percent which they advance until the project makes money, but is anyone blind to the fact that the promoters are going to make plenty of money on the construction of the buildings, especially when the promoters are architects and building contractors? They are in the picture because they can make a very liberal amount in constructing buildings. So I say that the architects and the builders, who are mostly the promoters, will be on the job just the same seeking projects of this character.

Of course, the Government can have an expanded housing program if it wants to be as liberal as the Congress has permitted the F. H. A. to be in connection with these large-scale housing projects.

I have no desire to take unfair advantage of anyone and every statement that I have made in connection with this matter is supported by facts, although I admit that it has been mighty hard for me to secure a break-down of expenditures in connection with the St. Louis housing projects, and I have not secured such a break-down up to this time.

One day I receive information from the F. H. A. in reply to questions and when I use that information I am informed that it is not entirely correct. I think I understand the English language at least to some extent and when I was told by F. H. A. officials that the promoters at the time of the write-up of the land values had not spent 1 cent above the purchase price of the two projects up to the time of the write-up I think I was justified in using the statement.

It has never been denied by the F. H. A. that the promoters never provide any of their own money for underground improvements, such as sewers, water, streets, sidewalks, and so forth, inside of the property line, but that the money for such improvements came out of the money guaranteed by the F. H. A., together with what money might have been placed in the project by the promoters, under their 20-percent contribution.

As an example, on one project in St. Louis the land value was written up from \$44,000 to one-hundred-seventy-oddthousand dollars, claim being made by an F. H. A. official that part of the increase in the write-up was money which the promoters were to expend on constructing roads and so forth, leading up to the property line. It had not been spent at the time of the write-up.

When I made the statement that none of the money of the promoters had been used for sewers, water, sidewalks, and streets inside the property line I was asked then by the F. H. A. how I could make such a statement when the promoters had put up over \$100,000 in cash. My answer to that is if the write-up did include any cash advanced, or was to be advanced by the promoters for improvements in increasing the value of the land, then that was included in the write-up, or at least should have been included in the write-up, and not taken out of over \$100,000 in cash which was advanced and included in their 20 percent. If the money for the improvements that justified the write-up in value of the land came out of the 80 percent guaranteed by the F. H. A. and the 20 percent of the promoters, then the promoters did not take any additional money out of their own pocket to make any improvements on the land aside from the cash in their 20percent contribution, and if that be so the write-up in the value of the land was not justified and should not have been allowed as part of the 20-percent contribution.

In any event, the fault lies entirely with the Congress because of the specific wording of section 207, and if we had not so enacted section 207 the write-up in the value of the land could not have occurred. Therefore I seek by my amendment to correct what the Congress should not have permitted.

In order to be fair and that the views of the Federal Housing Administration might be known in reference to the administrative policy under section 207, with the permission of the House I quote now a statement issued by the Federal Housing Administration on March 6, 1939:

The purpose of the 1938 amendments to section 207 of the National Housing Act was to provide an effective stimulus to rental housing construction through creating means for increasing, on liberal terms, the availability of funds for financing such construction.

It was recognized that the disappearance of facilities for real-It was recognized that the disappearance of facilities for real-estate bond financing, together with the reluctance of institutional lenders to provide sufficient funds to meet housing needs, required some positive action if the supply of rental housing was to be brought abreast with market requirements. It was likewise recog-nized that the older method of financing not only involved costs which effectively prevented new construction except for the upper income groups, but also, through its generally short-term character, its necessary association with highly speculative junior financing, and its lack of protection against wastage of the security contained its necessary association with nightly speculative junior financing, and its lack of protection against wastage of the security contained at all times a serious hazard to the stability of the real estate and mortgage market. It was, moreover, apparent that any methods devised in substitution must admit the scarcity of equity capital—a condition as true in boom times as it was last year or now—and provide for as large percentage loans as could be made consistent with a reasonable business risk.

Under the amendments these situations were frankly faced and authority was granted for insuring loans in amounts up to "80

authority was granted for insuring loans in amounts up to "80 percent of the amount which the Administrator estimates will be the value of the property or project when the proposed improve-ments are completed." This is avowedly a liberal policy and its purpose of providing the desired stimulus to rental housing construction is plain.

In order to surround so liberal a policy with sufficient safeguards to protect the Government's interest without nullifying the pure of Congress, the law and subsequent regulations and policy of the Federal Housing Administration established means of controlling and limiting the operating corporation so as to prevent the neglect or waste of the property, or the diversion of any funds other than to provide a limited return on the equity. Among these controls are the following:

The mortgage must not carry an interest rate above 4½ percent and must be fully amortized in regular payments extending over a period of usually 26 years.

No charges in connection with the financing of the project can

be made except as approved by the Administrator.

No mortgage will be insured which exceeds the Administrator's estimate of the cost of the physical improvements, so that in the minimum the equity must represent the land free and clear and all the miscellaneous costs for interest, taxes, and insurance during construction, organization, financing, and legal expense, etc. No mortgage will be insured which does not permit a drop in rental below the appraisal estimates of at least 20 percent before default on the mortgage occurs.

No liens secondary to the insured mortgage are permitted and

default on the mortgage occurs.

No liens secondary to the insured mortgage are permitted and no indebtedness of any sort may be incurred by the corporation except as approved by the Administrator.

Rentals must be established in accordance with a schedule approved by the Administrator as being proper, and no other charges for service to the tenants may be made without the Administrator's approved.

No dividends may be paid on the stock of the owning corpora-tion except as approved by the Administrator and only after all operating expense, regular interest, and amortization charges have been paid, and after reserves for working capital, for repairs and replacements, and for at least one-half year's debt service have been established and maintained. Any excess earnings above the dividends and reserves above stated must be paid to the mortgagee as editional amortization of the lose. as additional amortization of the loan.

No salaries may be paid except with the approval of the Ad-

The corporation is required to maintain the property in a satisfactory condition.

The corporation must at all times permit the Administrator to

examine its property and records.

The books of the corporation must be kept in accordance with the system of accounts prescribed by the Administrator.

The corporation must furnish the Administrator regular reports

and audits covering its operations.

In addition to these regulations which prevail during the entire period in which the mortgage-insurance contract is in force, certain other regulations are enforced during the construction period, as follows:

Funds representing the cash equity are required to be deposited by the owning corporation in an account under the joint control of the Administrator.

No funds may be paid on account of the mortgage loan except with the approval of the Administrator.

Assurances of completion in the form of construction bond, or otherwise in form satisfactory to the Administrator must be provided.

The above regulations are made effective by being included in the charter of the limited-dividend owning corporation and by granting to the Administrator shares of a special class of stock which acquire full voting rights on the default of any monetary payment or on the breach of any of the above charter require-ments. Through an administration representative on the board of directors of the corporation and through the regular reports required to be furnished the Administrator is kept informed of the operations of the corporation and maintains an effective super-

operations of the corporation and maintains an effective supervision of these operations.

In the event of any such default or breach, the Administrator has the right, without legal recourse, to assume control of the corporation and to conduct its operations himself until such time as the default or breach has been remedied or until the property or mortgage has been transferred to him by the mortgagee. Moreover, in case the Administrator does come into actual possession of the property through foreclosure, he may, through elimination of the equity and through the favorable financing terms which he can command, rent the property at a figure so much under the appraisal estimates as to make an actual loss to the Government an extremely remote possibility.

appraisal estimates as to make an actual loss to the Government an extremely remote possibility.

It is felt that these safeguards will not only reduce the assumed additional lending hazard arising from a high percentage loan but should in fact generally improve the quality of the mortgage security on income residential property as a whole. This opinion has been concurred in by lending institutions familiar with the procedure, and it is perhaps more effectively indicated by the increasing competition among lenders for these loans. It may be noted that the form of this competition is a healthy one from the point of view of added safety, taking, as it does, the form of reduction in interest rates and financing charges, rather than that of offerings of higher loans.

reduction in interest rates and financing charges, rather than that of offerings of higher loans.

The administrative problem in connection with operations under this section of the act has been to provide, within the restrictions above outlined, sufficient flexibility to meet the manifold complexities of real-estate and building conditions, to act with the maximum promptness consistent with careful examination, and to involve, through our procedure, as little delay and additional cost to builders as possible. While endeavoring to do everything essential to determine the safety of a loan, we have, in the interests of encouraging construction and keeping down administrative expense, eliminated all procedures except those necessary to protect the Government's position as insurer.

Three features of the examining procedure, designed not only to protect the Government but to improve generally the quality of rental properties as good housing and good mortgage security, should be noted. These features are: Housing market analysis, architectural consultation, and the F. H. A. appraisal procedure.

Since the basis of the success of any income property lies in the accuracy of the income estimates, great stress has been placed upon reaching valid determinations of this factor, and the administration is constantly endeavoring to improve its facilities for

istration is constantly endeavoring to improve its facilities for

obtaining thoroughgoing market information. In each zone office research officials have been placed whose sole duty it is to study the economic backgrounds of the cities in their regions, to study population and income trends, to check vacancies, and otherwise to provide a true background for estimating obtainable rentals. Studies of this type have been extremely helpful to the administration of the studies of t

Studies of this type have been extremely helpful to the administration in establishing the basis of examination and to developers in aiding them in selecting the type of project for submission. In the second place, emphasis is laid upon the character of project planning. It is considered desirable to have projects constitute self-contained entities of sufficient size to counteract adverse neighborhood influences which might arise during the economic life of the project. In order further to counteract obsolescence, it is required that lower population densities and greater amounts of park and recreational space be provided than are customarily established under local ordinances. Care is taken that within the family units provision is made for privacy, light, and ventilation. Through such means it is assured that tenant families will have amenities at least comparable with those possible in detached dwellings, and that the property will continue to offer attractive living accommodations over a long period of years.

The F. H. A. architectural consultation goes beyond these considerations. It includes also careful scrutiny of specifications to provide that the proposed structure will be a sound and durable one. Few proposals are approved that do not include many added conditions intended to assure a satisfactory standard of construction.

construction.

The procedures outlined above are conducted in addition to the appraisal process, and are for the purpose of providing a basically satisfactory security. In other words, no proposal is accepted for appraisal which does not serve a market agreed by the Administrator to represent a real housing need in the community, and which does not promise a building which will provide for that market in a settificatory.

market in a satisfactory way.

The appraisal process itself is exhaustive and includes in it the safeguards of using several methods and of obtaining several independent judgments in matters of valuation. Thus, initial examinations are made in the field by men familiar with conditions in the locality of the project. These findings are reviewed in a zone office and a complete report and recommendations forwarded to Washington. In the Washington office all details of the appraisal are again checked and afterward passed upon by heart

to Washington. In the Washington office all details of the appraisal are again checked and afterward passed upon by a board of review of five men especially set up for the purpose.

In this process, the project is first viewed as a going concern operating at rentals previously determined to be proper. Operating costs, taxes, etc., are carefully estimated. In every case it is assumed that rentals will decline over an estimated economic life and provision is made for such decline. Allowance is also made for vacancies and for depreciation. From such studies an estimate of the value of the project as a capitalization of net return is calculated. This estimate will represent a maximum of valuation acceptable to the Administration, but it does not comprise the whole of the determinations upon which the final conclusion is made. is made.

is made.

For instance, where comparable projects already exist, a comparison with the values of those projects is made. In addition, in every case careful estimates of building costs are made from a thorough survey of materials and labor by experienced construction cost estimators. The miscellaneous costs such as interest, insurance, and taxes during construction, financing, legal, and organization expense are also carefully estimated.

In this whole process, the determination of the portion of the total value contributed by the land under the development is an important and critical matter. In view of the wording of the act requiring valuations to be made on a completed and going concern basis, the cost of the raw land, or of comparable parcels—where

requiring valuations to be made on a completed and going concern basis, the cost of the raw land, or of comparable parcels—where such cost is obtainable—while a matter for consideration, is plainly not the controlling factor. In fact, such cost has been, in the case of our operations, rarely obtainable, or if so, rarely has it given a proper clue to a reasonable final determination. The long period of inactivity in real estate preceding the establishment of this administration, and the violent—though in many cases temporary—collapse of realty prices resulting from that inactivity have made extremely difficult, if not absolutely unjust, the gaging of normal values by comparison with such transfers as have taken place.

Moreover, in many cases no actual change in the ownership of

values by comparison with such transfers as have taken place. Moreover, in many cases no actual change in the ownership of land has taken place, the then owners taking part in the new corporation. Frequently such land has been held for a long period of years without any sales or developments which might give a benchmark of value prior to the new project. In many cases the value arising from important public improvements in the form of highways sewers transprotation lines etc. or the change of the

value arising from important public improvements in the form of highways, sewers, transportation lines, etc., or the change of the permissive land use in the neighborhood, may not have been reflected in sales prior to such occurrences. It is an accepted fact that land which may have lain dormant for a long period may, with the possibility of use through community growth or public improvements, rapidly acquire value. Again land which may be of little value for one use may potentially have great value for another. It must also be borne in mind that these rental projects are in most cases large enough to result in the creation of entire communities of as many as 3,500 persons, a fact that cannot be ignored in a consideration of value. Bringing into use, as they may, large tracts of undeveloped land, they do, through the installation of roads, sewers, schools, and other public improvements, the erection of shops and community facilities, and the stimulation of construction in surrounding areas, materially affect the aspect of the areas tion in surrounding areas, materially affect the aspect of the areas in which they are located and enhance values above the market

price of raw acreage before the concept of the project had been revealed.

It is, in fact, impossible to arrive at a fair and proper determination of land value without taking into consideration the various uses to which it will be put, and, in accordance with theories accepted by appraisal authorities, that use which on valid market cepted by appraisal authorities, that use which on valid market data promises the maximum return from development will be the determining one in arriving at a valuation. It must follow that in considering a definite use, such as a housing project, the returns to be conservatively estimated as arising from such use, will provide a reasonable basis for land value appraisal. The basis of valuation called for by the act and followed by the administration, if exercised with caution and in face of all obtainable data, is therefore. fore a valid one.

In confirmation of the reality of the concepts above outlined, we have had examples where projects already operating have in order to expand their developments purchased additional adjacent land at prices fully justifying valuations made in connection with the

original project

Recognizing, however, the difficulties inherent in achieving absolutely precise judgment in such matters, the Administrator has introduced additional precautions in establishing the maximum amount of an insurable mortgage. Thus, despite whatever final valuation may have been agreed as reasonable, no mortgage will be variation may have been agreed as reasonable, no mortgage will be accepted for insurance which exceeds the F. H. A. estimate of the cost of the physical improvements, as has been previously mentioned; or which does not at least have an equity comprising the land, free and clear of other encumbrances, plus cash equity suf-

land, free and clear of other encumbrances, plus cash equity sufficient to cover all miscellaneous costs for interest, taxes, and insurance during construction, legal, financial, and organization expenses, and a working-capital fund; or which does not, also, have all of the other controls outlined earlier in this statement.

In addition to the above procedures, effort is made to assure that the project, as it has been appraised and approved, will in fact be executed in accordance with the terms of the commitment. Before construction starts a schedule of payments of the mortgage proceeds is carefully determined from estimates of work to be required in relation to the total amount of the mortgage. Payments are made monthly by the lending institutions as the work proceeds only after the amount of work performed as well as its proceeds only after the amount of work performed as well as its compliance with plans, specifications, and F. H. A. requirements has been checked by resident F. H. A. inspectors. This practice, except in its greater thoroughness, is not dissimilar from that which has long been followed by careful lending institutions in connection with construction loans.

Recently the whole procedure above described was submitted for review and comment to a conference of representatives of six of the country's most important financial institutions which have been the most active lenders on rental projects, and, after study, was strongly commended by them as offering the best protection in the private lending field which had thus far been devised.

Through the controls established by law and regulation and through the procedure established for examination, appraisal, controls the procedure of the pr

through the procedure established for examination, appraisal, construction inspection, and management supervision, the Administration feels that it is not only providing a reasonable and proper protection as insurer to the housing insurance fund and to the Government but that it is performing an important service to the country in providing the means for adding to the soundness of mortgage lending on income properties and for increasing the supply of attractive, convenient, moderately priced rental accommodations for families which otherwise would be without a choice of living quarters of a degree of a manify in any way compared to

modations for families which otherwise would be without a choice of living quarters of a degree of amenity in any way comparable to that available to the home owner.

In respect to operations to date under section 207, it may be noted that the average amount of mortgage per room insured by the Administrator has been \$1,004 as against a legal limit of \$1,350, a limit which was set against the protests of builders and developers. It may also be noted that in the average project the value of improved land represents only 10.4 percent of the total cantialization.

value of improved land represents only 10.4 percent of the total capitalization.

We have insurance outstanding on \$71,194,500 worth of mortgages on projects as of January 31, 1939. In the operating period during which this amount of insurance was accumulated we examined projects totaling in proposed mortgage amounts \$743,819,654, from which we have been able to consummate only a small percentage. Numerous additional proposals were rejected during the course of preliminary interviews. Of the projects completed and in operation over a period of 6 months or more many during the course of preliminary interviews. Of the projects completed and in operation over a period of 6 months or more, many have obtained occupancies of 100 percent, a great majority have occupancies of 90 percent or better, and there are none which do not appear to be operating successfully. These figures are cited simply as evidence of the fact that we have been endeavoring to follow a conservative policy and have limited our insurance to those proposals the soundness of which we were thoroughly continued of the expensively assumination. vinced after exhaustive examination.

The Federal Housing Administration has also issued a statement in reference to one of the St. Louis projects, which is now practically completed, known as Manhassett Village. I also include that statement:

This project is located in an area in St. Louis County now being rapidly built up as a preferred residential location, on high land particularly adapted to a large rental-housing development. Before the inception of this project the land had not been subdivided due to its lack of accessibility and to its being held out of the market for other purposes. In order to place the land in

a suitable condition for the building of a project, it was necessary that approximately 1 mile of streets connecting the property in two directions with main highways, together with connecting sewer, water, gas, and electric lines be installed. In order to render permissive the type of project proposed, a change in zoning was necessary; and, in order to accommodate the increased population brought by such a development, a new school was advis-

It was considered by the examining officers of the Federal Housing Administration that when the above requirements had been accomplished the land would at least be comparable as to value with residential lots in adjoining areas, and would fulfill all prerequisites for a rental-housing project.

Section 207 of the National Housing Act instructs the Administration to have the detailed.

Section 207 of the National Housing Act instructs the Administration to base its determinations upon what it "estimates will be the value of the property or project when the proposed improvements are completed." In appraising this proposal, it was estimated that when the project was completed it would justify a valuation of \$2.016,000. It may be noted that an appraisal independently made by the New York Life Insurance Co. before making the loan compared within \$16,000 of this figure.

This valuation took into account the required utilities mentioned above. It assumed the erection of the new school. It recognized the importance of a superhighway to be installed closely adjacent to the property which would bring it pearer in division.

adjacent to the property which would bring it nearer in driving time to the center of the city. It recognized, moreover, that the creation of a community of over 1,000 persons with the facilities necessary to serve them, would have the tendency greatly to enhance values for a considerable area surrounding the property over those existent before the improvement was completed.

over those existent before the improvement was completed.

On the basis of the above valuation, the Administration agreed to insure a mortgage in the amount of \$1,600,000 and to accept an equity valuation of \$416,000. This equity was subscribed in stock by the sponsors and formed the basis for calculating the limited dividend permitted by the Administration, the only cash return allowed to be paid on the equity investment.

Of the amount of this equity, \$245,000 represented cash or its equivalent in addition to the mortgage proceeds, estimated to be required for the completion of the project, exclusive of the land and improvements outside the property. This requirement was met by a cash stock purchase of \$124,000, and by the acceptance by the builder and architect of stock estimated at \$121,000 on account of fees as approved by the Administration. The \$124,000 cash was deposited by the sponsors in an account jointly controlled by the of fees as approved by the Administration. The \$124,000 cash was deposited by the sponsors in an account jointly controlled by the Administration and could be withdrawn only for expenses incurred

Administration and could be withdrawn only for expenses incurred in connection with the project.

The remaining amount of the equity valuation was attributed to land. It has been shown that the sponsors of this development were able to acquire the land in its then inaccessible and unimproved condition for \$44,000, in two payments of \$5,000 and \$39,000. In addition, approximately \$45,000 was involved in the installation of connecting streets, sewers, water, gas, and electric lines, and drainage, all outside the property lines, and outside any consideration by the F. H. A. in estimating the costs of constructing the project. The sponsors were, in view of these extensive external improvements, in view of the enhancement in value arising from the project as a whole, in view of the estimated earning from the project as a whole, in view of the estimated earning power of the project as a going concern; and, moreover, in view of comparable prices being currently offered for residential lots in the neighborhood, permitted by the Administration to issue to themselves stock in the amount of \$171,000, representing the value of the fully improved land under the finished development, for the purpose of completing the allowance permitted by the Administration as a basis for computing the limited dividend return.

The land was, it must be emphasized, transferred to the limited dividend corporation for a stock payment without any cash consideration. Not only did no cash change hands in connection with this land transaction, but the net profit, if any, accruing therefrom must be deferred until such time as the project has proven its success and all of the conditions of the insurance contract fulfilled.

Any returns on the land stock, as well as the other stock in the corporation are, under F. H. A. regulations, strictly limited by the Administration. In order further to add to the safety of the loan, the Administration has required that, before even these the loan, the Administration has required that, before even these limited returns are obtainable, reserves must be set aside for repairs and replacements, for working capital, and for one-half year's mortgage payments. Any amounts earned above these reserves and the authorized dividends must be paid to the mortgagee as additional amortization. In this way, effective machinery is provided to prevent the project from being "milked" during the period that the insurance is in force, and to assure at all times the prior position of the programme indebtedness.

the prior position of the mortgage indebtedness.

It should, therefore, be evident that the sponsors must not only limit and defer their profits, but must risk, first, the loss of return on their investment, then the loss of their investment in land, improvements, cash, and services if the project proves to be

unsuccessful.

unsuccessful.

The Administration has further protection in its ability, without other recourse than an exercise of its rights under the Corporation's charter, to be kept at all times conversant with the corporate affairs, and, in case of monetary default or breach of regulations, immediately to assume full control of the Corporation and its assets. The control may continue until such time as the default or breach has been remedied, the mortgage insurance canceled, or the mortgage or property transferred to the Administration under the terms of the insurance contract.

In case of failure, which there is at present no reason to anticipate, the New York Life Insurance Co., as mortgagee, would have the choice of transferring the mortgage or property to the Administration, or of operating the project as its own property after foreclosure—a choice which it might well make, since the elimination of the equity would give it an increased margin for successful operof the eduty would give it an increased margin for successful operation. On the other hand, should it decide to accept the F. H. A. debentures, which carry 2% percent interest and run for a period 3 years longer than the original mortgage, the Administration would be enabled, through the elimination of the equity and through the financial terms it can command, to operate the project and pay off the indebtedness at a rental so low that actual loss to the Government would be an extremely remote possibilities. ernment would be an extremely remote possibility.

That neither of these possibilities is contemplated may be justi-

fied by the experience with projects in operation 6 months or more. In this category there are now 26 projects in 16 States and the District of Columbia. Four of these are in the immediate vicinity

District of Columbia. Four of these are in the immediate vicinity of Washington. All of these projects are operating successfully, the great majority have more than 90-percent occupancy, and many have waiting lists.

The Manhassett Village project illustrates many of the radical differences between mortgage financing under the F. H. A. limited-dividend plan and the old type of mortgage usually granted for 3, 5, or 10 years, where the lender had no control whatever over the property, and where the frequent practice was to "build them and bleed them." Instead of a period of 3 or 5 years during which the sponsors can manipulate the property to their own immediate advantage they have, under the F. H. A. plan, to adhere from the outset to most rigid regulation in respect to amortization, interest payments, operating expenses, reserves, dividends, etc. Under the old system the borrower endeavored to get his profits out of the property before the mortgage became due. Under this system it is impossible for the borrower to take out his profits, except in a limited way, until after the mortgage is paid off.

except in a limited way, until after the mortgage is paid off.

A decade ago saw the complete collapse of the old-style mortgage system. As a recognition of this failure, the State of New York has authorized insurance companies seeking an outlet for their funds in rental housing to build, own, and operate projects directly on their own account. Of this type of operation the \$50,000,000 project now being built and wholly owned by the Metropolitan Insurance Co. is the outstanding example and may be looked upon as a

100-percent mortgage.

Congress, recognizing the need for a new method for rental-housing financing, last year amended and amplified section 207 of the National Housing Act. The type of mortgage therein permitted is admittedly a high percentage loan, and follows from the full authorization of Congress after a consideration of the mortgage situation and the need for stimulating rental construction and employment in the building trades and allied work after a lapse of pearly 10 years.

nearly 10 years.

In addition to the radical change in the method of financing In addition to the radical change in the method of financing these projects, a similarly radical change has been achieved in their physical appearance. They may be described as "garden apartments" and are characterized by low land coverage, rarely exceeding 25 percent, as against the more customary apartment land coverages of 60 to 80 percent. For this reason they are able to provide a high degree of amenity to tenants, and, with the development of landscaped areas, improve rather than deteriorate in appearance with age. The four projects in this vicinity—Colonial Village and Buckingham, in Arlington County; Brentwood, in the District of Columbia; and Falkland, just over the Maryland line—well illustrate the type sought for. The open planning features, providing a parklike appearance, are considered a strong deterrent to obsolescence and an important factor in maintaining the soundness of the security over a long period—again protecting the position of the security over a long period—again protecting the position of the Government in the liberal type of financing it has made

I have nothing but the greatest respect for members of the Committee on Banking and Currency. I realize what a hard task they have but I really do not understand why some of the members of that committee become so exercised when a Member desires to amend a bill brought in from that committee. I recall once before I wanted to amend the Housing Act, offered what I felt was a very sound suggestion, and immediately was charged with trying to destroy title I of the act. I wanted to reduce the interest on loans under this title. As I understand the situation, interest as high as 9 percent is charged for those loans and is still the rate. I wanted to cut it in half or make it 5 percent. The gentleman from Michigan [Mr. Wolcott], who so strongly defends section 207, was with me on that occasion and he, like myself, was criticized. What is wrong with trying to reduce interest rates from 9 to 4½ or 5 percent? Oh, they said then, we would destroy the title. The banks of the country wanted the title left as it was. Of course, they did and do now because of the high interest that results from those loans guaranteed by the credit of the United States. It is true we have lost money on that title, but we would not have lost so much if we had done at the outset what you are doing in this bill-included a premium of 1 percent. It seems perfectly proper for the committee to make changes, but if a Member attempts to do something really constructive, he is charged with destroying the purposes of the law or being opposed to his administration. Consult the Record and find out how I have opposed the administration.

We all assail graft, but when Congress itself permits what many who have written me call legitimate graft I am assailed for trying to stop it. I want no part in providing

a way for graft, legitimate or illegitimate.

This law will work and work well with my amendment. It would work better in my opinion, as I said the other day, if we would provide for the Government to buy the site and then go into the open market and let all bid who are responsible on the construction of the project. Then you would get the project completed for far less than it costs today. I would be willing for the Government, if it is going to stay in this business, to guarantee 100 percent of the cost if necessary. If the project is sound, under that system, there would be no chance for the Government to lose in the end.

The House by its record vote, 199 to 143, serves notice on the House conferees it wants my amendment in this law and it is the duty of the House conferees to stand out for that amendment in conference, if the Senate refuses to agree

National Committee to Keep America Out of Foreign Wars

EXTENSION OF REMARKS

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 13, 1939

Mr. GRANT of Alabama. Mr. Speaker, yesterday I was astounded upon reading the Congressional Record to find that one of our Republican colleagues from the State of New York had gathered unto himself a band of Congressmen who styled themselves the National Committee to Keep America Out of Foreign Wars. It is noted that this committee does not include any Democratic Congressmen. It does seem that an organization of this nature, national in its scope, and with such a worthy purpose of keeping America out of foreign wars, would have transcended party lines and had at least a few Democratic Congressmen among its members.

Is this an organization dedicated to the purposes which its name purports, or is it, pure and simple, a political and partisan organization set up by various Republican leaders in an

attempt to embarrass the administration?

I have carefully read the purposes of this organization, and many of them are worthy, but if this is not a political and partisan organization, why are only Republican Congressmen organizers and incorporators? Do these gentlemen have a monopoly on patriotism?

The main purpose of the organization as set out is as follows:

To counteract the inspired propaganda emanating from the White House and spokesmen of the New Deal which has created mass war hysteria throughout the Nation by inflaming the fears and passions of our people and inciting hatreds against foreign

Even a child can see that this statement makes it an organization definitely opposed to the President of the United States and seeking to cripple his program. No matter how laudable its other so-called purposes are, this one purpose explains the reason for the organization and the motives behind its incorporation. A better name would be the National Committee to Weaken the President. Yet you say it is nonpartisan.

I recognize the fact that the organizers of this bund, or whatever it may be called, are conscientious and thorough American citizens, and as patriotic as can be found in the land; that they are entitled to their views upon domestic

and foreign matters. But why call an organization of this nature nonpartisan and patriotic when it even sets out in its purposes that the cardinal principle is to counteract that which comes from the White House?

Certainly there are patriotic organizations where Republicans and Democrats alike can meet upon a common ground. Compare the second purpose of this organization with the following news item which was clipped from Wednesday afternoon's Washington News-the heading "Nazi Press Attacks F. D.; Calls Him a Warmonger."

BERLIN, April 12.—The Nazi Propaganda Ministry newspaper Der Angriff today bitterly criticized President Roosevelt.

"Is it true, Mr. President," Der Angriff asked, "that warmongering and impending war are the last salvation for you and your president."

osition?

"It is true that it is not the international situation but your personal ties and personal affairs that move you to this despicable warmongering which you pursue continuously?"

Der Angriff said that "it was obvious that Mr. Roosevelt would hasten to the British warmongering encirclement policy with open arms, but we must term it gross irrelevance and impertinence when the head of a state can permit himself to pursue warmongering in this direct form."

The newspaper apparently referred to Mr. Roosevelt's remark

The newspaper apparently referred to Mr. Roosevelt's remark recently regarding the danger of war in Europe, including the fact that he told Georgians he would be back at Warm Springs next

fall unless there is a European war.
"Who do you think you are, Mr. Roosevelt?" the newspaper

"What has moved you to forecast war definitely in such con-sciously reckless and dangerous fashion?

"We know also that every one of your domestic plans has failed and that you are one of the most unpopular men in America. "Answer us, Mr. Roosevelt. That would be more praiseworthy than sophisticated, but peace is endangered by the way in which you play your role as head of the state for war and warmongering."

It sounds very much like the Nazi Propaganda Ministry newspaper Der Angriff is acting as publicity agent for the National Committee to Keep America Out of Foreign Wars. It is natural that the controlled press of dictator nations criticizes every action taken by the President of this Nation, and it would be much more of an American way if those who differ with the President come out and fight him in the open and not do it through the guise and under the cloak of a patriotic organization.

While many honest men will differ as to whether the President used discretion in saying that he would be back at Warm Springs next fall unless there is a European war, no one can state that Europe is not under a potential threat of war, and we might as well admit it.

Everyone also knows that a general European war means that we will have to use every precaution possible in order to stay out. I think that the President of the United States has handled the foreign policies of this Nation as well or better than anyone could have done under like circumstances. There have been several occasions during the term of President Roosevelt where this Nation could have been plunged into war except for his direction of affairs of this Nation toward a peace policy. I want to recall one of these to your attention, that being the sinking of the gunboat Panay. Nations have gone to war for much less than this. Yet only a few years after this incident we see the President of this Nation having ashes of the former Japanese Ambassador returned to his native land on an American warship. Such instances as this prove that the Commander in Chief of the Army and Navy of the United States is interested in maintaining peace.

Certainly none of my colleagues are in favor of repeating 1917 and 1918. We can now see that it was not worth the price. We can now see that the war to save democracy did not save democracy in the world, and that a war to end wars did not end wars in the world. Neither am I in favor of repeating the troublesome years of 1916 and 1917 when we announced to the world that we were too proud to fight. What do you think would happen today if we were to scrap our Army, Navy, and air forces and announce to the world that we are too proud to fight? Any sane man knows what would become of us.

We, as a Nation, have tried treaties, peace conferences, and neutrality laws in an effort to maintain peace. No nation has ever gone as far as we have in attempting to maintain neutrality. Twenty years ago, after the armistice, this Nation came out of the war with the world's most powerful military force. After the 1922 disarmament conference we allowed our defensive force to become one of the world's weakest. While we disarmed, other nations armed.

Upon the failure of this Nation to arrive at any definite peace pact with the leading European nations, the Neutrality Act was passed. After the League of Nations, the Nine Power Pact, the Kellogg-Briand Pact, the pact for limitation of armament, and others had failed to bring about the desired result for peace, this Nation was brought face to face with the proposition of trying to keep us from becoming mixed up in a war.

It was realized by Congress that America must settle its own problem of peace and through the Neutrality Act, some definite measures were devised whereby we could attempt, in the event of a war in Europe or elsewhere, to stay out of it. We had always insisted up to that time that citizens of this Nation have certain rights, and by this act we turn around and say that the citizens must give up certain rights in an effort to have this Nation maintain neutrality.

Some say that this law was caused by fear. You may call it fear, but it is the outgrowth of the failure of other nations to help this country in achieving an agency for peace. We have shown the world that we not only believe in peace, but that we are willing to sacrifice certain rights in order to maintain peace. No nation on earth has ever attempted to go as far as we have to maintain peace.

Partisanship should stop at the Nation's boundaries. We have certain rights as a nation which must be maintained, and it is the duty of all citizens regardless of their party affiliations to help maintain these rights.

If the National Committee to Keep America Out of Foreign Wars is to make its prime purpose as set out in paragraph 2 of its purposes, then, let me suggest that the committee change its name to the National Committee to Put President Roosevelt Out of the White House.

The White River in the Ozarks Region

EXTENSION OF REMARKS

HON. REUBEN T. WOOD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Thursday, April 13, 1939

ARTICLE BY JOHN T. WOODRUFF, OF SPRINGFIELD, MO.

Mr. WOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article written by Hon. John T. Woodruff, of Springfield, Mo .:

DISCOVERING RIVERS

"A river went out of Eden." Simple, isn't it? Well, near the head of the Euphrates was a spring and the garden was there. Many rivers have a spring as their source. The White River in the Ozarks region has, but it is of the river and not the spring we sing.

The White River rises in western Arkansas near Eureka, flows north into southern Missouri, then turns southeastwardly back into Arkansas and enters the Mississippi near the mouth of the

Its total length is 690 miles.

From its source to Batesville, Ark., a distance of 400 miles, the average fall of the river is 4 feet per mile; for the remaining distance of 290 miles, the fall is but 0.36 foot per mile.

The volume and velocity of the water for the upper portion is that afforded by a watershed of 21,000 square miles, where the annual rainfall is above 40 inches, fairly well spaced through the year. To equalize and stabilize such flow, natural conditions are favorable, for here it is that forests abound, many large springs exist, and small rivers of less declivity run into it.

Below Batesville the valley widens but the river channel does not. Thus this narrow stream, reduced to a fall of less than 6 inches to the mile, becomes the drainway, not only for the 21,000 square miles of Ozark hill country, but another 7,000 square miles

in the valley below. Under such conditions frequent floods on the

lowlands are inevitable.

One of the strange things about this river is that while it is near the center of United States, its value for power purposes was not discovered until about 1904. Even then the discovery was

an incident and not a result of exploration.

It was then that Russell Harding, vice president, Missouri Pacific Railroad, and Walker Powell, of the engineering staff of that railroad, the one directing and the other detailed to make a reconnaissance survey of the White River Valley as a possible location for a rail connection between the tri-State mining district and

for a rail connection between the tri-State mining district and the company's valley line between St. Louis and points south, saw, and later appraised, the power possibilities of this great river.

Powell later resigned as engineer of the railroad and devoted the remainder of his life to power promotions on the White River. It was he who assisted in preparing and having introduced in Congress the first bill to create a Federal Power Commission.

The bill was amended in divers and sundry respects in committee. Finally it was passed by the Congress but vetoed by President Wilson.

President Wilson.

President Wilson.

Not dismayed, Powell and his friends had another bill prepared and introduced at the next session. In the latter bill the features opposed by the President were deleted. The bill passed again and was then approved by the President in June 1920.

Pioneering any venture new to a community is slow and tedious, Disappointment and heartaches are to be expected. In this case it would seem that Powell should have had an open field and a fair fight, but not so. He filed an application for a permit to construct a large hydroelectric plant near Cotter, in Arkansas. This was attended with delay. Even the preliminary features like testing the undersurface formations and making the preliminary surveys were hard to finance. Financing the main project proved impossible.

sible.

Col. Hugh Cooper, of Keokuk Dam fame, was brought into the picture. Colonel Cooper and Powell did not agree upon some of the essential features. Others came on the scene later, but none of their efforts were of much avail.

Powell died a few years ago but strove to realize his dream until the last. He little realized the great contribution he had made in securing the passage of the Water Power Act, which has proven helpful in many other projects throughout the country.

In 1912 the Empire District Electric Co., a Cities Service subsidiary, built a dam at Ozark Beach, near Forsyth, Mo., installed generating equipment, and since then has operated the plant successfully.

successfully The profitable operation of this plant induced the Empire District Electric Co. to make further studies of the power possibilities of the upper White River with the result that in 1922 that company filed an application with the Federal Power Commission for a permit to construct a large dam at Table Rock, 5 miles up

stream from Branson, Mo. In furtherence of that project the company acquired the dam site and some 10,000 acres of land in the valley above it. Extensive exploration of the underground structures were carefully

made and found satisfactory. The dam, as designed, is 1,800 feet long, 185 feet high and tied into the abutting bluffs.

When built to such height a lake would be formed 65 miles in length with about 1,000 miles of indented shore line and covering some 30,000 acres. It was estimated that the generating equipment when installed would produce about 250,000 horsepower.

Up to this point things went well enough, but the matter of financing a project involving the expenditure of an estimated \$20,000,000 was no easy task.

Financing being rather difficult, the matter was allowed to drift until late in 1929, when satisfactory financing arrangements were made and it seemed as if the project might go forward promptly. It is said that the financial crash of that year made it under the wire only a few days ahead of starting construction work.

With the extensive distributing facilities of the Cities Service Co., of which the Empire District Electric Co. is an affiliate, the whole of this electric energy could and would have been profitably marketed, but it was just that slip between the cup and the lip that upset the apple cart.

But this impending development hindered other improvements. The Missouri State highway lay-out providing for numerous public roads in that area could not be surveyed and certainly not built until it was known whether the dam was to be constructed, for the building of it would flood many thousands of acres in that

Not only so but the provisions of the consolidated high-school law could not be carried out until it was known whether the dam was to be built. Farms in the valley were allowed to deteriorate as a result of the uncertainty of building the dam. So in a large portion of three counties, Taney, Stone, and Barry, the citizens became restive and appealed to the Power Commission at Washington for a hearing on the granting of a permanent license for the project.

The hearing was held and the Empire District Electric Co. required to accept a license. A time within which work should start was fixed. The time limit for beginning operations expired. Then a forfeiture of the license was asked, and upon hearing before the

Power Commission the license was canceled.

Efforts were then made to induce the Government to designate Table Rock Dam as a Public Works project and to carry on the activities as a combined flood-control, navigation-betterment, and hydroelectric project.

This request was in the form of a joint application by the three counties concerned, together with numerous civic organizations throughout the White River watershed.

There was a hearing upon the supplication before the Public Works Administration, the Mississippi Valley Committee, and supplemented by a special bill introduced in Congress by Senator CLARK

plemented by a special bill introduced in Congress by Senator Clark of Missouri.

Later the project was incorporated in the flood-control bill at the 1936 session of Congress, but this item was later eliminated from the bill, as were others having power features.

Numerous appeals were made to President Roosevelt, who showed interest in and familiarity with the enterprise. Further efforts are in prospect and will be made.

But this is not the whole story. In 1936 a permit to install a large dam at Wild Cat Shoals, above Cotter, in Arkansas, was granted to the White River Power Co., a subsidiary of the Arkansas Power & Light Co., Electric Bond & Share affiliate. The same company sought permits to install two other dams unstream from

Power & Light Co., Electric Bond & Share affiliate. The same company sought permits to install two other dams upstream from Wild Cat Shoals. The water from one of them would extend to Forsyth, Mo., only 3 miles below the present power-site dam.

These applications are repetitions of previous similar projects. All these activities at least indicate that there are valuable power sites on the White River but more persuasive than these things, is the appraisal of them by the United States Army Engineers. They have surveyed and resurveyed the White River from Batesville to its source with the result that five separate and distinct locations are found to be favorable for generating electric energy. These in are found to be favorable for generating electric energy. the reverse order of their importance are:

At Beaver, on Beaver River, a tributary in Arkansas; Galena, on the James, a tributary in Missouri; Buffalo Dam, on Buffalo River, in Arkansas; North Fork Dam, on the North Fork River, a tributary in Arkansas and Missouri; Wild Cat Shoals, near Cotter, in Arkansas; and Table Rock Dam, at Table Rock, in Missouri.

The potential power available at these locations is 2,185,188,000

kilowatt-hours average annual output, or equal to an ultimate horsepower of 768,000.

combining the two more important projects, Table Rock and Wild Cat Shoals, and building them alone, it is found by the Army engineers that the earning power on the basis of estimated cost would yield above 10 percent and that on the basis of marketing electric energy as low as 8 mills per kilowatt-hour for primary and 2 mills for secondary power.

2 mills for secondary power.

So it is insisted by everyone at all familiar with the subject that power development on the White River is not only feasible but also profitable. Not alone in the profit to be derived from power sold, but the ultimate effect upon the region as a whole.

When we reckon that the railroads in the Ozarks hill country, where existing grades are hard to negotiate, could be eliminated by electrification we can see what that would mean. Indeed, in time to come the railroads alone would consume all the power that could

be generated at both of these dams.

Then, in the tri-State mining district, the employment of the electrolytic process of ore reduction would consume great quanti-ties of electric energy. None of the cities within a 250-mile radius are consuming anything like as much power as they

would consume if lower rates are available.

As an instance, six of the larger manufacturing concerns in Springfield, Mo., generate their own electric current because of the

high power rates obtaining there.

Then too, there is the development incident to rural electrifica-Then too, there is the development incident to rural electrification. Referring to the situation at Springfield, Mo., an actual
survey shows that the population within a radius of 10 miles of
the corporate limits of the city is as dense as like areas surrounding St. Louis or Kansas City, and that but 15 percent of that
present population is using electric current at all.

If population is a factor in rating demand for power, the
Federal census shows there is upward of 15,000,000 people within
a 250-mile radius of the 2 latter dams.

The mineral resources of porth Arkansas, consisting of lead

The mineral resources of north Arkansas, consisting of lead, zinc, bauxite, and manganese, are proven to exist in large quantities, and the extensive marble beds there all await development for the lack of low-cost power.

There are but isolated instances of the demand for electric cur-

If the native were left to appraise the need of water-power

development, he would say:

"Make the rivers run the turbines, Let the motors bear the load With white flame heat the houses And electric current illuminate the road."

There is another and further useful purpose that the installation of the Table Rock Dam would serve excellently well, and, for that matter, a dam at Wild Cat Shoals would also serve. The 7,000 square miles of lowlands along the White River below Batesville are about as fertile and productive as any land in the Mississippi Valley.

The climatic conditions there are such that drought so common

The climatic conditions there are such that drought so common to other sections of the western country is of rare occurrence. The growing season is long, the yield abundant. If agriculture were carried on in but one region in the United States, doubtless that region would be the lower White River Valley.

The only hazard to successful farming operation there is recurring floods. The quick run-off of moisture in the upper 21,000 square miles of Ozarks hill land literally covers the lower 7,000 square miles during times of excessive rainfall.

In 1927, for instance, the damage wrought by the flood of that year ran into more than \$11,000,000. The rule is that there is a serious flood 1 year out of 3.

It is not alone the damage to farms, but to towns and cities as well. Flood control is admittedly a Federal Government function. Dams like those proposed at Table Rock and Wild Cat Shoals will minimize, indeed relieve, such floods. If the lowland farmer should express it he would say:

"Stay the floods, Save the homestead; Labor lost is ne'er restored. Health is wealth, Sweet contentment priceless. Hold that deluge, Help us, Lord."

Navigation on the White River is no new thing. Indeed, there is persuasive evidence that De Soto navigated the stream to what is

now Newport, Ark., in 1541.

Tradition has it that he visited Marvel Cave near the James River Inlet and bartered with Indians in that famous cavern. But that aside, the White River was navigable and navigated for generations to Forsyth, Mo., and navigation can and should be

Adequate improvements of the White River would assure this result, and the dams at Table Rock and Wild Cat Shoals are the first steps to that end. After these things the rest is easy at small expense. Flood control, navigation, and low-cost power are dear to the hearts of the hillmen and valley dweller alike, so they say:

"Verdant hills,
Fertile valleys,
Gushing springs,
Rushing rivers,
Allow the
Abundant life
To beasts, fowls, and fishes. Let the New Deal, True Deal, Fair Deal, Square Deal, In its many benefactions Vouchsafe as much to men."

Who are they that seek such things? The Ozarkian, of whom Who are they that seek such things? The Ozarkian, of whom Dr. Lewis Meador, professor of economics in Druy College, writes:

"Who are the Ozarkians and whence do they come? They are Scotch-Irish, having come to the Ozarks from the hills of Virginia, Tennessee, Kentucky, and North Carolina. And who are the Scotch-Irish? They are but little Scotch and less Irish. They represent the most mixed of all racial groups who have come to

"They are called Scotch because the race originated in southwest Scotland. They are called Irish because they moved from Scotland into northern Ireland before immigrating to America. But the Scotch-Irish race was a thousand years in the making. "From the fifth century to the sixteenth, the ancient Scots, Picts, Celts, Saxons, Angles, Danes, and Norwegians mixed and mingled in the hill country of southwest Scotland. The final product was the Scotch-Irish.

Scotch-Irish.

"When the Scotch-Irish immigrated to America they found the Atlantic seaboard already occupied by earlier comers, therefore, they moved into the hill country to the west and became the pioneers of American history. From their first home in the eastern mountains they emigrated to the Ozarks. The inhabitants of the Ozarks today represent the purest element of the Scotch-Irish in America.

This race has produced four times as many men of action and

"This race has produced four times as many men of action and achievement in proportion to their number than any other national group coming to this country.

"Among the famous men of this race are Edgar Allan Poe, Andrew Jackson, John C. Calhoun, Henry Clay, U. S. Grant, John D. Rockefeller, Andrew Carnegie, Stonewall Jackson, John Paul Jones, William McKinley, and many others.

"In all our wars the Scotch-Irish have furnished much of the leadership and most of the heroes.

"The typical Ozarkian possesses a keep sense of justice; he is

"The typical Ozarkian possesses a keen sense of justice; he is self-reliant, independent, courageous. He speaks his convictions without fear and takes orders from no man. He is quiet even to the degree of silence, but is hospitable and loyal to his family, neighbors, and Government.

neighbors, and Government.

"Such is the origin and such are the qualities of the people who live in the Ozark Hills. They come of a race of which the country is proud, and in every nook and corner of these hills the inhabitants still possess rare qualities of action, courage, loyalty, and ability, so much needed today in our national life."

To summarize, the most effective plan for controlling flood water is the impounding reservoir placed clear below the point of

is the impounding reservoir placed close below the point of heaviest run-off from the drainage area. The concrete dam most often used in this connection serves a threefold purpose:

It impounds the water, thereby obviating floods.

It stabilizes the flow and controls the downstream velocity, thereby improving navigation.

It creates the head to operate the hydroelectric generator, which has proven its economic superiority over every other device for producing electric energy.

LXXXIV-App-92

It has shown in countless cases that this trinity is inseparable. He who attempts to maintain the opposite just does not see the picture clearly and certainly does not see it whole.

Nature richly endowed the Mississippi Valley, but the spot most favored in variety is the 80,000 square miles of verdant hills and fertile valleys known as the Ozarks region. A vertitable empire within itself.

The Government has done much in other sections to encourage development. It has done little here. The Ozarkian is not weeping on anyone's shoulder that this is so, but he does insist that during the last century they penetrated the wilderness, beat back a vengeful foe, subdued the forests, broke the stubborn glebe, built homes, schools, churches, highways, and established at least the nucleus of a civilization.

They contributed their due share in furnishing the pioneers who settled the West. They deserve and should receive Federal support

They contributed their due share in furnishing the pioneers who settled the West. They deserve and should receive Federal support necessary to control floods, promote navigation, and conserve natural resources in common with other parts of the United States. This withheld, it would seem their efforts may prove a vast futility.

But granted or denied, they shall strive to keep the home fires burning, hold up their heads in the best of company, hoe their own row in fair or foul weather, pay taxes, send their youth to the front in times of trouble, and sing "Hail Columbia" with fervor and sympathetic understanding. and sympathetic understanding.

Essential Research

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES Thursday, April 13, 1939

EDITORIAL FROM NEW YORK TIMES OF APRIL 13, 1939

Mr. McCARRAN. Mr. President, on Tuesday last I introduced an amendment to the pending bill, the deficiency appropriation bill, bearing on the subject of an aeronautical laboratory at Sunnyvale, Calif., in which the entire country is very much interested. I ask to have inserted in the RECORD a very splendid editorial appearing in the New York Times of April 13, on that subject.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> [From the New York Times of April 13, 1939] ESSENTIAL RESEARCH

It is a pity that the Appropriations Committee of the Senate should follow the lead of the House in refusing an appropriation of \$10,000,000 to the National Advisory Committee for Aeronautics for the establishment of a research plant in California. The Senators agreed to an appropriation of \$2,140,000 for improving facilities at Langley Field, Va., the seat of the present great laboratories of the N. A. C. A. They are understood to be willing to increase funds still further for use at that site. They have been told, however, by Dr. Joseph S. Ames, chairman of the committee, and through him by Gen. Henry H. Arnold and Admiral A. B. Cook, speaking for the air arms of the Army and Navy respectively, that "it is absolutely impossible to expand adequately at Langley Field, as the Army cannot provide more room without impairing the military efficiency of its own operations." Army and Navy experts advanced an even more cogent argument for the Sunnyvale research project, which they say is "emergency in character" and of "vital importance to the success of our whole program for strengthening the air defense of the United States." This is the argument of decentralization. The officers of the services agree that it is not wise to have all our eggs in one basket. that it is not wise to have all our eggs in one basket.

Certainly, with expenditures for aircraft by the Army and Navy running to \$255,000,000 for the coming year alone, it would seem sufficient for such responsible authorities as Dr. Ames, General Arnold, and Admiral Cook to point out that such investments in national security "will not be worth all they cost unless our aircraft are at least equal in performance to those produced abroad." But they have been even more specific before the Senate committee. They were frank to say that one country (Germany), by reason of research development, now has aircraft of greater military effectiveness than our own. They add: "America does not want second-best aircraft. To regain American leadership it is imperative that N. A. C. A. facilities be materially expanded."

To refuse the research appropriation asked is, in homely phrase, to hold in at the spigot and let out at the bung. To allow sectional considerations to enter into such a decision would be something less than patriotic.

Have Congress and the President Forgotten Mandate of Election to Cooperate for Recovery?

EXTENSION OF REMARKS

HON. JOHN McDOWELL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 13, 1939

EDITORIAL FROM THE PITTSBURGH POST-GAZETTE

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Post-Gazette:

[From the Pittsburgh Post-Gazette]

HAVE CONGRESS AND THE PRESIDENT FORGOTTEN MANDATE OF ELECTION TO COOPERATE FOR RECOVERY?

When this session of Congress opened most of the Members had been home for the elections. They were surely aware that the country at large was interested in no new legislation. There was country at large was interested in no new legislation. There was nothing that the sane and productive elements in the country particularly wanted done; but there were lots of things that they passionately wanted undone. First of all they wanted to call a halt to spending in excess of revenue. They wanted the Government to live within its means, not by increasing its income but by cutting out superfluous activities. They wanted relief shifted from Federal to local nonpartisan administrators. Until it was thus changed they were not greatly interested in whether appropriations for it were a hundred million more or less.

They wanted the Federal Government to get out of the relief business and they wanted relief taken out of politics. They thought and they still think, that relief can be administered locally at less cost, on a nonpartisan basis, and with much less encouragement to either relievers or relieved to look upon relief

encouragement to either relievers or relieved to look upon relief

as a career.

They wanted the Wagner Act amended in such a way that employers would have as many rights as responsibilities and labor as many responsibilities as rights. While few understand the farm problem, an overwhelming majority of the people, including a high percentage of the farmers, are sure that Secretary Wallace's managed farm economy has been a dismal flop and want no more billions invested in his experiments.

billions invested in his experiments.

Finally, the people had certainly made up their mind by election time that they wanted no more congressional encouragement of Mr. Roosevelt in his gallery plays against business. The majority of the people want business regulation without persecution. They have ceased to be amused by the spectacle of Mr. Roosevelt in the guise of a malicious small boy chasing the goose that lays our golden eggs around the national barnyard at such a pace that it has no time to lay. If taxes are robbing it of the strength to lay, the public wants the tax burden lifted.

If all these actions mean less government, the neonle expect.

If all these actions mean less government, the people expect the Congress to cut down on government; and if Mr. Roosevelt and his entourage do not like it, the people expect this Congress to appreciate, especially after the demonstration at the polls in November, that Mr. Roosevelt and his entourage neither elect

Congressmen nor keep them in office.

This, in rough outline, is the schedule of work that public opinion assigned this Congress last autumn and there is not a Member of either House that doesn't know it. Yet the Congress as a whole has done next to nothing to forward this program. The recent conspiracy to save W. P. A. and farm subsidy appropriations through the negotiation of a treaty of defensive alliance against this wabbly, half-hearted economy drive, is evidence enough that a big percentage of our alleged representatives are still currying favor with organized minorities to guard their political hides

cal hides.

Many Congressmen will not be convinced that the average citizen puts the welfare of his country above the interests of his country above the interests of his country above the interests of his country above the clearly appreciates minority class, group, or clique, whenever he clearly appreciates that there is a conflict between the two, until they are sent by the verdict of the voters to be outside with Mr. Roosevelt looking in at a new President and a new Congress.

(We wish to acknowledge our indebtedness for many of the ideas expressed in the above editorial to the author of an open letter to the New York Herald Tribune which was signed by the nom de plume "Heptisax.") Electric Rates in Various Cities of United States

EXTENSION OF REMARKS

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES Thursday, April 13, 1939

TABLE GIVING COMPARISONS OF ELECTRIC BILLS

Mr. BONE. Mr. President, I have in my hand a very interesting table giving comparisons of electric bills in the city of Tacoma, Wash., my home city, and other prominent cities of the United States. I ask unanimous consent that this table may be published in the Appendix of the RECORD.

In this connection I call attention to the fact that my monthly bill from the Potomac Electric Power Co. in a recent month was \$4.92 for 244 kilowatt-hours. The bill for the same amount of current in the city of Tacoma, Wash., would have been \$3.14, the difference being \$1.78, which is the amount I paid here over and above what I would have paid my own municipally owned power system for the same amount of energy. The Tacoma bill was 63.86 percent of the Washington, D. C., bill, which indicates that in Washington, D. C., I paid more than one-third in excess of what I would have had to pay in Tacoma.

I call the attention of my brethren to that fact in the light of the argument so frequently heard in this body and at the other end of the building about the taxes private power companies pay. Here is a gap of more than one-third in the take of this company for this small bill. In my own home city of Tacoma I use a great deal more current than I use here, because of the diversity factor in my own home, where I employ electric energy for a great many things which people here may not employ current for, on account of the excessive price charged here.

I use the term "excessive," because in this city I frequently hear the argument uttered that this is a city enjoying low electric rates. I am sure the people of Washington, D. C., and the people of other cities who may observe this item in the Congressional Record will find the comparison of rates very interesting on 25 kilowatt-hours, 40 kilowatt-hours, 100 kilowatt-hours, 250 kilowatt-hours, and 500 kilowatt-hours.

Let me call attention to the fact that in the city of Washington, if I use 500 kilowatt-hours in a month and my consumption in my home is generally around twice that much-it costs me \$9.40, while it would cost me \$5.30 in the

city of Tacoma.

In conclusion, I desire to say to my brethren here that the electric plant in the city of Tacoma pays taxes exactly as a private company does. It operates under an accounting system comparable to that employed by private companies and public enterprises in the State of Washington. By 1951, which is 12 years from now, that plant will have been entirely paid for-a plant worth 25 or 30 million dollars, a plant which has never cost the taxpayers of that city one penny, but which has literally poured millions and millions of dollars back into the city treasury in the form of services and reduced rates.

The city of Tacoma enjoys probably one of the best municipal lighting systems in the country. The streets in the residence districts of many sections of the city are a blaze of light from one end to the other. A man owning a home can pay \$7 per 25-foot-front lot to the city of Tacoma, in return for which my city, rendering this kind of very fine service to its citizens, will put in a system of ornamental lights down the street, staggering them across the street, and the city will maintain that system in perpetuity, with

the result that the city of Tacoma today I think may justly claim to be one of the best-lighted cities in the world.

I send this table to the desk, and ask that it be printed with my remarks in the Appendix of the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

A comparison of electric bills-Tacoma versus other cities

	Kilowatt-hours				
ANGEST SON THE	25	40	100	250	500
Atlanta 1	\$1.45	\$2, 12	\$3, 95	\$6.58	\$8, 58
Boston 1	1.61	2.36	5. 24	9.74	12, 74
Chicago 1	1.34	1. 94	3, 65	6, 65	11, 65
Detroit 1	1.35	1.89	3, 38	6, 75	9, 81
Denver 1	1.50	2, 40	4.80	9.30	16, 80
Memphis 1	1.38	2, 20	4, 25	8.75	16, 25
Milwankeel	1.41	1.90	3, 48	6.36	8.74
Philadelphia 1	1.40	2. 15	3.76	6.76	9. 26
San Francisco 1	1.30	1.77	3.09	5.89	8. 29
Seattle 2	1, 25	2.00	3.20	6.08	7. 95
Tampa 1	2.50	3.40	6. 25	10.00	14.00
Eugene 2	.80	1.10	2.12	3. 92	6. 92
Los Angeles 2	1.10	1.65	2.97	5. 10	6. 8
Los Angeles ²	. 98	1.56	3. 10	5. 65	9.40
Tacoma 2	. 95	1.10	1.70	3. 20	5. 30

¹ Privately owned electric system. ² Publicly owned electric system.

In 1951 the citizens of Tacoma will have their present electric system fully paid for out of the earnings of the plant. This accomplishment has been possible under public operation at the lowest charges for electric energy in the United States. Check the chart and see how much you save each month.

Trade Pacts Versus Tariff

EXTENSION OF REMARKS OF

HON. LISTER HILL OF ALABAMA

IN THE SENATE OF THE UNITED STATES Thursday, April 13, 1939

ARTICLE FROM THE DES MOINES SUNDAY REGISTER OF MARCH 26, 1939

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Trade Pacts Shown to be Worth More Than Tariff to Labor," published in the Des Moines Sunday Register of March 26, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Des Moines Sunday Register of March 26, 1939]

TRADE PACTS SHOWN TO BE WORTH MORE THAN TARIFFS TO LABOR-JOURNAL OF ELECTRICAL WORKERS' UNION REMINDS WORKER OF HIS INTEREST AS A CONSUMER-OLD SYSTEM CALLED PIECEMEAL

(From a study of the effect of foreign-trade encouragement upon the electrical industry, published in the Journal of Electrical Work-

ers and Operators.)

To date 20 trade compacts, under Trade Agreements Act of 1934, have been signed by the United States, with as many foreign countries, including Great Britain and her colonies. The compact with Great Britain was signed November 17, 1938. Millions of dollars in commerce are involved.

Inasmuch as foreign commerce has shrunk about 80 percent—from \$5,000,000,000 to \$1,000,000,000—it would seem that any remedy, as promising as Secretary Hull's program, would be welcome, especially to workers in American industry.

It is likely that the greatest obstacle to understanding the pro-

gram of the United States Department of State lies in the fact that it is a reversal of past policies. Tariffs are predicated upon the idea of special aid to weak and struggling industries at home. The trade-compact program looks toward the ordering of all trade channels abroad. Tariffs are piecemeal approaches to trade health. Trade compacts view trade relations as a whole.

HOME AND EXPORT MARKETS

Trade agreements have been an important factor in the restora-tion of export outlets for American electrical goods. Concessions have been obtained on various types of electrical machinery and

apparatus from all countries with which agreements have been concluded, with the exception of Honduras, El Salvador, and

The chief market for American electrical goods and the only market for electrical service is, of course, the home market, and, unless that market is prosperous, electrical workers cannot be pros-

before the sprosperous. The American home market cannot be frusperous. The American home market cannot be fully prosperous so long as the markets for American export products are curtailed. Not only do workers dependent on export markets suffer from loss of foreign trade, but all other workers in the country suffer loss to some extent because those dependent on export markets are unable, when deprived of employment, to buy the goods produced by others in the United States.

EFFECT ON WAGES

It might be pointed out that since American electrical goods are It might be pointed out that since American electrical goods are sold in many countries where wages are far below those prevailing in this country, the electrical industry is a good example of how mistaken is the impression current in some quarters that American manufacturers are unable to meet the competition of imports from lower-wage countries and that American wage standards depend upon the maintenance of excessive tariffs.

As for the electrical-service industry, where wages are even higher than average for the United States as a whole, an increase in our foreign trade can only serve to increase earnings through the increase in general prosperity which this additional trade will create.

For more than half a century organized labor in the United States has been debating whether high tariffs raise the standard of living of American workmen and whether the tariff is a political question which has no place in the discussion and action taken by a trade-union.

HOME STANDARDS RAISED

The trade-agreements program raises these questions again, and

The trade-agreements program raises these questions again, and just now, with the announcement of the nineteenth and twentieth agreements, with the United Kingdom and Canada, a reexamination of the subject seems particularly appropriate.

Is it not possible that far from hurting the workers or being at best a matter of no concern to them, as some contend, healthy international trade helps American workmen? Those in charge of trade-agreement negotiations say that foreign trade increases the worker's standard of living, that it is a source of much direct employment and a factor in maintaining wages and employment in many industries not directly involved in the trade.

In the main, two questions relative to foreign trade and tariffs will be examined, in order to determine just what is the stake of the electrical workers in trade agreements.

the electrical workers in trade agreements.

"PROTECTION" THAT HURTS

In the first place, it will be shown that the value of excessively high tariffs has been much exaggerated and that the great majority of our workers derive no benefit whatever from high

tariffs.

Even those supposedly "protected" often work for wages below those prevailing in nonprotected industries, while workers who are engaged in rendering services or in manufacturing goods for export are actually hurt when export markets disappear and general purchasing power declines as a result of high tariffs.

The positive stake of electrical workers in the trade-agreements program will be discussed. We shall see how the decline in building-construction activity closely paralleled the decline in our foreign trade just as in previous depressions the trend of foreign trade almost always served as a barometer of general business conditions. By reviving foreign trade the Government of the United States now hopes to provide a powerful stimulant to general domestic business. This is the primary significance of the program for electrical workers as for all others.

TYPICALLY AMERICAN SHOPS

Furthermore, most of the manufacturing branches of the electrical industry have a positive interest in the increase of exports. Consisting, as the industry does of highly efficient and typically American mass-production shops the electrical apparatus industry is one of those with a very large interest in the expansion of export markets. of export markets.

Exports of electrical goods in 1937 represented the full-time labor of nearly 20,000 men working a full year and actually in-fluenced the wages and working conditions of a much larger number of men.

Protectionists advance the argument that tariffs make high wages and tell American workers that the tariff is responsible for the American standard of living. First of all, let us see just who these workers are who are supposed to have their wages increased

TARIFFS DON'T HELP THEM

How does a tariff help a carpenter, a lineman, a coal miner, a machinist, a mechanic, an automobile worker, a wheat farmer, a cotton farmer, a railroad conductor, or a postal clerk? Obviously, not at all. Out of the 50,000,000 men and women classified by the census as gainfully employed, nine-tenths are engaged in one of the following three types of industry which are not benefited by

First, there are the service trades—occupations which must be performed in the locality in which the consumer lives. Line-men and powerhouse employees, repairmen, and mechanics are all good examples of this type of worker. For them, there is no possibility that imported goods will compete or affect wage-levels,

since they are primarily engaged in doing something rather than

in making something.

Besides those already mentioned, linotypers, domestic workers, retail clerks, stenographers, truck drivers, railroad employees, hotel and restaurant employees are important groups of persons whom the tariff cannot possibly help for similar reasons. Altogether, service workers are a group of about 23,000,000, or half of all those gainfully employed.

AS TO IMMOVABLE GOODS

The second group of workers beyond the reach of the tariff as composed of those producing goods, but goods of a kind which cannot be moved at all or which can move short distances at best. In some cases, such as the building trades, no explanation is required

to show why the goods do not move.

Before the days of refrigeration, almost all goods except grains would also have fallen into this class—and even with refrigerated transport available, the bulk of our fresh vegetables, bakery goods and dairy produce still originates not far from the place of consumption. Regardless of whether imports do or do not affect prices of some of these products on the seaboard and near boundary lines, the standard of living of most of such producers has nothing whatever to do with the tariff.

to do with the tariff.

Coal miners are in much the same position for a different reason. With the cost of transportation what it is, goods which are heavy relative to their value will move only very short distances except by water. For example, the United States imports a small quantity of coal which is almost all consumed around Seattle and around Boston; in the same way we export a small quantity (larger than the quantity imported), chiefly to Canada.

Yet no one will contend that conditions in the coal industry, whether good or bad, can be traced to the effect of imports or exports upon price.

exports upon price.

This group of workers numbers about 13,000,000, or about one-fourth the total. It likewise includes some of the best-organized industries in the entire country, as well as some with the highest earnings.

TARIFF ON COTTON

The third group of persons whose wages and working conditions are untouched by the tariff is that made up of workers producing goods which the United States exports in large quantity. Since the tariff is a tax on imported goods designed to raise the price not only of the import but also of the competing domestic goods, it is obvious that to have any such effect part of the supply must come from abroad, or must, at least, have come from abroad prior to the imposition of the tariff.

If, for example, we were to place a tariff on cotton such as con-

If, for example, we were to place a tariff on cotton such as constitutes the bulk of our production, it could have no effect on the price of cotton. We would in no case import cotton of the types grown in this country, and the domestic supply would continue to determine domestic prices.

Although this is perhaps the most extreme example which could be chosen, the case is not essentially different from that of many goods for which we actually have tariff rates on the books. The test of protection must, therefore, be whether the tariff affects the price of the commodity in question.

UNAFFECTED INDUSTRIES

By this test a great many American agricultural products and By this test a great many American agricultural products and manufactured goods are unprotected; among those which come to mind are automobiles, cotton, wheat, apples, lard, bacon, hams, agricultural machinery, radios, most electrical apparatus, office machinery (typewriters, calculating machines, cash registers, etc.), rubber tires, refined petroleum, and certain types of lumber.

In the manufacture of goods of these and a great number of other types, the tariff is powerless to affect the wages or working conditions of labor. Taking manufacture and agriculture together this group accounts for another 7000 out of the total

gether, this group accounts for another 7,000,000 out of the total 50,000,000 gainfully employed.

We have now accounted for some 43,000,000 workers in all, surely

a large enough proportion to have more effect upon the American standard of living than the remaining five or seven million, whatever may be the effect of tariffs upon their wages.

UNION LABOR'S INTEREST

Some of the 43,000,000 need foreign trade to boost production in their industries; or, in the case of agriculture, to maintain prices. Others of the 43,000,000, in fact the whole group, have a consumer interest and a certain producer interest in the stability or gradual increase of buying power and consumption.

But none have the slightest reason to thank the tariff for their jobs, their wages, or the terms of employment which they enjoy.

Among the members of the organized workers of this country, it has been conservatively estimated that more than four and a half million out of a total of six million-odd fall into one of these groups which are in no way benefited by high tariffs. As consumers their interests are injured by excessive tariffs which raise the cost of

USELESS ENCOURAGEMENT

What of the remaining 5,000,000 workers, employed for the most part in the so-called protected industries? If high tariffs raise wage rates, as claimed by high-tariff advocates, the wages of this 5,000,000 should be above the average for other industries. In addition, we should expect to find labor as well organized, working as steady hours and finding as steadily increasing opportunities for work there as elsewhere

work there as elsewhere.

These characteristics are, however, almost wholly lacking. Instead of finding highly desirable types of employment being fostered

by our tariffs, we find some of the very worst industries, from the point of view of labor, as well as some which benefit small groups of workers at great cost to the Nation as a whole.

Under these circumstances, it is a grave question whether labor benefits at all from the encouragement of these industries as compared with the benefits which would result from a policy that would encourage other industries better able to give large numbers of workmen high rates of pay and steady jobs.

Position of France

EXTENSION OF REMARKS

HON, LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES Thursday, April 13, 1939

ARTICLE BY ROY W. HOWARD

Mr. HILL. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an article by Mr. Roy W. Howard, of the Scripps-Howard newspapers, on French Escape from Extremes Is Lesson to the United States. We know Mr. Howard as not only one of the greatest publishers in America but as a wise, able, and farseeing citizen.

There being no objection, the article was ordered to be

printed in the RECORD, as follows:

ROY W. HOWARD REPORTS FROM EUROPE—FRENCH ESCAPE FROM EXTREMES IS LESSON TO UNITED STATES

(By Roy W. Howard)

(By Roy W. Howard)

Paris, April 4.—France, of all the politically hot spots in Europe, is of especial interest to America at the moment.

It has recently traveled a political course quite similar to, although a couple of jumps ahead of, that covered by the United States. France has had its debauch of special privilege, its political joyride, and its economic headache. Now it has returned, sobered and satisfied, to a course just a little left of center.

Out of France's various financial crises since the war a situation had developed wherein, as in America, the rich were becoming relatively richer and all the others were finding the going a little tougher year by year. Then communism, the quack remedy for every political and economic ill and the cure for none, began to thrive. Economic excesses and political insurgency brought into being the Front Populaire. Politicians more blessed with good intentions than with good judgment took the wheel—and the far left side of the road. But the French learned that politically you go into the ditch and wreek your machine just as certainly if you get too much to the left as you do if you go too far to the right.

go into the ditch and wreck your machine just as certainly if you get too much to the left as you do if you go too far to the right.

With a crack-up impending, Edouard Daladier took the wheel from the idealistic but impractical Leon Blum and brought the nation back to slightly left of center. As Premier, M. Daladier has gradually settled the chaotic labor and industrial situation and restored the confidence of an internally shaken nation. French democracy has demonstrated its elasticity. It has successfully weathered excesses of both the right and the left. It has profited by experience. Nowhere is appreciation of this fact more apparent than in both Italy and Germany. Daladier's sanely liberal course is equally disconcerting and unpopular with Hitler, Stalin, and Mussolini.

Insofar as immediate peace is concerned, France seems to be in a

Insofar as immediate peace is concerned, France seems to be in a key position. That France and England must ultimately clash with Hitler before a permanent peace is possible in Europe is generally accepted as a tragic fact. It will continue to be so accepted unless or until the limits of the Fuehrer's territorial and economic con-

quests are defined.

With Italy, the case is different. The scope of Mussolini's program is not so great that it cannot be met. His speech of last Friday stating that Italy is "thinking in terms of decades" is regarded as significant. Il Duce is in no hurry. There is some advantage to him also in seeing how far Hitler's ambitions extend. Mussolini has more to fear and less to gain from Germany than from France and England, if he can deal with the latter two. And he can. That is more certain than ever, now that Chamberlain's position has been made more secure by his speech on Poland and his declarations since.

and his declarations since.

Without hysteria or excitement, but rather with an ominous calm, France is now pushing the work of perfecting the revealed weaknesses in its military machine, especially its aviation arm. The temporary near-dictatorial powers recently conferred on Premier Daladier are deeply significant of the new mood which has tardily seized France upon the realization that Hitler's course in the future cannot be halted by any mere paper commitment. Meanwhile, not since 1914–18 has America loomed so large in the European picture. This is inescapable. No statesmanship nor neutrality law can change the fact. Policies and laws are

subject to revision overnight, but the tremendous potential strength of the United States must always be a factor to be reckoned with.

In this position, which it is impossible for us to avoid, it be-hooves us to watch our step. As the game is being played here, it is not one in which we can win anything. But we stand to

lose a lot.

Above everything else, it is important to remember that up to this time any war that may be in the making is not our war. It may, however, become impossible for us to escape involvement in some manner. So long as it is not our war our chances of involvement will be reduced and our effectiveness in the interest of peace enhanced, if we have less intemperate talk and name-calling by Government officials who are neither qualified nor designated to speak for the American people.

If or when it does seem that we are likely to be involved, it will be up to the American Government to know a lot more of the details, the hidden inside baseball, of the next war than it knew of the last. We want to fight no more wars for a slogan. If Europe becomes involved in a war over present issues the contest might be one in which we had an interest and an obligation,

test might be one in which we had an interest and an obligation,

but not necessarily so.

ISSUES ARE CONFUSED

Should the contest be a clear-cut issue of deciding whether democracy can survive alongside the dictatorship, America can certainly maintain no neutral position. It is unlikely that the problem will be so simple. There are so many collateral issues that it

lem will be so simple. There are so many conaterar issues that it will be difficult but necessary to keep them separate.

Germany got a bad deal at Versailles, and Italy was undoubtedly short-changed by the same document, which failed to make good the promises made by the Allies in 1915. Some sort of military safeguards should be afforded to the territorial integrity of small nations. There will be a minor problem of boundary revisions. But these and kindred ones involving economic and cultural tie-ups are not our problems.

are not our problems.

So long as America remains aloof and doesn't overemphasize the importance of these lesser issues, no one of them is likely to become a basis for war on our part. On the other hand, continued evidence of strong popular support of President Roosevelt's foreign policies, indicating that America will not sit quietly on the side lines and see democracy destroyed, may prove the strongest single factor in preserving peace until some measure of sanity returns.

SHOULD CONSIDER COURSE

While there is time to consider matters calmly, America would do well to ponder in advance what her reply will be if the call for help comes from France and England.

Discounting and evaluating all the factors and the revised aline-

ments, it is questionable whether today England and France, unaided, could defeat Germany any more than they would have been able to do so between 1914 and 1918. On the direct issue of totaltarian destruction of democratic Europe, few are so optimistic as to believe that America would escape involvement. If European war comes, our action should be based on a logical appraisal of the issues, not on propaganda-created emotionalism. It will eventually be our war and our issues or else we should stay out. We will be We will be

a full partner and of issues of else we should stay out. We will be a full partner and a joint guarantor or nothing.

Most important of all, it must be recognized that whatever we do or whatever we toss in will be a contribution. We must never again be kidded into believing that we are making an investment. Modern wars pay no dividends except in death, discuss and destruction.

ease, and destruction.

In the meantime, more important at the moment is the mat-ter of our possible contributions toward peace. They can be very

NEED MODERNIZED ARMY

First among such contributions would rank the modernization

First among such contributions would rank the modernization of our own armament. Without adequate armament to back it up, no nation's opinion counts today.

Second, I would rate evidence in Congress and in the American press of a united support of our foreign policy as expressed to date by President Roosevelt. The intimation that any man with his knowledge of history would plunge his Nation into a foreign war under present-day conditions for the questionable satisfaction of a possible third term is an insult to the mass intelligence of America and dangerous propaganda material for the press of of America and dangerous propaganda material for the press of the dictatorships.

the dictatorships.

Third, I would list the importance of American economic recovery. Every American politician, publicist, financier, industrialist, or labor leader, regardless of past differences or conflicting interests, if he is possessed of either vision or conscience, should face the fact that just as certainly as all differences would be shelved if we were at war they should be minimized or dropped temporarily in order to prevent war.

CARDBOARD ECONOMY

As has been said before in these articles, American unemployment is the most effective weapon in the kit of the totalitarian propagandists. Restore American prosperity and the claims for the cardboard economy of the dictators will collapse. Finally, turn the floodlights on the sham battle that is being

waged in America under the names of communism and fascism. Both are of the same breed of pups—wolf pups. Neither can stand the light. Both are sworn enemies of democracy. Neither knows the meaning of, nor has the slightest respect for, the liberalism and tolerance which let them thrive under the protection of our Bill of Rights. Once raised to power, they are equally

vicious and reactionary. Once in power, the shades of difference between them are imperceptible. As a precedent to the success of either must come the destruction of the democracy whose protection they claim.

Meantime, regardless of party or difference of opinion as to its methods of getting results, the broad principles of the New Deal, looming in importance above its failures, are still America's best answer to the challenge of totalitarianism and the dictators' claim to be the real champions of the world's underprivileged.

National Labor Relations Act

EXTENSION OF REMARKS

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES Thursday, April 13, 1939

LETTER BY LLOYD K. GARRISON IN THE NEW YORK TIMES OF APRIL 9, 1939

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able letter written by Mr. Lloyd K. Garrison, on the question of amending the National Labor Relations Act. The letter appeared in the New York Times in its issue of April 9, 1939.

There being no objection, the letter was ordered to be

[From the New York Times of April 9, 1939]

LITTLE FAULT FOUND IN LABOR ACT—WISCONSIN UNIVERSITY LAW
DEAN BELIEVES MEASURE SHOULD HAVE FURTHER TRIAL BEFORE
CHANGES ARE MADE

To the Editor of the New York Times:

This letter is addressed to those who sincerely believe that the National Labor Relations Act is one-sided and that it ought to be

amended so as to put restrictions on labor.

In appearance the act is undoubtedly one-sided. It forbids certain practices by employers but none by workers. But it is necessary to go below appearances and to understand the aims of the

what was the situation before the act was passed? In many industries employers were banded together in trade associations whose purpose was to prevent the similar banding together of employees in unions. These associations, in varying degrees, put forth antiunion propaganda, lobbied against labor legislation, maintained blacklists of union men, came to the aid of members engaged in strikes or lock-outs against union recognition, and sometimes supplied strikebreakers and spiles.

While employers enjoyed the right to associate for these purposes.

while employers enjoyed the right to associate for these purposes, the right of workers to associate was in practice defeated. Men were discharged for joining or forming unions. Foremen and superintendents would threaten discharge, which was equally effective. Sples could be, and sometimes were, planted in union ranks and even wormed their way into official position. Company unions were formed and the men herded into them. In some communities dominated by one or two large concerns private police forces were employed, meetings were broken up and union agents were run out of town or violently assaulted.

WORKERS HANDICAPPED

Against these tactics, which were by no means universal but were more widely used than in any other industrial country, workers were substantially helpless. While employers freely organized, the corresponding right of their employees was frustrated, and the only way it could be protected was to forbid the practices which destroyed it. This the Wagner Act did. Its purpose was to equalize rights, to correct a preexisting one-sidedness.

The case for extending the act to cover union abuses must rest not on an argument of one-sidedness, but on a showing that such extension is needed and that particular abuses could workably

extension is needed and that particular abuses could workably and justly be dealt with under the act. First, as to the necessity: I shall consider racketeering, sit-down strikes and mass picketing, strikes in breach of contract, and intimidation of workers as the most frequently cited abuses.

Begin the property of the lower of every State.

Racketeering can be punished under the laws of every State. That there are not more prosecutions is partly because racketeering exists only in a few trades in some of the large cities, and partly because of official laxity or corruption. Where municipal politics is clean and district attorneys vigilant, racketeering can be dealt with, as the Dewey prosecutions have demonstrated—prosecutions which incidentally have had the public support of organized labor.
Sit-down strikes have been held illegal; and they are on the

decline. They can be, and have been, dealt with by injunctions, damage suits, fines, and imprisonment. The same holds true of mass picketing and violence. What more penalties could be added?

UNIONS CAN BE SUED

Strikes in breach of contract are rare. Thus far they have occurred chiefly in the automobile industry, where the conditions are quite unlike those elsewhere. Strikes of this sort have mainly been short-lived local ones not authorized by the union leadership. been short-lived local ones not authorized by the union leadership, and representing an impetuous attempt to correct real or imagined grievances. Unions can be sued for damages in many States and in the Federal courts under the antitrust laws and by appropriate legislation they could be made suable in all States.

In England, on the other hand, unions cannot be sued for breach of collective agreements or for other wrongful acts committed in the course of ordinary trade disputes; and experience there as well as here indicates that legislation is not a cure-all, and that agreements are lived up to wherever collective relationships

that agreements are lived up to wherever collective relationships have matured and adequate machinery for settling grievances has been worked out by both sides.

Coercing men into joining a union, if violence is used, may be punished in all States. Where threats alone are used, though they too are unlawful, the legal remedies are concededly inadequate, because the dividing line between threats and persuasion is hard to draw and men are loathe or afraid to bring charges. These impediments would exist under any form of law.

MAJORITY REQUIRED

But the Wagner Act has at least done something to make coercion, where it exists, ineffective. Under the act a union enjoys no collective bargaining rights until it has been freely chosen by a majority of those voting in a secret ballot election conducted by the Board. (Certifications by the Board without an election are not made where any question of coercion exists.)

It is difficult to believe that men will vote for a union, in secrecy and under Government auspices, if they have been coerced into joining it. This election machinery therefore marks a real step forward.

forward.

One may fairly conclude that existing laws are adequate, so far as laws can be, to deal with such abuses as occur; and that, as all experience demonstrates, industrial peace is best established by the frank acceptance of collective bargaining, the experience of living together and the working out of agreements—wherever possible on a regional or industry-wide basis—containing joint machinery

on a regional or industry-wide basis—containing joint machinery for the settlement of differences.

Next let us ask whether, apart from the question of the need of such a step, the Wagner Act could workably and justly be broadened to prohibit various practices by unions. Three possible sanctions could be imposed.

One would be criminal penalties. But the act is not a criminal statute. It does not punish employers. And no one seriously suggests that the Federal Government should, even if it constitutionally could, go into the police business in industrial disputes. From every point of view policing is better left to the States.

ally could, go into the police business in industrial disputes. From every point of view policing is better left to the States.

A second type of sanction would be that which the act itself now provides for, namely, an order of the Board directing that certain things be done or not done. But in view of the procedure laid down, and the time element, this kind of sanction would be ineffective in dealing with abuses of the sort discussed above. For no order of the Board is enforceable until a judgment of the circuit court of appeals, after a hearing and argument in court, has been entered approving the order; and this court procedure cannot be begun until the following initial steps have been completed: an investigation of the original charges; the serving of a complaint, if the charges appear meritorious; the filing of an answer; a public hearing before a trial examiner; the submission of his report to the parties and the Board, and argument before the Board on the record of testimony and on the examiner's report.

TIME A FACTOR

This whole procedure, from the filing of the original charges to a court judgment, takes anywhere from 3 to 6 months and sometimes longer. It is, in effect, simply a slow-motion injunction procedure. Clearly little, if anything, would be gained by attempting to apply it to strike situations, alleged coercion, etc., because the acts complained of would long since have run their course.

But there is a third possible sanction—denial to an erring union of its privileges under the act. I myself once suggested that men responsible for a breach of contract should, if discharged on the ground of union activity, be barred from relief, but closer acquaintance with the complex of human relations involved in unauthorized walk-outs has convinced me that each case must be judged on its merits.

In any event, the board may and does exercise discretion in the In any event, the board may and does exercise discretion in the granting or withholding of relief, and the Supreme Court recently has held that the board cannot order the reinstatement of men who have engaged in a sit-down strike precipitated by the employer's own violation of the act. The opinion may be broad enough to bar relief where other types of unlawful union activity have been engaged in; time will tell. It would seem wiser and more just to leave the question of denying relief to the board's discretion and the working out of judicial doctrines than to make an ironclad rule.

NOT ALL CASES HEARD

It is now scarcely 2 years since the act was upheld by the Supreme Court. Before then the Board was paralyzed by injunctions. Since then strikes have declined, and issues of discrimination and nonrecognition which formerly accounted for nearly half our strikes have increasingly been taken to the Board

for peaceful adjudication. Of the thousands of charges filed with the Board, about 95 percent have never had to be heard; about half have been amicably settled with the aid of the field staff, and

the Board, about 95 percent have never had to be heard; about half have been amicably settled with the aid of the field staff, and nearly half have been dismissed after investigation. The public does not know about these cases; it knows only of the tiny fraction of stubborn, bitter controversies which go to a hearing.

Nor does the public generally realize that, while representation disputes between A. F. of L. and C. I. O. unions constitute but a small proportion of the Board's cases, the Board's election machinery is now the only available method of settling such disputes. That method is not always successful, but it is more successful than anyone would have thought possible.

Under the Board's rules (though nothing in the act prohibits it) an employer cannot petition for an election when faced by two rival and bona fide unions. I think the rules might well be amended to permit such petitions in proper cases; but experience seems to show that the question is not one of great urgency, for the New York Labor Relations Board, which receives such petitions, has had but few. Normally, one union or the other will move for an election as soon as allegiances are sufficiently fixed for an election to settle things. Premature elections, before one group or another has a majority, settle nothing.

PRINCIPLE ACCEPTED

PRINCIPLE ACCEPTED

The mingling of investigatory, accusatory, and judicial functions in a single agency (though in separate departments thereof) has been frequently criticized. The question goes to the root of the whole administrative process and applies alike to the I. C. C., the S. E. C., the Federal Trade Commission, and other agencies, and to numerous State commissions. I cannot discuss it here except to say that the principle has long been accepted, and that in any event there is not sufficient justification for singling out the National Labor Relations Board and proposing to dismember its functions without making similar changes throughout our administrative set-up. The atmosphere of conflict now surrounding the Board will wane as the law comes to be accepted, and then the Board may cease to be viewed as something unique.

I do not suggest that the act may never need modification in

something unique.

I do not suggest that the act may never need modification in the light of further experience and of a broader perspective than we now have. Nor do I suggest that the Board has not made mistakes. But considering the novelty of the law, the flood of cases since it was upheld, the determined resistance to it in many quarters and the emotions engendered by labor's internal feud, I think that the Board has done a remarkable job. And I bespeak for its work and for the act it administers, and for the administrative process as a whole, which is still in the making, an informed and dispassionate judgment.

LLOYD K. GARRISON.

Farm Conditions in the Midwest

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Thursday, April 13, 1939

LETTERS AND RESOLUTIONS FROM CONSTITUENTS

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD several letters and resolutions I have received from constituents relative to farm conditions in the Midwest.

There being no objection, the letters and resolutions were ordered to be printed in the RECORD, as follows:

MARSHFIELD, WIS., January 14, 1938.

ALEXANDER WILEY,

United States Senator, Washington, D. C.

DEAR SENATOR: Enclosed you will find a resolution adopted by the Wood County Board of Supervisors at their last meeting. You will note by the resolution the mortgage situation of the farmers of Wood County, also their difficulty as far as making their payments. I believe that I am not overestimating when I say that this is the condition of a large percent of the counties in Wisconsin.

I hope that you will give this matter your attention, which is very important to the mortgaged farmer in your State.

Yours truly.

Yours truly,

E. J. LAUFENBERG.

STATE OF WISCONSIN,

County of Wood, ss:

I, J. A. Schindler, the duly elected, qualified acting county clerk, in and for Wood County, Wis., hereby certify that the following

is a true and correct copy of Resolution No. 21, adopted by the Wood County Board of Supervisors, meeting held January 10, 1939.

Dated at Wisconsin Rapids, Wis., this 11th day of January 1939.

J. A. SCHINDLER,

County Clerk, Wood County, Wis.

Resolution No. 21

Introduced by Agriculture Committee, January 10, 1939

We the undersigned members of the Wood County Agricultural Committee, having studied the farm situation carefully with particular reference to the farm-debt, mortgage, and interest-rate problem, do hereby offer this following resolution to the county board of supervisors for its adoption and recommend that copies of this resolution be forwarded to Gov. of this resolution be forwarded to Gov. Julius P. Heil, Senators Alex Wiley and Robert M. La Follette, and Congressman Reid Murray, and Assemblyman W. W. Clark, and each county clerk in

the State:
Whereas the mortgage indebtedness on Wood County farms as shown by 1,200 sworn statements of farmers, is approximately \$4,000 per farm, 800 farms are mortgaged to the Federal land bank; about 40 percent of these borrowers are delinquent in interest, principal, or both; the average rate of interest paid by Wood County farmers is about 4.9; commissioner loans from the Federal land bank are 5 percent and Federal land-bank loans are drawn at the average indebtedness on Colby silt loam is \$4,887 per farm; Vesper silt loam, \$3,108; and sand and peat, \$2,304; the average debt per cleared acre on Colby silt is \$91; Vesper silt loam, \$69; and sand and peat, \$2,304; the average debt per cleared acre on Colby silt is \$91; Vesper silt loam, \$69; and sand and peat, \$27; and

Whereas the chattel-mortgage debt on many herds of cattle has been made by formers at such a high figure that the assignments

been made by farmers at such a high figure that the assignments on the milk check takes too large a share of the farmer's income to enable him to keep up the American standard of living; and

Whereas farmers have suffered several years of extreme drought and low prices for farm products; and

Whereas the farm debt has been incurred at a time when farm income was higher than it is today, making it extremely difficult for them to pay off their debts besides meeting taxes and interest:

Now therefore be it

Resolved, That this county board of supervisors favor a drastic adjustment of the farm-mortgage debt and interest rate similar to that proposed by the Frazier-Lemke bill as proposed in Congress, and/or liberalize the present farm-credit system.

R. B. ROBERTS, WILLIAM LILLEY, EDWARD VRUWINK Members of the Agricultural Committee.

BARRON COUNTY NATIONAL FARM LOAN ASSOCIATION, Barron, Wis., February 1, 1939.

Hon. ALEXANDER WILEY,

United States Senator, Washington, D. C.
Dear Mr. Wiley: I am enclosing herewith copies of 4 resolutions adopted January 31, 1939, at a joint meeting of the directors of the five National Farm Loan Associations of Barron County, representing approximately 1,300 Federal land-bank and land-bank commissioner loans.

is requested that you give your earnest consideration to these

resolutions.

Very truly yours,

THOMAS ST. ANGELO, Secretary-Treasurer.

Resolved by the directors of the Barron County National Farm Loan Associations, in joint session this 31st day of January 1939,

Whereas under the present day of appraising farm loans showing the ability of the farm to liquidate such loan is the basis on which loans are granted: Now, therefore, be it Resolved by the directors here assembled, That we go on record favoring such an appraisal; and be it further Resolved, That the Federal land bank and land-bank commissioner be instructed to take such action as will put the loads and land-bank commissioner be instructed to take such action as will put the loads are such action as well action as well ac

made during the period in which land values were excessive on the basis with loans made under the present appraisal; and be it

Resolved, That a copy of this resolution be sent to the Federal land bank and to all Representatives from this district in Congress, these Representatives to use their influence in Congress to bring about a change that will coincide with the present-day

WILLIAM WILLS, Chairman, H. M. PALMQUIST, ROY G. DODGE,

Resolutions Committee.

Resolved by the directors of the Barron County National Farm Resolved by the directors of the Barron County National Farm
Loan Associations in joint session this 31st day of January 1939.
That one member of the advisory board or one director be authorized by the secretary-treasurer to investigate a foreclosure case before any recommendation to foreclose is made, with the idea in mind to avoid foreclosure if possible.

WILLIAM WILLS, Chairman,
H. M. PALMQUIST,
ROY G. DODGE,
Resolutions Committee.

Whereas the situation of the dairy farmer has become one of vital importance, and that while the present Agricultural Adjustment Act is favored by the majority of farmers, we also feel that some provision should be made within the act for the dairy farmer as in other special commodities: Therefore, be it Resolved, That this group of Barron County directors of farmloan associations go on record as favoring the recommendations formulated at the general meeting of farmers, extension men, State and county officers of farm organizations, State and county agricultural conservation committees, and cooperative creameries

agricultural conservation committees, and cooperative creameries and cheese factories, on January 10 and 11 at Chippewa Falls; be

Resolved, That this group go on record as endorsing Mr. Einar L.

Ness and Mr. Kenneth Hones as our representatives to go to Washinton to present the dairy program to the proper authorities there.

WILLIAM WILLS, Chairman,

H. M. PALMQUIST,

ROY G. DODGE,

Resolutions Committee.

Be it resolved. That the owner of a foreclosed farm be given the same chance to repurchase his foreclosed farm as anyone else, providing that he has made an outstanding effort to keep his record clean.

WILLIAM WILLS, Chairman, H. M. PALMQUIST, ROY G. DODGE, Resolutions Committee.

THE FIRST NATIONAL BANK OF MONROE, Monroe, Wis., February 28, 1939.

Senator ALEXANDER WILEY,

Senator Alexander Wiley, Chippewa Falls, Wis.

My Dear Senator: It has been very gratifying to myself as well as your other Wisconsin friends to learn of the interest you are taking in the Wisconsin dairy farmer.

I can think of no class of people that are more worthy or in greater need of help at the present time. This county, as you may know, is largely populated by Swiss people. They are a hardworking, thrifty class of people who believe in paying their obligations 100 cents on the dollar, and it is very seldom that one of them is found working on a relief job of any kind, but now for the first time they too are getting right up against a tough proposition. proposition.

proposition.

They take the best of care of their dairy herds, and they do have good herds, many of which they have been building up for the past 50 years, but the income from milk has now gone down to a point where many of them are beginning to be very much discouraged and are beginning to wonder if it is really worth while to make the effort they have been making to pay 100 cents on the dollar and stay off of relief when they see so many others enjoying more of the good things of life than they are able to secure, and it is only a question of time when this is going to have a demoralizing effect on this thrifty class of people, and I cannot help but believe the dairy farmer is entitled to more consideration than he has been receiving up to the present time.

I am also firmly in the belief that it would be good business on the part of our Government to give due consideration to the dairy

the part of our Government to give due consideration to the dairy industry so that an honest, hard-working dairyman, willing to work from 14 to 18 hours a day at hard labor, could secure enough for his product so that he would be able to keep his family together, at least under moderate circumstances.

Only a few years ago Green County was rated as the wealthiest dairy community per capita in the United State. This has all changed. Within the past few years, and only very recently, I saw statistics showing that the mortgages per farm on Green County farms was greater than that of any other county in the State. These people do not need the extravagant things in order to be happy and contented, but it will be too bad if they are going to be allowed to become discouraged and take what might prove to be an easier way instead of going along the lines they have been following ever since they came to this country and we, ourselves, have always been proud of the manner in which they fulfilled their obligations, but I am afraid this is all going to be due for a change unless something can be done in the near future for the Wisconsin dairy farmer.

We will be very much interested in observing the progress you are able to make along the lines you have started on.

Wishing you additional success, I am

Very sincerely.

F. B. LUCHSINGER.

Whereas for a number of years prices of agricultural products have been extremely low; and
Whereas very little, if any, progress has been made under the programs that have been in effect for several years; and
Whereas in view of the fact that agriculture cannot long endure

unless a more fundamental farm program is adopted: Now, there-

fore, be it

Resolved, That the delegrates of the Chippewa County Farmers
Equity Union, assembled this 11th day of March, in the city of
Stanley, Wis., earnestly request the Congress of the United States
to immediately adopt legislation to meet the current crisis in the
farming industry that will protect the American market for the

American farmer at a price equal to the average cost of production for the domestically consumed portion of agricultural products produced in the United States; be it further

Resolved, That copies of this resolution be sent to the following:

Hon. Robert M. La Follette, Senate Office Building, Washington, D. C.; Hon. Alexander Wiley, Washington, D. C.; Hon. Merlin Hull, Washington, D. C.; Hon. William Lemke, Washington, D. C.; Hon. D. D. Kennedy, Assembly Chamber, Madison, Wis.; county clerk of Chippewa County for consideration of the Chippewa County Board at their next regular session, and a copy of this resolution be sent at their next regular session, and a copy of this resolution be sent to the State Farmers Equity Union office for publication in the Farmers Equity Union News.

N. A. PENNING. DELMAR SMOCK, ELMER JACKSON, HENRY L. HANSON, WILLIAM P. BORGMAN.

STATE OF WISCONSIN,

County of Chippewa, ss:

I. L. M. Eslinger, county clerk in and for the County of Chippewa, hereby certify that the above is a true and correct copy of resolution adopted by the Chippewa County Board of Supervisors at the adjourned meeting held on March 24, 1939, at the court house in the city of Chippewa Falls.

Dated this 25th day of March 1939.

L. M. ESLINGER, County Clerk, Chippewa County, Wis.

Silver Purchase Program

EXTENSION OF REMARKS

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, April 13, 1939

EDITORIALS FROM VARIOUS NEWSPAPERS

Mr. TOWNSEND. Mr. President, I have here several editorials from various parts of the country on the subject of silver. I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Southampton (N. Y.) Press, of March 17, 1939] THE SILVER DOLLAR

The old American "cart wheel" became too heavy to carry 'round, but it is even more impossible for Uncle Sam to lift the "monetary value" of silver. Even though the raised letters on the face of a dollar declare that "In God We Trust" there is reason to suspect that the United States has been too trusty in silvery relations with good neighbors, and other foreign countries.

good neighbors, and other foreign countries.

The latest silver adventure began in 1934 when the monetary price of American silver was "set" at \$1.29 an ounce and thereup the United States started in to lift the price of the world's crops of silver to that level. At the end of the dreamland fiscal year, June 30, 1938, the United States held approximately 2,373,000,000 ounces of silver, and according to the Chamber of Commerce of the State of New York "the greatest accumulation of metal the world has ever known." This was actually "one-seventh of all the silver the world is known to have produced in nearly four and one-half centuries."

At the imaginary "monetary value" set in the Silver Purchase Act the United States had become the owner of \$2,234,000,000 worth of silver. However, this silver actually cost the Treasury \$1,006,000,000. The United States found itself deep in "the hole" in all "deals" outside dealings with our own countrymen. Mexico, which has been stealing American oil properties, got twice as much revenue for its silver as the miners in our own silver States.

[From the Fargo (N. Dak.) Evening Forum] AS TO MEXICO

One of the odd things about the Mexican attitude toward the United States and toward American property rights has been the fact that in otherwise depressed conditions there Mexico has profited more than any other country by the United States silverpurchase policy.

[From the Philadelphia (Pa.) News of March 10, 1939] GOOD NEIGHBORLINESS OR DAMN FOOLISHNESS?

What is causing us the greatest amount of doubt is the effects of our Silver Purchase Act which was supposed to stabilize world

money and save wabbling economic structures from collapsing or something of that sort.

Anyway, we were playing the good financial Samaritan.

That's what our good neighborliness did for us in Mexico. There are other instances of the effects of this same sort of helpfulness in other parts of South America, where nazi-ism is rather strongly entrenched already and where the good neighborliness is hardly reciprocated.

We hope this Brazilian agreement isn't going to prove another Mexican "investment."

Mexican "investment."

We think every possible safeguard should be taken to guarantee that it will not be.

We believe that the Secretary of the Treasury, the State Department, or the President owes the people of this country an explanation of just what this is all about.

No such enlightening explanation has ever been forthcoming on the Silver Purchase Act or even the gold-buying orgy.

It's about time the people were let in on some of these matters.

[From the Palm Beach (Fla.) Post of February 11, 1939] OUR OWN BACK YARD

With all the hubbub in which we are indulging over events on the other side of the Atlantic, we should not forget that we have a little situation right here in our own back yard that needs some earnest attention.

For by buying Mexico's silver output as a good neighbor at higher prices than prevail in the world, we are supporting the economic framework of a nation that expropriates properties of our citizens, wiggles its thumb in our faces, and when asked to settle for them, turns its trade over to others and permits of European political penetration.

[From the Nashville (Tenn.) Banner of March 4, 1939] MEXICO AND THE UNITED STATES

The full cost to the United States, of Mexico's expropriation of American oil properties, is barely intimated in the values placed by former owners of the expropriated properties.

By disposing of this oil according to its own program, Mexico is Germany that is international import trade to Germany, for it is Germany that is purchasing the bulk of the oil, and paying for it with commodities customarily sold to Mexico by the United States.

The minimum of \$20,000,000 is set as the United States annual loss through this deviation, promoted by President Cardenas as a new policy calculated to compel American sanction for expropriation. At the same time, Mexico is increasing its consumption of

tion. At the same time, Mexico is increasing its consumption of Italian-made goods.

Thus the United States loses not only the oil, but a customer wooed and subsidized these many years; a customer to whom has been extended every conceivable advantage, and such amenities as continued purchase of Mexican silver at a price far in excess of the world market value. While the United States was continuing to buy Mexican silver to protect the peso, Mexico was using those same pesos to block American trade.

[From the New York Herald Tribune of March 29, 1939] MR. ECCLES ON SILVER

MR. ECCLES ON SILVER

Those who disapprove of the budgetary philosophy of Marriner S. Eccles are legion, and their number, as Mr. Eccles himself recently admitted, is clearly on the increase. Yet, as we have had occasion to observe here before, the views of the Chairman of the Reserve Board will always merit respect if for no other reason than that they are invariably honest. Mr. Eccles' fiscal and monetary theories may be sound or they may be unsound, but probably not even his severest critic will contend that they are ambiguous or that their author has ever trimmed his sails to the shifting political breezes. If anyone had any lingering doubts about the forthrightness of the Reserve Board Chairman those doubts must have been effectively dispelled by his testimony on the silver-buying program before a special Senate subcommittee on Monday. The Silver Purchase Act is, of course, one of the administration's favorite political projects. Offered by the President in 1934 as a program for "broadening the monetary base," it was actually nothing more nor less than a thinly disguised effort to purchase the votes of the Senate's so-called silver bloc. It hasn't the slightest justification as a monetary measure, and not even its friends pretend to defend it openly. Nevertheless, because of its political implications, no one in the administration has had the temerity, in these 5 years, to challenge, or even question, its economic importance. No one, that is to say, until Mr. Eccles came along this week, But what Mr. Eccles had to say about this legislation must have made the members of the Senate committee wonder whether they were listening to the administration's own monetary expert or a member of the economists' national committee.

From a banking standpoint, Mr. Eccles told the committee, the silver-purchase scheme is definitely injurious, since it has the effect of adding artificially to excess reserves at a rate of \$400,-000,000 to \$600,000,000 annually. In addition, he noted, it puts these reserves by using its seig

at the present time to some \$1,250,000,000. But quite aside from its banking significance, the Reserve Board Chairman pointed out, the policy, if continued, must eventually defeat the objectives of its supposed beneficiaries. "I happen to be from Utah", said Mr. Eccles, "and I have told my friends there that the foreign-silverpurchase program does more, in my opinion, to destroy the domestic silver industry than anything else I know." Summing up the

case against the program in one brief but comprehensive paragraph, Mr. Eccles declared:

"This policy has created a situation in which practically the only important market for silver is in this country, and the only use we have for the silver is to make more excess reserves, which are already excessive, and more bank deposits, which are also already excessive."

The administration has imposed for 5 more the second and the program of the second s

The administration has ignored for 5 years the arguments of orthodox monetary economists, who have repeatedly and unanimously denounced its silver program. How long, one wonders, can it continue to ignore these arguments, now that they have received the frank and unequivocal endorsement of its own chosen monetary expert?

National Farm Program

EXTENSION OF REMARKS

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES Thursday, April 13, 1939

LETTER FROM ELVIN H. KILLHEFFER, OF WEST CHESTER, PA., AND REPLY THERETO

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to me by Mr. Elvin H. Killheffer, of West Chester, Pa., together with my reply.

There being no objection, the letter and reply thereto were ordered to be printed in the RECORD, as follows:

> MEADOWBROOK FARM, West Chester, Pa., April 7, 1939.

Hon. James J. Davis,

Senate Office Building, Washington, D. C.

Dear Senator: I notice in the Capitol Daily of Thursday, April 6, a statement that Senator Lucas, of Illinois, is trying to initiate a program which would call for cooperation of all interested groups so that we might really have a national farm program.

That there is an acute need for a unified program I think everyone will agree; that is, they will agree provided they can take a little time out from their own selfish activities and really devote a little constructive thinking to what would be good for the whole Nation. This may be expecting too much, because there is little evidence today of such national thinking.

In the same issue of the Capitol Daily to which I have already referred, there appears an article headed, "Irrigation Areas Pay U. S." This is based on a report by Commissioner Page, of the Bureau of Reclamation, made by him to Secretary Ickes and it goes on to show how, by the expenditure of some millions of money, various areas have by irrigation been brought into production and that as a result many other States received increased tion and that as a result many other States received increased business from those areas that have been made prosperous because of the irrigation.

So on one hand we spend money to bring new areas into production and on the other hand we spend greater amounts in order that farmers in other sections shall raise less on land that requires

that farmers in other sections shall raise less on land that requires no irrigation or other means of artificial persuasion.

We play Santa Claus to Cuba and the Philippines, buying their sugar while at the same time we restrict our own people from producing more sugar, meantime supporting a lot of people on various forms of relief who might otherwise be employed in producing some of the many things whose production we carefully

Frankly, the thinking people of this country, and there are still a few, are thoroughly disgusted with the hopelessly confused thinking, if any, on the part of our policy makers in Washington. If business interests conducted their affairs in like manner, the denunciation they would receive at the hands of this same Government would be quite considerable.

Cordially yours,

ELVIN H. KILLHEFFER.

APRIL 10, 1939.

Mr. Elvin H. Killheffer, Meadowbrook Farm, West Chester, Pa. Dear Mr. Killheffer: I have your thoughtful letter of April 7. We have been saying for a long time the points you have made

in your letter. Many of us have known of the utter confusion and divided policy of this administration. But very little has been done about it. Something more than criticism will be necessary. We must have a constructive and practical program. mecessary. We must have a constructive and practical program. Moreover, that program will require a thoroughgoing support not only of a few who plan it but the rank and file of our citizens. This will require intensive organization and effort.

The written me about the need for a unified farm pro-

You have written me about the need for a unified farm program. Agriculture is basic. We know that. And in the realm of agriculture cotton is of paramount importance. See what has

happened.

nappened.

In 1929 this country had 1,502 cotton mills that employed 441,000 persons, paid \$340,000,000 in wages, and over \$900,000,000 for materials, and turned out a textile product valued at \$1,595,000,000. My figures are from the Census of Manufactures, 1937.

During the 5-year period, 1926-30, the average annual experts of American cetter manufactures and semi-manufactures were

of American cotton manufactures and semi-manufactures were

valued at \$124,000,000.

In the calendar year 1937, as reported by the Commerce Department, there were imported into this country from Europe and Japan—pursuant to revised trade treaties—147,319,822 yards of cotton cloth. The average duty thereon was around 33 percent of the value of the goods. There was also imported in 1937 something over 86,000,000 pounds of cotton waste and cotton linters, free of duty.

the value of the goods. There was also imported in 1937 something over 86,000,000 pounds of cotton waste and cotton linters, free of duty.

The proposed subsidy on raw cotton exports to foreign countries, if around 3 cents to 4 cents per pound, would just about offset the tariff duty of 33 percent in value of cotton cloth, and give the foreign cotton-mill beneficiaries substantially free trade in cotton cloth, such as they already have in cotton waste and cotton linters. Indeed, with the proposed subsidy on 11,000,000 pounds of raw cotton shipped abroad, the foreign importers after the subsidized cotton had reached their ports, could turn their cargo ships around, without unloading, and send them back to American mills and make a profit at the expense of the United States Treasury in subsidy grants and indemnity losses.

This subsidy grant, indeed, affects the entire textile range of industries of the United States which employ a million workers on a yearly pay roll of nearly \$1,000,000,000

With one-third of our population ill-clothed, as stated by a high authority, the policy now seems to be to subsidize foreign mills with cheaper cotton in order to clothe the people of the United States, who 10 years ago were shipping a cotton-goods surplus of \$124,000,000 to countries abroad.

The United States Census of Manufactures for 1937 reports something like 1,800 manufacturing establishments in Pennsylvania which consume cotton or cotton products as primary material for manufacture into finished products.

These 1,800 mills and factories, including cotton goods, hosiery and knitting products, clothing, underwear and outerwear, house furnishings, cordage and twine, auto tires, bags, and batting, give employment to over 150,000 wage earners at an annual wage of around \$160,000,000.

The value of the cotton and cotton products consumed in these manufacturing establishments is around \$200,000,000 a year, and

around \$160,000,000.

The value of the cotton and cotton products consumed in these manufacturing establishments is around \$200,000,000 a year, and the value of the finished product exceeds \$400,000,000—which helps to clothe and serve the various needs of a rather considerable number of people in Pennsylvania and elsewhere.

Ten years ago Pennsylvania had products made of cotton for export to help clothe the needy abroad, besides paying nearly \$200,000,000 to Pennsylvania workers.

I should like to know why these Pennsylvania industries and wage earners are not entitled to receive from our Federal Government as fair treatment as the manufacturers and wage earners of Europe.

Pennsylvania and its industries paid into the United States Treasury in the fiscal year ending June 1938 a total of \$206,873,000 in income taxes for support of the Federal Government, besides a large revenue from estate and gift taxes and sundry internal revenue, amounting to nearly \$100,000,000 more.

All that foreign countries pay to Uncle Sam are the duties on foreign goods at American ports, and under the subsidy plan these duties on cotton cloth are largely canceled by the Treasury subsidy on the cotton shipped to foreign mills to aid them in invasion of American markets.

If the purpose of the proposed cotton export subsidy is to help the American people to a better supply of clothing and household textiles, the good old-fashioned American way is to give the job to the American worker, instead of to foreign labor.

This country has at least 10,000,000 unemployed. These unem-

ployed, if given factory jobs, might be able to convert that cotton surplus of 11,000,000 bales into enough clothing to thoroughly provide for the one-third of our population now so greatly in oughly provide for the one-third of our population now so greatly in need and for whom all of us have a very genuine concern. Such a bold experiment as giving business encouragement to go ahead, without its present unfair handicaps, ought to prove far more practical than the 1933 experiment of plowing cotton under or the 1939 proposal to ship cotton abroad by aid of a Treasury subsidy.

My answer to you, Mr. Killheffer, is that the best hope for a change of policy, away from the waste and confusion of this administration, is to change the policy makers. The present ones do not seem to know what to do.

Sincerely yours.

Sincerely yours,

Who Cultivates War?

EXTENSION OF REMARKS

HON, GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Thursday, April 13, 1939

EDITORIAL FROM THE SATURDAY EVENING POST OF APRIL 8, 1939

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial, appearing under date of April 8, 1939, in the Saturday Evening Post, entitled "Who Cultivates War?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> [From the Saturday Evening Post of April 8, 1939] WHO CULTIVATES WAR?

Never was a stranger thing than that the American people should be inviting themselves to another world war before it

At frequent intervals those who sample the waters of public emotion heave their questionnaires into the stream—such as, "If England and France are attacked by the dictators, will this country have to do something about it?" or, "Shall the democracies of the world, at any cost, stand together?"—and when what comes up is put through the sieve that separates the ayes and noes, the tabulated results show a steady onset of the idea that we shall have to save the world for democracy again. But you do not need the statistics. You can feel it. There is all at once an intellectual cult of interventionists. The feet of many pacifists are running in the paths toward war. The American character is inhabited by a strong crusader spirit. Many voices, for different reasons, have been calling to it, and it responds.

When the President first called to it, we were not thinking of At frequent intervals those who sample the waters of public

When the President first called to it, we were not thinking of war, talking of war, or preparing for war. Our thoughts were inturned upon our own economic and social maladies. The New Deal was going badly. That was in October 1937.

Suddenly, out of the blue, in a speech at Chicago, the President proposed that we should have to help quarantine the aggressor nations of the world. First he borrowed the words to make a terrifying picture of what that day would be like when the aggressors went utterly mad. "If those things come to pass in other parts of the world," he said, "let no one imagine that America will exceed that it may expect marks," that this Western Hemiother parts of the world," he said, "let no one imagine that America will escape, that it may expect mercy, that this Western Hemisphere will not be attacked. * * * If those days are not to come to pass * * * the peace-loving nations must make a concerted effort * * * there is no escape through mere isolation or neutrality * * * the epidemic of world lawlessness is spreading. When an epidemic of physical disease starts to spread, the community approves and joins in a quarantine." * * * We dwell upon this speech because it is the key to much that has happened since. Nobody knew we were going to cast aside the priceless advantage of mere isolation. Nobody knew we were going to forsake the traditional policy of mere neutrality. As for our duty to help quarantine the aggressor nations of Europe and Asia, such a thing had never been debated.

such a thing had never been debated.

such a thing had never been debated.

Several weeks ago there was an unseemly dispute as to whether or not the President had said in a certain way to members of the Senate Committee on Military Affairs, under pledge of secrecy, that our first line of defense was in France, or, by another version, that France was our frontier. Members of the Senate committee privately said that he said it. The French Embassy in Washington confirmed it to the French Government. Various responsible persons said they had heard him say it before. Yet 3 days later he called the newspaper correspondents to the White House and said to them that anyone who said he had said it was a book and a liar. Well, but he said it in that Chicago speech. Everybody knew

Well, but he said it in that Chicago speech. Everybody knew that his aggressor nations were Germany and Italy in Europe, and that his peace-loving democracies there were England and France. If we were going to help England and France to quarantine Germany and Italy, as if they were our enemies, too, where was our frontier, our first line of defense? It was in France, of course; and all that row a few weeks ago over how he had said it again was

Ever since the quarantine speech, the Government of the United States has been slapping the dictators in the face. When Secretary Ickes had used his heavy hand on Hitler, and the German Government protested, the State Department slapped him again by saying, in effect, that the indecencies of nazi-ism had put Germany beyond the pale of diplomatic amenities.

We ourselves sincerely tolerate that feeling. Just as sincerely we say that the Government should let the flames of hatred alone, instead of fanning them; and in any case, there is nothing to be said for the palm of the hand as an instrument of foreign policy.

After the quarantine speech, the front page of your newspaper began to change. Did you notice it? Rumors, alarms, and discussions of war, touching this country, began to compete for the first position with news of our internal frustrations. It was a relief, indeed, to be thinking and talking less about our economic

reier, indeed, to be thinking and taiking less about over economic anemia and more about our place in the affairs of the world.

The President went visiting in Canada, and said the United States would never "stand idly by" if Canada were invaded. Probably not; it might have been taken for granted. So far as anybody knew, there was at that time nowhere in the world a thought of

invading Canada.

Then it was South America. The dictators were penetrating South America with their hateful ideologies and their merchandise, and we should be ready to fight for the Monroe Doctrine. So we should. That is not what we are talking about. We are talking about the cultivation of the American mind with thoughts of war. We would sooner think of an American mind with thoughts of war. We would sooner think of an American frontier in South America than of one anywhere in Europe. It would make more sense. But it cannot well be one day in Europe and another day in South America. Or shall we have one in Europe and one in South America, too?

In his message to Congress last January the President said:

* * Words may be futile, but war is not the only means of commanding a decent respect for the opinions of mankind. There are many methods short of war, but stronger and more

Here are many methods short of war, but stronger and more effective than mere words, of bringing home to aggressor governments the aggregate sentiments of our own people."

He could not name the aggressor nations against whom we proposed to take measures. That would be going too far; though, of course, the whole world knew them as well as if he had called them by name.

But they had already been named. Two weeks before these words from the President, the chairman of the Senate Committee on Foreign Relations took a statement out of his pocket and anded it to the press. It said:
"1. The people of the United States do not like the Government handed it to the press.

of Japan.

"2. The people of the United States do not like the Government of Germany.

"3. The people of the United States, in my opinion, are against any form of dictatorial government, communistic, or fascistic.
"4. The people of the United States have the right and power to enforce morality and justice in accordance with peace treaties with us. Our Government does not have to use military force and will not unless necessary."

and will not unless necessary."

This amazing statement produced a sensation. The chairman of the Senate Committee on Foreign Relations is a high officer of the Government; moreover, it was Senator PITTMAN, whose same-seeing with the President on matters of foreign policy is so well known that few could suppose he would have prepared such a statement without the knowledge and approval of the President.

As one of the American people, we admit that Senator PITTMAN.

As one of the American people, we admit that Senator PITTMAN perfectly states what we feel about the governments of Germany and Japan. Nevertheless, he ought not to have said it; and if he could not help saying it, he ought to have first resigned from the Government. He must have known the effect his words would have, not because they were his—if they were his—but because they were bound to be received abroad as an indirect utterance of the American Government. Obliquely in that way the hated nations could be named.

The hypnotic by this time has undergone some change. In the

President's Chicago speech it was the word "quarantine." Not to fight the dictators, but to quarantine them. How simple!

The hypnotic now is the phrase, "short of war." Something to be done against the dictators, "stronger and more effective than words," and yet "short of war."

words," and yet "short of war."

Regard now the spectacle of the great American Government shouting at other governments, "We hate you. The American people hate you. These words, as we utter them, are futile. We know that. But we will do more than words. We will do everything we can to defeat you—short of war."

There is no such infantile thing. If those who say it do not know better, they are even more dangerous than we think, for they are incompatent.

are incompetent.

they are incompetent.

What are the methods more effective than words and short of war that one nation may employ against another? They will have to be either measures of economic hostility or measures of economic discrimination; and measures of either kind, with the positive and avowed intent to do injury, are measures of war.

Suppose this were not so. Suppose it were, as a Senator said in debate on the national-defense program, that "Every time we sell a plane to France, standing between us and the dictators, so to speak, we need one less ourselves." In that light, the thought of measures short of war turns out to be such a thought as that, of all the nations representing the democratic ideal in the world, the one most powerful shall save itself by selling arms to the others. The world for that attitude is one that were at its the others The word for that attitude is one that war at its

the others The word for that attitude is one that war at its worst has never yet deserved.

Meanwhile a national-defense program was taking shape, and when it had been submitted to Congress, the foreign affairs of the Nation passed suddenly into a phase of ominous mystery. We do not yet know whether the clumsy secrecy was meant to intensify the alarms or was only what it seemed.

The American Ambassadors to England and France came to testify at secret sessions of the Senate Committee on Military Affairs and of the House Committee on Military Affairs, and it was made known what they said was too alarming to be disclosed.

The crash of a military plane on the Pacific coast accidentally disclosed the fact that a French commission was secretly buying secret bombers in this country, and when the Senate Committee on Military Affairs began to ask embarrassing questions, and had already discovered from secret testimony that the President, over the protest of the War Department, had directed that the French buyers be given special access to what they wanted—just then the President called the members of the committee to the White House and, under pledge of secrecy, told them things that made their blood run cold.

That was all they could tell and it was perhaps were to tell.

their blood run cold.

That was all they could tell, and it was perhaps worse to tell that than to have told the truth.

The gong was still vibrating with this alarm when the President, on his way to the fleet maneuvers, said to the reporters that he might have to cut his absence short and return at any moment in haste, on account of something the dictators might be doing in Europe. This was cabled over the world and produced immense astonishment in all the chancelries of Europe.

The effect of imparting those frightful White House secrets to the Senate Committee on Military Affairs was to produce on the floor of the Senate this humiliating situation—that in the debatem a new program of pational defense some Senators were in pose-

on a new program of national defense some Senators were in pos session of facts they were pledged not to divulge, some found themselves speaking from expurgated versions of secret testimony themselves speaking from expurgated versions of secret testimony that had been superseded by other versions, and it was impossible for anyone to make an indisputable statement of what our foreign policy was; wherefore such a thing as an armament policy had to be debated in the dark by the United States Senate, since, of course, an armament policy, rationally, must be determined by a country's foreign policy and suited to it.

But whose foreign policy? Whose armament policy?

We go back to the quarantine speech in Chicago. Toward the end of it the President said: "It is my determination to pursue a policy of peace * * * yet we cannot insure ourselves against the disastrous effects of war and the dangers of involvement."

My determination.

My determination.
This is the balcony manner. It is the leader telling his people.
Strange as it was then, it has become very familiar since. The

Strange as it was then, it has become very familiar since. The national mind now is used to it.

This we may illustrate. From the Washington news leads of the New York Times—and it might be any other important newspaper—we take these examples:

February 1: "President Roosevelt told Senate Military Affairs Committeemen at the White House yesterday that the United States would back European democracies against dictatorships in every way short of war."

The President tells the Senators what the United States will do.

The President tells the Senators what the United States will do.

The point is not whether this news paragraph is accurate or not; the point is that news so written seems to excite neither wonder nor uneasiness.

Another:

February 3: "President was pressed by Congress groups yester-day to clarify his policy on the sale of arms abroad to aid the democracies.

His policy. Another:

Another:
February 4: "Taking cognizance of several severe attacks on himself and his policies in the German and Italian press, Mr. Roosevelt vehemently asserted that he contemplated no change in the country's traditional foreign policy."

It is not written that the President said there was no change in the traditional American foreign policy; it is written that he said he contemplated no change in it.

February 5: "Foreign-policy debate in the Senate next week is expected to turn on the question whether the President intends this country to back the French, except for manpower, in the event of war."

event of war."

And so the debate did turn on that question. What did the President intend? In this debate, if you will read it in the Congressional Record, you will find the Senators asking over and over: "What is the President's foreign policy?"

We seem to have forgotten that the President does not make the foreign policy of the United States. He has not that constitutional power. He can negotiate treaties, but he cannot make them; a treaty is not made until the Senate confirms it. He cannot declare war. Only the Congress can do that.

Nevertheless, he can, if he is so minded, provoke war.

He can create situations and entanglements such as to make war inevitable

He can, as we have seen, condition the national mind to thoughts of war.

The Constitution cannot save us from a President who turns world hero on our hands. It left that to the people.

There is no division of the American mind on the subject of adequate—very adequate—military defense. But unless we have a definite foreign policy—not Mr. Roosevelt's nor any President's, but a national policy—it is impossible to be intelligent about a defense

program.

To this we add that while we talk about our military defenses not his we add that while we tak about our limitary defenses without knowing what our foreign policy is, we are neglecting our natural defenses. The first of these, more important in many ways than armament, is to keep our industrial machine at high key and in full production. This we have failed to do. Our machine is running down. And our second most important natural defense is to mind our own business. The Civilian Conservation Corps

EXTENSION OF REMARKS

HON. JAMES M. MEAD OF NEW YORK

IN THE SENATE OF THE UNITED STATES Thursday, April 13, 1939

STATEMENT BY HON. JAMES M. MEAD, OF NEW YORK

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD a statement I made on the occasion of the sixth anniversary of the creation of the Civilian Conservation Corps.

There being no objection, the statement was ordered to be

printed in the RECORD, as follows:

THE C. C. C. HAS PROVED ITS WORTH

(By United States Senator JAMES M. MEAD)

For the past 6 years I have watched with great interest the program and progress of one of our conservation agencies—the Civilian Conservation Corps. The C. C. C. was created to provide jobs for unemployed young men on worth-while conservation projects on the Nation's forests, parks, and farms. Since it was first established in April 1933 it has had a vast influence on our national life—both on the physical resources of our country and the character of its

people.

It has taken more than 2,000,000 unemployed young men and given them jobs. While working on conservation projects carried out from the C. C. C. camps these boys have had not only jobs, but proper food, clothing, shelter, medical and dental care. They have had inspiring leadership, an opportunity for healthful recreation, a chance to receive both vocational and academic training in their leisure time after the workday is over. Many of these boys have left the corps to accept jobs in private industry—jobs obtained largely because of the training they received while in the C. C. C. These boys have also received a cash allowance of \$30 a month from which they are required to send home \$22 a month to their dependents—money which has helped keep homes together, prevented families from going on relief, and given the boys the added satisfaction and self-respect which comes from being not only independent themselves but able to help their families in need.

satisfaction and self-respect which comes from being not only independent themselves but able to help their families in need.

There are at present 1,500 C. C. C. camps in operation throughout the continental United States. From these camps each day go some 300,000 C. C. c. enrollees to carry out work designed to develop, to protect, and build up our national resources. The work is varied. All of it is valuable, both for the present and for the future. The enrollees plant trees, build truck trails, erect fire-detection towers, lay telephone lines, improve grazing conditions on the public domain and in national forests, carry out and demonstrate soil-erosion-control measures, conduct campaigns against the white-pine blister control measures, conduct campaigns against the white-pine blister rust, the gypsy moth, bark beetles, and other destructive forest pests, improve living conditions for wildlife, rehabilitate reclamation projects in the West and drainage ditches on farm lands, improve recreational areas in National and State parks and forests, and many

other jobs.

During the past 6 years some of the major work accomplishments of the C. C. include protection and improvement of millions of acres of forests and parks, development of new recreational areas for all the people, and advancement of a Nation-wide erosion-control program to save our fertile soil. During these 6 years enrollees have planted 1,500,600,000 forest trees—that's 12 trees for each of the 125,000,000 men, women, and children in this country. They have improved the forest stand on 3,430,000 acres, reduced fire hazards on over 2,000,000 acres, spent four and one-half million man-days fighting forest fires.

Judged on its past record of conservation of natural resources.

Judged on its past record of conservation of natural resources and aid to unemployed youth, the Civilian Conservation Corps deserves high praise. But what of its future? I am of the belief that this organization should be made a permanent one. Conservation authorities estimate that the value of our national resources has been augmented by hundreds of millions of dollars through the work of the C. C. C., and that conservation measures throughout the country have been advanced from 10 to 30 years by the C. C. C. program. They also state that there is need for by the C. C. C. program. They also state that there is need for this work for many years to come. Undoubtedly there will also be need of employment by many young men for some time to come. A permanent C. C. C. would aid in the solution of both these problems.

This problem of unemployed youth is not something new. Under the administration of President Roosevelt the situation was first recognized and measures taken to correct it, but the problem itself has been in existence for many years. It was a graver problem when the C. C. C. was launched to help correct it, but it is still a problem—we have always had unemployed youths who need just what the C. C. C. can give, not only a job, but wellorganized guidance and leadership to work, to develop, to study in healthful surroundings—in a word, to become better citizens. Nor is the need for a Nation-wide conservation program a new one. For years the physical assets of the Nation have been drying up, wearing away, and burning down. The C. C. C. is the first program of national scope designed to combat this waste. But not in 6 years can this waste be checked or rebuilt. A comprehensive conservation program planned by State and Federal officials, utilizing C. C. C. camps and workers to carry out a longrange program of forest protection, reforestation, flood control, soil-erosion-prevention measures, development of recreational resources, and wildlife restoration would be of the greatest value to our country, now and for future generations.

The program has been launched by the C. C. Let the corps continue its work.

Resolutions Adopted by the National Rivers and Harbors Congress

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES Thursday, April 13, 1939

RESOLUTIONS OF THE THIRTY-FOURTH ANNUAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS

Mr. MILLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD resolutions adopted by the Thirty-fourth Annual Convention of the National Rivers and Harbors Congress, Washington, D. C., March 23 and 24, 1939.

There being no objection, the resolutions were ordered to

be printed in the RECORD, as follows:

FOREWORD

The Thirty-fourth Annual Convention of the National Rivers and Harbors Congress, held in Washington, D. C., March 23 and 24, 1939, at which the following resolutions were unanimously adopted, was attended by delegates from 48 States, the District of Columbia,

was attended by delegates from 48 States, the District of Columbia, Alaska, Hawaii, and Puerto Rico.

This was the most widespread and representative convention in the congress' history of more than 36 years, the total number present exceeding all recent record years. There were in attendance delegates from all sections of the country, representing both legislative and executive branches of the Federal Government; State, city, county, and other local governmental agencies and interested groups; chambers of commerce, waterway, flood-control, and conservation associations; agricultural, labor, industrial, and trade organizations; and transportation interests.

The attendance of representatives, from far and near, of such different pursuits and interests and their unanimous adoption of the following resolutions is strong evidence that public sentiment demands that our national waterway, flood control, reclamation and conservation program go forward; that planning and execu-tion of public improvements of our water resources for navigation, flood control and allied purposes be continued as functions of the Army Engineer Corps under the direction of the Secretary of War and the supervision of the Chief of Engineers; that adequate funds be provided for the continuation of useful and beneficial projects for these purposes; that our navigable waterways ever be deemed public highways and remain free; that cognizance be taken of the national-defense value of our waterways, and that the American Merchant Marine be strengthened for national defense and com-

RESOLUTIONS UNANIMOUSLY ADOPTED BY THE THIRTY-FOURTH ANNUAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, WASHINGTON, D. C., MARCH 23-24, 1939

This congress, a national organization representing every State in the Union, the Territories, and insular possessions of the United States, reaffirms resolutions adopted at its 1938 sessions and reasstates, realisting resolutions adopted at its 1938 sessions and reasserts its interest in the development, improvement, conservation, and utilization of our rivers, harbors, waterways, and water resolutions while assembled in its thirty-fourth annual convention at Washington, D. C., March 23–24, 1939:

FUNCTIONS OF THE CORPS OF ENGINEERS OF THE UNITED STATES ARMY We recommend that hereafter all duties now performed by the Chief of Engineers under the direction of the Secretary of War shall be functions of the Engineer Corps, United States Army, and its head, to be administered under the direction of the Secretary of War and the supervision of the Chief of Engineers, except as otherwise specifically provided by act of Congress.

RIVER AND HARBOR LEGISLATION

We recommend the passage of a new river and harbor bill at the present session of Congress to include both the authorization

of complete projects and the approval of plans for certain large, comprehensive projects with partial authorizations for initiating these larger projects for which complete authorization may not be advisable at this time. This legislation is urged in order that our waterway-development program be kept in pace with our rapidly expanding business requirements and that additional navigation facilities may be provided to meet the growing demands of commerce and industry, and in such connection we emphasize the importance of completing as early as possible the connecting links in the intracoastal and inland-waterway systems.

PLANNING AND EXECUTION OF IMPROVEMENTS OF OUR WATER RESOURCES FOR NAVIGATION, FLOOD CONTROL, AND ALLIED PURPOSES

We recommend that all planning and execution of public improvements of our water resources for navigation, flood control, and allied purposes continue as in the past to be under the jurisdiction of the War Department as a function of the Corps of Engineers, in cooperation with other existing Federal agencies. Similarly the operation and maintenance of navigation improvements and the operation and maintenance of navigation improvements and the prevention of their injury by commercial wastes or pollution should be a duty of the corps. We reaffirm our faith and confidence in the Corps of Engineers, whose devotion to this Nation and loyalty to the Chief Executive have made possible the orderly and efficient development of the greatest waterway and flood-control projects on earth. In their many years of experience they have met several emergencies such as during the latest depression, when work on highly useful projects designed by them provided employment to hundreds, even thousands, that would otherwise have been on relief. Furthermore, we believe that only through the plans developed by the Corps of Engineers can we secure a consistent and coordinated improvement of our water resources.

APPROPRIATIONS

We recommend that the Congress of the United States assure We recommend that the Congress of the United States assure ample annual appropriations to advance the construction of authorized projects for river and harbor improvements and flood control in the interest of providing works of lasting value to the public and of furnishing widespread employment. We believe that such work is one of the best means of giving direct employment to a large number of skilled and unskilled workers and indirect employment to many basic industries of our Nation. We believe the 1939-40 Budget estimates for navigation and flood control are entirely too low and should be increased by the administration in accordance with the recommendations of the Corps of Engineers before the nonmilitary appropriation bill reaches the floors of Congress.

HYDROELECTRIC POWER

We recommend that where plans call for the development of hydroelectric power in connection with the construction of a dam for flood control, the planning and execution of such dam and the generation of electric power involved shall be under the jurisdiction of the agency responsible for the project and the power shall be turned over at the switchboard to the Federal Power Commission for distribution and sale. We believe that Federal planning, execution, operation, and maintenance of public improvements relating solely to the distribution and sale of electric power should be under the jurisdiction of the Federal Power Commission. be under the jurisdiction of the Federal Power Commission.

TRRIGATION

We believe that Federal planning, execution, operation, and maintenance of public improvements relating solely to irrigation should continue under the jurisdiction of the Interior Department.

SOIL CONSERVATION AND REFORESTATION

We believe that Federal planning, execution, operation, and maintenance of public improvements relating to the prevention maintenance of public improvements relating to the prevention of soil erosion and to reforestation, including such estimates of run-off and water-flow retardation in the various watersheds concerned as are considered to have useful or practical values, should continue under the jurisdiction of the Department of Agriculture.

NATIONAL DEFENSE

For many years European nations have recognized the nationaldefense value of their inland waterways. Experience during the World War justified their recognition. In this country existing waterways connect strategic areas and plans for more direct and improved connections have been made. It is accordingly urged that Congress consider this added value of our waterways when acting upon legislation and appropriations for navigation improvements. At this time when the greater portion of the civilized world is being forced to place national defense above all other issues it is fitting that we consider the great defense value of our water routes for transporting bulk commodities from production to manufacturing areas to supplement and relieve other means of transportation which are sorely overburdened in nationaldefense emergencies.

FOR NAVIGABLE WATERWAYS

We emphasize the traditional policy of free navigable waterwe emphasize the traditional policy of free navigable water-ways in the United States and we recommend that our waterways be deemed public highways and remain free forever. The sug-gested tonnage tax or tolls in any form on water-borne commerce is particularly obnoxious to us. We are unalterably opposed to the control and regulation of the water-transport services upon the inland waterways, intercoastal, coastwise, and lake areas by any regulatory commission.

AMERICAN MERCHANT MARINE

We believe that an American merchant marine, sufficient to promote our commerce and effectively aid in our national defense, is essential to the public welfare and we recommend that Federal aid necessary to maintain and increase our merchant marine be given.

OWNERSHIP OF SUBMERGED LANDS

Enactment by the Congress of the United States of any legis-Enactment by the Congress of the United States of any legislation attempting to assert or claim title or rights to any land or bottoms or minerals thereunder not presently owned by the United States under any waters or waterways is repugnant to the National Rivers and Harbors Congress, as it will deprive present owners and claimants of property rights without due process of law, many of these bottoms being owned by some States and in other instances is the property of individuals. We particularly condemn legislation now pending in Congress known as Senate Joint Resolution 24 and all similar legislation. We further condemn same as an invasion of States' rights, a violation of those rights guaranteed to property owners by the Constitution. property owners by the Constitution.

FLOOD-CONTROL RESERVOIRS

In order to insure the maximum protection of life and property from the destructiveness of floods, reservoirs, built for flood control under the provisions of flood-control legislation, should be designed and operated so that such reservoirs cannot be used for any purpose other than flood control until, in the judgment of the Army engineers, flood protection has been fully safeguarded.

APPROPRIATION RIDERS

We oppose as unsound policy any limitation in appropriation bills which may curtail, delay, or invalidate the construction of rivers and harbors or flood-control projects already authorized by

ARKANSAS RIVER NAVIGATION

We urge early completion of the economic survey of the Arkansas River for navigation. Though the Arkansas is one of the major tributaries of the Mississippi System it is yet the only one not now navigable. Traversing the States of Arkansas, Missouri, Oklahoma, Kansas, Texas, New Mexico, and Colorado the Arkansas Valley is one of Arkansas and Colorado the Arkansas. Oklahoma, Kansas, Texas, New Mexico, and Colorado the Arkansas Valley is one of America's great storehouses of natural wealth. Here, in the region of the highest average rall freight cost in the Union, is deposited 95 percent of our bauxite clay, half our lead and zinc, one of our major sources of petroleum and petroleum products, and one of our most extensive high-grade coal deposits, including the largest deposit of anthracite coal outside of Pennsylvania. The Arkansas region includes America's greatest winter wheat acreage and one of our major cotton areas. Here are mountains of gray iron and manganese yet untouched, the world's greatest potach field the only dependable source of helium gas greatest potash field, the only dependable source of helium gas within the continental limits of the United States, vast deposits of glass sand, wide pools of asphalt, extensive areas of commercial salt, tripoli, marble, granite, and limestone, resources essential to our economic welfare and our national life. We anticipate the day when a navigable Arkansas will complement the Mississippi River System.

RECLAMATION REQUIRED TO REHABILITATE 100,000 FARM FAMILIES

The National Rivers and Harbors Congress urges that adequate funds be provided to enable the Bureau of Reclamation, Department of the Interior, to expedite the construction of soundly conceived reclamation projects, in order to provide greatly needed irrigated land for more than 100,000 farm families—half a million persons—uprooted by circumstances beyond their control, who have moved into the arid and semiarid States seeking irrigated land for opportunities to make a new start in life and again become self-supporting.

Unless these families are reestablished promptly, they will add heavily to relief rolls and their situation become hopeless, while the solution of their problem lies in the "planned settlement on new reclamation and irrigation projects." And that a rehabilitation program with sufficient appropriations be instituted promptly to conserve and utilize water supplies in the Great Plains area.

The Coal Industry

EXTENSION OF REMARKS

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES Thursday, April 13, 1939

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the RECORD a letter written by myself, under date of April 10, 1939, relative to the coal industry.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 10, 1939.

What affects coal affects West Virginia.

Much is appearing in the papers about the coal conferences in ew York. These facts will be interesting to those who are follow-New York.

ing developments.

When the Guffey-Vinson Coal Act was being considered by Conwhen the Guffey-Vinson Coal Act was being considered by Congress, I opposed it. I said it was against the interest of the State. I stated, "The Guffey Coal Act will work an injury to the miners of the State of West Virginia * * * would be costly * * * would benefit only those on the pay roll * * * was a 'gold brick.'"

Immediately I was the target for attack. The politician who

Immediately I was the target for attack. The politician who supported every measure without question, the persons who wanted to get jobs on the Coal Commission, the paid representatives of John L. Lewis, all joined in the abuse. They tried to tell the miners I was opposing the miners' interest.

Four out of five of these individuals were on the pay roll of the Government or of the John Lewis regime. These organizers, whether the mines worked or not, went through the coal fields to spread poison among the miners. I am willing for the people to determine who told the truth. I want the people to know the facts.

facts.

Coal production in West Virginia during 1938 was at the lowest figure of any year since 1922 excepting 1932. The coal production in our State in 1937 was 118,050,000 tons. Last year, with the Guffey Coal Act in effect, this production declined to 93,511,099 tons. That means an approximate loss of 24,500,000 tons, or nearly \$50,000,000 in value.

Did this decline affect only the coal industry? No; the whole State felt the effect. The merchants sold less goods; the doctor, dentist, the professional man, found collections harder because the unemployed were unable to meet their bills as promptly as if they

unemployed were unable to meet their bills as promptly as if they had been working; the railroaders were furloughed because less coal was shipped. Everyone paid part of the penalty of this political move.

Some say that the decline was caused by bad business conditions.

Some say that the decline was caused by bad business conditions. No doubt that is partially right, but the same men who supported the Guffey Act were the men who helped pass other legislation that slowed up business recovery. If it was due to bad business, the same group helped to cause bad business.

As a last resort, the weather has been blamed for the failure of the Guffey Act to bring prosperity. Good weather or bad weather, the Coal Commission (many hundreds of persons) got their checks. They were not affected by bad business or the weather. They had time to come around before election to tell the voters of their interest. They now say things will be better next year. It is always to be better in the future.

The ones who drew millions of dollars out of the Treasury the

always to be better in the future.

The ones who drew millions of dollars out of the Treasury, the ones who are paid to spread propaganda through the coal fields, don't have to worry whether or not the mines are operating. They are on salaries, good ones, at that. Most of them are receiving large expense accounts; yes, much larger than the miner gets for working. These men have profited by the Guffey bill. The miners and the people of West Virginia outside of the coal industry have not profited.

These individuals who are on the pay roll will not admit their

These individuals who are on the pay roll will not admit their fakery. I am interested in giving the people of West Virginia the facts. They will find I told the truth when I said the Guffey Act would not help West Virginia.

Let's look at the record.

Still the Forgotten Man

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Thursday, April 13, 1939

EDITORIAL FROM MILWAUKEE JOURNAL

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Milwaukee Journal of March 30, 1939.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> [From the Milwaukee Journal of March 30, 1939] STILL THE FORGOTTEN MAN

STILL THE FORGOTTEN MAN

The W. P. A. has not been managed in a way to give the most employment possible to those in actual need. In other words, the forgotten man is still being forgotten by an administration which continually boasts of its devotion to his interests. This indictment comes from a majority of the House Committee on Appropriations, of whose members more than two-thirds are Democrats.

The committee begins with the inconsistent statement that the additional \$100,000,000 it recommends for W. P. A. from now until June 30 is not really needed. Nevertheless, it would grant this sum. The reason, of course, is that Congress has been put in a position of responsibility for throwing men and women out of jobs if it does not sign on the dotted line. President Roosevelt said that the cut of one hundred and fifty millions, less than 18 percent of what he asked, would throw 40 percent of W. P. A. workers off the rolls.

The committee does not recommend \$150,000,000. But it shows that the \$100,000,000 it does recommend makes the total larger than the President's own estimate in January. For what Mr. Roosevelt then asked was based on the estimate of no W. P. A. money remaining February 1, whereas there was \$145,000,000 left over on that date. This is one more example of the loose estimating on which the country is constantly asked for more than it can pay.

The indictment of W. P. A. management begins with the statement that administrative costs are "unjustifiably high." The committee criticizes something like \$500,000 a month for travel and subsistence. That means, to put it plainly, that some folks were going on junkets with money voted to give needy persons jobs. It criticizes \$150,000 a month for communications. Bureaucratic officials feeling their oats are addicted to extravagant telephone bills.

Under the head of "disproportionately high labor and material

Under the head of "disproportionately high labor and material costs," the committee points to more than \$300,000 of relief funds used to erect an exhibit building at the New York World Fair. How much do the needy, grateful for even the poorly paid W. P. A. jobs get out of this?

The committee notes that 89,000 persons on the relief rolls are not in actual need and that the Director of W. P. A. himself testified that probably 55,000 on the rolls were eligible for other kinds

These items are merely samples of the kind of extravagance that These items are merely samples of the kind of extravagance that is practiced under the plea of relieving human need. Yet when Congress made a little cut, there came no suggestion from the Administration that the waste, the junketing, the building to show off its virtues could be cut. No; the President said that one and a quarter million persons would be thrown out of work.

The picture is a sorry one. It shows how loosely the public's money is spent under the Roosevelt philosophy of deficit financing. More sadly it shows the hollowness of the pretense that all this spending by men in comfortable quarters, with comfortable travel allowances, is a great exhibition of charity and tender feeling for those in need.

those in need

The War Menace

EXTENSION OF REMARKS

HON. GERALD P. NYE OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Thursday, April 13, 1939

LETTER FROM HON. WILLIAM E. BORAH, OF IDAHO

Mr. NYE. Mr. President, very eloquent reference has been made here today to a letter addressed to a school body

by the senior Senator from Idaho [Mr. Borah]. The Senator from North Carolina in making reference to it quoted to some extent from the letter. I count the letter so deserving as to merit publication in its entirety, and I ask unanimous consent that it may be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 11, 1939.

Marvin Claussen,
703 St. Olaf Avenue, Northfield, Minn.
Dear Mr. Claussen: I am in receipt of your letter and I am deeply interested in what you say.
You are quite right when you state that "the growing war menace necessitates immediate action upon the part of American citizens." And no one is more concerned that that action be taken, and taken wisely, than the young men who are now in college preparing for the active affairs of life. If war should come, they would be the first victims. If they should cross the seas again to take part in a European war, those who are now seeking in every way to bring on a situation which means war would not be with them. When it comes to taking up the real

would not be with them. When it comes to taking up the real burdens of war, those who agitate war are never there.

You ask me to make some suggestions. The first suggestion I make is that you and all young people throughout the country investigate for yourselves as to the real issue which threatens to involve us in another European war. A thorough investigation will disclose to you that a more sordid, imperialistic war could hardly be imagined than this war should it unfortunately come.

hardly be imagined than this war should it unfortunately come. This is not a war over the question of democracy or totalitarianism. It was the democracies of Europe which wrote the secret treaties by which all spoils were divided even before the war was closed. It was the democracies of Europe which wrote the Versailles Treaty, not a peace treaty but a spoils treaty. It was the democracies which refused for twenty-odd years to make any changes in the Versailles Treaty looking toward peace.

We all abhor the doctrines of nazi-ism and the equally vicious doctrines of communism. But let us not be misled that this war turns upon a wholly different subject. Only a few days ago Mr. Chamberlain declared in one of his speeches that, while there was a question in Europe of ideology, etc., it was not up for consideration now.

a question in Europe of Ideology, etc., it was not up for consideration now.

Woodrow Wilson, speaking the profound sentiments of the American people, stated at Versailles that the United States wanted no territory, no reparations, no spoils, no loot. Reflect for a moment how much better the condition of the world today would be had the spoils of the victors never been incorporated in the Versailles Treaty and all had followed the far-seeing statesmanship of the then President of the United States.

The currence Prime Ministry of Canada Mackania King said.

The courageous Prime Minister of Canada, Mackenzie King, said a few days ago: "The idea that every 20 years this country, which has done all it can to run itself, should feel called upon to save periodically a continent which cannot run itself seems to me a nightmare and sheer madness." Again he said: "In a war to save the liberty of others and thus our own, we should not sacrifice our

own liberty or our own unity."

These European powers, whatever may be their idea of ideology or political views, pursue one and the same course when they come to deal with international affairs. They all alike violate treaties, disregard the most fundamental principles of right, pursue methods which (positably lead to war and then call upon the sue methods which inevitably lead to war, and then call upon the United States, Canada, and other nations to save them from their own intolerable and vicious methods.

own intolerable and vicious methods.

I urge, therefore, that you ascertain for yourselves just what all this madness means, rely upon your own investigation, your own intuitions, as to right and wrong.

When the time comes for the rising generation to deal with nazi-ism, fascism, communism—that devil's brew, which has been tendered to the clean-minded, patriotic, American boys—they will deal with it upon American soil and not in foreign lands where they would be sold out within a fortnight after they might have finished their job as they were at Versailles.

Very respectfully.

Very respectfully,

Business and Economic Conditions

EXTENSION OF REMARKS

HON. JOSEPH W. MARTIN, JR. OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Thursday, April 13, 1939

STATEMENT OF THE EXECUTIVE COUNCIL OF THE AMERICAN FEDERATION OF LABOR, FEBRUARY 14, 1939

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the American Federation of Labor:

The executive council at its midwinter meeting could not deal with its own administrative problems without giving careful and most serious consideration to the business and economic conditions prevailing throughout the Nation. The constituency of the executive council, numbering many millions, is seriously affected by the continuation of unemployment and adverse business con-

The absorption of the unemployed and the creation of work opportunities for all who are able and willing to work in private industry have ever been a part of the economic philosophy of the American Federation of Labor. We have consistently sought to

achieve these purposes.

During all the years intervening between 1929, when unemployment became a serious national problem, until the present moment the executive council has cooperated with the Government, with industrial management, and with all other groups in order that working men and women thrown out of work might find a new place

and new positions in private industry.

Both time and experience have already vindicated the position assumed and maintained by the American Federation of Labor upon

economic, social, and industrial problems.

We are firmly convinced that various forms of government spending, either in the distribution of relief or in the development

spending, either in the distribution of relief or in the development and maintenance of work projects designed to supply relief wages to unemployment, can only serve as temporary measures and cannot and do not provide a permanent solution for unemployment.

The market for the sale of goods and service can be increased and enlarged only through the application of a sound economic policy whereby there is placed in the hands of the masses of the people a buying power which will enable them to buy, use, and consume the manufactured goods and services which private industry is prepared to supply.

This leads to the inevitable conclusion that private industry and business, generally, should be stimulated so that the facilities of production may be increased and millions more working men and

women may be employed.

What can be done and what should be done, therefore, are the what can be done and what should be done, therefore, are the problems which, at the moment, call for consideration and a proper solution. We do not believe that the Nation has reached the maximum in production or consumption of manufactured goods. For that reason we cannot accept the reasoning of those who maintain that we must prepare to maintain constantly an army of unemployed as the wards of the Government. We must turn to private industry for the solution. It should and must serve the Nation.

Our national interests require that private industry be accorded the widest opportunity to do so. That involves expansion and an increase in productivity. Such action must be considered as the primary step necessary to create work opportunities for the millions

who are unemployed.

Obviously, the next step must be the establishment of credit and the will and purpose, on the part of the owners of industry, to risk, invest, build, and construct. The basis for such procedure must be found in the creation of a favorable state of mind. Fear, a lack of confidence, and distrust in governmental, social, and economic procedure should be removed.

A political and economic state of mind should be created which would enable all financiers and the owners and management of industry to face the future with confidence, willing to risk in the

would enable all financiers and the owners and management of industry to face the future with confidence, willing to risk in the expenditure of funds for the development of industrial enterprises and in the manufacture and sale of manufactured products.

We are firmly convinced that the realization of this objective should be the primary purpose of government, industry, and labor. Whatever stands in the way, whatever barrier may have been created, either as a result of fear or as a result of affirmative action on the part of those who administer the affairs of government, ought to be broken down so that our industrial processes may function in a proper way and unemployment may thus be overcome. Some strong, powerful, and influential representatives of private industry maintain that in order that private enterprise may go forward it is necessary that the rules and laws under which industry should operate should be more definite, clear, and understandable. This, it is asserted, would stabilize industrial conditions and would serve to release financial and industrial forces necessary to the enlargement and expansion of private industry. The executive council is firmly of the opinion that this issue should be met squarely. All should understand that no new rules or stipulations will be promulgated by some administrative bureau other than the rules and regulations definitely set forth in regulatory statutes enacted by the Congress of the United States. Such action will serve to help business, labor, and the people generally. Under such a plan industrial management would be accorded the widest opportunity to render service in the solution of our unemployment problem.

The executive council reaffirms the position of the American Federation of Labor regarding private enterprise and private initia-

The executive council reaffirms the position of the American Federation of Labor regarding private enterprise and private initiative. We are firmly committed to such an economic philosophy. We believe that private initiative, private investment, and private endeavor in private industry should earn a fair return upon such investment, and that labor should be paid a wage which would accord to all workers and their families an opportunity to live in decency and comfort.

decency and comfort.

We urge the development of the highest and most perfect form of cooperation between management and labor. We are convinced that the best interests of all the people of the entire Nation can be served through the acceptance by those who administer the

affairs of our Government and by the lawmaking bodies of the Nation of the well-considered plans and recommendations which both management and labor can, as a result of long and varied

both management and labor can, as a result of long and varied experience, submit for information and consideration.

The continuous existence of an army of unemployed, numbering more than 10,000,000 workers, is appalling. The records of the American Federation of Labor show that there were 10,388,000 workers unemployed during the month of December 1938. The records made up and kept by the American Federation of Labor show that since 1929 the unemployed have numbered from 8 to 14 million continuously. During these 10 years we have experimented in various relief measures and many organizations affiliated with the American Federation of Labor have expended millions of dollars from their treasuries in supplying relief to their unemployed members.

unemployed members.

If the unemployed could be accorded the opportunity to work in private industry the spending of millions of dollars for relief purposes would cease. This would mean that the burden of taxation could be reduced and the national income increased.

The spirit and morale of the unemployed workers would be lifted to a higher basis.

We are of the opinion that the responsibility for absorbing the unemployed in private industry should be placed squarely upon the owners and management of private industry and the Government. This can be done if and when the Government, industrial management, and labor cooperate in a full and complete way.

The executive council of the American Federation of Labor stands ready and willing to assist and to render all service possible in the promotion of a plan which will provide for the employment, in private industry, of the millions who are now idle.

International Problems

EXTENSION OF REMARKS

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES Thursday, April 13, 1939

EDITORIAL FROM NEW YORK MIRROR

Mr. CAPPER. Mr. President, the brilliant commentator Walter Winchell has an editorial paragraph on our international problems in a recent issue of the New York Mirror which I think will meet the universal approval of the American people. I ask unanimous consent to have it reproduced in the Congressional Record.

There being no objection, the extract from the editorial was ordered to be printed in the RECORD, as follows:

Once again Europe is rolling the loaded dice of Destiny.

Once again Europe is rolling the loaded dice of Destiny. Once again her miserable diplomats are pointing down the one-way street to war, as the only avenue to peace. And once again America is asked to play her role of the great international sucker. The time has come for us to pause and consider. If we must have another Unknown Soldier, let us not ask him to die for an unknown reason. And just what will be accomplished by dying in the mud? He will not increase America's resources; the last war nearly ruined the Great Plains. He will not increase America's wealth. In the last war we loaned our gold and were gold-bricked war nearly rulned the Great Plains. He will not increase America's wealth. In the last war we loaned our gold and were gold-bricked in return. He will not increase our liberties, for no man may protest slaughter after it starts. The truth is that external disaster never solved internal trouble. We must develop our youth, not sacrifice it. America must learn that her sons abroad will bring monuments to her glory, but her sons at home are a monument to America's common sense. The future of American youth is on top of American soil, not underneath European dirt.

Excessive Earnings of Toll Bridges

EXTENSION OF REMARKS

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 13, 1939

Mr. ALEXANDER. Mr. Speaker, I have just introduced a bill in cooperation with the gentleman from Wisconsin [Mr. GEHRMANN], which provides for the authorization by the States of Minnesota and Wisconsin to construct, maintain, and operate a free highway bridge across the beautiful and scenic St. Croix River at Osceola, Wis., and the point in Chisago County, Minn., where it would cross that river. I hope the Rivers and Harbors Committee will act favorably on this bill in as expeditious manner as possible.

However, on this occasion and in this connection, I wish to take time to present to the attention of the Members of Congress some information regarding the excessive profits which are being taken from the pockets of the general public on toll bridges throughout the country.

It will be noted that this bill, which we have introduced, calls for a free bridge.

Some toll bridges, such as the one at Hudson, Wis., only a few miles south of the bridge proposed to be erected under the authorization of my bill, collect annually almost the entire original cost of the bridge. Some bridges, such as the one which we have all crossed at Dubuque, Iowa, collects yearly more than its original cost.

Especially interesting and apropos on this subject is a letter which I have just received and which I insert in the RECORD at this point:

Hon. JOHN G. ALEXANDER.

Representative from Minnesota,

Representative from Minnesota,
House Office Building, Washington, D. C.

Dear Sir: I wish to call your attention to Senate file 1755 in regard to toll bridges, which I strongly urge you to support.
I am not in the habit of wiring and writing my Representatives on every issue that comes up, giving my personal opinion, as I believe you are far better qualified and informed to pass on them than I myself, but being thoroughly conversant with the earnings of most of the toll bridges in the country and realizing the obnovious situation that exists thereby. I feel constrained to call obnoxious situation that exists thereby, I feel constrained to call your attention to certain facts.

The profits on privately owned toll bridges have pyramided to unprecedented heights because of the increase in automobiles and truck traffic. I will give you a few instances in this territory of which I have first-hand knowledge.

At Omaha, Nebr., there exists a 50-year-old structure which could be replaced by a modern up-to-date bridge for \$1,500,000. This bridge collects a toll, according to Government records, of \$600,000 to \$700,000 annually and has done this during the last 10 to 15 years and with an average of \$100,000 to \$600,000 the preceding 20 years. The bridge at Hudson, Wis., according to State of Wisconsip Highway Department wavelength. ceding 20 years. The bridge at Hudson, Wis., according to State of Wisconsin Highway Department records, collects a toll of approximately 80 percent of its original cost per annum, and has done so for a period of 10 to 15 years. The bridge at Prescott, Wis., collects a toll of approximately 35 percent of its original cost per annum, and has done so for a period of 10 to 15 years.

The toll bridge at Dubuque, Iowa, collects from \$250,000 to \$300,-100 per annum and has done so for a period of 20 to 25 years. This bridge is 50 years old and could be reproduced for not to exceed \$200,000 in its present condition. This is also true of the bridge situation at Clinton, Iowa. All of the bridges listed above are 50 years of age or more, with the exception of the bridges at Prescott and Hudson, Wis., which are in the neighborhood of 30

years of age.

In the Bureau of Public Roads there are records of a toll bridge survey made approximately 10 or 12 years ago which gives the actual conditions existing in the country from the toll bridge situation, and the enormous profits that are taken by these structures. While there are many State laws regulating and providing for the safety of publicly owned and built structures, I know of none applying to privately owned bridges, and many of the structures operating today are at best nothing but death traps, and no selfrespecting engineer would permit them to be placed in their present condition even on an isolated township road.

There seems to be no remedy at the present time for the elimination of this evil. Many of these bridges if operated on a self-liquidating basis by municipalities would liquidate themselves in from 2 to 8 years if Senate file 1755 became a law.

As I stated above, in the files of the Bureau of Public Roads is a record of the investigation conducted by that department which, I think, will substantiate my statements. And in the Congressional Record of 10 or 12 years back is a report made by Tom McDonald, Chief of the Bureau of Public Roads, which would be of great interest to any legislator desirous of ridding the traveling public of this nuisance.

United States Leads World in Number of Jobless

EXTENSION OF REMARKS

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, April 13, 1939

EDITORIAL FROM THE BATTLE CREEK (MICH.) ENQUIRER-

Mr. SHAFER of Michigan. Mr. Speaker, the United States still holds the unenviable position of having more unemployed than all other leading nations of the world. This Nation has come back the shortest distance of all nations toward the recovery levels of 1929 despite the billions of dollars that have been spent and the many reforms and panaceas attempted by the New Deal.

In this connection I ask unanimous consent to extend my remarks and include therein an interesting and significant editorial from the Enquirer-News, a daily newspaper pub-

lished at Battle Creek, Mich.

The editorial follows:

ALONG THE WAYSIDE

Considerable significance must be attached to the latest world unemployment report, which reveals that the United States leads the world in the number of jobless.

Figures released by the International Labor Office in Geneva show

that 13 of the 22 countries appearing on the list had more unemployment in the first quarter of this year than in the last quarter

However, the greatest increase in the number of jobless occurred in the United States, which had 11,523,000 unemployed during the first 3 months of 1939, which was 1,408,000 more than in the final quarter of last year.

Among the seven countries which have fewer workers in jobs today than 10 years ago, this country also holds the lead. Employ-

ment here is 15.8 percent below that of 1929.

When the Roosevelt administration came into power the country was struggling to meet the challenge of a depression. The Roosevelt answer was a new deal, which, the Nation was told, would relieve the situation and drastically reduce unemployment. Since that time the administration has spent billions of dollars on its program to reduce the jobless, yet our Nation still leads the world in unemployment.

Those who opposed the radical New Deal method of fighting the depression, held to the theory that sound business methods and economy would bring about a return to prosperity. At the time the depression was world-wide and this Nation was the only one

to adopt such unusual measures to meet the emergency.

In the light of developments it appears rather conclusively that
the New Deal methods have failed, while nations which adopted a less spectacular but more sensible program have progressed to-ward normalcy much faster.

The most serious aspect of the entire picture is that the adminis-

tration refuses to recognize defeat.

Plant Diseases Affecting Tobacco

EXTENSION OF REMARKS

HON. JOSEPH W. BYRNS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Thursday, April 13, 1939

STATEMENT OF FACTS, PETITION, AND BRIEF PREPARED BY M. F. WILLIAMS

Mr, BYRNS of Tennessee. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement of facts, petition, and brief prepared by M. F. Williams, field agent, Eastern Dark Fired Tobacco Association, in support of the bill H. R. 2955:

Diseases of tobacco plants such as wildfire, black fire, root rot, mosaic, and blue mold have been prevalent in this section of the mosaic, and blue mold have been prevalent in this section of the country for many years and have occasioned losses to tobacco farmers of millions of dollars, thus adding another large burden to the calamities which have beset tobacco farmers. Such diseases are decidedly on the increase and have done more damage each succeeding year until 1938, when the amount of losses to the farmers and to the Federal Government and the States in tobacco taxes were truly astounding.

This situation has engaged the attention of Eastern Dark Fired Tobacco Growers' Association, a cooperative organization having a membership of more than 20,000 farmers, and by resolution of its board of directors on October 14, 1938, petitioned the legisla-

Tobacco Growers' Association, a cooperative organization having a membership of more than 20,000 farmers, and by resolution of its board of directors on October 14, 1938, petitioned the legislature of the State of Tennessee to make an appropriation to fight these diseases through the establishment of an experiment farm in Robertson County or Montgomery County for that purpose and further petitioned the Department of Agriculture of the United States to take necessary steps to broaden and extend its services to tobacco farmers of this section in this regard.

Kindred resolutions have been adopted by the county courts of many of the counties, including Robertson County, Cheatham County, and Montgomery County, where dark fired tobacco is grown and mass meetings have been held in practically all the counties which have been attended by large numbers of growers from these counties and resolutions of similar purport have been adopted. The Farm Bureaus of practically all the counties in this area have taken action on this matter by resolution and the State Farm Bureau of the State of Tennessee, pursuant to the interest manifested in this matter by the people and the county Farm Bureaus of all tobacco-growing counties in Tennessee, has adopted and spread upon its minutes a resolution requesting action by the State of Tennessee and the Federal Government.

Pursuant to these resolutions and the intense interest of farmers in this area, the Legislature of the State of Tennessee at its 1939 session passed an act, being house bill No. 670 and senate bill No. 520, appropriated \$15,000 a year for 2 years, or a total of \$30,000, for the purpose of equipping, erecting buildings, maintaining and operating an agricultural experiment station in Robertson County or Montgomery County for general agricultural experiment purposes and particularly the study of plant diseases such as affect tobacco, particularly of the dark fired and air-cured dark types. A copy of said bill appears as an exhibit to this petition.

It is to be noted also

exhibit to this petition.

It is to be noted also that the appropriation by the State of Tennessee in said bill is depended upon and contingent on an appropriation of a like sum or of a greater sum by the Federal

appropriation of a like sum or of a greater sum by the Federal Government in this matter.

It is thus seen that this experiment station is now an accomplished fact and can be and will be established and put into operation in a short time for the benefit of the farmers of this section if an appropriation can be obtained from the Federal Government to match the State funds appropriated, and that unless such funds can be obtained from the Federal Government all the efforts and hopes of the farmers of this section and of the various organizations and bodies which have taken so much interest in this vital question will be valueless and of no avail.

We submit that in 1938 the Federal Government received in taxes on tobacco and tobacco products of all kinds the immense sum of \$568,182,000, and that the State of Tennessee received from like sources the sum of \$2,880,000.

The total acreage of types Nos. 22, 23, 31, and 36 in the year

The total acreage of types Nos. 22, 23, 31, and 36 in the year 1937 was 137,000 acres in Tennessee, and the poundage upon these acres in Tennessee was 114,890,000 pounds, and when this amount of tobacco, produced by Tennessee farmers, is manufactured and purchased by consumers, the Federal Government and the State of Tennessee will realize approximately \$45,000,000 in revenue therefrom.

In order to give some idea of the effect of tobacco diseases in In order to give some idea of the effect of tobacco diseases in 1938 upon the tobacco crop of that year, it is a matter of record that through April 5, 1939, there had been marketed of type No. 22 tobacco on the market in Springfield, Tenn., and Clarksville, Tenn., the amount of 38,169,000 pounds at a sale price of \$3,091,000, whereas on the same date in 1938 the amount of 61,739,000 pounds had been marketed on these markets with the sale price of \$6,791,000. The acreage planted to tobacco which was delivered to these markets was approximately the same for the year 1937 and 1938, so that the growers received approximately \$3,700,000 more for their tobacco through sald date in 1938 than in 1939. It is a known fact that like grades of tobacco of the 1938 crop brought as much, if not more, than the 1937 crop, so that this brought as much, if not more, than the 1937 crop, so that this vast difference in the proceeds of tobacco has been due very largely to the reduction of grades on account of tobacco plant diseases

which affected tobacco so disastrously in 1938.

Attention is also called to the fact that the Department of Agriculture of the United States has taken about 3,600,000 pounds of damaged tobacco of the 1938 crop allowing the growers to realize about \$800,000 therefrom.

LXXXIV-App-

It is thus seen that it is to the mutual interest and advantage of growers, and of the Federal Government, and of the State governments that some steps be taken to minimize this tremendous loss due to tobacco plant diseases.

There is no group in whatever capacity they may be interested in tobacco in this area or whether they are directly interested in tobacco at all, that is not vitally interested in the relief of this stituation and in the appropriation by the Congress of the United States in this matter. An appropriation of money of comparatively small amount will do wonders for us in the Black Patch and will return to the people and to the Federal and State Governments many dollars for every dollar expended thereon.

We, therefore, earnestly petition the Congress of the United States and/or any committee or committees which may consider this matter to come to our relief in this emergency and to make an appropriation from Federal funds sufficient to begin this organized fight upon the tobacco diseases which have been so disastrated. trous to us.

National Forest in Michigan

EXTENSION OF REMARKS

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, April 13, 1939

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of April 8, 1939:

[From the New York Herald Tribune of April 8, 1939] FOR A NATIONAL FOREST IN MICHIGAN

An investment in public welfare is proposed by Representative Frank E. Hook, of Michigan, in a bill to appropriate \$10,000,000 for the purchase of timbered lands in the Gogebic-Porcupine Mountain area in the Upper Peninsula of Michigan as part of the new Ottawa National Forest. This act should ultimately take some 50,000 people off the relief rolls, at an estimated probable saving of \$25,000,000 a year. It is the type of national investment which does not compete with private industry. It provides a means for the Government to cooperate with the lumbermen toward a mutually beneficial production. ally beneficial production.

While the Hook bill (H. R. No. 931) may seem at first glance merely of sectional interest, it suggests a wise move in the direction of national saving which should appeal to income-tax payers of New York and other cities. The question that concerns all of us is whether commercial lumbering operations shall devastate millions of acres of Michigan forest lands or whether the Government, in the public interest, shall purchase these lands from private owners in order that the natural resources thereon shall be consumed in a gradual and economic manner rather than ruthlessly liquidated.

Lumbermen declare that they cannot afford to use up slowly the matured growth on privately owned lands while the annual tax bill has to be met; they say they must follow the adopted procedure of "clear cut and get out." The effect of this procedure, which can be seen by any traveler through the northern Michigan Peninsula, is to denude the land, invite the fires which so readily follow when the cooling dampness of the forest has been taken away, and to leave in the wake of commercial lumbering operations, as herefolore carried on, a scene of desolation such as recells to as heretofore carried on, a scene of desolation such as recalls to mind the picture of no man's land in France in 1918.

mind the picture of no man's land in France in 1918.

Representative Hook proposes that the acquired area—containing one of the last stands of virgin timber in the Middle West—shall be leased to commercial operators by competitive bidding, with their operations restricted to selective cutting so that the economic value of these forests may be preserved for all time. Byproducts of the acquisition of this land in its virgin state are the results in flood control and avoidance of soil erosion, in addition to the reduction of fig. beyond and the preparations of in addition to the reduction of fire hazard and the perpetuation of timber supply, which, in themselves, should be worth to the Nation all of the original investment.

We believe that the Nation will approve an opportunity to make a public investment that will be noncompetitive with private industry, that will provide an economic future for the 127,000 inhabitants of the five counties affected by the Hook bill, that paves the way for 40 percent of those worthy citizens to leave the relief rolls and reestablish themselves in the American manner, and that maintains for those who can visit it an area of magnificent recreational facilities.

Puerto Rico and Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Thursday, April 13, 1939

STATEMENT BY HON. RAFAEL MARTINEZ NADAL, PRESIDENT OF THE SENATE OF PUERTO RICO

Mr. CARLSON. Mr. Speaker, the United States Government has a direct interest in and contributes annually large sums of money to the citizens of Puerto Rico. The statement I am including in these remarks, by Hon. Rafael Martinez Nadal, president of the Senate of Puerto Rico, contains information that should be of value to us. On the one hand we make direct contributions to the support of the government and its citizens, and on the other hand we enact reciprocal-trade treaties and legislation that more than destroy our beneficence.

STATEMENT BY THE HONORABLE RAFAEL MARTINEZ NADAL, PRESIDENT OF THE SENATE OF PUERTO RICO, DELIVERED BEFORE THE SENATE OF PUERTO RICO ON MARCH 24, 1939

I should like to make a few statements for the record.

I should like to make a few statements for the record.

It is to express our resentment at the mistreatment that we are receiving, both at the hands of the Congress of the United States and of the national administration. Not only from Congress but from the national administration as well.

While there is much boasting of democracy in the United States, and they feel justified in opposing all those whom they feel might menace the democracy of the world Puerto Rico is being administered not under the regime of a republican but of a Fascist form of government. Politically we are being held over 40 years backof government. Politically we are being held over 40 years back-ward with curtailed liberties, thus being unable to control our own destinies. This is being done with a people of our culture and our civilization, with a people that for over 40 years have been endeavoring to absorb the purest principles of democracy, with a people that have conducted themselves with good judgment, intelligence,

and discretion.

And notwithstanding all these demonstrations of our having absorbed democratic principles and having acquired the attributes of true citizens of a republic, we are maintained in a state of political slavery, there is bickering with the powers of our legislature, and the latter is not permitted to delve into any question that might bear the slightest semblance of unconstitutionality, while on the other hand, we receive ukases from the Department of the Interior of the United States, with laws drafted there for our approval exactly as submitted, regardless of violation of all the constitutional principles of the United States, and regardless of violation of all the constitutional principles of our organic act.

When these bills are sent to us, it is with the threat that, if not approved exactly as submitted, Puerto Rico will not be given additional grants of money, and the national administration thereby places the entire well-being of Puerto Rico upon a yearly remittance of a few million dollars, with which an administrator of the Puerto Rico Reconstruction Administration may play politics on the island and spend a large percentage for cement, steel hars on the island and spend a large percentage for cement, steel bars, etc. And the truth of the matter is that practically all the money so "generously" granted, returns to the United States in purchase of nails, cement, lumber, steel bars, and zinc, and only a small amount, very small indeed, remains here in the form of wages for

Puerto Rican labor.

Moreover, Congress enacts laws which destroy the sources of industrial, agricultural, and commercial wealth of Puerto Rico. They send us three or four million dollars and then deprive us of ten, fifteen, or twenty million. Commercial treaties are concluded with fifteen, or twenty million. Commercial treaties are concluded with Cuba, a foreign nation, an independent republic, not composed of American citizens. * * * Cuba enjoys all the advantages; tariff concessions on pineapples and sugar. Puerto Rico has to stand all the discriminations, all the disadvantages. Presently a commercial treaty is being drafted—not by Congress, but by the administration—which is intended for no other purpose but the betterment of the situation of Cuban sugar producers, to the detriment of the producers of sugar of Puerto Rico. Treaties are concluded with Switzerland which contribute further to the ruination of our industry. Treaties are concluded with England which concluded with Switzerland which contribute further to the ruination of our industry. Treaties are concluded with England which destroy the agricultural industry of copra production in Puerto Rico. Treaties are made with Switzerland, resulting in price reduction and lowered income from all the needlework in Puerto Rico, thus destroying this industry. Even in the Philippines the needlework industries are in a better position than ours. The minimum wage and hour law is applicable to us but not to the Philippines. While we are being oppressed, foreigners are being afforded opportunities for development. Congress enacts the Costigan-Jones law whereby our people are destined to perish from famine and our rural population is denied employment and means of subsistence. The time will come when the rural man will have no place where to work.

There is something more serious still. Both the administration and Congress know that our great and fundamental problem consists in the overpopulation of the island and, knowing that it is the moral obligation of the United States to procure the well-being the moral obligation of the United States to procure the well-being of Puerto Rico, instead of negotiating international agreements with the Dominican Republic, with Venezuela and with other countries of Latin America that have large extensions of land, instead of negotiating treaties for the sending of our surplus population to those countries, the United States is planning to make such arrangement for 100,000 German Jews in the Dominican Republic. So that in the United States there is greater sympathy for the Jews fieeing in confusion from Hitler's power than for American citizens residing in Puerto Rico, who are perishing from famine due to unemployment, caused by laws enacted by the Congress of the United States. Congress of the United States.

This is what I had wished to say for a long time. I had kept it deep in me for months, seeing the mistreatment we receive from the American Nation.

Over there they vote the bills approved by our legislature. Orders come directly from there to the Commissioners who head our government departments. The Chief of the Division of Territories of the Department of the Interior is the one who really governs and rules in Puerto Rico, and our acting governors have to cable there for orders in any matter, and even in connection with local municipal differences they have to cable there for them to say what is to be done.

Under these circumstances the political battles we have been Under these circumstances the political battles we have been waging here are useless if we later have to suffer the policy of whip wielding by the Government of the United States. On my part, I consider that all this is Byzantine. Why struggle in our election campaigns to come to this? It is not worth while for us to make these efforts, or any sort of sacrifice, to achieve this sort of position. They are trying to win us over with red beads, as one would try to win over the Negroes of Zululand, with a few paltry millions, all the while destroying our every source of wealth without replacing them by others, suppressing our desire to make our people contented, and blocking our efforts. It is not worth while to come here! It is useless to struggle!

while to come here! It is useless to struggle!

There is a need for all Puerto Ricans to become united at once and forever, and for us, the legislators, to state that we are here as surplusage. Let them come to govern here and to provide for the well-being of Puerto Rico, for we are not in a position to do so. Our representation here is a farce.

Politically, we have the Governors appointed by the administration, who are surrounded by continental Americans, inclined to discredit everything that is Puerto Rican and the Puerto Ricans, and it is a disgrace for Puerto Rloo that certain Puerto Ricans also share this attitude. In reality, men like myself, who have been campaigning in public life in our country for 30 years, cannot but feel considerable resentment, disgust, and disappointment. feel considerable resentment, disgust, and disappointment.

We feel disgusted over so much treachery, and we are disappointed at having sacrificed so much in these struggles, for none of this is worth the sacrifice of youth and of the life of an honest person.

worth the sacrifice of youth and of the life of an honest person.

I have taken advantage of this opportunity to make these statements, which I could hold no longer. This is what I had to say to my friends of the senate. This is what I had to say to the country from the chair of the senate. If this should bring my downfall, let it be thus. Such is the procedure, such is the manipulation: To form new leaders and disbar the old leaders. They will say there, "From such department and from such office the friends of Martinez Nadal have to be put out." Very well. Let them put them out. They will be put out. But in the meantime, while I continue struggling and being honest, no one can dislodge me from the hearts of the Puerto Ricans.

The Philippine Supply of Chromium

EXTENSION OF REMARKS

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1939

Mr. KNUTSON. Mr. Speaker, in connection with the bill now pending before the House (H. R. 5191) to provide for the common defense by acquiring stocks of strategic and very necessary raw materials in time of national emergency, I wish to submit an article appearing in the Far Eastern Survey, the Journal of the Institute of Pacific Relations, in its issue of March 1, and ask that it be printed in the RECORD for the information of the House. It deals with the enormous chromite deposits that have recently been developed in the Philippines.

Both the House and Senate reports stress the fact that up to this time the United States has been almost wholly dependent upon foreign countries for this ore, in each case emphasizing that an adequate supply of chrome is essential for the national defense, because there is no known substitute for many of its uses. Of the 556,237 tons of ore which we consumed in 1937, only 2,321 tons came from our own mines. Of the importations we were compelled to rely upon, only 8 percent came from our possessions in the Orient, the balance being made up of shipments from South Africa, Turkey, India, Cuba, and New Caledonia,

In the light of this statement the report just made public by the Pacific Relations Institute appears paradoxical. It points out that prior to 1935 chromite did not figure among the lists of exports from the Philippines. In that year, however, initial shipments amounted to 1,292 tons. later, in 1937, they had jumped to 69,856 tons; while during the first 6 months of 1938 the shipments reached 57,400 tons-an increase of 234 percent over the same period for the preceding year. This almost magical increase is explained by the feverish haste with which a war-mad world is now rearming itself, coupled with the simultaneous discoveries of this ore. The most extensive deposits have been found in the mountains of Louzon. The holdings of the Consolidated Mines at Masinlac, consisting of more than 10,000,000 tons of proved chrome ore in a single small mountain is the largest chromium deposit in the world. It should be a matter of pride and satisfaction for every American to know that in this crisis the Consolidated Mines, acting through the chairman of its board, Courtney Whitney, has placed its properties and facilities unreservedly at the disposal of the American Government.

The article referred to follows:

PHILIPPINE CHROMITE NOW A FACTOR IN WORLD MARKET

Since the announcement that important chromite deposits had been discovered in the Philippines (see Far Eastern Survey, January 30, 1935, p. 13), considerable progress has been made in building a new domestic mining industry spoken of in some quarters as a potential rival of Philippine gold. War clouds bring prosperity to producers of chromium, a constituent of the ferrochrome alloys which are essential for war purposes. Competitive rearmament has accordingly increased the demand for this metal already stimulated accordingly increased the demand for this metal already stimulated by the steady extension of its uses in other fields and general recovery in the base-metal market. These factors furnished a powerful impetus to the Philippine industry, quickening the tempo of exploration and production. In turn they have led to cynical reappraisals of the ultimate political destiny of the Commonwealth should control of its chromite resources prove vital either to the United States or other major powers.

Although the Philippines now rank as an important producer of chromite, the industry is so new that very little was known of deposits there prior to 1933. In recent years, however, extensive exploration has yielded workable bodies of ore occurring in the ultrabasic rocks from northern Luzon to Mindanao. The west and southeast coasts of Luzon, the southern part of Panay, parts of Samar, Dinagat Island, and the northern coast of Mindanao all contribute to the known chromite reserves.

The first deposit of commercial consequence found and exploited was the Florannie Mine, near San Jose, on the Caramoan Penin-

The first deposit of commercial consequence found and exploited was the Florannie Mine, near San Jose, on the Caramoan Peninsula in Camarines Sur. Here the Florannie Mining Co., under an operating agreement with the Benguet Consolidated Mining Co., has developed approximately 100,000 tons of good grade ore running better than 50 percent in chromic oxide content. This entire output was contracted to the Union Carbide Co. and shipments began in 1936. By November 1938 some 70,000 tons had been sent to the United States. Estimates of remaining unmined reserves run from 30,000 to 50,000 tons. Other small bodies of good chromite are found in the same section and will probably be mined by the Florannie Co., which is the only producer operating there. ating there.

ating there.

While the Florannie Mine has accounted for the largest Philippine export tonnage to date, by far the most spectacular discovery of chromite involves the area along the foothills on the west side of the Zambales Mountains in Luzon. These deposits, said to be the largest in the world, aroused the early interest of the United States and Philippine Governments, which exercised their right of reservation under the basic mining law. While several Government reservations remain in force, one was vacated. In this latter area Consolidated Mines acquired holdings which it subselatter area Consolidated Mines acquired holdings which it subsequently turned over to the Benguet Consolidated Mining Co. on a profit-sharing basis. Tonnage estimated at more than 10,000,-000 tons has now been proved. Unfortunately the ore is not of the same high quality as that produced at the Florannie Mine. Averaging not more than 34 percent in chromic oxide content, it is below the usual standard for metallurgical purposes.

Aluminum oxide is present, however, in a proportion very desirable for the manufacturer of refractory materials. In addition, recent reports from the Philippines speak of new methods devised to permit the use of this ore in the manufacture of metallurgical products. Should these hopes be fulfilled a substantial expansion products. Should these hopes be fulfilled a substantial expansion of production would be indicated. Aside from the immense Benguet Consolidated holdings, there are estimated ore reserves of more than 250,000 tons controlled by several other private companies operating in the Zambales area. This is all richer in chromic oxide. Ore of metallurgical grade, for example, is taken from the Acoje mine at Santa Cruz, which has estimated reserves of 150,000 tons. Westima conditions which have the effect of of 150,000 tons. Wartime conditions, which have the effect of lowering grade requirements, would undoubtedly see a vastly increased production.

When the extent of the Zambales deposits became apparent, explorations were hastened in other parts of the archipelago, with varying success. On the island of Samar a number of small chromite lenses of shipping grade have been discovered, and some ore was shipped to Europe from this source. Difficulties have been encountered, however, and development is delayed. The same situation applies to the chromite of superior quality found on Dinagat Island, south of Leyte. Transportation from the mine and the absence of any suitable ocean shipping point are here the major problems. Mindanao ore, discovered along the north coast in the foothills south of Cagayan, Oriental Misamis, is scattered and expensive to operate. Some 10,000 tons have so far been uncovered, showing the chromite to be of high quality, and in the event of war it would certainly be mined.

Philippine export statistics reflect the growth of the industry. When the extent of the Zambales deposits became apparent,

Philippine export statistics reflect the growth of the industry. Prior to 1935 chromite did not figure in the export list and in that year only 1,292 metric tons were shipped. In 1936, 11,890 metric tons were exported and in 1937 shipments mounted very rapidly, reaching 69,856 metric tons. Tax-collection figures for the latter year show that 76,416 metric tons were actually removed from year show that 76,416 metric tons were actually removed from Philippine mines. In 1937 world production of chromite rose to an all-time peak, more than doubling the low figure of the depression and exceeding 1,000,000 tons for the second successive year. Despite that fact, Philippine exports of almost 70,000 metric tons were an important source of supply in the world markets, comparing with the following tonnage figures in other leading producing countries: Southern Rhodesia, 276,000 tons; Soviet Union, 219,000 tons (1936); Union of South Africa, 169,000 tons; Turkey, where chromite mining has developed very rapidly in recent years, 164,000 chromite mining has developed very rapidly in recent years, 164,000

chromite mining has developed very rapidly in recent years, 164,000 tons (1936); and Cuba, mostly low-grade ore, 95,000 tons. In the first 6 months of 1938 Philippine exports of chromite continued at the same high rate. During this time 57,400 metric tons of ore, valued at #1,393,120, were shipped, compared with 17,201 metric tons for the same period in 1937, an increase of 234 percent. Shipments dropped in the second half of the year, amounting to less than 10,000 metric tons (through October) against more than 25,000 metric tons for the 4-month period, July-October 1937. July-October 1937.

In the disposition of Philippine chromite, the United States has been able to command the market. At the outset, Japan, by commercial pressure and persuasion, sought to contract for the entire output of the islands (see Far Eastern Survey, Apr. 14, 1937, p. 85). This plan was unsuccessful. In 1935 Philippine trade returns indicate shipments of 1,071 metric tons to the United States and 210 metric tons to Japan. In 1936 the relative percentages were approximately maintained, the United States receiving 9,206 metric tons and Japan 2,084 metric tons. In 1937 United States trade returns show imports of Philippine chromited amounting to 43,648 long tons. Except for 508 tons taken by Italy in 1936, Philippine export records are virtually barren of shipments to any countries other than the United States and Japan.

The United States is by far the largest consumer of chromite, yet almost all of its supply must be imported. Like other major consuming countries, except Russia and to some extent Japan, it produces only a minor fraction of its needs. In 1937 the United States imported 554,000 long tons of chromite, or approximately half of world production, and of this amount the Philippines supplied about 8 percent.

Chromium makes steel harder and increases its tensile strength. Chromium makes steel harder and increases its tensile strength. Alloyed with nickel it is used in making armor plate. The chromium alloy steels find many other uses in the manufacture of airplanes, projectiles, guns, ball bearings, safes, tools, and machine tools. The stainless steels, largest and best known use of chromium, constitute a still unfinished chapter in metallurgy and industry. Chromium is extensively utilized in the automotive and transportation industries, in building and petroleum production. Chrome plating has been widely developed for decorative purposes and for its wear-resisting qualities. In addition, 40 percent of the world consumption of chromite is devoted to the manufacture of chrome brick and other refractory materials and cements. Lesser chrome brick and other refractory materials and cements. Lesser quantities are consumed in the manufacture of chromic acid for electroplating, and in the dyeing, tanning, pigment, and ceramic industries.

Clearly chromium is an expanding industry and a useful one to the Philippines. Although chromite exports from the islands are valued at less than 1 percent of total exports, the hazards of independence and restricted markets offer no threat here, as they do to so many Philippine products. The architects of a new Philippine economy may well find in chromite a dependable building block.

Interstate Trade Barriers Challenge the Union of the States

EXTENSION OF REMARKS

HON. WILLIAM L. NELSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1939

ADDRESS BY GOV. LLOYD C. STARK, OF MISSOURI, AT NATIONAL CONFERENCE ON INTERSTATE TRADE BARRIERS, CHICAGO, ILL., APRIL 6, 1939

Mr. NELSON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address by Gov. Lloyd C. Stark, of Missouri, at the National Conference on Interstate Trade Barriers, Chicago, Ill., April 6, 1939:

I appreciate very much this opportunity to address this gathering, and I am especially honored to have been chosen the keynote speaker at what I believe will prove to be an historic conference in the commercial history of the United States.

Gentlemen, the business before this conference is urgent business. The time to erase the trade barriers which are blocking free commerce between the States is now.

Within 9 short years this form of destructive competition abroad, inspired largely because of, and aggravated by, the depression, has brought Europe to the brink of war. True, there are complicating factors, but the basic cause of war inevitably is economic in nature.

Remote as any such possibility may seem to us in free America, we cannot ignore the results which cutthroat economics have

we cannot ignore the results which cutthroat economics have brought about in the lands on the other side of the Atlantic Ocean.

I spoke of "free America." It is a phrase we may well ponder, as we study this question of trade barriers between the States. Can we still call it "free America" if the right to do business across State lines is dependent on the whims or selfish interests of 48 different kingdoms?

We may well ask, then, if this is the United States of America, We may well ask, then, if this is the United States of America, or the New World version of the Balkan states. I know of no more apt term for this process of erecting tariff walls about a State than "Balkanization." It fits like a glove, yet the very sound of the word is repugnant to American ears.

Prof. James Harvey Rogers, of Yale University, recently made an exhaustive study of the whole question of trade barriers.

He found three major reasons for this trend: First, the need for additional State revenues; second, the growing and ofttimes unregulated business of trucking; and, third, the battle between local merchants and outside interests for domination of specific trade

I can deal with the first of these three factors from first-hand

I can deal with the first of these three factors from first-hand knowledge. I was a businessman before I was an elective official, and I have diligently endeavored to administer the office of Governor along the lines of accepted and successful business principles. But we are confronted with a new era in government in many respects. The demands for new types of necessary but costly services are coming from the people themselves, and may not be denied. Social-security programs, launched in the optimistic belief that they could be restricted to needy citizens, have become terrific drains on State treasuries. drains on State treasuries.

So it is easy to understand why State officials should be engaged in a desperate search for revenue to finance these new services.

And we must understand that the need is genuine if we are to

And we must understand that the need is genuine if we are to deal intelligently with this question.

The point is this: If the States try to get these additional revenues at the expense of their neighbors, they are gaining only a temporary advantage while they are laying the groundwork for an unprecedented economic break-down and eventually Nation-wide financial chaos which will affect their own citizens along with the citizens of all the other States.

Experience has shown that while a few minority groups reap the benefits of trade barriers, the great consuming public pays the bill once these barriers have been erected. In fact, these State barriers constitute a subsidy for organized minorities.

This important aspect has been largely overlooked in recent dis-cussion of the trade-barrier subject. Actually it is the heart of the problem.

Our domestic economy is based on free trade among the States, but this principle so fundamental to prosperity now is being violated with disastrous effect to business, increased sectionalism among the States, and growing bitterness between the people of neighboring States.

My subject today is Interstate Trade Barriers Challenge the Union of the States. My friends, this is a real challenge to our national unity, national safety, and national prosperity. I think you will agree that it is our State duty to do everything in our power to prevent such a state of affairs from materializing.

One of Missouri's neighbor States took the lead in erecting along its borders ports of entry which differ very little from the customhouses which dot the frontier of hostile European nations. There is this difference: Passenger cars are not stopped unless the occupant appears to be a commercial traveler.

How can that State possibly take in enough revenue at these ports of entry to compensate for the ill-will and bad advertising

it receives?

Now, in a private business the goodwill of the customers some-times is a more important asset than the actual property hold-ings. It is always an important factor in making that business a success or a failure.

Of course, there could be such a thing as a self-contained State; one that needed no intercourse with other States in order to exist. But by no stretch of the imagination could such a State be a

prosperous or happy one.

We cannot drive home too often the vital truth that America grew great because it was an unrestricted market; that any interference with that creed means stultification of industry and eco-

ference with that creed means stultification of industry and economic suffering for everyone.

My own State just now, to revert to the subject of good will, is striving to attract tourists. We do not propose to set up ports of entry as some States have done. We do not want travelers entering Missouri to gain their first impression of our hospitality by witnessing a long line of trucks and busses undergoing inspection for taxation purposes by uniformed border guards such as some other States have done.

I want to relate an incident which occurred in the Missouri Legislature recently, because I believe it throws light on the impractical plan of attempting to regulate truckers except through interstate cooperation.

interstate cooperation.

A measure was introduced which would have forbidden the sale of produce, other than that grown by the trucker himself, if it had been transported from more than 10 miles beyond the county line. Not the State line, but the county line. It is apparent that such legislation would be unworkable, and the opposition to the bill came from the rural members

themselves.

They pointed out that such a law would prohibit a farmer who owned a truck and was going to market to take along some of his neighbor's livestock or produce, and that the mileage provision

would call for a virtual army of enforcement officers.

This is the same kind of realistic approach, gentlemen, which should actuate this conference. I am sure we are all agreed on the dangers ahead if our once free America becomes a collection of separate economic feudal States. Therefore, I want to suggest

some methods of combating this situation.

The answer is not drastic regulation of interstate commerce by truckers. Certainly, it is not to be found in attempts to regulate them out of business by erecting barriers to their entry into and progress through any given State.

progress through any given State.

There is one aspect to the question of State trade barriers which cannot be lightly dismissed when viewed in historical perspective. That is the recurrent irritation created between the peoples of bordering States.

It is easy to answer that the United States is not the Balkans; that a "border incident" in this country could hardly be expected to result in anything more serious than an altercation between a truck driver and a port of entry official.

It is when we view these trivial irritations in the aggregate, when we sum up the varied antagonisms and retaliatory laws which fol-

we sum up the varied antagonisms and retaliatory laws which fol-low drastic methods of "protecting" home industries, that we

low drastic methods of "protecting" home industries, that we realize how serious this condition might become.

It seems that these trade barriers not only interfere with commercial enterprise but can even put a ridiculous aspect on a serious situation. Witness this true story of a blight on young love, which I think is a revealing one.

A Missouri young man, living on a farm near the State line, was engaged to a girl in the adjoining State not far from the border. On the morning of his wedding day he received a telegram from a relative to stop at the freight station in town and pick up a wedding gift. His only car was a pick-up truck, and he dutifully called at the freight station in the Missouri city near his home. home.

The wedding gift turned out to be a big electric refrigerator.

Unwittingly, he loaded it into the rear of the truck and started for his bride's home, since he did not have time to return to his farm. As he drove by the port of entry on the highway just across the State line, he was challenged by the guard. When he failed to stop, a pistol shot aimed at a rear tire promptly brought him to a helt. him to a halt.

The port of entry official just laughed at his story of being on his way to a wedding. It was obvious to that suspicious-minded individual that here was a salesman trying to deliver merchandise into his State without paying the highway tax. He even refused to allow him to use the telephone until he was through giving

to allow him to use the telephone until he was through giving him the third degree.

Finally, a call to the bride's home convinced the guard, and our young bridegroom proceeded on his way. The wedding over, he set out for his farm with his bride in the car beside him. This time he approached the port of entry post cautiously and, sure enough, was halted to a stop.

You can imagine his surprise when he found a new guard on duty and once again was halted. It took another phone call to gain his release so the honeymoon could continue.

If I had given that story a setting in Europe, none of you would have been surprised in the least. But it did not happen

in Europe; it happened in free America where the Constitution specifically forbids the States to interfere with commerce between the States.

It was in 1787 that President James Madison wrote this warning message to the Colonies in calling for a Constitutional Convention.

He said:
"The practice of many States in restricting the commercial inter-

"The practice of many States in restricting the commercial intercourse with other States and putting their productions and manufactures on the same footing with those of foreign nations, though
not contrary to the Federal articles, is certainly adverse to the spirit
of the Union, and tends to beget retaliating regulations, not less
expensive and vexatious to themselves than they are destructive
of the general harmony."

All of you are familiar with the situation which faced the fledgling Republic of the United States, no longer bound together by
the need for repelling a common foe—the Thirteen Colonies sought
to outdo one another in setting up customs systems of their own,
An economic break-down was the almost immediate and inevitable
result. A civil war was not far away when the founding fathers. result. A civil war was not far away when the founding fathers, in their God-given wisdom, then gave us the Constitution of the United States, which still serves as the guiding light for what has

become the world's greatest democracy.

It is a disturbing thought that today there is a distinct trend toward a state of affairs similar to that which created this perilous situation in the early days of the Nation.

President Madison and his fellow statesmen who drafted our Con-stitution saw that interstate trade barriers would hold back the

growth of the Nation.

They believed that prosperity results from the distribution of the greatest possible volume of goods and the trading of those goods freely among the people of all the States, so that all might

share in the abundance thus created.

History has proved that their belief was sound. The United States became the richest nation, with the highest standard of

living, in the history of mankind.

Are we now to turn our backs on the system of free trade within the Nation, the system which helped create that great national wealth, and follow the delusion of State tariffs to protect home industry?

My friends, it is your job and my job to see that this does not

My friends, it is your job and my job to see that this does not happen.

I want to list some of these barriers to interstate trade, so we can see the problem in its full dimensions. The Constitution does not permit States to levy duties on imports or exports.

It prohibits discrimination against the commerce, ship, and citizens of other States. But under the taxing power and the licensing power originally intended for the regulation of industry and trade within the State, various States have succeeded in invoking, many forms of discriminatory legislation.

There are such things as special taxes and license fees required

There are such things as special taxes and license fees required of corporations for the right to do business within the State.

Some municipalities levy vendor licensing taxes to apply to

truckers and canvassers.

There are States which place high premium taxes on insurance companies with home offices outside the State.

Special taxes are placed on certain types of merchandising

organizations.

A common form of discrimination is the special taxes on certain commodities which compete with products made in the State. For instance, some States place excise taxes on oleomargarine to protect local industries. The ultimate example is that afforded by States producing oleomargarine which tax that same product when it contains "foreign" oils.

I have referred to the taxation of trucks and busses from other States as one of the most visible evils of the trade barrier problem.

problem.

Something new under the sun is the "use tax." It is intended to protect States which have sales taxes against the purchase of goods outside the State on which no taxes of that kind are levied.

Then we find many States using their police powers to interfere with the normal development of interstate trade.

We must grant that sometimes special interests are benefited by such practices. America did not become a dominant commercial Nation by favoring special interests but by stimulating every form of industry to find and broaden its natural market. Some examples of interstate trade barriers by the use of the police power include the following:

Limiting the area from which fluid milk may be supplied by stimulating the description of the police power include the following:

Limiting the area from which fiuld milk may be supplied by refusal to furnish health inspectors, and by arbitrary changes in the sanitary requirements at intervals.

Quarantining against plant or animal products of competing areas on economic, rather than pathological or biological grounds. Restrictions on the movement of laborers across State boundaries by requiring monetary proof of their ability to support themselves. At least two States operate on a scale comparable to Ellis Island itself.

Limitations on exportation of natural resources is another instance. A State may limit the exportation of cheap electric power, for example, in order to compel industry to locate within its borders if it is to use such power.

Then there are regulations of dimensions, weights and equip-

ment of trucks and busses, especially set up not to conform with

standards in other States.
Similarly, some States establish State grades, standards, and labels which do not conform to Federal or other States' specifications.

Then there are the laws specifying that public buildings must be constructed of materials produced within the State, so far as is practicable. There are other examples of such preferential methods which I might name, notably in the widespread practice

methods which I might name, notably in the widespread practice of favoring domestic printing.

The Federal Trade Commission, after investigating a large eastern milk-sales area, said: "Usually each State, subdivision of a State, and municipality insists on making its own inspection and will not accept information by virtue of other jurisdiction. Operators of country milk-receiving plants and farmers supplying them sometimes find it necessary to submit to as many as seven or more separate inspections." separate inspections."

All this has led to an absurd situation in certain parts of the Nation, where farmers or operators find that, in order to conform to the requirements of one authority, they must violate those of

another.

The whole situation reminds me of that old law on the statute books of one of our States which specifies that "when two trains approach an intersection at the same time, both shall stop, and neither shall proceed until the other has passed over."

With the power to regulate the liquor traffic within their own

With the power to regulate the liquor traffic within their own borders restored to them, some States passed laws and regulations imposing upon products of other States heavier burdens than they imposed upon products of their own territory. This practice, recently upheld by the United States Supreme Court, led to retaliatory laws and sowed new seeds of discord among the States.

Several years ago the Fifty-ninth General Assembly of Missouri enacted such an act, openly and avowedly for the purpose of giving Missouri producers the same protection against importations that other States were giving their distillers and brewers. The lapse of time demonstrated the unwisdom of that legislation.

It runs squarely counter to the great basic principle of our Fed-

It runs squarely counter to the great basic principle of our Federal Constitution, and I am happy to report that I recently signed a bill passed by the present legislature repealing the Missouri dis-

criminatory liquor law.

It is now an encouraging omen that we do recognize the problem

of interstate barriers and are organizing to meet it.

I am particularly glad that the impetus for this campaign is coming from the representatives of the State governments themselves.

It should be a good and sufficient answer to those critics who cry that the States have ceased to function as full-fledged governmental units, that they have shifted their responsibilities onto the Federal Government at Washington.

One recommendation which I would make in carrying on this program of destroying these barriers to the future prosperity of our Nation is to condense the arguments into a few understandable phrases and take our cause to the public through every legitimate channel of publicity.

Never have the blessings of a free press been better demonstrated than in the cooperation given this movement by the newspapers of this Nation. In all frankness, it is a difficult task to reduce so complex a situation to terms which can be grasped by those who

But the newspapers are doing that very thing and doing it well.

Our job is to provide them with the information and to expand the influence of this National Trade Barrier Conference out into the States and the counters through similar gatherings and by contacting such organizations as chambers of commerce and civic

contacting such organizations as chambers of commerce and civic clubs everywhere.

Typical of the fine cooperation the newspapers have given this movement is an editorial which appeared only 2 days ago in the St. Louis Globe-Democrat. Halling the conference on trade barriers as (I quote) "the first impressive effort to check this growing danger to interstate trade," the editorial offers this terse summary of the objectives of this meeting.

Again I quote:

"For generations no restrictions were placed on interstate com-merce and the United States constituted the world's greatest free

"Undoubtedly that fact, more than any other force, was the most potent instrument of our internal development. Undoubt-edly an unfettered trade served to weld the individual States into

the present powerful Union.

"But this vast free mart is now being imperiled. States have thrown up around their borders tariff walls against imports that compete with their own industries; they tax out-of-State goods to bolster dwindling revenues or to defray costs of new activities.

"Inevitably the ultimate consumer is the scapegoat under policies of economic isolation. He must foot the bill for added taxes on imports, for inspection fees, and every other levy that hikes the cost of products he buys.

"Inherently State barriers are a dangerous implement for restraint of trade. They threaten and have, in many cases, destroyed

a business competition guaranteed by the Constitution."

I have quoted only a part of this excellent editorial. It serves to illustrate the universal condemnation of trade barriers in the press throughout the United States.

The radio, too, is making an important contribution to this

crusade against a growing menace to our national prosperity.

Here, too, we can rejoice in the knowledge that this great instrument for public service is fully conscious of its opportunity to bring about a better understanding of this crucial problem.

Now, you may contend that minority groups who stand to profit, however temporarily, from such discriminatory measures would be adamant against any revision of them.

I would concede the force of such an argument, except for one

I would concert the force of such an argument, except for one thing. A man's pocketbook is his own property, but his conscience and his loyalty belong to the United States of America.

If we can show him the danger which lies ahead through the pursuit of such a policy to its ultimate conclusion, we can convert him to the cause of a Nation unfettered by internal economic struggles between the States.

It is a real pleasure to be here on this occasion. I hope these remarks will give us some food for thought.

In closing, I want to assure you that I am proud to be associated with an organization dedicated to so worthy a cause—the elimination of all these damaging State barriers to free trade between the people of the United States.

Defense of Alaska

EXTENSION OF REMARKS

HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1939

EDITORIAL FROM THE FAIRBANKS (ALASKA) DAILY NEWS-MINER

Mr. DIMOND. Mr. Speaker, the geographical location of Alaska makes it of such outstanding importance with respect to the complete and comprehensive plan of national defense that under leave heretofore granted I think it suitable to incorporate in the RECORD the following well-written and illuminating editorial on the subject appearing in the Fairbanks Daily News-Miner of March 25, 1939, written by Mr. Charles R. Settlemier, the editor and publisher of that news-

BALANCED DEFENSE OF ALASKA VITAL

Telegraphic advices yesterday to the effect the Senate committee approved \$513,000,000 as part of the Army supply bill, is an important step in the program for national defense in which Alaska is to share.

The military bill, embracing the whole program of national defense, is to be adjusted in the conference committee, and after adoption by both Houses will go to the President for final approval. Advices from Washington stress the points that the program contemplates a balanced defensive plan for the Nation, especially as to air units. Naval and Coast Guard bases and fleets have a prominent place.

prominent place.

In respect to all these, Alaska's needs are considered along with those of continental and Territorial possessions.

Reports from Washington stress the Alaskan coastal-defense plans. The air units for the Territory are mentioned in a general

Doubtless the Nation's strategists and those responsible for the important duty of protecting every inch of the country—and particularly the most vulnerable and exposed portions—are not overlooking the fact that two-thirds of Alaska, as large as the State of Texas and several others of the larger States, lies in the Interior, far from the coastal areas.

To adequately defend this vast interior doubtless will demand the basing of a defensive force, logically an air unit, in the interior.

A little study of the map easily reveals how easy it might be for a foreign force to fly high over some isolated Arctic or coastal route into the interior and take possession in this region if there be no defensive force or grand defensive force on guard.

Alaska is the natural buffer state between the Orient and continental America. If an enemy force flew to Alaska, making it a stepping stone to attack on the States or Canada, it would not alight on a coastal rim, but somewhere in the great inland.

And doubtless this is one of the big points the Army representa-tives sensed when they investigated the region, and selected a site near Fairbanks for the major air base which Uncle Sam contemplates for Alaska.

Provision for such a base cannot come too soon. Other parts of America may seek preference, but it is well for all to remember this northland is the vulnerable point—and as yet the open gateway of attack on the very heart of the Nation.

All America should be concerned in this matter, not Alaska alone.

Sectional pride and preference and political matters cannot and doubtless will not stand in the way when it comes to drawing a cordon about America that will be impregnable in every vital link.

Taxation of Public Securities

EXTENSION OF REMARKS

HON, JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 13, 1939

RESOLUTION OF THE MINNEAPOLIS CITY COUNCIL

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following resolution recently adopted by the City Council of the City of Minneapolis:

Resolution memorializing Congress to defeat any legislation designed to tax public securities either by levying a tax on the income thereof, or otherwise

Whereas there is now pending before Congress a bill designed to levy a tax upon public securities, including securities issued by municipalities; and
Whereas such a tax will greatly increase the cost of financing

local governments; and

Whereas these local governments will get no benefits from said tax and will receive no part or portion of the proceeds thereof;

Whereas the city of Minneapolis is faced with a serious relief situation necessitating the selling of bonds for the purpose of furnishing relief to the poor and indigent; and

furnishing relief to the poor and indigent; and
Whereas a tax such as is contemplated will seriously cripple and
handicap the city in its attempt to take care of its poor and to
supply the necessary municipal services to it inhabitants: Now,
therefore, be it

Resolved by the City Council of the City of Minneapolis, That
Congress be respectfully urged and petitioned to defeat any attempts to tax public securities in any manner, shape, or form,
and to take no action whatever in attempting to tax any public
securities in any manner whatsoever.

That in the event legislation is passed designed to tax public
securities in any manner, securities issued for the purpose of
raising money to take care of the poor and indigent be expressly
excluded from such tax: Be it further

Resolved, That the city clerk be instructed to send copies of
this resolution to the Honorable Franklin D. Roosevelt, President
of the United States, the Honorable John N. Garner, Vice President
of the United States, the Honorable William B. Bankhead, Speaker
of the House of Representatives of the United States, and to each of
the Senators and Representatives from the State of Minnesota in
the Congress of the United States. the Congress of the United States. Passed March 31, 1939.

ERIC G. HOYER, President of the Council.

Approved April 3, 1939.

GEORGE E. LEACH, Mayor.

Attest:

CHAS. C. SWANSON, City Clerk.

River Burlesque

EXTENSION OF REMARKS

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES Thursday, April 13, 1939

EDITORIAL FROM KANSAS CITY JOURNAL

Mr. REED. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Kansas City Journal, reprinted in the Topeka Journal of April 10, 1939.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> [From the Kansas City Journal] RIVER BURLESQUE

From the A.-S.-B. Bridge at Kansas City, the Missouri River pursues a winding course across the State to the Mississippi for a

distance of 377 miles. On each of those 377 miles the Government had spent, up to June 30, 1937, an average of \$197,722 for channel dredging and other improvements.

The interest on this sum at 4 percent is \$7,789 per mile annually. The per-mile maintenance costs in 1937 were \$4,521.

If the investment were taxed at approximately the rate of railroad taxation, the annual bill would be \$1,499 a mile.

These add up to \$13,809 annually for each of the 377 miles. Catfish never swam in costlier surroundings.

What are the benefits?

What are the benefits?
The river is supposed to provide an economical method of transporting grain and other bulky commodities down the Missouri and Mississippi Rivers to New Orleans for export. Its record shows an appalling failure to justify the colossal expenditures upon it.

In the 1938 navigation season the Government barge line transported 1,604,000 bushels of wheat. This amount, for the transportation of which the boat line required an entire navigation season, is only a fraction of the daily receipts at the Kansas City Board of Trade during the harvest season. The farmers do not benefit. The only beneficiaries are export commission firms which, if they are in no hurry, can ship by barge and add the savings to their profits in handling the grain.

their profits in handling the grain.

The channel is now being extended to Sioux City, bringing the total cost of the project from that point to the mouth to \$164,-000,000. This is more than the amount of the bonds voted by Missouri to build the State highway system of thousands of miles of

paved roads.

Glance down the river the next time you drive over the A.-S.-B. Bridge. Reflect that on the bottom of the mile stretch lying ahead are \$197,722, placed there at the expense of the taxpayers and serving no useful economic purpose whatever.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. ALBERT G. RUTHERFORD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 13, 1939

LETTER AND ARTICLE CONCERNING TRADE AGREEMENTS

Mr. RUTHERFORD. Mr. Speaker, of late I have had many communications from farmers and manufacturers condemning the reciprocal-trade agreements. Our citizens cannot compete with foreign-made goods and foreign-grown products. The difference in the wage scale is too great between our country and foreign countries. I attach herewith a letter received from one of the manufacturers of my State which shows how the reciprocal-trade agreements affect the woolen industry. It should be of interest to all Members of Congress. The letter is as follows:

Hon. ALBERT G. RUTHERFORD.

HON. ALBERT G. RUTHERFORD,

House of Representatives, Washington, D. C.

Dear Mr. Congressman: You no doubt realize that the reciprocaltrade treaties promulgated by Mr. Hull are increasing the imports
from various countries into the United States, and particularly is
this true in woolen textiles since the reciprocal treaty with Great
Britain became effective. This treaty is the most important of all, because it reduces duties from all countries in the world except Germany.

Wages in Great Britain are less than half of what they are in the United States. In Italy, 25 percent of what they are here, and in Japan, less than one-tenth of what they are here. At the same time, when this treaty went into effect, we were confronted with a wage and hour law which put a floor under wages and a ceiling on

hours in this country.

hours in this country.

For this reason I am particularly interested in H. R. 4320, introduced by Mr. Risk, which amends the Fair Labor Standards Act of 1938 by keeping out goods of foreign manufacture unless they are made under the same fair-labor standards as exist in the United States of America. Reciprocal treaties and the Fair Labor Standards Act do not go together unless manufacturers the world over are forced to conform to the same conditions that domestic manufacturers have to contend with. I hope that you will support the bill of Mr. Risk or else work for an abrogation of reciprocal-trade treaties.

Yours sincerely.

MILLARD D. BROWN.

The following article, which is entitled "Hell, What's \$4?" is well worth the consideration of every Member of Congress

who believes that the American workman should receive adequate protection from foreign competition:

What's \$4, anyway?
Well, to an American workman \$4 a month is \$48 a year, or just enough to buy a suit of clothes for himself, a dress for the missus, and an outfit for the kids.

Yet that is precisely the amount forfeited by every wool-textile craftsman in this country by reason of the imports of woolens and worsteds from Great Britain and other countries during the month

In the first month of the current year we imported 1,123,310 square yards of woolens, valued at \$850,004. Of this amount Great Britain shipped us 1,000,933 square yards, valued at \$749,156. We imported 478,401 square yards of worsteds, valued abroad at \$320,943. Of this amount Great Britain shipped us 417,250 square yards,

valued at \$294,757.

This represents an increase of approximately 200 percent in the value of wool goods and of approximately 100 percent in the value of worsteds imported during the same month in the previous

The American value of these imports would be approximately \$2,350,000, of which labor's share, when divided among the 150,000 men in American wool textile plants, would be roughly \$4 each for the month of January.

Truly, the year of our Lord 1939 is proving a year of grace for America's trade rivals, for it marks the lowering of the barriers against the import of products from poor wage-paying countries in accordance with the altruistic policy of the present administration, which apparently holds that good feeling abroad must be engendered even at the expense of American industry and the American standard of living.

Of course, the money diverted from our labor goes much further abroad. For instance, an English mill operative gets only one-half of the wages paid the native textile worker, the Italian gets one-fifth, the Japanese receives a tenth of the American scale.

But then a full foreign stomach is essential to international amity.

Seeing that this invasion of the American market actually took place in a depressed business period like January, when hand-to-mouth buying prevailed, imagine the extent of the inroad in stabilized or boom times!

There is no doubt we are facing a tremendous growth in imports of wool textiles, to mention only one of the thousand-and-more items of American-made merchandise gravely affected by the reductions in tariff under the reciprocal-trade agreements. It is bound

tions in tariff under the reciprocal-trade agreements. It is bound to aggravate American unemployment, to reduce the American living standard, and to impoverish our national income.

Before the full effect of this new ideology is reflected in closed American plants and increased relief rolls, we suggest that American manufacturers and American workers bring strong pressure to bear on their congressional representatives for a show-down on the reciprocal trade alphantagy.

reciprocal-trade phantasy.

"For the Ox Knoweth His Owner and the Ass His Master's Crib, but My People Doth Not Consider," Isaiah 1:3

EXTENSION OF REMARKS

HON. KENT E. KELLER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Thursday, April 13, 1939

LETTER SENT BY THE CONSTITUTIONAL MONEY LEAGUE OF AMERICA, AND RADIO DISCUSSION

Mr. KELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include a brief letter sent out by the Constitutional Money League of America, a nonpartisan educational organization, that in my judgment is doing a most wonderful work. I also include a discussion of the monetary problem as presented during the congressional breakfast talks.

The letter and discussion are as follows:

COME, LET US SIT DOWN TOGETHER AND REASON WELL

My Dear Colleague: We are giving a series of congressional breakfast talks over Station WOL every Tuesday morning at 8:15 o'clock on the subject of Constitutional Monetary Control, and would be pleased if you would take an active part in the discussion. If you will communicate with us we will try and arrange a date to suit your convenience.

We earnestly invite those who are opposed to Government control equally as much as those favoring it.

It isn't a question of, Shall we have monetary control?

have monetary control now.

It is only a question of, Who shall control—shall it be the people or the banks? The bankers have had control for 150 years, marked by 27 money panics or depressions.

It isn't a question, Has the bankers' control been a failure?

Everyone knows it has.

The question is, Shall we continue this disastrous system that creates a money panic every 5 or 6 years into the future?

It isn't a question, Are money panics created intentionally, deliberately, premeditatedly, or carelessly? Everyone knows they

The question is, Shall the people exercise their constitutional privilege to coin and control their own measure of value that determines price and measures the sweat of the brow of man?

These matters are all explained in our congressional breakfast talks. Listen in on WOL Tuesday morning at 8:15.

Respectfully,
THE CONSTITUTIONAL MONEY LEAGUE OF AMERICA,

President.

"FOR THE OX KNOWETH HIS OWNER AND THE ASS HIS MASTER'S CRIB, BUT MY PEOPLE DOETH NOT CONSIDER," ISAIAH 1:3

The Announcer. Again we present to you the Tuesday morning congressional breakfast talk conducted by Charles G. Binderup, Congressman from Nebraska.

Mr. BINDERUP. Greetings this morning to President Roosevelt and his Cabinet, to the Members of the Senate and House of Representatives, and Governors of the Federal Reserve bank.

And greetings to our congenial announcer, Mr. Brown, coupled with thanks and appreciation to the WOL Broadcasting Co. It is with thanks and appreciation to the WOL Broadcasting Co. It is always a pleasure to introduce our noted speakers on our congressional breakfast talks, and this morning it is an added pleasure to say that besides their knowledge of the subject they also possess the necessary courage to call a spade a spade. I am pleased to introduce Senator Johnson, of Colorado, and Congressman Burdick, of North Dakota. Senator Johnson, we will ask you to open the discussion this morning, if you will.

Senator Johnson. Yes, Congressman Binderup, it is some years they are the first time and we were concerned then with the

since we met the first time and we were concerned then with the same problem which now confronts us. I refer to the monetary conference in the senate chamber in Denver, that was called by William Jennings Bryan, Jr., of Los Angeles. We recognized the necessity for constitutional money and Government monetary control in that conference and we must continue the fight for it.

I know you will recall on that occasion the eloquent, masterful speech of Senator Cannon of Utah and the beautiful tribute he paid to the memory of your great Nebraska statesman, William Jennings Bryan, affectionately called by his followers the "Great Commoner" and the "Prince of Peace." An important part of Senator Cannon's speech was a quotation from Bryan's book, The Benator Cannon's speech was a quotation from Bryan's book, The Last Battle, wherein Bryan warned the people against the power of the Federal Reserve Banking System if wrongly used. Since this is our subject this morning, I brought Bryan's profound and prophetic statement with me and will read it, with your permission, as an introduction to our broadcast.

Mr. BINDERUP. Thank you, Senator Johnson. I know we will

all like to hear it.

Senator Johnson, I quote: "The Federal Reserve bank that should have been the farmer's greatest protection has become his should have been the farmer's greatest protection has become his greatest enemy. The deflation of the farmer was a crime deliberately committed, not out of enmity to the farmer, but out of indifference to him. Inflation of prices had encouraged him to buy, and then deflation delivered him in the hands of the moneylender. The Federal Reserve bank can be a blessing or a curse according to its management. If the Wall Street speculators are in control of it they can drain the agricultural districts and keep ma a fighting prosperity among the members of the Plunderbund."

up a fictitious prosperity among the members of the Plunderbund."

I continue to quote Bryan: "While the Federal Reserve bank
law is the greatest economic reform achieved in the last half century, if not in our national history, it would be better to re-peal it, go back to old conditions and take our chances with individual financiers, than to turn the Federal Reserve bank over to Wall Street and allow its tremendous power to be used for the carrying out of the plans of the Money Trust." That is what Bryan said.

Bryan said.

Mr. Binderd. Thank you, Senator Johnson. The memory of our great Commoner is dear to the hearts of the American people. I ofttimes visit Bryan's grave in Arlington and the monument erected to his memory down on the banks of the Potomac—a beautiful bronze likeness of the great leader looking out over the old historic river, with his hand raised and his face stern, just as he looked when he made that immortal speech in the national convention at Chicago, closing with that emphatic command: "You shall not press down upon the brow of labor this crown of thorns. You shall not crucify mankind upon a cross of gold." Senator, I am sure you have heard much of the startling statement coming from the Governors of the Federal Reserve bank as disclosed in one of the Washington papers last week, wherein they are denying the quantitative philosophy of money. We discussed this subject last Tuesday morning, but I want to add just a little more. You have a book there before you wherein is contained many opinions of the world's greatest economists and authorities on the

quantitative philosophy of money. Will you read a few of the

most prominent ones?

Senator Johnson. I shall be happy to do so. I will briefly quote a few of the outstanding authorities: First, the economist Ricardo,

who is quoted so often, said:

"Commodities rise or fall according to the increase or decrease in the quantity of money. This, of course, I assume, is a fact that is incontrovertible." One of England's greatest thinkers and recognized economists, John Locke, writes:

John Locke, writes:

"The lessening of the quantity of money makes an equal quantity of it exchange for a greater quantity of commodities."

Another great authority, David Hume, whose quotations are always accepted as authority, writes:

"It is the proportion between the circulating money and the commodities in the market that establishes prices of all commodities."

John Stuart Mills, another great authority, tells us:

"That an increase of the quantity of money raises prices and a decrease lowers them, is the most elementary proposition in the theory of currency, and without it we should have no key to any of the others." of the others.

Mr. Binderup. And so the Governors of the Federal Reserve Board, according to their statement in the press, stand out as a lone monetary tribunal in denying the quantitative philosophy of money in their effort to discourage Government monetary control. It is so seldom that our invisible Government sticks its head out of the mist and the clouds and the shadows of utter secrecy that surround mist and the clouds and the shadows of utter secrecy that surround it that we rejoice in this public statement, for at last the people can see and understand the truth we have been telling them for many years—that the Governors of the Federal Reserve Board and the Federal Reserve Banking System in general is the head of the octopus, "money monopoly."

Congressman Burdick, I am sure this exceptional statement, coming from the Federal Reserve Board of Governors, was a survive only of the statement.

prise and a shock to you.

Mr. Burdick. No; I was not a bit surprised, Mr. Binderup. For, some time ago I read the testimony of Mr. Marriner Eccles before the Senate Committee on Finance, the Seventy-second Congress, second session, February 27, 1933, on page 730, where he makes

second session, repruary 21, 1993, on page 1994, where he maked this statement:

"I am a capitalist; I happen to be interested in the following business: President of the First Security Corporation, owning and operating 26 banks and 1 trust company in the principal points of Utah and southern Idaho. Our total resources are approximately \$50,000,000." That explains the whole thing to me. What would be appeared from a chain banker president at the head of 26. \$50,000,000." That explains the whole thing to me. What would you expect from a chain banker president, at the head of 26 banks with a capital of fifty million, appointed on the Federal Reserve Board that was supposed to be for the protection of the people with the authority to control their money? Well, that seems to me to be a strange combination. If that's our policy, then why not put the presidents of the railroad companies in control of the Interstate Commerce Commission? Why not put the prevers why not put the presidents of the railroad companies in control of the Interstate Commerce Commission? Why not put the brewers in the control of liquor traffic? That would be far better and safer for the people than to put bankers on the Board of Governors of the Federal Reserve Banking System.

Mr. Binderup. Yes; and why not put in the contractors and builders here in the District as building inspectors?

Senator Johnson. Congressman Burdick, would you favor a provision in the Federal Reserve Act that would prohibit and prevent any banker from serving on the Board of Governors of the Federal Reserve banks?

eral Reserve banks?

Mr. Burdock. I most certainly would, and I would go considerably further. I would prohibit and prevent any man who owned bank stock in any bank from serving on the Board. When we have repealed the present Federal Reserve Banking Act—and the sooner this is done the better—and we have established in its place by a new act a Government monetary authority as an agent of Congress, whose only duty it shall be to control our money supply and maintain a dollar of uniform purchasing and debt-paying power, it will not require any banking knowledge, whatsoever.

Senator Johnson. What do you think about the Board of Governors saying the price level cannot be maintained and that they oppose any legislation passed by Congress demanding of them the control of the volume of money or the control of the bankers' credit now being used as money to the extent of about 97 percent? Senator JOHNSON. By that statement, as I understand it, they

Senator Johnson. By that statement, as I understand it, they have eliminated themselves for all practical purposes as effective members of the Board of Governors. Their statement, however, that it cannot be done, in my opinion, is erroneous. Rather they should have said, "We can't do it," and if that really be so, they should step out and make room for someone who can function according to the necessities. Certainly you would not continue to hire a doctor who threw up his hands and said he just could not do anything for you when a million other doctors stood by and insisted they could cure you. If the present Board folds up and says it cannot do the very thing the act was supposed to accomplish—which is monetary control that will end booms as well as depressions—then I say we should try out other men on the Board who are friendly to monetary control, and if they find remedial action is impossible under the law we should amend the act until it will function to make the dollar a constant measure now and forever.

now and forever.

Mr. Burdick. You spoke about controlling the money, Senator Johnson, and stopping booms and depressions. Now, isn't it a fact we have had three of the worst money panics the Nation has ever suffered since the Federal Reserve Act was passed, and there-

fore I believe Bryan was right. Let us repeal the Federal Reserve Act and in place of that let us have a people's monetary authority, not appointed by anyone, but elected by the people—one from each of the 12 Federal Reserve districts. That would give the people a representation in the most important branch of Government, monetary control. In other words, that would be just true con-

monetary control. In other words, that would be just true constitutional democracy.

Mr. Binderup. And may I add that the three panics referred to by Congressman Burdick were created intentionally, deliberately, and premeditatively, according to a definite and infallible plan by our invisible government, created by none other than the Governors of the Federal Reserve Board and the Federal Reserve banks, who hold in the palm of their hand the welfare of every man, woman, and child, and in this statement I challenge the world. I invite the members of the Federal Reserve Board of Governors, or any former members, to come and sit with us at this microphone and talk to the individual citizens of the Nation and defend themselves before the Nation's highest tribunal, the people. Yes; I accuse the Federal Reserve Banking System of being responsible themselves before the Nation's highest tribunal, the people. Yes, I accuse the Federal Reserve Banking System of being responsible for the misery and want, for the tears and the sorrows and the suffering of our people who have lost their homes and their farms and their jobs. I accuse them of being responsible for the starvation and deprivation, soup kitchens, and bread lines since the passage of the Federal Reserve Act. Oh, I do not claim that they did this intending to destroy the people and the Nation. No; but they did it to enrich themselves with a total disregard for the Nation and the people's welfare. Their object was to give dollars and interest, which is their crop, their stock in trade, a greater purchasing power by making money scarce. Thus bringing the prices of labor and commodities down where their interest would have a greater purchasing power.

Senator Johnson. Congressman Binderup, when the Federal Reserve Banking System was first started was it not the intention to make it strictly a governmental institution? I remember how we will have no more money panics.

will have no more money panics.

Mr. Binderup. Yes; it was definitely the intention that it should

Government institution.

Senator Johnson. Then what happened to change it into a pri-

vate institution?

Mr. BINDERUP. It was a compromise measure in 1913, intended to conciliate the American Bankers' Association, who had opposed the bill, and so, to overcome their opposition, we allowed them to have a stock interest in the banks which would earn 6 percent, and we also allowed them to elect three class A directors and three class B directors out of nine. The Government names three class C directors who are appointed as representatives of the Government. The class A directors are chosen by the banks. Class B

directors are supposed to represent agriculture and industry.

Mr. BURDICK. The management of the whole Federal Reserve
Banking System was thus definitely put under the management
of the members banks. Isn't that true?

Mr. BINDERUP. Yes; subject to the supervisory control of the Federal Reserve Board of Governors.

Mr. BURDICK. You say class C directors are appointed as representatives of the Government. Mr. Binderup, who pays these men their salaries?

Mr. BINDERUP. They are paid by the banks.
Mr. BURDICK. You say class B directors were intended to represent agriculture and industry. Who pays these representatives?
Mr. BINDERUP. The bankers pay these also.
Senator Johnson. Do the banks have any further representation

in the Federal Reserve Banking System?

Mr. BINDERUP, Yes; they have a Federal Reserve Advisory Council of 1 member from each of the 12 Federal Reserve banks, making 12 in all, who periodically meet in Washington, to advise the Board. Mr. Burdick. How are these selected?
Mr. Binderup. They are selected by the Federal Reserve banks.
Each one of the Federal Reserve banks selects one.

Mr. Burdick. How are these representatives paid?

Mr. Binderup. They are paid by the banks.
Mr. Burdick. How many members are there on the Board of Governors of the Federal Reserve banks?

Mr. BINDERUP. The act provides for seven. However, only six have

ever been appointed.

Mr. Burdick. And now, Congressman Binderup, just who pays these members of the Board of Governors serving on this Board— Mr. Eccles and the other five?

Mr. Binderup. These are also paid by the banks.

Senator Johnson. Then, Congressman Binderup, as I understand it, all the directors and advisory council and Board of Governors—in fact, the entire personnel of the banks and all the help—are paid by the banks.

Mr. BINDERUP. Yes; in this you are entirely correct

Senator Johnson. Then, may I ask, Congressman Binderup, don't you think you were unnecessarily harsh when you criticized the Governors of the Federal Reserve Banking System so severely? If Governors of the Federal Reserve Banking System so severely? If they are paid by the Federal Reserve banks, evidently they consider, as most anyone would, that they are working for the Federal Reserve Banking System. The Government does not pay them a cent of salary. How could you expect them to do anything that would be in any way against the will of the banks who pay them their entire salary? Our loyalty often follows the pay check, and in this case every cent of it comes from private sources. I hold that the Federal Reserve Banking System should be supported by all of the people and represent the people and not the banks.

Mr. Binderup. Well, Senator Johnson, I do not think that I have been unnecessarily harsh toward the Federal Reserve Banking System of the Nation, I have merely given a true picture of just who they are. The people of the United States have never thoroughly understood the Federal Reserve Banking System of the United States. It has always been represented by the public press and by the member banks themselves that the Federal Reserve Banking System was a Government institution. Well, I Reserve Banking System was a Government institution. Well, I just wanted to banish the mists and the fog that was surrounding the Federal Reserve Banking System and just tell the people the truth, that is all. Of course I know and understand very well, as you have so ably explained, Senator, that the pay check determines just who a man works for. That is described pretty well by a bit of Scripture which reads as follows: "For the ox knoweth his owner and the ass his master's crib." And that is as true today as it was when it was written.

Mr. Brunder, But Congressing Binderup, what supprises me

Mr. Burdick. But Congressman Binderup, what surprises me is that all the little commercial bankers for some peculiar reason are allowing themselves to be led around by the big international bankers through the instrumentality of the American Banking Association even though 16,000 commercial banks were destroyed in the twenties by the action of the Governors of the Federal Reserve Banking System of the United States. In other words, destroyed by the money trusts.

Mr. Binderup. Yes; that is indeed strange, Congressman Burdick, how blindly they follow like sheep led to slaughter. I just recall another passage of the Bible, Congressman Burdick, that can very well be applied to this situation. I think the passage is in the Book of Job. It reads: "For though they slay me, yet shall I love them." And now in conclusion I would like to thank Senator JOHNSON of Colorado and Congressman Burdick, of North Dakota for their splendid contribution to our congressional breakfast talks. Announcer. You have just heard the sixth congressional break-

Announcer. You have just heard the sixth congressional breakfast talk arranged by Charles G. Binderup, former Congressman from the State of Nebraska. Congressman Binderup, I understand you have a very interesing program planned for next Tuesday morning. Can you tell us something about it now?

Mr. Binderup. Yes, Mr. Brown; it is a pleasure to announce we have for our guest speakers next Tuesday morning Senator Lundeen, of Minnesota, and Congressman Murdock, of Utah.

The Announcer. That sounds mighty interesting and so until our next congressional breakfast talk, next Tuesday morning.

Pan American Day Address

EXTENSION OF REMARKS

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Monday, April 17, 1939

ADDRESS BY HON. FRANKLIN D. ROOSEVELT, APRIL 14, 1939

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD the address on the subject of Pan American Relationships, delivered on last Friday, April 14, 1939, by the President of the United States, before the Governing Board of the Pan American Union.

There being no objection, the address was ordered to be

printed in the RECORD, as follows:

The American family of nations pays honor today to the oldest and most successful association of sovereign governments which

Few of us realize that the Pan American organization as we know it has now attained a longer history and a greater catalog know it has now attained a longer history and a greater catalog of achievements than any similar group known to modern history. Justly we can be proud of it. With even more right we can look to it as a symbol of great hope at a time when much of the world finds hope dim and difficult. Never was it more fitting to salute Pan American Day than in the stormy present.

For upwards of half a century the republics of the Western World have been working together to promote their common civilization under a system of peace. That venture, launched so hopefully 50 years ago, has succeeded; the American family is today a great cooperative group facing a troubled world in serenity and calm.

and calm.

This success of the Western Hemisphere is sometimes attributed This success of the Western Hemisphere is sometimes attributed to good fortune. I do not share that view. There are not wanting here all of the usual rivalries, all of the normal human desires for power and expansion, all of the commercial problems. The Americas are sufficiently rich to have been themselves the object of desire on the part of overseas governments; our traditions in history are as deeply rooted in the Old World as are those of Europe. It was not accident that prevented South America and our own West from sharing the fate of other great areas of the world in the nineteenth century. We have here diversities of race, of language,

of custom, of natural resources, and of intellectual forces at least

of custom, of natural resources, and of intellectual forces at least as great as those which prevailed in Europe.

What was it that has protected us from the tragic involvements which are today making the Old World a new cockpit of old struggles? The answer is easily found. A new and powerful ideal—that of the community of nations—sprang up at the same time that the Americas became free and independent. It was nurtured by statesmen, thinkers, and plain people for decades. Gradually it brought together the Pan American group of governments: today it has fused the thinking of the peoples and the ernments; today it has fused the thinking of the peoples and the desires of their responsible representatives toward a common

The result of this thinking has been to shape a typically American institution. This is the Pan American group, which works in open conference by open agreement. We hold our conferences not as a result of wars but as the result of our will to peace.

Elsewhere in the world, to hold conferences such as ours, which meet every 5 years, it is necessary to fight a major war, until expectation or defeat at length brings governments together to recon-

haustion or defeat at length brings governments together to reconstruct their shattered fabrics.

Greeting a conference at Buenos Aires in 1936, I took occasion

to say:
"The madness of a great war in another part of the world would be a hundred ways. And the ecoaffect us and threaten our good in a hundred ways. And the economic collapse of any nation or nations must of necessity harm our own prosperity. Can we, the republics of the New World, help the Old World to avert the catastrophe which impends? Yes; I am confident that we can."

I still have that confidence. There is no fatality which forces the Old World toward new catastrophe.

the Old World toward new catastrophe. Men are not prisoners of fate but only prisoners of their own minds. They have within themselves the power to become free at any moment.

Only a few days ago the head of a great nation referred to his country as a "prisoner" of the Mediterranean. A little later, another chief of state, on learning that a neighbor country had agreed to defend the independence of another neighbor, characterized that agreement as a "threat" and an "encirclement." Yet there is no such thing as encircling, or threatening, or imprisoning any peaceful nation by other peaceful nations. We have reason to know this

in our own experience.

For instance, on the occasion of a visit to the neighboring Dominion of Canada last summer, I stated that the United States would join in defending Canada were she ever attacked from overseas. Again at Lima, in December, the 21 American nations joined in a declaration that they would coordinate their common efforts to defend the integrity of their institutions from any attack direct rindirect.

At Buenos Aires, in 1936, all of us agreed that in the event of any war or threat of war on this continent we would consult together to remove or obviate that threat. Yet in no case did any American nation regard any of these understandings as making any one of them a "prisoner," or as "encircling" any American

any one of them a "prisoner," or as "encircling" any American country, or as a threat of any sort or kind.

Measures of this kind taken in this hemisphere are taken as guaranties not of war but of peace, for the simple reason that no nation on this hemisphere has any will to aggression, or any desire to establish dominance or mastery. Equally, because we are interdependent, and because we know it, no American nation seeks to deny any neighbor access to the economic and other resouces which it must have to live in prosperity.

In these circumstances dreams of conquest appear to us as ridiculous as they are criminal. Pledges designed to prevent aggression, accompanied by the open doors of trade and intercourse, and bound together by common will to cooperate peacefully, make warfare between us as outworn and useless as the weapons of the Stone Age. We may prouchly boast that we have begun to realize in Pan American relations what civilization in intercourse between countries really means. countries really means.

If that process can be successful here, is it too much to hope that a similar intellectual and spiritual process may succeed elsewhere? Do we really have to assume that nations can find no better methods of realizing their destinies than those which were used by the

Huns and Vandals 1,500 years ago?

The American peace which we celebrate today has no quality of weakness in it. We are prepared to maintain it and to defend it to the fullest extent of our strength, matching force to force if any attempt is made to subvert our institutions or to impair the inde-

pendence of any one of our group.

Should the method of attack be that of economic pressure, I pledge that my own country will also give economic support, othat no American nation need surrender any fraction of its sovereign freedom to maintain its economic welfare. This is the spirit and intent of the Declaration of Lima; the solidarity of the

The American family of nations may also rightfully claim, now, to speak to the rest of the world. We have an interest, wider

to speak to the rest of the world. We have an interest, wider than that of the mere defense of our sea-ringed continent. We know now that the development of the next generation will so narrow the oceans separating us from the Old World that our customs and our actions are necessarily involved with hers. Beyond question, within a scant few years air fleets will cross the ocean as easily as today they cross the closed European seas. Economic functioning of the world becomes increasingly a unit; no interruption of it anywhere can fail, in the future, to disrupt economic life everywhere.

nomic life everywhere.

The past generation in Pan American matters was concerned with constructing the principles and the mechanisms through which this hemisphere would work together. But the next generation will be concerned with the methods by which the New World can live together with the Old.

The issue is really whether our civilization is to be dragged into the tragic vortex of unending militarism punctuated by periodic wars, or whether we shall be able to maintain the ideal of peace, individuality, and civilization as the fabric of our lives. We have the right to say that there shall not be an organization of world affairs which permits us no choice but to turn our countries into barracks, unless we are to be vassals of some conquering empire.

The truest defense of the peace of our hemisphere must always

lie in the hope that our sister nations beyond the seas will break the bonds of the ideas which constrain them toward perpetual warfare. By example we can at least show them the possibility. too, have a stake in world affairs.

Our will to peace can be as powerful as our will to mutual defense; it can command greater loyalty, devotion, and discipline than that enlisted elsewhere for temporary conquest or equally futile glory. It will have its voice in determining the order of world affairs.

This is the living message which the New World can send to the Old. It can be light opening on dark waters. It shows the path

of peace.

Neutrality Legislation

EXTENSION OF REMARKS

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES Monday, April 17, 1939

RADIO ADDRESS OF HON. KEY PITTMAN, OF NEVADA, APRIL 15, 1939

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the RECORD a very interesting and able address on neutrality legislation delivered over a Nationwide radio hook-up on Saturday, April 15, 1939, by the senior Senator from Nevada [Mr. PITTMAN], the chairman of the Senate Committee on Foreign Relations.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the radio audience, the President, in his sincere, timely, and appealing message to Chancellor Hitler and Duce Mussolini, opened his communication by saying, "You realize, I am sure, that throughout the world hundreds of millions of human beings are living today in constant fear of a new war or even a series of wars." Never in the history of the world was there so imminent and dangerous a threat to the peace of the whole world and to civilization. Remembering the horrors of the World was the loss and destruction the death and the living death of the world. War, the loss and destruction, the death and the living death of our loved ones, our people, their President, and their Congress are determined to do everything possible with honor to keep out of the next foreign war.

The Committee on Foreign Relations of the United States Senate hold this sentiment and determination without exception. The committee, now realizing the vital effect any determination Corperss may make relative to the present and future peace of the United States, are seeking the sincere opinions of various organized

groups in our country and the ablest historians and international lawyers. There are only four substantial issues:

(1) Shall we repeal all neutrality and peace legislation and rely upon the international law as advocated in the legislation proposed by Senator King, of Utah; or

(2) Shall we grant to the President the discretion to define from time to time the materials and articles the export of which shall be embargoed to belligerents, and by proclamation to name the belligerents against whom such embargo shall be applied; or

(3) Shall we enact no further neutrality or peace legislation,

relying on existing law; or

(4) Shall we enact the legislation proposed by Senator Pittman, placing all articles and materials, including arms, ammunition, and implements of war, upon the so-called cash-and-carry basis? The purpose and effect of such proposed legislation is becoming clarified in the minds of the committee, but there is apparently

a widespread misunderstanding and confusion as to the purpose and effect of the existing neutrality legislation and the proposed legislation.

legislation.

In so threatening and serious an emergency where the general understanding and support of any proposed legislation by the citizens of our country is essential to the expeditious enactment of legislation by Congress, the people must be advised as to the effect of any legislation that may be enacted. In my opinion it would be disastrous for our Congress to repeal the existing neutrality laws, even inadequate as they may be to meet the impending situation. Our citizens and our Government, prior to and at

the time we entered the World War, were acting under and in obedience to the fixed principles of international law. Neither our people nor our Government committed any act that was not our people nor our Government committed any act that was not sanctioned by international law. The belligerents, prior to our entry into the war, during a period of many months violated our every right as a neutral under international law. They challenged and ignored our constant protests and demands for the respect of our neutral rights. Such violations were the sole cause that impelled us to declare a state of war with Germany. All of the other alleged causes are baseless. If any persons doubt this assertion, let them read the great speeches that were delivered on the floor of the United States Senate on the 4th day of April 1917, the day that the Senate adopted the war resolution. In support of this contention may I briefly quote from the speech of Senator Borah delivered on that occasion, and I take it that no one will question the learning, patriotism, and love of peace of Senator Borah. I quote from that speech as follows:

"Our commerce has been destroyed; our ships have been driven from the ocean; our people have been drowned or left to perish upon the midnight sea. What more could a people do to evidence to the world their desire for peace than to do what this Nation has done for the last few years? I repeat that, whatever may be

has done for the last few years? I repeat that, whatever may be said in justification of the course which has been pursued in the past, it must be evident to every mind that a different policy is not only essential to the protection of our people but is of itself the

best guaranty of peace.
"Under the condition in which the world is moving today we cannot hope for protection for ourselves unless first we give evidence of our intention to protect, and, secondly, our determination and our capacity to protect. * * *
"We enter this war, therefore, not disunited, not discordant, but as men who believe that their rights have been invaded, their privates."

ileges assailed, their Government attacked, and who are willing to meet the situation, not as they have made it, but as others have made it for them.

"Nevertheless, here are a hundred million people united in spirit and in purpose, determined to enter the struggle, not for territory

and in purpose, determined to enter the struggle, not for territory or for power but for their rights and their honor, without which we as a Nation must perish."

If we repeal all neutrality and peace legislation and resort to international law to keep us out of war, is there any reason to believe that our citizens will not avail themselves of the rights under international law and pursue the same policy and commit the same acts that they did prior to our cutty into the World War? the same acts that they did prior to our entry into the World War? Is there any reason to doubt that the same illegal submarine warfare will be conducted not only against the vessels of the belligerents, but against neutral vessels of our own country and against our neutral exports? And is there any doubt, if these events take place, that the same controversies will arise and that it will again to the difference of the country of the place. be the duty of our Government under such policy to eventually protect the neutral rights of our citizens to an extent that will probably again impel us through honor and duty to enter another foreign war?

Prior to 1917 when we entered the war, we maintained for our

Government the same national policy maintained by every neutral government throughout the world. By the enactment of the so-called Neutrality Act we did not abandon our rights under international law, but we suspended some of the rights of our citizens as neutrals in their relation to belligerents during war. We reas neutrals in their relation to beingerents during war. We restrained our own citizens and our own vessels from subjecting themselves to the danger of death and destruction, that controversies such as arose prior to our entry into the war might be eliminated for the sake of the peace of all of our people. The danger is too great at this time to abolish all control over the action of our citizens and our commerce.

action of our citizens and our commerce.

I fully realize the high purpose of the Thomas amendment and appreciate the strong arguments that have been made in its behalf by great organizations in this country. The time may come when such character of legislation may be deemed necessary by Congress. There is a grave question as to whether any attempt to enact such legislation at the present would accomplish any good. The debate upon it might not be wise and its defeat would have an unfortunate psychological effect both at home and abroad. I am satisfied that a large majority of the Foreign Relations Committee oppose the Thomas amendment and I believe that a large majority of the Senate are opposed to it at this time.

But may I assert that there is no inconsistency in the enactment

But may I assert that there is no inconsistency in the enactment of the legislation proposed by Senator Thomas and the legislation proposed by me. Such proposed acts, however, deal with entirely different subjects and have for their purpose entirely different ends. The Thomas amendment is a change in our foreign policy with regard to foreign governments. The legislation that I suggest is preclibed to describe a demostly adversaries mention that the proposing further restricts a consistence of the constant of the suggest is metric proposing further restricts a demostly metric proposing further restricts a type of the constant of th regard to foreign governments. The legislation that I suggest is peculiarly a domestic matter proposing further restraints upon our own citizens for the sole purpose of preventing them from being killed and their property destroyed by belligerents, because I believe that such illegal destruction would again impel us to go to

If the third alternative is recommended by the committee and adopted by Congress—that is, the enactment of no legislation at this session of Congress relative to neutrality and peace—what position will our Government be in with relation to the next war? The cash-and-carry provisions of the existing law terminate on May 1 of this year. After the termination of such provisions our citizens may transport every kind of articles and materials to belligerent countries except those few manufactured articles now defined by statute as "arms, ammunition, and implements of war." Would not all belligerents be just as intense in preventing their enemy

from receiving all of the materials that enter into the manufacture of arms, ammunition, and implements of war or that are directly used in the destruction of human life as they would be to intercept the transportation of "arms, ammunition, and implements of war" to their enemy? Would not the same methods be adopted as were adopted prior to our entrance into the World War? Would not the same controversies over the legal rights of our citizens arise? Would not our Government be called upon to defend those rights? Would not the results probably be the same as they were in 1917?

Let us assume however that such cash-and-carry provisions are

Let us assume, however, that such cash-and-carry provisions are reenacted. The President has the discretion under the existing law to place in effect such cash-and-carry system or not to place it in effect. He also has the discretion, I believe, to exempt certain materials from the cash-and-carry system. You can well imagine the effort of those engaged in certain production to have their products exempted from the cash-and-carry provisions of the law. It is true that nothing under the cash-and-carry provisions of existing law prevent the sale to anyone in the United States of any article or material except those defined as "arms, ammunition, and implements of war," provided the title is transferred to some foreigner before export; but there is a certain restriction on such sales, and the profits derived by sale in the United States are not as great as the profits that would be received if the seller delivered the goods through a combat area to a belligerent country.

Again, the present law is defective in that it grants no power to prevent our ships from entering a combat area. The bill I propose the effort of those engaged in certain production to have their prod-

prevent our ships from entering a combat area. The bill I propose authorizes the President, from time to time, by proclamation, to designate combat areas within which our vessels shall not move. The importance of this provision must be realized, when we look back upon the immediate cause for our declaration of a state of

In February 1917 the German Government notified the United States that, commencing with March 1, it would establish a war zone on the high seas commencing at the tip of Norway and extending to the entrance to the Mediterranean, reaching hundreds of miles out at sea, and that after the first day of March Germany would sink every vessel entering that zone, neutral as well as belligerent; neutrals engaged in trade with neutrals, or with bel-ligerents; neutrals carrying contraband of war or noncontraband

of war; and without notice and without any provision for the safety of the lives of our citizens on board such vessels.

That was not only contrary to every concept of international law but was brutal beyond expression. Our vessels were ordered off the high seas. Our vessels were denied the freedom of the open seas. Between March 1 and April 6 when we entered the war, a number of our vessels were such in such some with the loss of the number of our vessels were sunk in such zone, with the loss of the

lives of our citizens.

If my proposed legislation is adopted, the President in such

If my proposed legislation is adopted, the President in such a case would have the authority to declare such a zone as was established by Germany as a combat zone, in which our vessels would be prohibited from entering. He had no such authority in 1917, and he has no such authority under existing law.

Let it be understood that in the proposed Pittman Act all articles and materials, including arms, ammunition, and implements of war, are not only included in the "cash and carry" provisions but such "cash and carry" provisions but such "cash and carry" provisions automatically and immediately go into effect upon the declaration by the President or by Congress that a state of war exists between or among certain powers, as do the other provisions of the existing law which are incorporated in the proposed Pittman Act. So that the transportation of foodstuffs and clothing may be safely carried to the suffering civil populations of warring countries, the Pittman Act adds another provision to the existing law. That provision exempts the Red Cross, its officers, agents, and employees, and the vessels that it may charter or control, from the

employees, and the vessels that it may charter or control, from the

provisions of the law.

employees, and the vessels that it may charter or control, from the provisions of the law.

It is very unfortunate, in my opinion, that great peace organizations and organizations of patriotic women should fail to support the Pittman proposal because they prefer the Thomas bill. As I have heretofore stated, they are different subjects and should not be combined. Their purposes are inconsistent with each other. A peace act, to be respected, must be universal in its administration in the United States.

I believe that the chief urge of these societies and organizations in support of the Thomas Act is to obtain aid for China and repression of Japan. My sympathies in this matter are too well known to require reassertion. I do not believe that the Pittman proposed act will be as injurious to China or as preferential to Japan as some believe. Japan has every port in China controlled. Nothing shipped into a port of China can reach the armies of China. Our Government vessels cannot engage in the transportation of war materials to either country, and most of our vessels on the Pacific are Government vessels. The privately owned American vessels are not engaged in the trade with Burma or with Russia, which today are the only two ports of entry to the armies of China.

China's credit position with the United States would not be affected. China must depend upon her sale of silver to the United States for her credit. Such sales are not prohibited under my proposed act. But, be that as it may, I again assert that a domestic act stelly for the protection of curvers entry to the survey of the protection of curvers of chirals.

States for her credit. Such sales are not promitted under my proposed act. But, be that as it may, I again assert that a domestic act solely for the protection of our own citizens must be universal in its administration in the United States as to all governments and all peoples. The people of the United States, the President, and Congress are familiar with all the facts with regard to the invasion. of China by Japan and the conduct of its war of aggression. The President and the Congress know that since 1932, when Japan navaded Manchuria, Japan has been in constant violation of the Nine Power Pact. They know that Japan has particularly violated that

clause which directly affects the United States, where it was agreed between Japan and the United States and other powers that the open door in China should ever be maintained and that none of the open door in China should ever be maintained and that none of the nationals of any of the parties to that treaty would be permitted to obtain any special privileges and sanctions in China over the nationals of any other of the parties to the treaty nor to commit any acts prejudicial to nationals of all parties to the treaty. This has been and now is being openly and admittedly violated by Japan. Our Government has been protesting against these violations and others for months. Japan continues to ignore these protests. Our Government therefore would be justified in passing special legislation with regard to such violation. lation with regard to such violation.

It would not be improper, in the circumstances, in my opinion, to authorize the President to place such restrictions upon our trade with Japan as might be necessary to induce Japan to cease such violations, or at least to give assurances by action that she was taking steps that would terminate such violations in a reasonable time. I cannot understand the consistency or the moral attitude of those who would forbid the sale of manufactured arms, ammunition, and implements of war to Japan because, as they say, they nition, and implements of war to Japan because, as they say, they are unwilling to participate in the murder of people, while at the same time they take no steps to prevent the export to Japan of all the articles and materials used in the manufacture of arms, ammunition, and implements of war They seem to object to the export of manufactured shells and bombs with which to murder innocent Chinese, but they make no objection to the shipment of the materials to Japan with which Japan does manufacture the shells and bombs with which to continue such destruction. Japan would rather have the raw materials than the manufactured articles because the manufactured articles would cost much more ricies, because the manufactured articles would cost much more, and Japan has cheap labor and factories with which to manufacture such instruments of death. China, on the other hand, can only benefit by the manufactured articles, as she has few munitions works and manufacturing institutions. I am thinking only of our own peace. I have not hesitated, personally, to express my abhorrence of dictator governments, because those governments, through their controlled press, have continued to attack and ridicule our form of government and its officers. One statement that I made was incompletely quoted, or garbled, and republished in totalitarian countries for the purpose of convincing their own people that the attacks were upon them and not upon their Government. I have no hatred for any people. I pity those who are deprived of all rights under the totalitarian powers.

Dictators have sprouted and prematurely withered throughout all history. Their governments have been abolished and their domains divided. More liberal governments have arisen from the ashes of dictatorships. Such will be the fate of every dictator and every dictator's government.

Over 4,000 years ago, so the Bible records, Belshazzar, King of Berbleau of the such as the such ticles, because the manufactured articles would cost much more,

Over 4,000 years ago, so the Bible records, Belshazzar, King of Babylon and dictator of all the then known civilized world, had arbitrary power over the life and death of his subjects. Those of his own race were impoverished and maltreated, while those of his own race were impoverished and maitreated, while those of other races were enslaved. Belshazzar turned from the worship of God to worship the golden idols; and at the great feast, when he was celebrating his own absolute power and independence of God and man, a hand wrote upon the walls of that chamber in living light the words: "Mene, mene, tekel, upharsin."

And Daniel was called in to interpret the meaning of these words, and thus he read them to Belshazzar:

"God hoth numbered the kinedom and finished it.

"God hath numbered thy kingdom and finished it.

"Thou art weighed in the balances and art found wanting.

"Thy kingdom is divided and given to the Medes and Persians." Mene, mene, tekel, upharsin,

President's Communication to Chancelor Hitler

EXTENSION OF REMARKS

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Monday, April 17, 1939

LETTER TO THE CHANCELOR OF THE GERMAN REICH FROM THE PRESIDENT OF THE UNITED STATES

Mr. BARKLEY. Mr. President, I ask to have printed in the RECORD the letter sent by the President of the United States to Adolf Hitler, Chancelor of the German Reich, on the subject of world peace or a cessation of aggressive operations, and suggesting a conference among the nations to determine upon the matters involved in the present world chaotic conditions.

There being no objection, the communication was ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE, April 14, 1939.

His Excellency Abolf Hitler,

His Excellency Adolf Hitler,

Chancelor of the German Reich, Berlin, Germany:

You realize I am sure that throughout the world hundreds of millions of human beings are living today in constant fear of a new war or even a series of wars.

The existence of this fear—and the possibility of such a conflict—is of definite concern to the people of the United States for whom I speak, as it must also be to the peoples of the other nations of the entire Western Hemisphere. All of them know that any major war, even if it were to be confined to other continents, must bear heavily on them during its continuance and also for generations to come.

Because of the fact that after the acute tension in which the world has been living during the past few weeks there would seem to be at least a momentary relaxation—because no troops are at this moment on the march—this may be an opportune moment for

this moment on the march—this may be an opportune moment for me to send you this message.

On a previous occasion I have addressed you in behalf of the settlement of political, economic, and social problems by peaceful methods and without resort to arms.

But the tide of events seems to have reverted to the threat of arms. If such threats continue, it seems inevitable that much of the world much become involved in common with all the world. arms. If such threats continue, it seems inevitable that much of the world must become involved in common ruin. All the world— victor nations, vanquished nations, and neutral nations—will suffer. I refuse to believe that the world is, of necessity, such a prisoner of destiny. On the contrary, it is clear that the leaders of great nations have it in their power to liberate their peoples from the disaster that impends. It is equally clear that in their own minds and in their own hearts the peoples themselves desire that their fears be ended their fears be ended.

It is, however, unfortunately necessary to take cognizance of recent facts.

Three nations in Europe and one in Africa have seen their independent existence terminated. A vast territory in another independent nation of the Far East has been occupied by a neighboring state. Reports, which we trust are not true, insist that further acts of agrression are contemplated against still other independent nations. Plainly the world is moving toward the moment when this situation must end in catastrophe unless a more rational way of guiding events is found.

You have repeatedly asserted that you and the German people have no desire for war. If this is true, there need be no war.

Nothing can persuade the peoples of the earth that any governing power has any right or need to inflict the consequences of war on its own or any other people save in the cause of self-evident home defense.

In making this statement we as Americans speak not through selfishness or fear or weakness. If we speak now it is with the voice of strength and with friendship for mankind. It is still clear to me that international problems can be solved at the council table.

It is therefore no answer to the plea for peaceful discussion for one side to plead that unless they receive assurances beforehand that the verdict will be theirs, they will not lay aside their arms. In conference rooms, as in courts, it is necessary that both sides enter upon the discussion in good faith, assuming that substantial justice will accrue to both; and it is customary and necessary that they leave their arms outside the room where they confer.

I am convinced that the cause of world peace would be greatly advanced if the nations of the world were to obtain a frank statement relating to the present and future policy of governments.

advanced if the nations of the world were to obtain a frank statement relating to the present and future policy of governments.

Because the United States, as one of the nations of the Western Hemisphere, is not involved in the immediate controversies which have arisen in Europe, I trust that you may be willing to make such a statement of policy to me as the head of a nation far removed from Europe in order that I, acting only with the responsibility and obligation of a friendly intermediary, may communicate such declaration to other nations now apprehensive as to the course which the policy of your Government may take

municate such declaration to other nations now apprehensive as to the course which the policy of your Government may take.

Are you willing to give assurance that your armed forces will not attack or invade the territory or possessions of the following independent nations: Finland, Estonia, Latvia, Lithuania, Sweden, Norway, Denmark, the Netherlands, Belgium, Great Britain and Ireland, France, Portugal, Spain, Switzerland, Liechtenstein, Luxemburg, Poland, Hungary, Rumania, Yugoslavia, Russia, Bulgaria, Greece, Turkey, Iraq, the Arabias, Syria, Palestine, Egypt, and Iran. Such an assurance clearly must apply not only to the present day but also to a future sufficiently long to give every opportunity to work by peaceful methods for a more permanent peace. I therefore suggest that you construe the word "future" to apply to a minimum period of assured nonaggression—10 years at the least—a quarter of a century, if we dare look that far ahead.

If such assurance is given by your Government, I will immediately transmit it to the governments of the nations I have named, and I will simultaneously inquire whether, as I am reasonably

ately transmit it to the governments of the nations I have named, and I will simultaneously inquire whether, as I am reasonably sure, each of the nations enumerated above will in turn give like assurance for transmission to you.

Reciprocal assurances such as I have outlined will bring to the world an immediate measure of relief.

I propose that if it is given, two essential problems shall promptly be discussed in the resulting peaceful surroundings, and in those discussions the Government of the United States will cledly take part gladly take part.

The discussions which I have in mind relate to the most effec-

tive and immediate manner through which the peoples of the world

can obtain progressive relief from the crushing burden of armament which is each day bringing them more closely to the brink of economic disaster. Simultaneously the Government of the United States would be prepared to take part in discussions looking toward the most practical manner of opening up avenues of international trade to the end that every nation of the earth may be enabled to buy and sell on equal terms in the world market as well as to possess assurance of obtaining the materials and products of peaceful economic life.

At the same time, those governments other than the United States which are directly interested could undertake such political discussions as they may consider necessary or desirable.

discussions as they may consider necessary or desirable.

We recognize complex world problems which affect all humanity but we know that study and discussion of them must be held in an atmosphere of peace. Such an atmosphere of peace cannot exist if negotiations are overshadowed by the threat of force or by the

I think you will not misunderstand the spirit of frankness in which I send you this message. Heads of great governments in this hour are literally responsible for the fate of humanity in the coming years. They cannot fail to hear the prayers of their peoples to be protected from the foreseeable chaos of war. History will hold them accountable for the lives and the happiness of all-even unto the least.

I hope that your answer will make it possible for humanity to lose fear and regain security for many years to come.

A similar message is being addressed to the Chief of the Italian

Government.

FRANKLIN D. ROOSEVELT.

Home-Front Sabotage

EXTENSION OF REMARKS

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES Monday, April 17, 1939

ARTICLE BY ERNEST K. LINDLEY

Mr. BONE. Mr. President, a few days ago Mr. Ernest K. Lindley, whom I consider to be one of the most brilliant and able newspaper men in the United States, wrote a very interesting article on the war tax bill now pending in Congress. I ask unanimous consent that the article may be printed in the Appendix.

There being no objection, the article was ordered to be

printed in the RECORD as follows:

HOME-FRONT SABOTAGE-THE PURSE PATRIOTS (By Ernest K. Lindley)

The war-profits-taxation bill, introduced last week by Senator Bone on behalf of himself and 49 other Senators, is already causing agony in various quarters—among them the New York Times, Miss Dorothy Thompson, and, so I am informed, the Communist Daily Worker.

Last Saturday the New York Times announced on its front page,

Last Saturday the New York Times announced on its front page, with an air of triumph, that among the senatorial sponsors of the bill it could find only 10 who avowed that they had read its full text. This is a 183-page revenue bill. Any bill of such length which has been read line by line by 10 Senators before it has been considered in committee is a bill which has commanded unusual attention. In fact, as much can be said of any revenue bill which has been digested line by line at any time by 10 Senators, with the exception of those who have worked on it in committee. I suspect that the bill had not been read line by line by any member of the staff of the New York Times before last Saturday.

But the New York Times knows the substance of the bill—and so do the Senators of all parties who are its sponsors. The sub-

But the New York Times knows the substance of the bill—and so do the Senators of all parties who are its sponsors. The substance is to be found on four pages—7, 8, and 9, which set up certain tax schedules, and 183, which makes these tax schedules effective upon the declaration by Congress that a state of war exists between the United States and any foreign government. For corporations the bill sets up a tax of 15 percent on the first 2 percent of profits on the adjusted declared value of the corporation's capital stock, 25 percent on the next 4 percent of profits, and 100 percent on all profits in excess of 6 percent.

For individuals the bill reduces the personal exemption to \$500 for an unmarried worker, and to \$1,000 for a married worker, with an allowance of \$100 for each dependent. It applies a normal tax of 6 percent on all taxable income and a surtax which rises from 10 percent on net income of between \$3,000 and \$5,000 to 93 percent on net income in excess of \$20,000.

Miss Thompson says that to adopt this war-tax bill would "give notice to the world and ourselves that we shall accompany war with revolution," and so "make an international promise to commit

suicide." The New York Times says it would "practically insure our industrial disorganization at the very moment when our in-

our industrial disorganization at the very moment when our industry would be called upon to function at its highest pitch."

So we are warned that if corporations and individuals with large incomes were so heavily taxed they would be too discouraged to work for the victory of their country. In short, there would be sabotage on the home front.

How much income and how much profit are necessary to induce these patriots of the home front to work while their country is at war? Both the New York Times and Miss Thompson suggest that it would be nice if war-profits taxes were to take only the excess over normal peacetime profit. The New York Times proposes that the same principle be applied to personal income. income

So we are warned that American corporations and recipients of large incomes won't do their part in the event of war unless they are assured of approximately their peacetime profits and incomes.

If that is so, it is well to know it before a single American youth is dispatched to face a foreign foe.

youth is dispatched to face a foreign foe.

I doubt that most managers of American business and most recipients of large incomes are inclined to be so treasonable as Miss Thompson and the New York Times credit them with being. Morally there can be only one attitude toward the bill of Senator Bone and his 49 colleagues. That is that it does not go far enough. It will permit corporations to make a substantial profit and individuals remaining safely at home to enjoy substantial incomes while others are risking their lives at the front. But as a practical compromise, the bill seems reasonable. It is designed to preserve the system of private enterprise during the war. It permits capital to receive its wage. It is an alternative—probably the only alternative acceptable to the American people—to the socialization of important enterprises during a war. It will still

socialization of important enterprises during a war. It will still permit many thousands of people at home to receive larger remunerations than are paid to the highest officers of the Army and Navy.

erations than are paid to the highest officers of the Army and Navy. On the economic side, Senator Bone's tax schedule, or something approximating it, would restrain a war inflation. We had one during the late World War, largely because we didn't tax heavily enough. The next time the inflation may be worse. A pay-as-you-go tax policy is the best check on inflation.

Some of the support for this bill arises, of course, from the belief that it will help to keep us out of war. It will not keep us out of any war in which we belong because we have a vital interest at stake. But it should subdue agitation for war, not only by those who would profit from it, but by those who, in the absence of a threat to their purses, feel free to indulge their personal animosities at the expense of other people's sons and fathers.

Introductory Address by Secretary Ickes at Marian Anderson Concert

EXTENSION OF REMARKS

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Monday, April 17, 1939

ADDRESS BY HON, HAROLD L. ICKES AND COMMENT BY THEODORE MITCHELL

Mr. SMATHERS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD the introductory speech delivered by Hon. Harold L. Ickes, Secretary of the Interior, on last Easter Sunday, at the Lincoln Memorial, in Washington, D. C., with a comment made by one of my constituents, Theodore Mitchell, of Newark, N. J.

There being no objection, the speech and the comment were ordered to be printed in the RECORD, as follows:

were ordered to be printed in the Record, as follows:

In this great auditorium under the sky all of us are free. When God gave us this wonderful outdoors and the sun, the moon, and the stars He made no distinction of race or creed or color. And 130 years ago He sent to us one of His truly great in order that he might restore freedom to those from whom we had disregardfully taken it. In carrying out this task Abraham Lincoln laid down his life, and so it is as appropriate as it is fortunate that today we stand reverently and humbly at the base of this memorial to the great emancipator while glorious tribute is rendered to his memory by a daughter of the race from which he struck the chains of slavery.

Facing us down the Mall beyond the Washington Monument which we have erected as a symbol of the towering stature and fame of him who founded this republic, there is rising a memorial to that other great Democrat in our short history, Thomas Jefferson, who proclaimed that principle of equality of opportunity which Abraham Lincoln believed in so implicitly and took so

seriously. In our own time, too many pay mere lip service to these twin planets in our democratic heaven. There are those, even in this great Capital of our democratic republic, who are either too timid or too indifferent to lift up the light that Jeffer-

son and Lincoln carried aloft.

Genius, like justice, is blind. For genius has touched with the tip of her wing this woman who, if it had not been for the great mind of Jefferson, if it had not been for the great heart of Lincoln, would not be able to stand among us today a free individual in a free land. Genius draws no color line. She has endowed Marian Anderson with such a voice as lifts any individual above his fellows, as is a matter of exultant pride to any race. And so it is fitting that Marian Anderson should raise her voice in tribute to the noble Lincoln, whom mankind will ever honor.

We are grateful to Miss Marian Anderson for coming here to

sing to us today.

[Comment of Theodore Mitchell]

I think Mr. Ickes struck at a vital point when he remarked about "lip service" to the freedom of speech and other liberties guaranteed by our Constitution. The whole concert and its significance cannot but be felt by the American people. I feel proud to say that we have a Government that not only gives "lip service" but actually practices the American principles enunciated by Lincoln, Washington, Jefferson, and other great Americans.

Respectfully yours,

Theodore Mischest.

THEODORE MITCHELL

Unemployment and Relief

EXTENSION OF REMARKS

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES Monday, April 17, 1939

RADIO ADDRESS BY HON. JAMES F. BYRNES, OF SOUTH CAROLINA

Mr. CLARK of Missouri. Mr. President, on April 16 the Senator from South Carolina [Mr. Byrnes] delivered an address on the American forum of the air from station WOL, of the Mutual Broadcasting Co., on the subject of unemployment and relief. I ask unanimous consent that the address be published in the RECORD.

There being no objection, the address was ordered to be

printed in the RECORD, as follows:

The normal way for a man to earn a living is by employment in private enterprise. However, to expect the millions of unemployed to secure employment in private enterprise this year or for years to come is to indulge in wishful thinking. To expect local governments to be able to provide jobs for these millions is to indulge the mishing without thinking. Some persons who admit that local ments to be able to provide jobs for these millions is to indulge in wishing without thinking. Some persons who admit that local governments cannot furnish the funds for a work program contend that the Federal Government should appropriate the money and permit it to be disbursed by the officials of local governments.

Some of our Republican friends urge that a work program be administered by a bipartisan board appointed by the President, and in the States by similar boards appointed by the Governors of the States.

There is no such thing as a bipartisan board. If a Democratic President appoints such a board, the Republicans appointed are the kind of Republicans who support a Democratic President. If a Republican President appoints the board, the Democrats selected must prove that, after all, they are not very staunch Democrats. No board or commission can administer a work program. It must be done by an individual, clothed with power and held accountable by the people.

A board can act in a quasi-judicial capacity. It cannot successfully perform executive functions. If a work program, daily requiring quick decision on hundreds of questions, were administered by a board, the board would become a debating society and while the members debated the unemployed would suffer. It could be made to operate efficiently only by appointing to the There is no such thing as a bipartisan board. If a Democratic

It could be made to operate efficiently only by appointing to the board one Edgar Bergen and four Charlie McCarthys.

board one Edgar Bergen and four Charlie McCarthys.

If the United States Government should collect the money from the people and turn it over to the States with the power to determine how the money should be spent, it would mean in many States a dole for the able-bodied unemployed. The American people are opposed to the dole for the able-bodied. If the law required a work program we would have not simply 48 W. P. A.'s with different patterns in each State, but we would have several thousand different programs, because by the States the money would be turned over to the towns and townships in the various States.

Turning Federal funds over to the States for administration would mean more politics instead of less politics in administration. When the Congress first appropriated funds for relief, the administration was left to the States. The result was that in three States funds had to be withdrawn and in one State the Governor was indicted and convicted for misuse of funds.

State officials are no better nor worse than officials of the Federal Government. They are elected by the same people. But there is this difference: All of the people realize they furnish through taxation the funds of State governments while many of the people apparently believe that Federal funds come either from big business or from a Christmas tree. Many State officials will fight to balance the budget of the State government but will fight with even greater vigor to unbalance the Budget of the

will fight with even greater vigor to unbalance the Budget of the United States Government.

Much of the sentiment in favor of administration by local governments is due to the mistaken impression that the persons eligible for jobs are selected by Federal officials. The fact is that the persons holding W. P. A. jobs are certified by local agencies. If there is favoritism or corruption the fault lies with local officials and not with officials of the Federal Government.

Social-security funds are administered by State officials, and today we hear many complaints. The States should supervise assistance to the aged and helpless, because the expression of mercy and charity by neighbors is most effective. But the States have a sufficiently difficult problem in administration relief to unemployables without undertaking to administer work program funds, two-thirds or three-fourths of which would come from the Federal Government.

It is rather surprising to hear the party of Lincoln advocating

It is rather surprising to hear the party of Lincoln advocating that the States remain in the political union, but second from the economic union. The fact is no one ever heard of Republicans urging that States administer Federal funds for a work program until last November when, as a result of a temporary lapse in the political thinking of the people, they happened to elect a number of Republican Governors.

of Republican Governors.

Unemployment is a national problem; not only do I say so, but the distinguished Senator from Oregon says so. It is true that he advocated transferring the administration of the law to the States because Dr. Gallup's poll stated that approximately 60 percent of the people believed the States should supervise such expenditures. But in the first part of his speech the Senator from Oregon stated: "It is the primary duty of the Federal Government to provide jobs for the unemployed." The Senator was right, and the Federal Government cannot shirk its responsibilities to discharge what he called a primary duty simply because of a poll by Dr. Gallup.

In a sincere effort to make some progress toward the solution of In a sincere effort to make some progress toward the solution of this most serious problem, the Unemployment Committee of the Senate yesterday authorized me to report to the Senate a bill on this subject. Recognizing that our relief agencies were created during a period of emergency without relation to each other, I have attempted to view the picture as a whole.

By making more liberal payments for dependent children, the blind, and for old-age assistance, this plan would remove these beneficiaries from the field of Government employment.

Unemployment-compensation laws have been in operation in all

beneficiaries from the field of Government employment.

Unemployment-compensation laws have been in operation in all the States only since January 1, 1939. These laws have not yet received a fair trial. This bill provides a minimum amount for unemployment compensation. It shortens to 1 week the time a man must wait for such payments. It lengthens to 13 weeks the time he can receive compensation if he continues unemployed. These laws cover 60 percent of the wage earners, and for a period of 13 weeks will remove thousands from the field of Government-work programs. work programs.

work programs.

The bill provides an additional cooperative program with the States on a 50-50 basis, providing assistance for handicapped individuals who, because of mental or physical disability, are unable to secure gainful employment.

Today sympathetic local officials certify these people to work programs where the average cost is \$1,000 per man per year. Their disabilities make them unable to perform satisfactory work and bring criticism upon the program.

Realizing that those not covered by unemployment compensa-

bring criticism upon the program.

Realizing that those not covered by unemployment compensation or unemployed for a period longer than that for which compensation is paid will still present a problem, the bill provides for a public works agency. Into that agency there will be transferred W. P. A., P. W. A., the construction work of the Treasury Department, the Bureau of Public Roads, the N. Y. A., and the C. C. C. The director of this agency, like the Chief of Staff of the Army, viewing unemployment conditions throughout the Nation and having in advance approved work projects, can order them to proceed in a particular section whenever conditions demand it.

As to such projects as have been administered by W. P. A. and

In a particular section whenever conditions demand it.

As to such projects as have been administered by W. P. A. and P. W. A., the bill requires that a State must contribute an average of one-third of the total cost of all projects. This does not mean one-third of each project, but means that if, for instance, the official in charge accepts a smaller contribution on a sewing-room project, he must require a larger contribution on some other project in order to maintain the average of at least one-third.

In addition to the construction work of W. P. A., the so-called white-collar projects will be transferred, but with this modification, that the agency cannot transfer its funds to other depart.

white-coint projects will be transfer its funds to other departments for so-called Federal projects and cannot use its funds for any project for which there is no local contribution.

By merging all of the construction work, as well as the power to grant funds for construction work by local governments, in

one agency, administration costs will be greatly reduced. We will bring to an end the competition between Federal departments to spend money in the States and bring to an end the "shopping" by local officials for funds from various departments. It will make it possible for a larger proportion of the funds appropriated to reach the persons who are actually out of employment and in need of assistance.

reach the persons who are actually out of employment and in need of assistance.

In communities dependent upon one industry, the shutting down of that industry presents a serious problem to its people. In like manner, technological developments force a readjustment among workers. In such cases it is often difficult to teach an old man a new trade. The chances are he will remain unemployed and in need of assistance, but the younger man should be trained to perform other work for which there is a demand in private enterprise. The bill provides for such training.

In the emergency, appropriation bills were hurriedly considered to relieve what was regarded as a temporary problem, and authorized the expenditure of vast sums in the discretion of department officials. Recognizing this problem now as a permanent one, this bill seeks to have Congress provide the formula for the allotment of funds instead of permitting the money to be disbursed in the discretion of an individual.

The bill provides for the selection of administrative officials under the civil-service laws and this, coupled with the bill which has already passed the Senate making it a criminal offense to use political influence to secure jobs or intimidate employees, is bound to result in great improvement in the administration of these

to result in great improvement in the administration of these

The officials who have administered the work-relief programs were called upon to perform the most difficult task ever confronted by Government officials. For P. W. A. and W. P. A. there was no precedent. Nation-wide organizations were formed. Millions of men and women were put to work. These workers were selected by local officials—by Republicans and Democrats. Mistakes were made by administrative officials, as mistakes will always be made by human beings. You cannot employ millions of people without giving jobs to some who are loafers and some who are criminals.

Projects were selected and applied for in each case by the local Projects were selected and applied for in each case by the local officials. Inevitably there were some of little or no value. But the character of projects improved and today in every county and State there are hospitals, schoolhouses, airports, and public roads, testifying to the permanent increase in the assets of the Nation. Recalling the conditions existing during the last 5 years, I know you will agree that this was a marked improvement in the morale of the unemployed as a result of the inauguration of these work programs.

programs.

I think I know as well as anyone in public life the mistakes that have been made. By simply citing them I might appeal to your humor or arouse your prejudices, but I would not merit your respect. It is our duty to solve this problem which is all important to those who, through no fault of their own, must look to government for the necessities of life and important also to the taxpayers who must pay the bills.

In the solution of this problem, there is no place for petty, partisan politics. Hunger knows no party lines.

The man who will take money from the pockets of the people through the levying of taxes and under the guise of relief, use that money to promote his political fortunes should not only forfeit his office, but should forfeit the respect of all decent people.

The bill we have reported to the Senate is not a complete rem-

The bill we have reported to the Senate is not a complete remedy for the unemployment problem. It is, however, an honest effort to direct the expenditures of the funds of the Government available for this purpose in such manner as to secure for those who are unemployed the greatest possible benefits at the least possible expense to the American people.

The President's Address-One Hundred and Fiftieth Anniversary of the Departure of George Washington to Take Oath as First President

EXTENSION OF REMARKS

HON. ALBEN W. BARKLEY OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Monday, April 17, 1939

M. FRANKLIN D. ROOSEVELT AT MOUNT VERNON, APRIL 14, 1939 ADDRESS BY HON.

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD the speech delivered by the President of the United States at Mount Vernon on April 14, 1939, on the one hundred and fiftieth anniversary of the departure of George Washington to take the oath as the first President of the United States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mme. Regent, Mr. Director General, ladies, and gentlemen, we have come to the home of George Washington today in memory of another day, exactly 150 years ago, when the owner of Mount Vernon received a message from the First Congress of the United States.

Here in his beloved Mount Vernon he listened to the formal

message from the Congress announcing his election as the first President of the United States of America.

Charles Thomson, his guest, had ridden hither from New York to bring it—Charles Thomson, native of County Derry in Ireland, a Pennsylvania Irishman, with a passionate zeal for liberty, who, through 15 eventful years, had served as the Secretary of the Continuous Congress. tinental Congress.

tinental Congress.

We who are here today can readily visualize that scene from this porch—the sprouting lawn, the budding trees and the dogwoods, and the majestic Potomac running by at the foot of the hill. We can visualize the thoughts, too, which flowed through General Washington's mind. Saying farewell to his Army in 1783, the independence of the Colonies assured, he, already the Father of his Country, had returned to his beloved Mount Vernon with the hope and expectation that his task was done and that he would live a happy and useful life on his broad acres during the remainder of his days of his days.

But trying times still lay ahead for the struggling Nation, and those years after 1783 proved the most critical peace years in all

our history.

Called from his home, he had presided with skill and patience over the Constitutional Convention in 1787. And anxiety and doubt had attended him for many months thereafter while he waited for belated news that the Constitution itself had been

ratified by the States.

I take it that when the permanent framework of the Union had been assured in the summer of 1788, the elections ordered, and the First Congress summoned, General Washington must have known that the task of the Presidency would, without question, fall on

It meant that once more he would leave Mount Vernon behind It meant that once more he would leave Mount Vernon behind him, with no certainty of his return, and that on his shoulders, in the far-off North, would lie the burden of initiating the civil leadership of a new, untried Republic.

He knew that his would be the task of ending uncertainty, jealousy between the several States and creating, with the help of the Congress, a functioning national government fit to take its

the Congress, a functioning national government fit to take its place among the organized nations of the world.

Two days later he and his family were to set forth on that long and difficult journey by highway and ferry and barge, which was to culminate in his inauguration as President on the balcony of Federal Hall in New York on April 30, 1789.

Doubtless on this very porch he sat with Charles Thomson, hearing at first-hand of the long efforts of the first Senate and the first House of Representatives to obtain a quorum, learning of the unanimity by which the votes of the electors were cast for him, listening to the precedents that were being set in the conduct of the first Legislature under the Constitution, and thinking doubtless that his own every move from that day on for many years to come would be chronicled for future generations and thereby set the tempo and the customs of the Presidency of the United States. dency of the United States.

But I am to be forgiven if I, the thirty-first President, dwell for a moment on the feelings within the heart of him who was about

a moment on the feelings within the heart of him who was about to be the first President.

Washington was essentially a man close to Mother Earth. His early training on a plantation, his profession of surveyor, his studies in agriculture and the development of farm lands were never replaced by his outstanding military service under Braddock or as Commander in Chief for the 8 years of the Revolution.

We know that when Mount Vernon came to him by inheritance here his heart was planted for all time. Here he could talk with his neighbors about the improvement of navigation on the river, about

here his heart was planted for all time. Here he could talk with his neighbors about the improvement of navigation on the river, about grist mills on the creeks, about the improving of highways, about the dream of a canal to the western country, about saw mills and rotation of crops, about the topsoil, which even then had begun to run off to the sea, about the planting of trees, new varieties of food and fodder crops, new breeds of horses and cattle and sheep.

Here, too, he had his books and was in touch with the authors and artists of the New and Old Worlds.

Here at the junction point of the North and of the South, at the foot of one of the main arteries that led to the exciting new lands beyond the mountains the travelers and the news stopped at his

beyond the mountains, the travelers and the news stopped at his

door.

Rightly he must have felt that his labors in the service of his rounded out his contribution to the

Rightly he must have felt that his labors in the service of his State and of his Nation had rounded out his contribution to the public weal. Rightly he felt that he had earned the privilege of returning for all time to the private life which had been his dream. That Washington would have refused public service if the call had been a normal one has always been my belief. But the summons to the Presidency had come to him in a time of real crisis and deep emergency. The dangers that beset the young Nation were as real as though the very independence Washington had won for it had been threatened once more by foreign foes. Clear it must have been that the permanence of the Republic was at stake and that if the new Government, under the Constitution, should fall in its early days, the several States falling out among themselves would become so many small and weak nations subject to attack and conquest from overseas.

So it came about that once more he put from him the life he loved so well and took upon himself the Presidency.

That cannot have been a happy day for Gen. and Mrs. George Washington on the 14th of April 1789—a day of torn emotions, a

day of many regrets.

The decision had been made. We, their successors, are thankful for that decision and proud of it. And I think that it would have made General and Mrs. Washington happy if they had known that 150 years later tens of millions of Americans would appreciate and understand how they felt that day in their Mount Vernon home.

Return to States of Responsibility for Relief Administration

EXTENSION OF REMARKS

HON, ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Monday, April 17, 1939

RADIO ADDRESS OF HON. CHARLES L. McNARY, OF OREGON, APRIL 16, 1939

Mr. VANDENBERG. Mr. President, on Sunday evening the able senior Senator from Oregon [Mr. McNary], the distinguished leader of the Republican minority, delivered an address on the American Forum of the Air on the subject of relief administration. The address cogently sets forth a philosophy with which I cordially agree and which is growing in its appeal to the country. I ask that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be

printed in the RECORD, as follows:

Whenever one undertakes to talk calmly and rationally about the current relief problem his effort usually is misinterpreted. So let me make clear at the outset that I have no quarrel with the use of Federal funds to provide effective and adequate relief for the needy. Republicans, no less than Democrats, recognize that the Federal Government must continue, as long as unemployment is a critical problem, to bear the major share of the cost of its relief. Indeed, it was a Republican, ex-President Benjamin Harrison, who as early as 1894 made the first demand that the Federal Government

Indeed, it was a Republican, ex-President Benjamin Harrison, who as early as 1894 made the first demand that the Federal Government set up a work program to fight unemployment.

Unemployment is our most serious domestic problem. It is a permanent problem. It is a national problem. An overwhelming majority of our people believe that the granting of prompt and adequate aid to the needy unemployed is primarily the duty of the Federal Government. The Congress has taken cognizance of this sentiment. Appropriation of Federal funds for unemployment relief has become an established policy of our Government.

In advocating abolition of the Works Progress Administration and the return to the States and localities of responsibility for the administration of unemployment relief, I am not unsympathetic with the aims of the W. P. A., which as an agency for taking care of the needy and deserving appeals to human sympathy. Most of those on the W. P. A. rolls are genuinely deserving. Yet it is difficult to withhold sympathy from an institution which, despite its glaring defects and inadequacies, does take care of persons who are worthy of the utmost consideration and sympathy.

However, when 64 percent of the voters of the Nation believe that relief should be administered by State and local governments, something should be done to give effective expression to their wishes. And when 53 percent of the voters are convinced that politics plays a large part in New Deal administration of relief in their communities, it is obvious that the crying need is for a relief program which will prevent recurrence of political manipulation, favoritism, and intimidation. The figures I have cited are not fanciful. They are the result of a poll just made public by the American Institute of Public Opinion.

Let us look at just a few of the many specific instances on which are based this Nation-wide criticism of W. P. A. We find evidence of wasteful, extravagant, foolish, and needless spending, political favoritism and intimidation of the unfortunat

favoritism and intimidation of the unfortunate, and outright graft.

However, I do believe the present administration of W. P. A. is probably doing everything humanly possible to insure honest and efficient fulfillment of its duty. The point is that its structural defects are so serious that it is doubtful if it is possible to operate the present organization without risk of periodic scandals. The issue is not the occasional venality of individuals. It is whether or not the system encourages graft, waste, and abuse of power.

The testimony as to the misuse of relief funds for political purposes within the organization comes from officials of the agency itself. Former Administrator Harry Hopkins testified before a Senate committee to the misuse of funds in last year's elections and conceded that he was powerless to prevent it.

Colonel Somervell, W. P. A. Administrator in New York City, recently stated publicly:

"There has been crookedness in the W. P. A. in the past, and there will be in the future. We have found persons who have stolen or misappropriated property. We have found persons who have connived with vendors in the sale or acceptance of materials. We have found persons who have padded pay rolls, and shall probably find more."

Colonel Somervell made this comment after a Federal grand

shall probably find more."

Colonel Somervell made this comment after a Federal grand fury in New York City had urged the appointment of a special prosecutor to determine the extent of graft in the local W. P. A. administration. The jury indicted three employees of the agency for selling minor administrative jobs. It also reported that the evidence indicated a general laxity in the administration of public works and shocking official ignorance of what was going on. Somewhat similar indictments were returned in New Mexico. These situations serve to illustrate not merely the urgent necessity for eliminating waste but for a complete transformation of the present setup.

These situations serve to illustrate not merely the urgent necessity for eliminating waste but for a complete transformation of the present set-up.

On the score of waste and extravagance, W. P. A. has run its administrative costs up to a point higher than the combined comparable expenses of the Civil Service Commission, the Reconstruction Finance Corporation, the Interstate Commerce Commission, the Railroad Retirement Board, the Securities and Exchange Commission, and the Social Security Board.

Administrative expenditures were well over \$5,000,000 a month from July 1938 to January 1939. More than \$4,000,000 a month went for personal services alone. This serves to remind that there are 1,902 administrative employees in Washington and 32,670 in the field, receiving salaries that range up to \$9,000 a year. The W. P. A. monthly expenditure for travel and subsistence is \$500,000. For telegrams and telephone it is \$150,000.

As examples of waste and extravagance in the expenditure of funds for sponsored projects, I might mention \$100,000 for a beauty parlor in Cleveland and \$250,000 to build a W. P. A. propaganda exhibit at the New York World's Fair.

The plain fact is that the New Deal high command has never sought to have the W. P. A. economize. On the contrary, it has been encouraged to waste money in accordance with the naive New Deal pump-priming philosophy.

In 1936 W. P. A. expenditures aggregated \$1,270,235,065: in 1937.

philosophy.
In 1936 W. P. A. expenditures aggregated \$1,270,235,065; in 1937,

In 1936 W. P. A. expenditures aggregated \$1,270,235,065; in 1937, \$1,833,456,971; and in 1938 they totaled \$1,427,701,994. For the current fiscal year they reached the staggering total of \$2,250,000,000. And this in a year in which unemployment-insurance payments and other social-security benefits have increased hugely; a year in which Federal public-works and housing programs are reaching their job-making peaks.

What has this tremendous spending in the current fiscal year accomplished in priming the pump? In January 1938 there were 1,900,000 persons on W. P. A. pay rolls. In January 1939 the number had increased to 2,996,000. The net result of all this spending apparently has been to add 1,100,000 persons to the W. P. A. pay rolls. It has been demonstrated clearly that this agency fails to stimulate private employment and that it cannot care for more than a fraction of the unemployed. Its one unquestioned asset is its

stimulate private employment and that it cannot care for more than a fraction of the unemployed. Its one unquestioned asset is its ability to spend large sums of money with celerity and ease.

In this connection it is well to remember that Congress has never required the W. P. A. to justify its expenditures, as it has done in the case of every other governmental agency. Relief appropriations heretofore have been rushed through House and Senate on the plea of meeting an emergency. Under such a procedure what else could be expected except large administrative costs for which there was little justification?

I might continue with instances of waste, inefficiency, and corruption. But enough has been said, I believe, to demonstrate that the whole set-up is due for a drastic and fundamental overhauling. And until the Federal Government and the States get together to look at the problem as a whole, we cannot expect to get out of the Nation-wide relief muddle.

look at the problem as a whole, we cannot expect to get out of the Nation-wide relief muddle.

The precise provisions of the legislation needed to correct current abuses and to provide swift and adequate relief for unemployed workers in distress is a matter for discussion and decision by the Congress. But whatever form this legislation may finally take to be effective, it must embody certain essential fundamentals.

First of these is outright abolition of the Works Progress Administration and the return to the States and localities of responsibility for administering relief. The Federal Government, as heretofore, must continue to furnish the bulk of the funds. But it must set up safeguards as assurance against political and other misuse of this money. other misuse of this money.

To this end there should be created a Federal Relief Board to which would be entrusted the allocation of the Federal relief funds to the individual States. This Board should be bipartisan and should be appointed by the President, subject to Senate confirmation.

The formula to be used by the Board in making the allocations to the States should be prescribed in the law. It might be desirable to require the Board to give weight to unemployment as determined by the latest available statistics of the United States Employment Service, living costs, population, and the financial resources of each individual State.

The amount allocated to any State should not exceed 75 percent of the total amount to be spent for relief in that State. In no case should it be more than 10 percent of the total amount available for allocation.

In each State there should be set up bipartisan boards to receive and disburse the allocated funds. These boards should be under the close supervision of the Federal Board and held by it to strict accountability. The Federal Board should be given the power to demand the ouster and replacement of a member of

the power to demand the ouster and replacement of a member or a local board for cause.

Thus responsibility for the administration of relief would be placed directly upon the States and localities but safeguarded by Federal supervision so that local politics may not be substituted for Federal politics. Under such conditions, local administration would be far more effective than Federal administration.

A local board is better able to determine worth-while projects than a Federal board. It can make certain that relief is extended to all persons who are really in need and to only such persons.

to all persons who are really in need and to only such persons. Local officials can determine more quickly than Federal officials if there is inefficiency in the execution of any project. And they

also are more responsive to local public opinion.

As a condition to receiving the Federal grants-in-aid, the States should be required to provide not less than 25 percent of the amount to be expended for relief within their respective borders. Should the Federal board find that any of the relief funds had been diverted or misused, it should have the authority to deduct from the Federal allocations an amount equal to the funds misused. The State boards should be required to account to the

used. The State boards should be required to account to the Federal board for all expenditures and the Federal board should be required to give an annual accounting to the Congress.

The law should contain specific prohibitions, with penalties, against any form of bribery and graft, and against any discrimination in the extension of relief because of race, religion, or

political affiliation.

Adoption of such legislation, I believe, is a necessary step at this time if we are to solve the pressing problem of relief and clear up once and for all the political abuses which have made a scandal of the New Deal administration of relief. Certainly that is the least which should be done until we have an opportunity to correct the policies which now are retarding recovery and preventing employment in private industry.

The Democratic Crisis in America

EXTENSION OF REMARKS

HON. SAM C. MASSINGALE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES Monday, April 17, 1939

ADDRESS BY HON. FRANK MURPHY, ATTORNEY GENERAL OF THE UNITED STATES, APRIL 13, 1939

Mr. MASSINGALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Frank Murphy, Attorney General of the United States, delivered at the Jefferson Day dinner of the Demo-cratic city executive committee, in Philadelphia, Pa., on April 13, 1939:

Thomas Jefferson has rested in his grave for more than a hundred years. In those years a great Nation has risen on the land he trod. Enormous changes, almost beyond imagination, have made a simple agricultural country the most impressive industrial Nation on the face of the earth.

It helps to grasp the tremendous sweep of that transition if we put it this way: In the 100 years since Jefferson the economic

put it this way: In the 100 years since Jefferson the economic world has changed far more than it did in all the 4,000 years before Jefferson. In other words, the economy of Jefferson's day was much more like that of the Egyptian Pharaohs in 2200 B. C. than it was like our economy of A. D. 1939.

But socially and politically, Jefferson's America was as much unlike the Egypt of the Pharaohs as the day is unlike the night. The common man, instead of being a nameless sort of nobody who knew only such pitiful freedom as the man on the throne saw fit to give him, had become a very definite somebody. In fact, he had done away with the man on the throne and taken it over himself. More surprising still, he had let it be known that liberty was not the luxury of a few but the elementary right of all—the rich and the poor, the weak and the strong, the Jew and the Gentile.

I know of few things in our history that have symbolized that creed quite as well as the words Jefferson once spoke to a visitor from a foreign land where men knew liberty only by the grace of kings.

You may remember that during Jefferson's first term the country was visited by Baron von Humboldt, a great German scientist who was also a great admirer of Thomas Jefferson. One day at the White House, the baron picked up from the President's desk an opposition newspaper that fairly reeked with anti-Jefferson abuse. Indignantly he turned to the President and asked:

"Why is such an outrage permitted? This paper should be suppressed and the editor sent to prison."

Jefferson smiled at his German friend, folded the offending paper, and handed it to him.

"Baron," he said, "take that with you when you go home. And when hereafter anywhere in the Old World you hear men question the freedom of speech and the liberty of the press in the United States, show them that paper and tell them where you found it."

That's the real spirit of America—not just to believe in democracy

That's the real spirit of America—not just to believe in democracy but to practice it all the way, even when it hurts.

We have another President today who not only has faith in democracy but believes in making it live. On his desk, too, there have been newspapers that questioned his motives and his veracity, even his sense of honor. But hysteria and abuse have not weakened his purpose. They have never swayed him from his course. Instead, for 6 difficult years, day in and day out, he has made the same gallant battle for economic justice, the same unfilinching stand for tolerance and civil liberty, the same uncompromising fight for all the intangible blessings of freedom that tyrants across the sea are fighting to destroy. Like Thomas Jefferson, he has refused to let democracy down.

His fight has been all the more inspiring because it was made in the face of a catastrophe such as the America of Jefferson's day

in the face of a catastrophe such as the America of Jefferson's day me the face of a catastrophe such as the America of Jenerson's day never imagined. He has struggled, and struggled successfully, not only to protect the minds of men from the tyranny of despotism but also to save their bodies from the blight of hunger and cold. His has been a twofold ordeal—economic as well as political— because in the span of a century we have experienced an economic

because in the span of a century we have experienced an economic revolution.

From a simple, quiet age in which unemployment was practically unheard of and each man was in large measure the master of his own fate, we have come to an amazingly mechanized era in which 130,000,000 people are economically interdependent. In agriculture and industry alike, our economy operates through specialization and minute division of labor. Invention has nullified distance and multiplied thousandfold man's power to produce.

But what each of us does produce and can produce depends no longer simply upon our own efforts but upon the acts and decisions of thousands of others. No man stands alone. If the economic system as a whole is functioning smoothly, the average man has the means of self-support and the liberty that goes with it. But if the system bogs down, he may easily become powerless to help himself. And it is folly to speak of democracy, when men do not have the chance to earn their dally bread.

Out of a great process of transition, there has emerged a new world. It has brought us great, new problems. And we must be ready to meet them, if necessary, with new ways.

The average American citizen is just as willing and eager to work today as he was in Jefferson's time. But he needs the opportunity to work. More than anything else, he wants his job, at a living wage. He wants to provide for his own by the labor of his hands and mind. He is asking society, "Am I a pariah? Have I no place in the economic system?" He knows that without the opportunity to work liberty is a meaningless and hollow thing. And he is demanding that the economic system be so ordered as to give him steady work for wages that will let him live a decent and a healthy life.

The average American is not willing any longer to depend on

demanding that the economic system be so ordered as to give him steady work for wages that will let him live a decent and a healthy life.

The average American is not willing any longer to depend on fate to bring him the chance to work. If natural economic forces fail to bring him that chance, he looks to his Government, that alone speaks for all of us, to do something about it. He believes, with Abraham Lincoln, that "the legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all or cannot do so well for themselves in their separate and individual capacities." He believes, with President Roosevelt, that "our economic and social system cannot deny the paramount right of millions who wish to toll to have it function smoothly and efficiently."

There are those who say that this philosophy of government was not the philosophy of Thomas Jefferson. Nothing could be more mistaken. It is true, of course, that Jefferson believed that in his time the government which governed least was best. But he did so because he believed, and rightly believed, that in his time such a government was most likely to insure to all men life, liberty, and the pursuit of happiness. Jefferson knew the changing tides of life far too well ever to contend seriously that the government which was best for his day would be inevitably best for all times. On the contrary, he insisted that government was instituted to secure for all men life, liberty, and the pursuit of happiness and that it was for each generation to determine for itself the means by which the well-being of the people could best be achieved.

In some other lands where democratic government failed to meet their needs, the people gave up their liberties to dictators who at least promised to provide opportunity for work and security in employment. And we must admit that despite their ruthless suppression of civil and religious liberties, they have kept the great they have done it while the great democracies have so far fail

and realities.

LXXXIV-App-94

We must recognize that nature has been kind to us in America. It has given us a country unexcelled in natural resources. Potentially we can produce within our own boundaries more of the things we need than any other nation or group of nations in the world. We are not indebted to or dependent upon the favor of any foreign power. We have in this country the men, the knowledge, the skill, and the resources to produce much more than we are producing. We can husband the national estate—control its floods, harness its waters, and conserve its irreplaceable forests, minerals, and soils—for the benefit of ourselves and our posterity. We have the men and the resources to provide decent housing for We have the men and the resources to provide decent housing for all our people, to give them the blessings of electric power, to clothe them warmly, and to make good health the property of all rather than the prerogative of some of our people.

Our problem is to do these things through the medium of a

healthy, vigorous, constantly expanding system of private enter-prise. Our task is to find the policies and the program that will assure a strong, steady flow of capital into the stream of commerce and trade. Our problem is to give to the industrial mechanism that fullness and steadiness of operation which will allow the laborer and the industrialist alike, the farmer and the professional man, the business executive and the white-collar worker to enjoy the benefits of a reasonable, permanent security.

We want to hand down to our children a Nation healthier than when we found it. We want to endow them, so far as we can achieve it in our time, with an economy that lets men work and know the joy of living. We want to hand down to them a system of private enterprise geared to the permanent well-being of 130,-000,000 souls.

000,000 souls.

To do the many things that need to be done, there is room and there is need for both public works and private enterprise. Both can and should cooperate to achieve common objectives.

Hostility and needless friction between Government and business will not achieve them. Hostility has never done anything but delay social reform and add to the toll of social waste that such delay always brings in its wake.

We don't want an antigovernment mentality; we don't want an antisocial mentality; and we don't want an antibusiness mentality. None of those attitudes can possibly give us the kind of social climate that encourages business and industry to prosper.

We want the kind of mentality that sees this job of effecting recovery for what it really is—a partnership of government and business and labor and all the other elements that make up our common life. We want the kind of mentality that isn't hemmed in by barriers of creed or race or nationality. We want the kind of mentality that isn't hemmed for mentality that will rise over every division and join in the common errand of enriching life in this land of ours.

Until recently, the delay in achieving social reform has not been

mon errand of enriching life in this land of ours.

Until recently, the delay in achieving social reform has not been seriously harmful. Its ill effects have been largely absorbed by the constant expansion and growth of the economic order. But we cannot be sure any longer that our economy will continue to survive this delay. We have never before this decade had 15,000,000 employables without jobs. We have never before seen one-third of the Nation without adequate food, adequate clothing, and adequate shelter. Now more than ever, nine-tenths of the wisdom of action is that it be taken on time. action is that it be taken on time.

If we act too late, if we tarry too long and quarrel too much about using the affirmative powers of government to keep our system of private enterprise working smoothly, we will assuredly seal our own fate. We will betray democracy into the hands of its enemies—either those who want to put all enterprise in the

its enemies—either those who want to put all enterprise in the hands of an all-powerful state or those who would return to a socially irresponsible system of laissez faire.

This is why I am so deeply concerned with the continuance of the progressive program of President Roosevelt. This is why I believe so strongly that we must not take a backward step.

We are so close to the scene that sometimes we do not realize just how heavily the future of democracy, not only in America but in the whole world, depends upon the success of the progressive program in the United States. And I am not now referring to any specific blueprints but to its general policies and objectives, its general methods of approach.

gressive program in the United States. And I am not now referring to any specific blueprints but to its general policies and objectives, its general methods of approach.

Those policies and objectives must be carried on. Profiting by experience and correcting past errors, we must keep looking ahead to the great goal of economic justice within a refreshed and expanded political democracy. We must not turn our eyes backward. If we do, it will be to risk for democracy the fate of Lot's wife, who looked back and suffered death by petrification. For we know that in some other lands democracy has petrified through disuse and has been discarded. It might happen here. Thomas Jefferson knew that democracy would petrify unless the people had something more than the right which people under dictatorship have, to vote "yes." He saw the need of a political opposition—of competing parties which would see to it that the people understood the vital political issues of the day—so that the people might have an effective right to choose not blindly but intelligently between competing principles of political action.

Before Jefferson there were no such things as party platforms or party principles between which voters might choose. Jefferson created the party system in this country when he founded the Democratic Party as a liberal opposition party to the conservative Federalist Party, which up to then had enjoyed a one-party monopoly.

But the entire nurses of the party system is lost if the voters.

monopoly.

But the entire purpose of the party system is lost if the voters of the country do not have a chance to say "yes" or "no" on the the real political issues before the country.

Now you know and I know that as the people of the United States see it, the President and his policies—the general principles and social objectives of the New Deal—constitute the overshadowing political issue in America today. And the democratic process insists that the people have the right to vote upon that issue—to choose whether or not the New Deal shall go on.

We know that the Republican Party, with the support of every reactionary influence in the United States, will fight the New Deal. And if the Democratic Party does not stand firmly behind the President's program, there is danger that the people will be deprived of the right to voice their own convictions at the polls in 1940.

1940.

There may have been times in our history when it made little difference to the people who was President—times when it would have made little difference if there had been no one in the White

But our times are not and will not be such times. We must have a President who has the strength and moral stature to guide the American people in the way they want to go. In a moving world, it is dangerous to stand still. The times demand a national leader who can act as well as say no. Modern

demand a national leader who can act as well as say no. Modern government, as well as modern business, requires an executive who knows when to act as well as when not to act.

And, of course, a liberal and progressive leadership which accepts an affirmative responsibility for action must be strong and vigorous enough to throw off all the corroding influences which seek to attach themselves to its power. A liberal government must be alert to throw off the selfish and corrupt who would barter offices, lobs privileges and even justice.

alert to throw off the selfish and corrupt who would barter offices, jobs, privileges, and even justice.

The best protection of our Constitution against dictatorship is not a weak but a strong constitutional Executive. All dictatorships in the world today have risen because of weak constitutional leadership. Dictators do not grow to power from within constitutional government, but strike swiftly from the outside when constitutional government has become too weak to handle the problems which the mass of the people demand shall be handled. That is twentieth-century lesson No. 1.

There are political opponents of the President who claim that his policies no longer command the confidence of the people. I believe those individuals are wrong. I believe the great popular forces which supported the President in 1936 are just as determined today that the powers of Government must be exercised to do, for all the people, the many things which need to be done and which the people individually cannot do for themselves. themselves

It isn't the President who has lost touch with the people. It is those who would have us believe that the Nation will advance by turning backward.

The President is still the gallant leader who brought the people hope when all the world was in despair. They have not forgotten the blackness of those days in 1930 and 1931. They have not forgotten the terror of the modern famine that swept away

in a twinkling the fruits of a lifetime's work.

They remember how bravely, in the midst of the saddest experience America has known since the Civil War, a great, silent figure elbowed his way through the crowd and led them out of the shadow

They said then, "He speaks our thoughts, he shares our hopes and prayers. We will follow him."

Today, after 6 years of trial, he is still making their fight, still in the front trenches battling for the things they hold most dear. And because he is they are saying, as they did before, "He speaks our thoughts. He shares our hopes. He is our President."

The Monetary Problem

EXTENSION OF REMARKS

HON. JOHN F. HUNTER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, April 17, 1939

RADIO DISCUSSION ON THE MONETARY PROBLEM

Mr. HUNTER. Mr. Speaker, I hope every Member of the House has formed the habit of tuning in on station WOL every Tuesday morning at 8:15 for the series of congressional breakfast discussions now being conducted.

As a sponsor of H. R. 2387, which provides for the return to Congress of the control of money, I am finding these discussions particularly interesting.

Mr. Binderup, the director of the discussions, in the Seventy-fifth Congress introduced the bill which I have the privilege of sponsoring this session. For those who may have missed last Tuesday's broadcast. I am inserting the following copy in the RECORD.

The Announcer. Musical-clock listeners, this morning we are pleased to present the seventh in a series of broadcasts known as the congressional breakfast discussions. We are sure that this program is becoming one of the most popular features on the air, and I am pleased to introduce at this time Mr. Charles G. Binderup, former Congressman from Nebraska, who is conducting these broadcasts each Tuesday at this time. Mr. Binderup.

Mr. Binderup. Greetings to our President Roosevelt, his Cabinet, Members of the Senate and House, and Governors of the Federal Reserve Banking System, and others.

We have invited our guest speakers this morning from the great

We have invited our guest speakers this morning from the great outdoors of the West, from out in the wide-open spaces where Na-ture trains the minds of men to call everything by its right name without fear or favor. I present to our radio audience this morn-ing Senator Lundeen, of Minnesota, and Congressman Murdock of

Senator Lundeen, I remember with much pleasure when we met about 14 years ago out on the plains of Nebraska. That was in the days when we campaigned for Bob La Follette, Sr., for President. We learned to know you then as a friend of farmer and laborer, and we are glad to find you still enlisted in the ranks.

Senator Lundeen. Thank you, Congressman Binderup. I appreciate this fine introduction.

ciate this fine introduction.

In looking over your Uncle Sam's Hospital Chart, wherein you explain the principles of your monetary plan, you very modestly state that these principles were borrowed from Jefferson, Jackson, Lincoln, Blaine, Garfield, and Bryan. Are you right sure that you did not borrow one of these great principles from Dr. Townsend? I refer to that part of your plan pertaining to oldage pensions. I think we all agree that regardless of whether Dr. Townsend's plan is right or wrong, he should at least have credit for making the people of the Nation pension-minded, which paves the way for your plan with an adequate old-age pension.

Mr. Binderd, which paves the way for your plan with an adequate old-age pension.

Mr. Binderd, Yes; I am glad to be reminded of this, Senator.

Dr. Townsend has been a great pioneer in this work, and I know and appreciate the assistance he has rendered in this righteous

cause of old-age pensions.

In my monetary plan, I incorporate old-age pensions as one of the avenues through which we must expand our new money into circulation among the lower-income groups in order thereby to create a greater consuming and purchasing power of the multi-tude, so they can eat and wear, purchase and consume, so our factories can run, and the farmer can produce and sell. The plan stipulates definitely \$50 per month to be paid direct by the Government, eliminating entirely any payments by the States, thus leaving all this new money in the States in circulation for further use.

Mr. Murdock. Congressman Binderup, you said you had borrowed the principles contained in your plan from Jackson, Jefferson, Lincoln, and others. However, I believe this plan of expanding the necessary new money among the lower-income group is decidedly original with you, is it not?

Mr. Branderup Well yes in a way it is original to the extent.

Mr. Binderup. Well, yes, in a way it is original to the extent that the plan was born from observing the failures of other nations as well as our own in past history as well as at present. All former plans contemplated expanding their money supply from the top by donating it to the banks in that strange, peculiar, erroneous philosophy that the people's own money based on their own credit should be donated to the wealthy people to loan to the poorer classes, thereby extracting a penalty from those who labor and create the Nation's wealth, and giving it to those who labor not, but concentrate the Nation's wealth.

Mr. Murbock. But do you believe, Mr. Binderup, that \$50 a month is enough to create the necessary consuming and purchasing power to get us out of this depression? You know the Townsend plan provides \$200 a month, and you know their plan is to force or speed the velocity of money by compelling people to spend their pension money as soon as they get it.

their pension money as soon as they get it.

Mr. Binderup. First, let me reply frankly: No; I do not think \$50 a month old-age pension is sufficient to establish the necessary consuming and purchasing power of the masses that should enable them to buy and consume so the factories and the mines would run to capacity sufficient to supply the needs of the people and create full employment.

And so you will notice our plan contemplates five different steps by which to measure money into circulation scientifically, according to a definite plan that will control velocity and volume.

The first plan of old-age pensions is definite, and why? Definite because 50 years' statistics show that the Nation grows over 4 percent a year on an average, and 4-percent growth added to our new money supply yearly would be more than enough to pay pensions.

The second step is, if and when further expansion is available under the 1926 price level, there shall be appropriated to rehabilitate the farmer not to exceed \$1,000,000,000 per year, \$8,000 per unit, at 2½ percent yearly local tax that the money may remain in the community. If and when further added expansion is available under the 1926 price level, not to exceed \$250,000,000 shall be appropriated for the National Youth Administration in order that children of moderate means may acquire as good an education as a

child of rich parents.

The fourth step is, if and when still further expansion is available under the 1926 price level, all Government bonds shall be paid and ours shall be a debt-free Nation.

The fifth and last step is, if and when all the above provisions have been met and further expansion is available under the 1926 price level, it shall be used to develop the Nation's natural resources

and build transcontinental roads.

Senator Lundeen. I am, of course, 100 percent in favor of your Senator Lundeen. I am, of course, 100 percent in favor of your plan to expand our money supply in this way among the lower-income group; but, Mr. Binderup, how about velocity? Velocity of money is to most of the people of the Nation a rather new thought. I believe our radio audience would like to know just how you propose under your plan to create and determine the speed with which money should move, which, of course, is a vital matter in a Government monetary control bill such as you suggest.

For example, I have here a clipping from a Washington paper, dated April 3, which reads as follows: "The Federal Deposit Insurance Corporation reported yesterday that lendable cash in insured banks reached an all-time record high of \$17,176,000,000 at the end of 1938."

Now, this money is dead and dormant. It has no velocity what-

Now, this money is dead and dormant. It has no velocity what-ver. Just how are you going to make this money move? Mr. Binderup. I discussed this matter sometime ago with Con-

gressman Murpock of Utah, and he has such a very comprehensible

way of explaining this apparently intricate problem that I am going to turn the "mike" over to him and let him explain it.

Mr. Murrock. Well, in the first place, if we had Government monetary control, it would be most unnatural for money to lie dormant without any velocity. The possession of money is only profitable when it is coupled with velocity, or in other words, when it is invested or in circulation.

oh, I will admit, under a bankers' control plan, such as we have at the present time, the most profitable business in the world is to let it lie idle as is the seventeen billion the Senator speaks of, because by letting money lie idle, thus taking it out of circulation and lesing its velocity money dies for hoarded money is not because by letting money lie idle, thus taking it out of circulation and losing its velocity, money dies, for hoarded money is not money or does not function as money, and thus this seventeen billion of idle money lies dormant and waits, and by its own inactivity, creates a scarcity of money, causing the prices of everything to come down when these speculators in dollars periodically start buying until prices go up and then they reinvest in dollars, hoard their money until prices again go to the bottom.

Now with a Government monetary-control plan, money would always seek investment, for when the hoarder takes money out of circulation, we will expand our money supply to that extent into the veins and arteries of trade and commerce, and if, at any time, by the combined efforts of all hoarders, they should be able to put too much money back into circulation, we will quietly take some of our money out. Thus we would balance the money supply and definitely control by adding or subtracting volume.

our money out. Thus we would balance the money supply and definitely control by adding or subtracting volume.

Much has been said about taxing hoarded money to force it to circulate; and the Townsend plan, by forced spending, is promoted by the same thought. These ways are all very complicated if not impossible. Why not use the natural way? Take the profits out of hoarding and make it safe for our people to invest their money and you will find your seventeen billion the F. D. I. C. reports hoarded immediately finding its way into circulation.

The prices of commodities change but very little in a hundred years when measured by each other. It is only when measured by money that there is a disastrous change, because willful contraction and expansion of our money supply causes the price of the dollar to

and expansion of our money supply causes the price of the dollar to fluctuate. So, having first established velocity, we control definitely and at all times the volume of money in the veins and arteries of and at all times the volume of money in the veins and arteries of trade and commerce by expanding our money supply among the lower-income group, and money will be balanced with and according to commodities. The more commodities that are produced, necessarily, the more money that must be created.

Senator Lundeen. Now, Congressman, stop right there a minute. You just said that the more commodities that are produced the more money must be created. What do you mean by creating more money? Do you mean we would have to buy or dig up more silver and gold?

silver and gold?

silver and gold?

Mr. Murrock. Silver, yes; for silver adds to our money supply, and we do not have to pay the international bankers a rake-off every year for using silver, and silver money doesn't cost the United States anything in the first place, as all we do is give a receipt for silver, called a silver certificate, which is in reality a receipt for services rendered by the miner. A silver certificate is a real pattern for money. All our money should be merely a receipt for services rendered. for services rendered.

In reference to gold—well, as long as we dig it out of one hole in the mountains and then bury it in another hole down in

In the mountains and then bury it in another hole down in Kentucky, gold is very immaterial.

We still have with us, however, people from the "horse and buggy" days who believe we should have gold for money exclusively, or what we call the "gold standard," meaning that all our money should be based on gold. Well, I might agree with them, if these same parties could assure us of some way that we could always find just enough gold and silver to balance our monetary supply with the increased population, increasing industry, and the natural increase in money made necessary by a higher standard of living, for our people in the lower income groups, and to balance the price of labor and commodities with fixed charges that do not respond to supply and demand, such as all of our debts, which amount to approximately \$300,000,000,000, our interest, taxes, freight rates, and hundreds of other things which are trust-controlled and remain stationary. Now, if our gold-standard friends could show us a way whereby we could always find just enough gold to balance our monetary supply according to these demands, the gold standard would be all right. But,

of course, everyone knows that this is an impossibility, and knowing that, everybody should realize that the gold standard is a farce and a fraud.

But every thinking man knows that, under our present mone-tary system, approximately 97 percent of all business and commerce is done with checks. And so, I want to answer the question of the Senator and say, let gold and silver flow in and out of the channels of trade, but control your volume and velocity of money by controlling bank credit. In other words, establish 100 percent reserves back of demand deposits and thereby stop 15,000 banks, little individual mints, from creating and destroying our money. ing our money.

Senator Lundeen. That is a very good explanation, Congressman Murdock, but you still haven't answered my question as to how you are going to create money so this balanced price level can be maintained. Now what we would like to know is: How is

money created?

Mr. Murdock. The fathers very wisely provided in the Constitution that Congress shall create money and regulate its value. Senator Lundeen. But how about the 97 percent of our money which the bankers create? Would you say that is created by

law also?
Mr. Murdock. No; I would say the creation of money by bankers
Mr. Murdock. No; I would say the creation of money by bankers Mr. Murbock. No; I would say the creation of money by bankers violates the most sacred law we have—our Constitution—the provision I just referred to. However, notwithstanding the Constitution, statutory law invests the bankers with this power, which has not been questioned in our courts. All money, however, should be created by law, in harmony with the Constitution. Senator Lundern But now what I would like to have you explain, Mr. Murdock, you say all money should be created by law, but who under our present system controls the value of the money that is created under our present system. and how is the

money that is created under our present system controls the value of the value of money established?

Mr. Murnock. Of course, the banks create 97 percent of our money, "check-book money," and with the power to create goes the power to destroy. It must be admitted that the banks create the value of money, that is, the purchasing power of money. In other words, the value of money as compared with commodities. I have recently coined the phrase "emotional money," which in my opinion is a perfect definition of "check-book money." The emotions of the bankers create it, destroy it, and control its value.

Senator Lundeen. Now, Congressman Murdock, let me again ask you, under our present monetary policy, who really does

create our money?

Is it our Government which creates money by law providing this or that shall be money, or is it the banks who determine the value of the purchasing power of our money? Now tell me, Congressman Murpock, which of these two forces is the creating

power.

Mr. Murdock. Well, I don't think there is any question but what the power which determines the value of money is the

superpower.

superpower.

Senator Lundeen. And so, since the banks create 97 percent of our money and determine the value of the purchasing power of all of our money by their power to expand or contract money without any governmental control whatsoever, I agree that our present monetary system is a violation of and results in a practical nullification of article I, section 8 of the Constitution of the United States which vests in Congress the sole power to issue the money of the Nation and regulate its value or purchasing power.

Mr. Murdock. I believe in this opinion we are joined by a great majority of monetary students that our present banker-created and banker-controlled money is unconstitutional. In my own personal judgment, there is no difference between the issue of this uncontrolled bankers' credit and the unsound and thoroughly discredited wildcat banknotes of our earlier history.

oughly discredited wildcat banknotes of our earlier history. Senator Lundeen. And so let us see just how far this vicious system can bring us. I leave it to you two gentlemen who are seated at the table with me. Isn't it a fact that by this power we have extended to the banks to control the value of the purchasing power of the Nation's money they could have, if they wanted to—we have no law to prevent them—some more meetings like they had in 1920, when they took approximately \$10,000,000,000 out of circulation; in 1929, when they took no less than \$8,000,000,000; in 1937, when they took almost \$3,000,000,000 out of circulation; and take enough money out of circulation just by telling the people to come in and pay off their old notes and refuse to make any more loans? more loans?

more loans?

By this process they could bring our land down to a dollar an acre or less and wages down to a nickel a day or less, and there is no power in the land that could stop them, unless the Constitution of the United States is still law that says "Congress shall control the volume and the value of money."

The Announcer. You have just listened to another of our congressional breakfast discussions conducted by former Congressman Charles G. Binderup, of Nebraska.

Mr. Binderup, I believe your audience would like to know who your guest speakers will be next Tuesday morning.

Mr. Binderup. Well, Mr. Brown, I can assure you that it is a great pleasure for me to announce that one of our speakers will be from the extreme northern part of the United States, Senator Murray, of Montana, a good Democrat, and the other speaker will be from the extreme western part of the United States, Congressman Anderson, from California, a good Republican.

What Shall Our Foreign Policy Be?

EXTENSION OF REMARKS

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1939

I. KEEP OUT OF WAR

Mr. BENDER. Mr. Speaker, every step taken by our diplomatic corps, every official utterance of our State Department, every address of our President and his Cabinet must be based upon the desire to keep out of war.

This should be the major objective of our foreign policy. Anything which involves us in any European conflict must be interpreted as a complete failure of our Diplomatic Service.

Whether this policy be branded as "isolationist," "nar-row," or "uncooperative," it must be the one basic desideratum in every discussion of foreign affairs.

II. THE NEUTRALITY ACT

Our present Neutrality Act, which vests in the President absolute discretion to determine whether or not a state of war exists at any place in the world, completely ignores the invention of undeclared warfare.

It permits the Nation's Chief Executive to distinguish between such conflicts as the recent Spanish War and the Sino-Japanese struggle, in spite of the fact that the ele-

ments of aggression must exist in every war.

To maintain this neutrality legislation in the event of a general European conflict would be to invite the destruction of American shipping and the creation of incidents identical with those which led us into the last war.

We must adopt measures which will impose strict neutrality, placing all commerce with nations at war on a "cash and

carry at their own risk" basis.

III. THE LUDLOW RESOLUTION

Ideologically, there is much to be said for the adoption of the Ludlow resolution. The men and women who must do the fighting-and the dying-in any war ought to be given the right to determine for themselves their choice of peace or war.

Since the Ludlow resolution specifically provides that it shall not apply to any armed invasion of our own Nation, but shall be invoked before we fight on any European or other foreign soil, it appeals strongly to my sense of ideal democ-

racy in the determination of affairs.

The only objection which I have to the passage of this important resolution is the strong assurance which I am afraid its adoption might give to dictators abroad. Secure in the knowledge that the American people hate war, the forces of madness which are stirring in Europe today might well continue their course without hesitation, banking upon nonintervention.

Our moral influence, for whatever value it may have in a world which seemingly ignores moral considerations, would be utterly useless.

For this reason I cannot give my unqualified support to the Ludlow proposal.

IV. RELATIONSHIP TO THE DEMOCRACIES

The policies which I have outlined should serve to throw our support to the democracies of the world against the dictators

Morally, our influence is already entirely motivated by a desire to back them.

Economically, the "cash and carry" neutrality would aid our friends since they alone in Europe have the funds to purchase what they may need on a cash basis.

But more than anything else, by refusing to be drawn into active participation, through ships or men, we should be far more able to keep out of war than we are under the present legislation of our Nation.

H. R. 4931-An Attack on the Central Problem of Modern America

EXTENSION OF REMARKS OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1939

Mr. VOORHIS of California. Mr. Speaker, the single, allimportant task before this Congress today is to solve our two great problems: Unemployment and the public debt. It is not enough to solve one or the other of these problems. Both of them have to be solved together. Both of them can be largely solved by a sensible application of two fundamental principles: First, that the Government of the United States has a primary duty to see to it that the consumption of the Nation keeps pace with its production, and, second, that one of the primary methods it must use in accomplishing this is the establishment of a scientific relationship between the supply of money in circulation and the productive capacity of the country. In an effort to bring these two principles into play, H. R. 4931 has been introduced into the Congress. It is not the only thing that needs doing; it is one of the most important ones.

The present situation of continued unemployment and an ever-rising Government debt cannot be attacked with palliatives any longer nor can it any longer be called an "emergency situation" to be dealt with by emergency measures. We are confronted with the necessity of correcting what apparently is a fundamental shortcoming of our economic system which makes it impossible for us to get our idle men, idle machines, and idle capital together. Our surpluses of dairy products, oranges, wheat, even cotton, are not real surpluses. They are a threat to our farmers only because we have not yet learned the true relationship between money

and real wealth.

Today men, women, and children go hungry and ill-clad because they lack the money to buy the necessary food and clothing. One-third of this Nation is ill-housed, ill-clothed, and ill-fed, not because of lack of ability to produce these things nor because of lack of a human demand for them but simply because of a lack of money to make the demand active. Money in our complicated economy of division of labor is the beginning and end of our production and consumption and the vital link which connects the two. To the man who has no money, and no chance to earn it, the "inalienable" right to "life, liberty and the pursuit of happiness" is no longer present.

THE PRIMARY NEED OF OUR NATION

American factories, mines, and farms would be producing \$100,000,000,000 worth of goods and services, and possibly considerably more than that if just one thing were done. That one thing is to work out a means whereby these goods and services could be distributed to the consumers of the Nation regularly and continuously.

Americans are unemployed and poor today not because they need to, be but just because we have so far not had the necessary patriotism, courage, and wisdom to solve this prob-

lem of distribution.

Fundamentally the break-down of our system of exchanging our abundant goods and services and our failure to make use of the available wealth is due to basic flaws in our monetary system. To solve the problem of poverty in the midst of plenty we must correct the inequities of our money and credit system and find a way to socially distribute the purchasing power which is not only made economically available but becomes economically necessary as technological improvements and capital formation proceed.

To accomplish these things H. R. 4931 has been introduced. THE CONSTITUTIONAL DUTY OF CONGRESS

Article I, section 8, of the United States Constitution places on Congress the responsibility to "coin money, regulate the value thereof and of foreign coin * * *." These words have often been quoted before the Congress, but Congress has done very little about them.

Now what is "money" and what is "value" in the inten-

tion of the framers of the Constitution?

Money: In speaking of coining money, was it the intention of those who wrote the Constitution that the Congress of the United States should have control only over the pennies, nickels, dimes, and quarters? What about bank notes? The Supreme Court, in the Legal Tender cases, after the Civil War, determined substantially that the issuing of bank notes was the equivalent of "coining money." But neither coins nor bank notes are our chief money today; for more than nine-tenths of our trade is carried on by means of what we may call deposit currency or demand deposits subject to check. There can be no disagreement regarding the fact that deposits subject to check are promises by the banks to furnish money on demand; and that these promises of banks circulate as if they were themselves money, and perform the functions of money. That is what we are here concerned with. Since check-book money performs the functions of money, we must call it money with the same right that the Supreme Court declared bank notes to be the equivalent of coin.

"To coin money" means, therefore, the issuance of actual coin, of bank notes, and of check-book money or any other substitute which performs the function of money. And further, the responsibility of Congress to coin the money of the Nation necessarily carries with it the responsibility of prohibiting anyone else from coining money substitutes such

as demand bank deposits.

At present the following agencies coin the money of this Nation: (1) The United States Treasury when it issues silver certificates in exchange for silver bought from domestic producers or from foreign producers; (2) the United States Mint when it coins the small change, the pennies, nickels, dimes, quarters, half dollars, and dollars out of metal; (3) the Federal Reserve System when it issues Federal Reserve notes and extends Federal Reserve credit to the member banks of the Federal Reserve System; and (4) our 15,000 commercial banks whenever they create check-book money in the process of making loans. So we can say without fear of contradiction that it is not the Congress which coins the money of this Nation but four different agencies, of which the two important ones are the privately owned Federal Reserve System and the privately owned 15,000 commercial banks.

Now, as to the second part of our constitutional responsibility, to "regulate the value thereof"; what is the value of our money and how is it regulated? At the time the Constitution was written the only interpretation of value was the value of the dollar in terms of gold-its gold content or gold weight. In the past 150 years, however, with the development of economics as a science, and especially with the increasing use of index numbers, there has gradually emerged a new conception of the value of money, namely, its value in terms of goods and services, or its buying power. This interpretation of value was evidently followed by the Supreme Court in its decision in the gold clause cases when it said in October 1934:

The question of value in relation to transactions legally available to the plaintiff would require a consideration of the purchasing power of the dollars which the plaintiff could have received. Plaintiff has not shown, or attempted to show, that in relation to buying power he has sustained any loss whatever.

That is, according to this decision of the Supreme Court, value means purchasing power.

WHAT HAS BECOME OF CONGRESS' CONSTITUTIONAL POWER AND DUTY?

Who today regulates the value or purchasing power of our money? Each one of the four agencies just mentioned, the Treasury, the Mint, the Federal Reserve System, and the 15,000 commercial banks, by increasing or decreasing the volume of our money, thereby affect its value; for if there are many dollars in active circulation, the individual dollar buys fewer goods and services than if dollars are scarce. The power of these agencies to affect the volume of our money, therefore, gives them power to regulate its value. If any proof of this is needed, it is only necessary to recall the disastrous fall in basic commodity prices which followed the deliberate contraction of credit by the Federal Reserve Board in May 1920.

In addition, the President has the power to change the gold content of the dollar; the Secretary of the Treasury has the power to change the price of silver and gold and of the foreign exchanges. These powers, too, affect the value of the dollar. These discretionary powers were given the President and the Secretary of the Treasury in an emergency, and in the absence of any governmental agency which might have been prepared to use these powers for the purpose of protecting the dollar from detrimental influences from abroad. There has been demand for abolishing these discretionary powers. H. R. 4931 provides that these powers be taken from the President and Secretary of the Treasury and given to the monetary authority set up in the bill. Under this condition it would be proper to take the powers away from the Executive. But so long as we do not have a properly constituted monetary authority, so long as these powers would fall to the privately owned Federal Reserve System, or be made the tool of speculators, it is vastly better to leave them with the Executive.

Among the agencies affecting, or regulating the value of the dollar, the Federal Reserve System is by far the most powerful. The Board of Governors of the Federal Reserve System exert a tremendous influence over our commercial banks. By buying Government bonds in the open market, it can put new money into the banks, and put them in a position to expand deposit currency; by selling Government bonds, it can reduce the cash resources of the banks and thus enforce contraction. The Board has power to change the reserve requirements of banks, that is, it may say to the banks that instead of holding \$12 of cash behind \$100 of demand deposits, the banks now must hold \$20 of cash reserve: in this manner the Board may lower reserve requirements, and thus facilitate the possible expansion of bank money. The Board may also fix either high or low interest rates which the banks must ask of their customers, and in this manner either encourage or discourage the creation of bank money. In these and other manners the Board may regulate the volume of money and thus its value.

HOW OUR PRESENT SYSTEM WAS SUPPOSED TO WORK AND WHY IT FAILS

Our banking system was supposed to function on the principle of automatic expansion. That is, as more goods and services were being produced, the necessary expansion in the volume of means of payment was to be automatically brought about by additional borrowing by business from the banks. The money thus created would again automatically be destroyed as business repaid its bank loans after having been paid itself. In this manner, the volume of our means of payment was supposed to expand and contract with the volume of short-term, or self-liquidating commercial loans. The banks monetized temporarily goods in process of production or distribution.

In actual practice, however, the volume of these commercial loans was never adjusted to supply us with the volume of means of payment we needed for our expanding economy. On the contrary, commercial loans, hence demand deposits, hence America's money supply, have been expanded vigorously at the very times when the country did not need more money in circulation, and contracted still more sharply at times when more money was desperately needed to overcome deflation, bankruptcy, and depression. The "system" has and must by its very nature continue to work exactly opposite to the public interest of the United States. Moreover, the banks have monetized not only commercial self-liquidating loans, but long-term loans and the purchase of securities. In this manner the banks have interfered with what is essentially the function of savings-since savings must in the end be the source of funds for long-term investment. They also disturbed the rate of interest on long-term investment. And, most serious of all perhaps, by creating demand deposits on the basis of long-term loans which could

not be repaid within reasonably short periods of time, the banks filled their portfolios with slow assets which froze completely when, in the depression, they were supposed to be repaid. This monetization of long-term loans contributed substantially to the failures of about 10,000 banks in this depression. Likewise, the monetization of securities purchases not only sent the stock market skyrocketing, but provided the banks with assets of fictitiously high value, and led straight to the stock-market crash, the deflating of these values, and disaster not only for the banks but for everyone else too.

Strict regulations now make a repetition of this type of expansion almost impossible, although lately there have already been attempts to press the banks into making realestate and other long-term loans for the sake of supplying us with the circulating medium without which our economy cannot be operated. But the banks are, on the whole, unwilling to risk that sort of expansion again. So they let the Government make the loans for them, and merely "finance" the Government by purchasing Government bonds. Nor can we expect that the demand for commercial loans of banks will increase sufficiently, and soon enough, to provide us with the necessary increase in demand deposits from that source. On the contrary, in the past few years business has developed new methods for financing its operations; it has added to its cash reserves, and it obtains additional resources by offering investments directly to the public; so that the natural trend is one of less, not more, commercial loans. It therefore has become an utterly indefensible position to contend that this great Nation must continue to depend for its supply of money and for hope of overcoming depression upon the hit-or-miss creation of demand deposits by our 15,000 commercial banks.

All these facts are cited merely to show what is implied in our constitutional responsibility "to coin money, regulate the value thereof, and of foreign coin * * *." Partly we have delegated the necessary powers, partly these powers have been usurped; but the central responsibility of keeping in circulation the amount of money this Nation needs to carry on an expanding trade has been placed exactly nowhere. Nor is there any agency to which has been given the definite responsibility of regulating the value of our money so as to give us the stability of purchasing power, without which the exchange value of every service and every commodity and the size of every debt is subject to change without notice and without regard to consequence. Without such stability all business is a gamble, periodic farm foreclosures are a certainty, and the honest investor is at the mercy of the smart speculator.

THE PRESENT FEDERAL RESERVE BOARD AND A REMEDY FOR ITS INACTION

As I have shown, Congress has delegated considerable of its power to "coin and regulate" to the Federal Reserve Board. Many people today believe that the Board has all the powers necessary for effective control of both the volume and value of our money, which is not true; many believe the Board has been told by Congress to regulate the value, that is, the buying power of the dollar, which is not true either; and many, no doubt, believe that the Board is anxious and willing to take on that responsibility, which apparently is also a false belief. The fact is, as expressed in its statement of March 11, 1939, that "the Board's control of the amount of money is not * * *"; and the inexcusable tragedy is that the complete Board does not ask for more powers which would enable it to actually exercise this control, and gives, on the other hand, the distinct impression of not desiring such powers.

Nowhere in this or any other statement does the Board give any valid reasons why it believes that its control could not be made complete. The whole statement of March 11, 1939, was apparently made for the express purpose of discouraging any attempt on the part of Congress to direct the Board to use the powers it now has, or any additional powers it might be given in order to maintain a decent stability in the buying power of the dollar as expressed in an index number of prices. But since it is practically only through an

index number of prices that we can measure what the dollar's value is, we must conclude that the Board is fundamentally opposed to the constitutional provision that Congress shall "regulate the value" of our money.

The Federal Reserve Board as at present constituted has demonstrated neither by its actions nor by its words that it is either willing or qualified to act as the agent of Congress in carrying out its constitutional duty of coining and regulat-

ing the value of our money.

The Board has, in recent statements, expressed what it considers its duty. In a statement published in the Federal Reserve Bulletin of September 1937, it said:

* * the Board believes that economic stability rather than price stability should be the general objective of public policy.

But it does not define what economic stability is nor offer the slightest suggestion of how to attain it. In fact, in the spring of that very year, 1937, the Board, in raising reserve requirements behind demand deposits of member banks, contributed to a decline in the volume of our money, which was an important factor in the recession which began in that year. But, instead of reversing itself and lowering reserve requirements, so as to contribute, if possible, to an expansion in the volume of money, the Board permitted a contraction of some \$729,000,000 in demand deposits of member banks in the first 4 months of 1937, at the very time when it was raising reserve requirements. And it waited a full year before it took any effective action to offset this disastrous shrinkage in our volume of money. In what manner the Board here contributed toward the maintenance of economic stability I am unable to see.

In its more recent statement of March 11, 1939, the Board says that it is "in complete sympathy with the desire to prevent booms and depressions, and has always considered it its duty to do what it could to help accomplish these results." In view of our recession experience, however, the Board's sympathy would hardly appear to be enough to actually accomplish results. Sympathy and no action. Congress has given the Board great powers to be used in controlling America's monetary system; the Board gives Congress sympathy, says it has not enough power, and suggests no new power that would enable it to become a constructive force in our national life.

This is the same disastrous do-nothing psychology which dominated the Board before the depression; the Board has pointed to its good intentions; but it has seldom given any practical demonstration of them.

In 1932 Governor Meyer, of the Federal Reserve Board, before a congressional committee, justified the Board's lack of action during the depression with these words:

* * a whole lot of these maladjustments come from neither one standard nor another, but from the conduct and behavior of the people; and sometimes a large number of people, en masse, get optimistic together, and overdo things; then they get pessimistic and overdo things on the other side.

And in its last statement the Board uses almost the same words when it says:

When people are venturesome and expect good times, they lay in supplies and this tends to raise prices. When people are discouraged and expect things to go badly, they tighten their belts and buy as little as possible; the demand for goods declines and prices fall. Usually other things have a greater influence on prices than has the amount of money.

Can this really be the whole philosophy of the Federal Reserve Board? "Don't blame us for anything! Don't ask us to do anything! Times are bad because the people are discouraged. Times were good before the depression because the people were venturesome and expected good times." One is tempted to ask why we should have a Federal Reserve Board at all.

It would be hard to estimate to how great an extent this philosophy on the part of our monetary authority has been responsible for the depth of the depression and for the failure of recovery to materialize. But surely this statement is proof that the Board is standing squarely in the way of an effective carrying out of the policy of this administration of

using all the means at its disposal to restore prosperity. "What is the use," the Board says, "the people are discouraged." The fact is, the people are not discouraged. They have no money to buy the things they want and need. That is why they are forced to tighten their belts and buy as little as possible. But the Board, our most important money-creating agency, says, "Please no; we have nothing to do with it; the trouble is, the people are discouraged."

In the twenties, when Congress tried to legislate directions according to which the Board should carry out its policy, the members of the Board came before Congress and opposed such directions on the ground that they would interfere with the Board's giving the country the type of monetary policy it thought it should have to accomplish the best results. In fact, it was then, as it evidently is now, the wish of the Board to "work toward economic stability," without the obligation to define what it meant by it. Dr. Miller, a member of the Board since its establishment, testifying before the Banking and Currency Committee of the House, said:

I think we have given the conveniently vague phrase (of the Federal Reserve Act) "accommodating commerce and business" a meaning, a content, that is about as good as any promise as can be had that the Federal Reserve System will be operated so as to conduce to economic stability.

The depression experience from 1929 on was proof that the Board was merely opposed to a legislative mandate and not primarily interested in economic stability at all, for it has been shown that the Board's failure to offset deflation was one of the most important factors that contributed to our great depression. Today the Board, again in opposition to a legislative mandate, promises "economic stability." We have heard a lot about bureaucratic usurpation recently. This is a good example.

The Board, in opposing stability of the dollar's buying power, contends that "people are more interested in the relation between prices of what they produce and sell, and the prices of what they buy and use, than in the general price level." There is an element of truth in this, but it is ridiculous to contend that because the Board cannot through monetary measures eliminate the advantages enjoyed by monopoly nor iron out all the difficulties of the economic system, therefore it should not even try to do the obvious, first, and basic thing, namely, ask for power to give us stability in the dollar itself, so that on the basis of such stability we might proceed with some assurance to attack the problem of the lack of balance between specific prices of specific commodities. The Board should remember that one of the reasons given by it for its deflationary policies of 1937 was that it was trying to use monetary measures to bring down the prices of certain monopoly products.

In 1932, near the bottom of the depression, and again in opposition to a mandate by Congress, Dr. Miller testified that—

The important thing from the point of view of good functioning of the economic system either of this country or of the world is that there shall be stability in the price structure, in the relationship of prices to one another * * *.

It was because the Board had by its very action demonstrated that it paid attention neither to the general price level nor to the relationship of prices to one another that Congress reconstituted the Board in 1935; its members were relieved of their positions; new blood, progressive ideas, and aggressive leadership were to take the place of mere wishful thinking. But apparently we are right back where we were 10 years ago. And this is the primary reason for providing in H. R. 4931 that we do away with our present Board entirely, and that this time we not only give it new, progressive blood, but also such additional powers as it needs in order to be effective and congressional direction as to how it must act.

WHAT H. R. 4931 PROPOSES TO DO ABOUT IT

Establishment of central monetary authority: H. R. 4931 proposes to set up an entirely new board consisting of seven members, one of whom shall be the Secretary of the Treasury as ex-officio member. They are to be appointed for 7 years,

with the right of reappointment, and are to have a right to pensions after having served 14 years or more in office.

The bill will abolish the present so-called open-market committee, which consists of seven members of the Board and five presidents of the Federal Reserve banks. There is no reason why anyone but the members of the Board should determine the open-market policy by which the Board exerts its power to determine the volume of money in circulation.

In addition to its present powers, the bill gives the Board the power to determine the price of gold and silver, to buy and sell these precious metals, and to determine foreign-exchange rates—taking these powers away from the President and the Secretary of the Treasury. The Board may, but is not required, to purchase foreign offerings of gold.

Most important, however, the bill provides for the purchase by the Government of the Federal Reserve banks. The present situation is untenable. The Federal Reserve banks are to all intents and purposes the banks of issue of the United States; they put Federal Reserve notes, our legaltender currency, into circulation. They have been given gold certificates which give them a lien against approximately \$11,500,000,000 of the gold in Fort Knox. They execute the open-market policy of the Board; they rediscount for the commercial banks. But they are not owned by the Government at all, but by the commercial banks which are members of the Federal Reserve System. For \$132,000,000, approximately, we will not only purchase the capital stock of the 12 Federal Reserve Banks but will also obtain a clear title to \$11,500,000,000 of gold now buried in the Kentucky hills, and the Federal Reserve banks will in reality become, what many people think they are today, Government banks run by the Board of Governors and through which the Board will execute the monetary policy laid down by the Congress. All earnings of these 12 banks which now go into surplus for the benefit of the private member banks would upon passage of H. R. 4931 be paid annually into the Treasury of the United States.

REASON FOR 100-PERCENT MONEY IN DEMAND DEPOSITS

But all these powers are still insufficient to give the Board effective control over the volume of our money; for, as we have seen above, over nine-tenths of our trade is carried on by means of bank deposits, created by the commercial banks.

How, specifically, can the commercial banks create money? They can do it, because they are required to hold on the average only about \$20 in cash for every \$100 they lend and promise to furnish on demand. The promises of the banks to furnish money are permitted to circulate as money—and they perform the functions of money, provided the people do not all come to the banks and ask for their money. For if they do, as they did in 1932 and early 1933, they find the money is not there, and unless the Government interferes the banks fail. Ten thousand banks disappeared in this depression, largely because their depositors asked for their money which they believed they had in the bank. What they actually had in the bank was merely the banks' promises to pay on demand. The banks were sorry. So were the depositors.

This practice of permitting the banks' promises to circulate as money actually affects the volume of our money in circulation in the following manner. When a bank makes a loan, what it lends is not actual money, but its credit, and this credit takes the form of a demand deposit. The bank credits the account of its customer with, say \$1,000, and he can draw against this \$1,000 as if it were actually in the bank. The bank has, by the stroke of a pen, increased its demand liabilities, and also the total of demand deposits in circulation in the country. Reversely, when the loan is repaid to the bank, the demand deposits of that bank are reduced by that \$1,000, and the total of all demand deposits in circulation are reduced by that much. That is how bank loans first increase and then decrease the volume of money in the country. It is the process that accounted for the destruction of \$8,000,000,000 of America's circulating medium between 1929 and 1932, when the banks

were calling and refusing to renew outstanding loans, and when the real property of the American people was falling once again into bankers' hands because the people could not make good in cash the promises the bankers had loaned to them.

The power of the banks thus to create and destroy our money is inherent in the fractional reserve system. H. R. 4931 proposes to end this system, replacing it with a requirement for a dollar for dollar reserve behind demand deposits. What does this mean? It means that the commercial banks must have on hand—or on deposit in a Federal Reserve bank—a dollar in actual money for each dollar they lend to their customers. Then the borrower's money in the bank will actually be money and actually be in the bank and not be as at present no money at all, but merely a promise to furnish money which is not in the bank at all.

The distinction between a demand deposit which functions like money, but is a mere promise of the bank to pay, and actual money, will thus disappear overnight. Our money system will be simplified, and it will be possible for everyone to understand it.

Incidentally the establishment of 100-percent reserve or safety-deposit banks provided for in this bill would lead to a separation within each bank of its demand-deposit business from its lending and investment business. The demanddeposit business would consist merely of warehousing of the depositor's money, but the lending and investment department would be the real banking business as it should be. To prevent any abuse of the savings and time deposits from developing it is probably necessary to enforce regulations as to the withdrawal of cash from time and savings deposits, and the bill provides for this. At present the savings banks permit the withdrawal of cash from saving accounts almost as if they were demand deposits. As a result the banks, particularly the small country banks, are in constant danger of having to meet unreasonable demands of cash withdrawals from savings accounts which should be regarded as investments and never as ready money. It is therefore provided specifically in H. R. 4931 that the withdrawal of cash from savings or time deposits be made subject to adequate notice and to regulations of the Federal Reserve Board.

ONE HUNDRED PERCENT RESERVE SYSTEM NOT NEW

This 100 percent reserve system is not a new system at all. It is the original system of deposit banking as it was carried on for centuries. The fractional reserve system is relatively young; it dates from the seventeenth century and was invented by the goldsmiths of London who, because they had facilities for storage, were entrusted with the precious metal and money of the people of London. The goldsmiths soon found out that the people were satisfied to transfer their deposits by means of the receipts the goldsmiths had given them, and seldom asked for their money. So the goldsmiths handed out more receipts than they had metal or money in storage, thus beginning the practice of pyramiding deposits. It was essentially a breach of trust, but it soon became such a general practice, that people ceased to think of the system of fractional reserve banking as a sort of legalized fraud, which, strictly speaking, it really is.

WHY OUR PUBLIC DEBT IS SO LARGE

The most important consequence of this 100-percent reserve system is that the Nation will no longer depend for its money on the creation of demand deposits by the commercial banks. Today we, as a Nation, are absolutely helpless with respect to obtaining necessary additions to our circulating volume of money because, as the Federal Reserve Board quite correctly says in its recent statement, "it cannot make the people borrow, and it cannot make the people spend the deposits that result when the banks do make loans and investments." Someone has to go into debt to the banks if we wish an increase in our circulating medium, irrespective of the need of the Nation for more money or of the justification of bringing more into circulation.

As business does not borrow, and our Government is at present obstructed from using its own credit directly, the only

3, 163, 271, 000

method that remains is for the Government to sell bonds to the banks for credit on their books and thus to buy demand deposits. The Government has been doing this for the past 6 years, with the result that a considerable increase has been made in public debt, and that we are presently threatened with having even this method of giving the Nation the additional volume of actively circulating money which it needs taken away from us by the people who insist upon immediate balancing of the Budget.

A BALANCED BUDGET POSITIVELY DANGEROUS TODAY UNDER DEBT MONEY SYSTEM

I am wondering, however, whether those who clamor the loudest for a balanced Budget really see the picture. If the Government stops borrowing, and if business does not borrow instead, there will be no further addition to our circulating medium, and consequently no further recovery. We tried to cut Government expenditures and start depending on business borrowing in 1937. It is unnecessary to detail the disastrous results. I was one of those who warned of the consequences if we stopped spending, so long as there was no assurance that business would increase its borrowing of the banks at least as much as the Government reduced its borrowing. I wish to warn again today that a policy of Government economy and Budget balancing will have disastrous consequences so long as we continue to operate under a monetary system which makes the creation of our circulation medium dependent upon someone's going into debt to the banks. A debt money system simply will not meet the needs of a nation of vast productive capacity, tremendous accumulated capital, and limited opportunity for new investments.

It simply cannot be shown that if the Government only stopped spending and embarked on a policy of Budget balancing, business would take heart and expand; or that it is only a feeling of insecurity as to the future of the Budget which keeps business from investing today. For business will expand and invest only when it foresees increasing sales and continued profits ahead. Its present productive capacity is far from fully employed. If we reduce Government spending and as a result consumer purchases, there will be even less reason than there is today, why business should wish to expand. What we need is more spending, more money in circulation in the hands of the people who need it most. But we do not need more Government debt but less of it. That is our dilemma; and the only way that we can obtain both a decrease in our public debt and also the essential distribution of buying power in proportion to our productive capacity is through the terms of H. R. 4931, or a measure like it.

INFLATION A REAL THREAT UNDER PRESENT SYSTEM

On the other hand, suppose that business should begin to borrow of the banks, and the banks to lend to the full extent of their possibilities under the present fractional reserve system. With their present volume of excess reserves the banks could conceivably create \$20,000,000,000 of new demand deposits, enough to drive prices sky high, and inevitably pull us into another crash and depression. The powers of the Federal Reserve Board are utterly inadequate to control this situation. In its annual report for 1938 the Board said—

The ability of the banks greatly to expand the volume of their credit without resort to the Federal Reserve banks would make it possible for a speculative situation to get under way that would be beyond the power of the system to check or control. The Reserve System would, therefore, be unable to discharge the responsibility placed upon it by Congress or to perform the service that the country rightly expects from it.

The 100-percent reserve requirement behind demand deposits would, practically overnight, wipe out excess reserves and thus remove this inflation danger. Until something of this kind is done, a great many otherwise sound and constructive proposals for dealing with the present economic conditions in the Nation will be cast aside on the ground that they would add to excess reserves and thus increase this inflation danger.

The inflation danger is a fitting demonstration of the perverse flexibility of the banking system under fractional reserve requirements. When the banks are expected to expand the volume of money, as during the depression period, that is when they are calling loans and contracting; and when they are expected to contract to save us from inflation, as during the stock-market boom of 1928–29, that is the very time when they expand and thus blow up the inflation bubble still more. This Nation cannot afford to depend upon the self-interest of money merchants for a steady adequate supply of the lifeblood of its economic system.

PUTTING 100-PERCENT SYSTEM INTO OPERATION—WHAT WILL HAPPEN TO BANK EARNINGS

The question now is, How difficult will it be to put our commercial-banking system on a 100-percent basis? The bill provides that 1 year after passage the banks shall hold their demand deposits 100 percent in cash, but permits such amounts of direct and fully guaranteed Government obligations as they hold invested 3 months after passage to be counted as cash for this purpose. The following table of the condition of all insured banks, based on the report of the Federal Deposit Insurance Corporation as of June 30, 1938, shows that the change from the present, fractional reserve system to the 100-percent reserve can be effected without great difficulties:

without great dimeutles:	
Assets (to be held as reserve behind demand Coin and currency	\$909, 727, 000 8, 004, 090, 000 1, 945, 536, 000
Total	24, 384, 547, 000
Liabilities (subject to 100-percent reserve requ	uirement)
Demand deposits	\$26, 121, 112, 000
This would leave a deficiency in reserves as of June 30, 1938, of	1, 736, 565, 000
cent reserve behind time deposits of	445, 844, 000
Excess of interbank deposits over assets	980, 862, 000
Total amount of new money required to put	

According to this table there will be required only a little over \$3,000,000,000 of additional reserves in order to provide the 100-percent reserve requirement. H. R. 4931 provides that this money may be obtained by the commercial banks either by their sale to the Reconstruction Finance Corporation of a part of their assets, sufficient to bring their total of cash and Government bonds up to the required 100 percent of their demand deposits; or by an increase by the banks of their capital stock by the sale of additional common or preferred stock to the R. F. C.

commercial banks on a 100-percent re-

Now, if we go into the details of this transition to the 100-percent reserve system, we find that practically two-thirds of the required additional reserves will be needed in New York; for the rest of the country approximately \$1,000,000,000 will be sufficient to put the banks on a 100-percent reserve basis. In the larger cities the need for new money will be much larger, proportionately, than in the small cities; and in the large banks more new money will be needed, proportionately, than in the small banks. This is because the large banks, and particularly the large New York banks, are today acting somewhat like central banks for the smaller banks. Take the biggest bank of all, the Chase National Bank of New York:

Cash plus Government bonds was on June 30,	\$1, 491, 013, 000
Demand deposits (exclusive of deposits of other banks) Required cash reserve behind time deposits	1, 437, 878, 000 1, 377, 000
	1, 439, 255, 000
Which would leave the Chase Bank with a surplus of cash over and above that required behind demand deposits of	61, 758, 000 668, 604, 000
This leaves the Chase Bank short by The National City Bank would be short \$275	

In other words, by adjusting the situation in a comparatively small number of powerful banks, the 100-percent reserve system could be introduced, without affecting the condition of the many small banks at all. The chief change these small banks would have to make is, that instead of keeping balances in the large New York City banks, they would have to deposit those funds they did not wish to keep in their vaults, in the Federal Reserve banks of their respective districts. That is what the Federal Reserve banks are for.

Moreover, the loss in earnings of the large city banks from the loss of the interbank deposits would not be large. On the contrary, the management and investment of these huge funds is at present one of the greatest problems of the large banks; it is a very costly business, and the possibilities for investing these funds in short-term paper—formerly a profitable business—are very few and far between. In fact, the Federal Reserve Board has had under consideration putting these interbank deposits on a 100-percent reserve basis for the reason that they are not profitable now anyway, but on the other hand furnish the basis for a possible dangerous credit expansion.

The presence of these large interbank balances with the large banks explains also why they have not been able to show as high profits as the smaller banks have been able to show during the past few years. The following table shows the earnings and dividends of national banks, as reported in the Annual Report of the Comptroller of the Currency for 1937:

Earnings and dividends of national banks

Year	Number of banks	Capital funds	Net addition to profits	Dividends on common stock
1926	7, 978	\$3, 089, 358, 000	\$249, 167, 000	\$173, 753, 000
1927	7, 796 7, 691	3, 239, 539, 000 3, 570, 988, 000	252, 319, 000 270, 158, 000	180, 753, 000 205, 358, 000
1929	7, 536	3, 674, 763, 000	301, 804, 000	222, 672, 000
1930	7, 252 6, 805	3, 976, 148, 000 3, 755, 730, 000	246, 261, 000 52, 541, 000	237, 029, 000 211, 301, 000
1931	6, 150	3, 279, 848, 000	1 139, 780, 000	169, 155, 00
1933	4, 902	2, 856, 554, 000	1 218, 384, 000	99, 146, 000
1934	5, 422 5, 431	3, 001, 033, 000 3, 086, 418, 000	1 303, 546, 000 71, 373, 000	75, 848, 000 103, 417, 000
1936	5, 374	3, 165, 728, 000	241, 654, 600	125, 604, 000
1937	5, 299	3, 212, 165, 000	286, 561, 000	153, 475, 00

¹ Loss.

That a 100-percent reserve system would not materially alter the profits from operation of the banks is shown clearly by the next table of the net profits of national banks per \$100 of investment:

Net profits of national banks per \$100 investment (available for dividends)1

aividends).	
Year:	mount

¹ From the Annual Report for 1937 of the Comptroller of the Currency.

² Loss.

This table shows that, as the banks have come practically to a 100-percent reserve system during the past few years, this trend has been accompanied by increasing profits. In 1937 the national banks had the highest net profits in 10 years, with the exception of 1929. This is proof positive that the 100-percent reserve system will tend to stabilize not only the Nation's monetary system, but bank earnings as well. On the contrary, the profits of the banks may be expected to rise even higher with the resulting simplification of the banking system and the fact that bothersome and expensive attention to seek investment for demand deposit funds will disappear. Furthermore, H. R. 4931 provides in place of the

present expensive and complicated system of supervision and examination, a single free examination of all banks by the F. D. I. C.

The banks will, in addition, be able to earn money by making small service charges for the handling of their customers' checking accounts. In other words, instead of expecting banks to do all sorts of accounting work for depositors entirely free of charge, and then letting them make up for this by giving them a monopoly on the creation of credit in the Nation, this bill proposes that we should pay the banks an honest fee for their services and then restore to our Government the right to create our circulatory medium. A special commission of the American Bankers Association which has been making a study of service charges says in its Service Charge Survey of 1938 that service charges are a first essential to safe and sound banking. The earnings of banks from service charges have consistently risen during the past 10 years. H. R. 4931 provides that the Federal Reserve Board prescribe maximum rates which may be charged the depositor to prevent abuse.

WHAT ABOUT LOANS?

One first question uppermost in the minds of many people who look into the 100-percent reserve system is, How will the banks be able to make any loans, if they can no longer lend out money from their demand-deposit department? The answer is twofold: First, the banks have now outstanding in loans, discounts, and overdrafts about \$16,000,000,000. As these fall due, the banks will come in the possession of money which they will be able to lend out again. Second, there is a constant stream of funds from current income into savings; these savings are the second source of funds from which the banks will be able to make loans. The freedom from violent changes in the supply of money under the 100-percent system will probably stimulate savings and thus put at the disposal of the banks a constant flow of money for them to put back into the stream of circulation through legitimate loans of real money.

100-PERCENT SAFE BANKING

The 100-percent reserve behind demand deposits will put our commercial banking system on an absolutely safe basis. There will be no need for deposit insurance of checking deposits; for they are the equivalent of cash, and the bank will not be permitted to touch them, but will have to hold them in trust for the depositor. The Federal Deposit Insurance Corporation can then use its facilities to insure time and savings deposits, and H. R. 4931 provides for this insurance. It also provides for the elimination of the present often conflicting examination of the banks by three agencies—the Federal Reserve Board, the Controller of the Currency, and the Federal Deposit Insurance Corporation. The Federal Deposit Insurance Corporation which has to insure deposits will be the sole agency charged with the examination of the banks.

The 100-percent reserve system would, moreover, protect the small banks from the otherwise inevitable encroachment of the larger banks through the adoption of branch banking. Branch banking is often advocated to make our banking system sounder and safer. The British banking system is praised for its efficiency and absence of bank failure, because in England the great bulk of the banking business is carried on by five big banks and their branches.

But the price of this kind of system is to give over control of the economic destiny of the nation to these five banks. In France an even greater concentration exists with the Bank of France in a position to actually dictate governmental as well as financial policy. A similar development in this country cannot be prevented if we fail to put our banking system on an intrinsically sound basis. My bill would do just that. Branch banking, like deposit insurance, is in itself a mere palliative which can do no more than give an appearance of soundness to an essentially unsound situation.

Moreover, democracy's future hangs in the balance. Branch banking is today growing by leaps and bounds. Since 1920 some 15,000 small banks have disappearedmost of them gobbled up by our financial giants. Seventyfive of our largest banks control one-third of the financial resources of the Nation. There are good reasons for these things. Branch banking grows partly because little banks cannot compete with the big ones in a fractional reserve banking business. The combinations take place because it is deemed necessary for safety's sake. England's whole economic life is dominated as I have said by five great banks; France's by one.

If, then, we want to prevent a financial monopoly far more powerful than any we have yet seen from growing up we had better do something about the situation now.

SUMMARY

We have seen why we cannot go on with four agencies coining the Nation's money haphazardly, and entirely without reference to the Nation's need for money; that our constitutional responsibility to regulate the value of our dollar is not being fulfilled; that under present circumstances the Federal Reserve Board-now our most powerful monetary agency-is unwilling and unable to act as the agent of Congress in carrying out monetary policy.

It has been indicated how H. R. 4931 proposes to centralize all the powers over our monetary system in one single agency which would thus become the agent of Congress to carry out its monetary policy; why the present dependence of the Nation for its money supply upon the creation and destruction of bank credit by the commercial banks, gives us an unsound, antisocial, and uncontrollable monetary system; and how this situation can be corrected without difficulty by the introduction of a 100-percent reserve system.

THE HOPE OF LASTING RECOVERY

So far we have been talking largely in technical terms and about the things that need to be done to eliminate the harmful factors in our existing monetary system. Now, let us see how the passage of H. R. 4931 will help directly and positively in solving the two problems of increasing public debt and continuing unemployment about which I spoke at the beginning of this speech.

Here are the pertinent provisions of the bill:

SEC. 2 (a) The Board of Governors of the Federal Reserve System (hereinafter referred to as the Board) is hereby constituted the monetary agent of the Congress of the United States to regulate the value of the money of the United States in accordance with article I, section 8, of the Constitution of the United States, and for this purpose the Board shall have sole power to issue all lawful money of the United States, to regulate the exchange value of all foreign currency and coin, and to control the volume of demand bank deposits, and shall be fiscal agent trol the volume of demand bank deposits, and shall be fiscal agent of the Government of the United States.

And again:

SEC. 6 (a) The Board is hereby authorized and directed to use any or all of its powers to bring about and maintain full employment and a stable buying power in the dollar.

(b) The Board is authorized and directed to purchase with law-

(b) The Board is authorized and directed to purchase with lawful money or deposits in the Federal Reserve banks direct or fully guaranteed obligations of the United States, including, but not limited to, obligations issued for the purpose of financing employment of the unemployed, the rehabilitation of agriculture, the provision of low-interest credit to farmers, home builders, and small industry or other recovery purposes. The Board shall carry forward this policy until such time as a condition of practically full employment has been attained or until the buying power of the dollar has been restored to the average level held by it in the year 1926. year 1926.

(c) Whenever the Board shall find that there is practically full employment or that the buying power of the dollar has been restored to the average level held by it in the year 1926, then the Board shall so announce and shall thereafter use any or all of its powers to maintain the buying power of the dollar as of the date of such announcement and to promote the balanced expansion of production, distribution, and consumption, and full employment

therein.

(d) If the Board shall find that the exercise of all its powers is ineffectual in maintaining practically full employment at the stabilization level of the buying power of the dollar provided for in subsection (c) of this section, then the Board shall promptly advise the Congress and the President with recommendations for appropriate legislation and/or Executive action.

IMMEDIATE RESULTS

Immediately what would these provisions do? They would make possible a frontal attack on the depression in both agriculture and industry without any further increase in the public debt. This bill, as has been indicated, provides that the Board-now an agent of the Congress-shall purchase with the credit of the United States or with lawful money, the bonds of the Housing Authority, R. F. C., Farm Credit Administration, P. W. A., Treasury, or any other Government agency thus making available to these agencies, funds to be used in employing the unemployed, paying old-age pensions, making low-interest loans, or for similar purposes.

This would be new credit—the Nation's credit used for the Nation's needs. Interest on the bonds-if they bore interest-would every dollar of it return to the Treasury of the United States, for H. R. 4931 provides that all earnings of the Federal Reserve banks are to be paid into the Treasury at the end of each fiscal year. The Board would continue this policy until a condition of full employment had been brought about or until the buying power of the dollar had been

brought back to the 1926 level.

I readily admit that immediately the effect of the passage of the bill will be to make money worth less in terms of goods. I think this will be a good thing for the immediate future. People are at present hoarding money in very large amounts. They are doing so because they hope its value in terms of goods is going to rise. Give them the clear idea that the opposite is going to happen, and we will see these very people begin investing their money and putting it to work. This would mean increased employment at once.

Furthermore, so far as the farmers of America are concerned, it is important to remember that if the dollar becomes cheaper and real wealth dearer in terms of dollars, every debt on every farm in America can be paid off with less bushels of wheat, less bales of cotton, fewer cattle or hogs, or smaller amounts of any other farm commodity than was the case before. One of the first effects of the passage of the bill would be to prevent thousands of foreclosures throughout this country for the reasons just given.

I believe this would be a good thing for us to do. But it is most important to point out also that once either full employment or the 1926 buying power of the dollar was reached-whichever was reached first-then thereafter there could be no substantial variations in the value of the dollar in terms of commodities.

THE CENTRAL PRINCIPLE

And now let me say with the greatest possible emphasis that the main reason for depriving the banking system of its power to create money is in order to place this dynamic power in the hands of a public agency of the American people, acting under direction of the Congress.

If, by the introduction of 100-percent reserves we put the banks in the position of making loans not with fiat credit but with real money we must then see to it that the money creating power is exercised in the public interest by the Government of the United States itself. This should always have been the case, but in recent years every time it has been proposed for the Government to expand the volume of money, by using some of the gold or in some other way, the objection has always and, I think quite properly, been raised that to do so would inevitably add to the excess reserves in the banks and to the consequent danger of an uncontrolled inflation of bank credit at some future time. And let me repeat, that my main reason, though not the only one, for wanting 100-percent reserves is in order to give us a controllable monetary system and one in which the Congress can safely provide for bringing into circulation regularly, year by year, a volume of money and/or credit which bears a scientific relationship to the needs of the Nation, its people, and its businesses for such money. This is the end and aim of the whole bill.

And the justification and argument for it are these: Money, in any sane economy must be the means of moving goods and services from producer to consumer. It should not be a factor that decides whether goods and services are to be moved from producer to consumer, neither should it be an all-important commodity bought and sold like other commodities and subject to manipulation for private advantage by those who deal in and control it. So far as possible the relation of money to commodities—its value in terms of commodities—should be constant, for until this is the case we will not produce our goods and services for the good and logical reason that they are needed and can be sold at a fairly assured value; but will, instead, continue to produce goods only when we think their value in terms of money is going to rise, and will refrain from producing them when we think their value in terms of money is going to fall. Until we have a dollar whose purchasing and debt-paying power will remain relatively constant for a generation—as the President has said—we cannot proceed with any assurance to the solution of the problem of the unjustly high prices for monopoly goods and services and the unjustly low prices for agriculture products.

To those who contend that, due to declining costs of production, we should seek a declining price level, there are two answers. First, that as an historical fact we never have had any period of prosperity on a declining price level, and that so long as we retain a free economic system we never can expect production and employment to be full on a declining price level; and, second, that if government controls the issue of money and can direct it into the hands of those who need and will spend it—as, for example, by paying pensions to the aged—the benefits of declining production costs will be passed on to the consumers of the Nation even more certainly than can be done by a declining general price level with its almost certain consequence of unemployment.

THE PEOPLE'S MONEY

For these reasons the bill provides that the function of creating money, removed from the hands of private banks by the 100-percent reserve system, shall be exercised by the Federal Reserve Board as agent of the Congress.

The economic advantage from the creation of money and credit would accrue to the Government and people of the United States under the terms of this bill. Unless that economic advantage does accrue to the whole people there can never be a balance between production and consumption in the Nation. For there is at present no way except increasing debt whereby increased productive capacity, or the amount set aside for depreciation by industry can be compensated for by a corresponding increase in consumer-buying power. In the past, the commercial banks have failed disastrously to supply the Nation's monetary needs. As we have seen, the banks have invariably expanded when they should have contracted; and contracted when they should have expanded. Instead of increasing our debt, as we now do, in order to increase our volume of money, we will in the future, if this bill passes, reduce our debt with every dollar of new money put into circulation.

I cannot imagine that it was ever intended that we should trust to luck, to someone's going into debt to the banks for our supply of our money. Thomas Jefferson, John Adams, Andrew Jackson, and Abraham Lincoln are only a few of the great Americans who have looked with horror upon control by the banks over the Nation's money. The proper business of the banks is, and was always intended to be, that of lending and investing money but not of creating the money they That function was reserved to the sovereign people of the United States by the Constitution. The fact that we have let it fall into the hands of the private banks is one reason why the Government is in the banking business to the extent it now is. In fact, there is only this essential difference between Uncle Sam as a banker and a commercial banker; the commercial banker creates the money he lends, but Uncle Sam has to borrow the funds he lends from the commercial banker. That is, we have today exactly the reverse of all that is right and just and economically de-

THE NATION'S CREDIT GIVEN AWAY

It is one of the most ridiculous features of the present situation that, whereas we permit the promises to pay of commercial banks to circulate as cash, our sovereign Government's promises to pay are not permitted to so circulate at

all, unless, forsooth, the permission of the private banks has been obtained beforehand. What I mean is this. If a farmer borrows money from a bank, the bank creates and lends the farmer credit upon the farmer-borrower's security. But if the farmer borrows from the land-bank commissioner of the United States Government, then Mr. Commissioner, with all the resources of the United States behind him, does not lend the farmer credit on the security of the farmer-borrower's collateral, but must first have the Federal Farm Mortgage Corporation go out and sell a United States Government guaranteed bond for some credit on the books of a private bank and then, and only then, can a loan be made.

In other words, every time a United States Government agency lends credit, it is today compelled to pay tribute to the private financial system. Could we ask any more dramatic proof of the fact that Congress has sold America's birthright—the right to create her money—for a sorry mess of bankers' pottage?

Indeed the Government of the United States today does not even use the Nation's credit to lend against the security of the bonds of a State or city, but even in these cases bonds of the Government are first sold and interest paid before the Government of the Nation is regarded as having any credit to lend. House bill 115 would correct this particular abuse.

And yet to remain in any real sense a sovereign government, our Government must reserve to itself the right to create originally the money of the Nation. Therefore, to restore to Congress that right section 7, the most vital section of the whole bill, reads as follows:

SEC. 7. (a) It is hereby declared to be the policy of Congress to provide, in an orderly manner and without increase in the public debt, such expansion in the actively circulating volume of lawful money and demand bank deposits subject to check as may be necessary to compensate for the annual increase in population of the Nation and in the productive capacity of its industry, agriculture, and commerce. In order to carry out this policy the Board shall from time to time in return for obligations of the United States, establish deposits in the Federal reserve banks in favor of the Secretary of the Treasury of the United States in amounts sufficient to maintain a stable buying power in the dollar under conditions of expanding production, distribution, and consumption; and the Secretary of the Treasury shall forthwith apportion such deposits to the accounts of appropriate Federal agencies in accordance with congressional enactment for any or all of the following purposes:

(1) For the payment of pensions or social dividends to such citizens of the United States as shall have been made eligible to receive any such payments by act of Congress; (2) for the making of loans at low interest rates to farmers to assist in the rehabilitation of agriculture and the reduction of farm tenancy; (3) for the expansion of public works, including conservation and development of our natural resources, slum-clearance, low-cost-housing construction, and similar activities; (4) for retirement of the public debt of the United States; (5) for payment of the ordinary expenses of the Federal Government.

(b) If at any time after the announcement provided for in subsection 6 (c) above the Board shall find that the volume of lawful money and demand bank deposits in active circulation is not so balanced by the volume of goods and services flowing through the markets of the Nation as to prevent a sharp and inflationary rise in prices, then the Board shall cause the Federal Reserve banks to sell to the public obligations issued or fully guaranteed by the United States Government in amounts sufficient to maintain a stable buying power in the dollar.

Let me explain that section. Here is what would happen. The Board is charged with maintaining the buying power of the dollar once a proper stabilization level has been reached under the terms of section 6 of the bill. As production increased or goods and services became more plentiful, the value of the dollar in terms of goods would tend to rise. The Board must then purchase from the Secretary of the Treasury enough obligations of the United States to give the Treasury such additional volume of money as would be necessary to keep the relationship of the dollar to commodities a constant one. So far as the Treasury is concerned, this would merely be a source of funds in addition to the tax source and the borrowing source.

The Treasury would then spend the money as Congress directed through its appropriations in one of the five ways enumerated in the bill. Congress would appropriate the money made available by the Board just as if it has come out

of taxes or out of bond sales to banks or the public. Treasury obligations bought by the Board under this provision could be either interest bearing or noninterest bearing. If they bore interest, it would be returned to the Treasury again at the end of the fiscal year along with all other earnings of the Federal Reserve banks. In any case, the important thing is that the public debt would not be increased. One agency of government, the Treasury, would owe another agency, the Board, a certain amount of money. It would be a bookkeeping transaction similar to the transaction that takes place now when the Treasury sells bonds to the private banks, except that the people of the United States would be using their own credit, put into circulation by the Board, under absolute control by its mandate, to promote the public welfare.

THE ANSWER TO THE DEBT

Here, I think, is the key to the failure of our efforts to deal successfully with depression in the past few years, the answer to recurrent periods of prosperity followed by collapse, the reason why modern capitalist economies almost universally are burdened with staggering debt and afflicted with the tragic paradox of poverty in the midst of plenty.

We have blunderingly assumed that the reservoir of credit in the Nation was ϵ private, not a public, one and we have permitted private financial interests to capitalize in terms of new flat credit the growth of population and productive capacity of this great Nation.

We have attempted to borrow into circulation enough demand bank deposits to bring recovery, but we have been unable to push the national debt up fast enough to make this policy effective.

Instead of this we should have recognized the fundamental justice as well as the absolute economic necessity of having the Congress bring into circulation directly year by year a volume of money sufficient to meet the needs of a growing population and expanding productive capacity on a basis of reasonable stability in the buying power of the dollar.

We have left out of account this basic factor in our calculations. There takes place, year by year, a net increase in the productive capacity, population, and wealth of America. Over our history this increase has averaged about 4 or 5 percent despite the terrible depressions we have suffered. In the absence of a practical recognition of this factor of national growth, no amount of investment, however large, can ever bring about balance between our power to produce and our power to consume. For investment, while adding temporarily to consuming power through wage payments and the like, also increases our power to produce and in the long run leaves us more out of balance than we were before.

This is the main thing my bill aims to do. It says in effect the American people have had children and increased the population, the American people have improved their technique of production in agriculture and industry, the American people have invented new means of transportation. The whole people have earned the right to have their Government bring into circulation an additional amount of interest-free money to compensate for this growth and to keep the dollar as such from devouring, in inflated value, the wealth and hope that this growth made possible.

If the dollar is to be the handmaid of industry and not its devouring master, then the volume of money must be increased scientifically year by year to match the growth of industry.

SOUND MONEY

Among the most indefensible of the arguments which I know will be advanced against H. R. 4931 are these: That money, in order to be sound money, must bring interest to some bank which has created it; that the money we now use is sound money, and that Government-created money, being free from this interest charge, would be unsound or flat money. It is not here proposed to create flat money in unlimited amounts for the purpose of financing Government expenditures or an ever-growing deficit, for, under this bill, money would be created no more rapidly than the expansion of population and actual production of wealth justified.

The number of dollars in circulation would, as it were, be determined by the number of bushels of wheat, bales of cotton, boxes of oranges, houses, and so on. This Government created money, the supply of which would be controlled strictly with a view to maintaining its buying power, would be the soundest of sound money, while the money presently created by banks chiefly for the purpose of creating a profit to the banks, and without due regard to the needs of the national economy as a whole, is unsound in the truest sense of the word.

Federal Reserve notes are redeemable in lawful money, but there is no lawful money with which to redeem them. They are supposed to be backed 40 percent by gold, but the gold is not available to back them with. This is part of our "sound" money. Furthermore, under our present system we could have the most colossal inflation that the Nation has ever dreamed of. For since the Federal Reserve banks have gold certificates in the amount of \$11,500,000,000 and a 40-percent gold backing is required for issues of Federal Reserve notes, therefore under present law some \$28,000,000,000 of Federal Reserve notes could be issued. If this were done, then, on the basis of average requirements of 20-percent reserves in the banks behind demand deposits, there would be room for five times \$28,000,000,000,000 of bank credit, or \$140,000,000,000 of check-book money.

Yet we are told we must cling to sound money.

Under H. R. 4931 no inflation at all would be possible unless the Board disobeyed the law.

Sound money is money which bears a constant relationship to and value in terms of actual goods and services. That is all there is to it. It makes no difference what it is made out of. It makes no difference what it can be redeemed in. It certainly makes no difference whether or not a tribute is paid to a banker by a government to regain its sovereign right to issue the money. None of these three things has anything to do with the soundness of money. Sound money is money that does the job money is supposed to do.

LIMIT TO INCREASE IN MONEY IS PRODUCTIVE CAPACITY. SOLUTION TO PROBLEM OF NATIONAL DEBT

H. R. 4931 does not propose inflation, nor deflation. It provides for a sufficient increase in the volume of money to maintain stability in the dollar in an economy of expanding production. It says the more consumers there are and the larger volume of production there is, the more money is needed to move the goods and services.

If we would do this, pass this bill, put this one factor to work, we would free America from her bondage to debt. The fact is the people of the Nation by their industry and their inventiveness are even now paying off that debt. Only our bookkeeping system does not give them credit for it, but says to the people's government, "You must never monetize the net increase in national population and productive capacity until you have made your propitiation in the form of interest to those who now hold the monopoly of the right to create your money."

Under H. R. 4931, approximately half of the national debt would, in effect, be turned into cash upon passage of the bill. For bonds held by the banks would be required to be held as part of reserves behind demand deposits and would as they matured be paid off by public creation of credit even as they were bought in the first place by private creation of credit. The interest on the bonds which the banks would receive, meanwhile, would be like compensation to them for their services to demand depositors, and would be the means of keeping service charges low or making them, in some instances, unnecessary. Furthermore the bill provides that as expansion of the volume of money is called for, one of the ways it can be used is for retirement of the public debt. The passage of this bill would therefore allay once and for all the concern of this Nation over the public-debt situation. Instead of trying to pay old debt by contracting new debt or adding to taxes we would have a system whereby the people of America, through the process of increasing wealth production, would earn into circulation the money with which to pay their debt.

Statisticians and economists have given us reams of figures to show how large could be the incomes of American families if we produced at decent capacity and equitably divided our national income.

We know that the producers of America—the farmers, manufacturers, and all the rest-are not only able to produce an abundance but are only waiting for a chance to do so. We know also that there are millions of people in the Nation with unmet needs who would quickly buy the output of our farms and factories if only they had the money to do so. Our problem is to solve the problem of distribution, to perfect machinery whereby an abundant production can be regularly consumed by the people of America. This is partly a problem of taxes, wage scales, margins of profit, monopoly control, and

It is in large measure a pension problem, because everyone can see that never again will all the available workers of the Nation be needed by our industries, and that it is therefore an economic necessity that those in the upper age groups be enabled to retire from active participation in industry while still retaining a decent measure of consuming power.

The difficulty up to now has been how to find the money to pay the pensions with. Year by year the problem becomes more acute. Industry becomes more efficient, better able to supply in a short period enough of its products to supply the Nation for a whole year. The men over 45, or even 40, find it more and more difficult to get jobs. Savings accumulate and it is more and more difficult to find profitable investment for them. And all because we are too efficient, able to become too wealthy. In part this problem can only be solved by a courageous tax policy which can prevent excessive accumulations of savings in a few hands. But, in part this problem can never be solved unless and until the central principle of H. R. 4931 is enacted into law. A part of the funds we need for pensions must come out of a net increase in the volume of money brought into circulation by Government to compensate for the increase in productive capacity of the Nation. Unless this is done consuming power can never keep up with power to produce-not without a constant never-ending increase in national debt.

This is why H. R. 4931 provides in section 7, which I have already described, that the Board shall, by purchasing obligations of the Treasury with new national credit, put into the Secretary of the Treasury's hands an additional volume of money or credit sufficient to maintain stability of buying power in the dollar under conditions of expanding production and consumption. This is why the bill provides that the Secretary shall promptly expend this money as Congress directs, for the payment of old-age pensions, the payment of wages to workers on public works, the making of loans at very low interest to farmers, or the retirement of the public The bill does not attempt to determine how much additional money is to be put into circulation from time to time by this method. That would be determined by the Board on the basis of the amount necessary to keep the buying power of the dollar stable. Neither does the bill determine absolutely how the new money shall be spent, except that it is in all cases to be put into circulation through people at the bottom of the economic scale who are most certain to spend it. What the bill does provide is that whatever amount of additional consuming power is necessary to match the increase in our power to produce shall be made available by the board for congressional appropriation without increase in the public debt.

Here is in large part, the answer to the great dilemma of modern industrial civilization, the factor that has been disregarded for so long. Here, I am convinced, is a measure that will benefit every single group in the whole Nation. Here is one of the things we must do to set this Nation free from its present bondage to poverty, debt, and confusion.

Here is hope for democratic America.

THE SAME PROPOSAL BY LEADING ECONOMISTS

I am not alone in the belief that the reforms provided in H. R. 4931 are inevitable if we are to continue to have democracy in America. As proof of this fact I wish in conclusion to give some of my authorities for the things I have said here. In the first place H. R. 4931 is based in its major features on the bill introduced at the last session by Congressman Charles G. Binderup of Nebraska. It is directly in the tradition which started with the introduction of a very similar bill by the late Senator Cutting of New Mexico in 1935. It will have the keen interest and, I feel sure, enthusiastic support of such men as ex-Senator Robert L. Owen, coauthor of the original Federal Reserve Act, and Robert H. Hemphill, former credit manager of the Federal Reserve Bank of Atlanta.

Furthermore, there follows a Program for Monetary Reform drawn up by Profs. Paul H. Douglas, of Chicago University; Irving Fisher, of Yale; Frank Graham, of Princeton; Earl J. Hamilton, of Duke; Willford I. King, of New York University; and Charles R. Whittlesey, of Princeton; and agreed to by an overwhelming percentage of economists to whom it has been submitted. I ask you to read it carefully and to compare the provisions of H. R. 4931 with the measures for monetary reform which these lifetime students of the subject call for.

A PROGRAM FOR MONETARY REFORM

The following suggested monetary program is put forth not as a panacea nor even as a full solution of the depression problem. It is intended to eliminate one recognized cause of great depressions, the lawless variability in our supply of circulating medium.

medium.

(1) During the last 10 years the world's nations have largely given up the gold standard. Gold is still, and may always remain, an important part of the machinery of foreign trade and exchange. But it is no longer, and probably never again will be, the sole reliance for determining the "internal value" of monetary units. Even those who advocate some degree of return toward the former gold standard are now convinced that it must be managed and never again left to work automatically.

(2) The majority of the world's leading nations now seek to keep their monetary units reasonably stable in internal value or buying power and to make their money supply fit the requirements of agriculture, industry, and commerce.

or buying power and to make their money supply fit the requirements of agriculture, industry, and commerce.

(3) Many countries, especially the Scandinavian and others included in the so-called sterling bloc, have gone further than the United States, both in formulating and in carrying out these new monetary policies.

(4) Our own monetary policy should likewise be directed toward avoiding inflation as well as deflation and attaining and maintaining as nearly as possible full production and employment.

employment.
(5) To this end we should set up certain definite criteria for

money management according to which our monetary policy should be carried out.

(6) The criteria for monetary management adopted should be so clearly defined and safeguarded by law as to eliminate the need of any wide discretion permitted to our monetary authority.

(7) Among the possible standards to which the dollar could be made to conform are those which would be obtained by the two following methods:

following methods:

(a) Establish a constant average per capita supply or volume of the circulating medium, including both "pocket-book money" and "check-book money" (that is, demand deposits or individual deposits subject to check). One great advantage of this "constant per capita money" standard is that it would require a minimum of

discretion on the part of the monetary authority.

(b) Keep the dollar equivalent to an ideal "market-basket dollar," similar to Sweden's market-basket krona. This market-basket lar," similar to Sweden's market-basket krona. This market-basket dollar would consist of a representative assortment of consumer goods in the retail markets (so much food, clothing, etc.), thus constituting the reciprocal of an index number of the cost of living. Under this "constant cost of living" standard, the monetary authority would, however, as has been found in Sweden, have to observe closely the movements of other, more sensitive, indexes, with a view to preventing the development of disequilibrium as between sensitive and insensitive prices.

(8) In order that our monetary policy may be made to conform to the new standard and become the means of attaining a high degree of prosperity and stability, legislation should be enacted, embodying the following features:

(a) There should be constituted a "monetary authority." clothed with carefully defined powers over the monetary system of this country, including the determination of the volume of circulating medium.

medium.

(b) Congress should give this monetary authority a mandate specifying the monetary standard, to maintain which these powers would be exercised. The mandate should also define the part which monetary policy would play in attaining the objective of steadily increasing prosperity.

(c) This monetary authority might be the Federal Reserve Board or another body associated therewith. It should be kept free from any political or other influences and interests which might tend to

interfere with the performance of its functions. Its sole concern should be the maintenance of the monetary standard as defined by Congress. This standard and the means of maintaining it should

Congress. This standard and the means of maintaining it should be so narrowly defined by Congress as to leave only a minimum of discretion to the monetary authority.

(d) Neither the President nor the United States Treasury nor the agency of the Government should have power to alter the volume of circulating medium in conflict with the powers of the monetary authority. That is, none of them should have the power to issue greenbacks, whether to meet the fiscal needs of the Government or for any other purpose. Nor should they have the power to change the price of gold or the weight of the gold dollar, whether to increase the cash of the Government or for any other purpose. Any discretionary powers along these lines now possessed whether to increase the cash of the Government or for any other purpose. Any discretionary powers along these lines now possessed by the President or the Secretary of the Treasury should be repealed, and such of them as may be necessary for controlling the volume of money, including the power of gold sterilization, should be transferred to the monetary authority.

But in determining its activities the monetary authority should take note of all other activities of the Government intended or likely to affect economic conditions, and it should seek any necessary cooperation with other agencies of the Government with a view to establishing and maintaining stable prosperity.

(9) The chief loose screw in our present American money and banking system is the requirement of only fractional reserves behind demand deposits. Fractional reserves give our thousands of commercial banks the power to increase or decrease the volume of our circulating medium by increasing or decreasing bank loans

commercial banks the power to increase or decrease the volume of our circulating medium by increasing or decreasing bank loans and investments. And as each bank exercises this power independently of other banks, and without any centralized control, the resulting changes in the volume of the circulating medium are largely haphazard. This situation is a most important factor in booms and depressions.

(10) This situation also hinders effective control by the monetary authority over the volume of our circulating medium. Therefore it is highly desirable that any bank or other agency holding deposits subject to check (demand deposits) be required to keep on hand a dollar of reserve for every dollar of such deposits, so that, in effect, deposits subject to check actually represent money held by the bank in trust for the depositor.

The following are two of several methods of introducing,

(11) The following are two of several methods of introducing, or rather reintroducing, the 100-percent reserve system:

(a) The simplest method of making the transition from fractional to 100-percent reserves would be to authorize the monetary authority to lend, without interest, sufficient cash (Federal reserve notes, credit, United States notes, or other lawful money), to every bank or other agency carrying demand deposits to make the reserve of each bank equal to its demand deposits on a certain specified date.

(b) Another method would be to let each bank count as cash

on a certain specified date.

(b) Another method would be to let each bank count as cash reserve its United States Government securities (reckoned at par), up to a specified maximum, and to provide for their conversion by the Government, on demand of the bank, into cash. This method of transition would be particularly easy today because the banks already hold enough cash and Government securities to fulfill the proposed 100-percent reserve requirement.

(12) Under a 100-percent reserve requirement, the monetary authority would replace the banks as the manufacturer of our circulating medium. As long as our population and trade continue to increase there will, in general, be a need for more money in circulation, and the consequent action of the monetary authority in satisfying this need through the purchase of Government bonds with new money would gradually reduce the Government debt. This means that the Government would profit by manufacturing the necessary increments of money, much the Government debt. This means that the Government would profit by manufacturing the necessary increments of money, much as the banks have profited in times past, though they do not and cannot profit greatly now. That is, the governmental creation of money would now be profitable where the banker's creation of money can no longer be profitable, for lack of unified

control.

(13) The 100-percent reserve requirement would, in effect, completely separate money from banking. The two are now disastrously interdependent. Banking would become wholly a business of lending and investing preexisting money. The banks would no longer be concerned with creating the money they lend or invest, though they would still continue to be the chief agencies for handling and clearing checking accounts.

clearing checking accounts.

(14) While there would be no restrictions on the transfer and withdrawal of checking deposits, withdrawals from time or savings deposits, including postal savings, should be restricted and subject to adequate notice. Only thus may the bankers ever feel safe in

to adequate notice. long-term investing.

long-term investing.

(15) This split of the two functions would be much like that of 1844 in the Bank of England, separating the issue department from the banking department. That split was made with substantially the same object as that here proposed; but demand deposits, being then comparatively little used in place of bank notes, were overlooked. The pound-for-pound reserve behind Bank of England notes then enacted was a 100-percent reserve system for pocket-book money. The present proposal merely extends the same system to check-book money.

(16) Lest anyone may think that the 100-percent reserve system would be injurious to the banks, it should be emphasized that the banks would gain quite as truly as the Government and the people in general. Government control of the money supply would save the banks from themselves—from the uncoordinated action of some

the banks from themselves-from the uncoordinated action of some

15,000 independent banks, manufacturing and destroying our check-

15,000 independent banks, manufacturing and destroying our checkbook money in a haphazard way.

With the new steadiness in supplying the Nation's increasing monetary needs and with the consequent alleviation of severe depressions, the people's savings would accumulate more rapidly and with less interruption. Loans and investments would grow greater and safer, thus swelling the business of all banks. (These new loans and investments would no longer be associated with demand deposits but only with time and savings deposits just as the old loans and investments, carried over from the present regime, would be transferred from the "demand deposit" part of the business to the "time" category.)

The banks would also get some revenue from the demand-deposit business itself in the form of charges for their services in taking care of the checking business.

If the manufacture of money is thus made exclusively a governmental function and lending money is left to become exclusively a banking or nongovernmental function most of the vexatious regulations to which bankers are now subject could be

sivery a banking or hongovernmentar function most of the vexa-tious regulations to which bankers are now subject could be abolished. Moreover, the Government could withdraw from the banking business and leave the field again entirely to the bankers. Incidentally there would no longer be any need of deposit in-surance on demand deposits nor of branch banking which is often regarded as a way to stabilize banking—at the expense of the small bentor.

banker.

(17) There are two forces now at work which are tending silently but powerfully to compel the adoption of the 100-percent reserve plan:

(a) Short-term commercial loans and liquid bankable invest-(a) Short-term commercial loans and inquit balliable investor ments other than Government bonds are no longer adequate to furnish a basis for our chief medium of exchange (demand deposits) under the fractional reserve system. Capital loans are inappropriate for this purpose. As time goes on this inadequancy will grow far worse. Under the present fractional reserve system. the only way to provide the Nation with circulating medium for its growing needs is to add continually to our huge Government debt. Under the 100-percent reserve system the needed increase in the circulating medium can be accomplished without increasing

the circulating medium can be accomplished without increasing the Government debt.

(b) As already noted, a byproduct of the 100-percent reserve system would be that it would enable the Government to pay off its debt, largely through routine open-market purchases of Government bonds by the monetary authority. Under the fractional system any attempt to pay off the Government debt, whether through decreasing Government expenditures or increasing taxation, threatens deflation and depression.

Some competent observers think these two forces will eventually compel adoption of the 100-percent plan.

(18) If the money problem is not solved in the near future.

(18) If the money problem is not solved in the near future, another great depression, as disastrous as that of 1929-38, is almost sure to overtake us within a few years. This seems the more likely, as in the absence of monetary reform inflation may be pursued as an escape from the present depression. Or a great inflation may come as a mere consequence of surplus reserves. If these disasters should occur our opportunity of even partially solving the depression problem by removing its monetary causes may be lost, and, like France, Germany, and other countries where this opportunity was lost, our country could expect, if not chaos and revolution, at least more and more regulation and regimenta. and revolution, as teast into and into regulation and regimenta-tion of industry, commerce, and labor—practically the end of free enterprise as we have known it in America.

In this manner the decline of democracy has set in elsewhere. "It can happen here."

Unemployment and Relief-From the Republican and Democratic Viewpoints

EXTENSION OF REMARKS

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, April 17, 1939

RADIO DISCUSSION BY HON. ROBERT A. TAFT, OF OHIO, AND HON. T. V. SMITH, OF ILLINOIS, APRIL 4, 1939

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely and important discussion on unemployment and relief disclosing the Democratic and Republican points of view on the subject as presented by Senator Robert A. Taft, of Ohio, and Representative T. V. SMITH, of Illinois, Tuesday, April 4, over the Columbia Broadcasting System:

Announces. First, from a Democratic point of view, as presented by Representative T. V. Smith.

Mr. SMITH of Illinois. Kinsmen in Texas, neighbors in Illinois, and friends on W. P. A., men and women of America, greetings from Washington. You have no doubt heard of a class of people called the "new rich." There aren't many of them now; but some of you can remember samples from other days. They were people who got wealthy so quickly that they weren't able to develop a set of manners supposed to go along with money. There is another group in our day, uneasy and numerous, which we may call the "new poor."

the "new poor."
You'll find this group, the new poor, mostly on the W. P. A. I propose to confine my discussion largely to them. So quickly have impersonal economic forces deprived them of what they had, that they haven't yet lost the manners of freemen. They dare to believe, for instance, that they have the individual's right to work. They believe that they have the citizen's right to vote. They believe that they have the workman's right to organize and to bargain collectively. You see, they aren't like the ancient poor, whom we've always had with us. They haven't been pauperized—vet.

yet.

The records of these new poor show, according to the Fortune magazine in 1937, that they have been substantial American citizens, rather than ne'er-do-wells, that two-thirds of them indeed held their longest private jobs more than 5 years. Forget your cruel jokes and relax your prejudices to hear that again: Two-thirds of these men on relief held their longest private jobs more than 5 years. Moreover, only 15 percent of those now on W. P. A. have been on since 1936. The new poor, though down, are not out; they're poor, not from personal fault, but through national misfortune. Yesterday, so to say, they were like us. Tomorrow, so to say, we may be like them. So today let's count ourselves all alike as fellow citizens, Americans all!

Now there are those who don't like the W. P. A. Some, I believe, are more irritated by the independence than by the poverty of these new poor. It's not that these critics want men to starve, as melodramatists say. To the contrary, they want these men to go back to private jobs—but how? but where? Failing that, they want the self-respect of these new poor to quit costing us better-to-do people so much money. These critics are not mere critics, however. They propose a plan for the new poor, a plan that means giving less relief than the W. P. A. to fewer people at proportionately greater administrative cost. They not only have a plan; they also have a party. It's called the Republican Party. This party has leaders; and has a record on this very matter—but the less said about that record the pleasanter the evening. One of the leaders is Herbert Hoover, who on principle was as President against all Federal aid to the unemployed. Another is Alfred M. Landon, who promised diverse kinds of Federal aid if elected President; but he wasn't elected President. Another leader is the Honorable Robert A. Taft, junior United States Senator from Ohio, who promises—well, why should I tell you what he promises? He's here to speak for himself.

Meantime, I say to you, however, that the plan variously proposed by the Republicans, of turning relief back to the States, will give "less relief to fewer people at proportionately greater administrative cost." I have in mind as I go along to show you why and how that's true. Now there are those who don't like the W. P. A. Some, I be-

why and how that's true.

We ought to admit first that neither of our parties know for certain how to cure unemployment. If we did, of course, we'd cure it. As penance paid, therefore, to our ignorance, we surely ought to pool the experience we've had in trying to help the unfortunate victims of it. Under Hoover and Roosevelt together we've had a decade of experience diverse, costly, and clear in its lessons. I say "diverse" because we've really tried out all major especially the plan of State and local responsibility. I "costly threaten the peace of the land and enough of money under Roosevelt to double the national debt. The lessons of this experience ought to be the dearer for the cost.

The first lesson is indeed very clear. It is that the Federal Government must take major responsibility for relief. Unemployment is, after all, a national problem. The States could not pay for relief even if they would and should. Why, the bill equaled all State taxes collected last year for all purposes, and surpassed all State taxes for every preceding year. Fifteen States require a referendum to increase indebtedness and 23 a constitutional expendent. Moreover States mostly deeped upon taxes that are Moreover, States mostly depend upon taxes that are amendment. had for business and worse for justice—regressive, like the sales tax.

Nor is it merely ability to raise the money, and to raise it more

justly, that makes relief rightly a Federal matter. mainly the superior ability of the Federal matter. It is also aministration. This triple advantage of an energetic central government is the heart of the new federalism which I have been proclaiming to you in each of these debates. Financially, it's certainly cheaper to administer these national things nationally. The cold figures to administer these national things nationally. The cold figures show that present State and local relief for unemployables costs 15 percent to administer. Former Federal grants to States cost 10 percent to administer. Present Federal cost under W. P. A. is down almost to 3 percent. Doctor these figures as you will, and the lesson still sticks out like a sore thumb that the larger the unit the less the money to administer relief. The obvious reasons will come to your minds. There's one reason, however, we politicians try to keep out of your minds—I'm revealing State secrets which I imagine have worried Mr. Taft in Ohio even more than me in Illinois. This main reason is patronage. Hard as this evil is to resist federally, it is impossible to resist locally. With 48 State political machines, more than 3,000 county machines, and millions hungry for jobs in 10,000 precincts which Mr. Taft all but made sovereign last week, the political waste in store is appalling. Talk of the few mistakes on W. P. A.! Why, "you ain't seen nothin' yet," not until you face the political pressure of localities uncautioned by Federal selection of projects and supervision of the work.

The relative immunity which the Federal Government has from The relative immunity which the Federal Government has from the worst patronage grabbing explains in large part why the administrative costs of W. P. A. are only a little over 3 percent while the law allows W. P. A. 5 percent. The local communities, at least in Illinois, frequently exceed the legal allowance, whatever it be. Even the Chicago Tribune is now complaining in a series of scandal articles about the "pull," favoritism, and unevenness of relief given by supervisors—a great many of them Republicans—to the unemployable in down-State Illinois. The uneven range goes from \$7\$ to \$21\$ a month. Our experience with the three types of administration—local and State, State and Federal, and Federal—ought to close debate on this matter for all save theorists and fanatics. A national matter like relief must, if adequate be mostly natics. A national matter like relief must, if adequate, be mostly financed by the Federal Government and must, if economical, be centrally controlled. To fear this indicated arrangement is to fear fear, not facts. As Republicans fear to learn this first lesson, so they forfeit the second lesson of our experience.

This second lesson is that work relief is better than direct relief. It is better first because it really "relieved"; it than direct relief.

This second lesson is that work relief is better than direct relief. It is better, first, because it really "relieves"; it helps the mind, I mean, as well as feeds the body. This might not be important for slaves, but it's of prime importance in dealing with citizens. Work relief is better, second, because it spends to create wealth as well as to relieve men. It justifies itself while it's going and leaves monuments to itself when it's gone. What insane notion of economy could lead us to waste both men and money on the dole when through W. P. A. and P. W. A. work we can save the men and have these magnificent buildings, bridges, roads, and parks all over the Nation to show for our sanity? Only a pauper nation will waste Nation to show for our sanity? Only a pauper nation will waste its wealth in pauperizing its helpless people. We are not a pauper nation. Economy means spending to conserve, and any other spending is waste, however large or small it be.

This lesson that relief must be work in order to "relieve" enforces the first lesson that it must be federally administered. Ignore the first lesson, and you leave no basis for the second. Even if States have the will, they lack the wit—the tradition of merit in personnel—to provide and manage public works. States are poorly sonnel—to provide and manage public works. States are poorly prepared, and lesser units hardly prepared at all, to set up and to execute work projects other than purely trivial activities. Only the Federal Government is prepared to follow the wise advice of the National Resources Committee, i. e., "to provide a reservoir of selected projects which can be utilized in periods of economic depression." As States lack the scientific resources to lay out the projects, so they lack the political tradition of civil service to administer them without the waste of patronage. Republicans ignore this second lesson in order to avoid the third.

The third lesson is that cheapness is not economy and cannot

The third lesson is that cheapness is not economy and cannot be made so by any talk about the Budget. Sit down and really think a moment whether the fifty-odd dollars a month averaged on the W. P. A. is too much for your family, for any family, to live on in America today. Are men to count, or are we to go mad about money? Do we know what wealth's for, or don't we? The head and front of our Democratic offending is that we are spending more money on men than the Republicans want spent. We are spending twice as much per man, in fact, on the W. P. A. spending more money on men than the Republicans want spent. We are spending twice as much per man, in fact, on the W. P. A. as together with the States we spent per man through the F. E. R. A. So what? Well, we Democrats believe in men. We suppose that money exists for men, not men for money. We could go back to the Federal-grant system and drop to the \$25 a month per family. We might even drop the employables to the State and local average for unemployables of \$15 a month per family. That is, we might do these things if we were not Democrats who believe in men.

We Democrats know that where selfish wealth accumulates help-We Democrats know that where selfish wealth accumulates help-less men decay. We know that children today will be citizens tomorrow, and we don't want them so undernourished and dis-gruntled that some Hitler can play upon their hate to the ever-lasting hurt of our republican institutions. Who does not know that it was our social-security program that stopped Huey Long in his tracks? We Democrats know as well as the Republicans that perspection is chapter that the relief of citizens. But that that pauperization is cheaper that the relief of citizens; but that doesn't make us Democrats prefer pauperization to patriotism. This is the gist of the Republican position for direct relief by local communities; that it is cheaper than work relief under Federal supervision. Of course, it is. As to that issue, I tell you Federal supervision. Of course, it is. As to that issue, I tell you trankly that Mr. Taft or anybody else can win the victory any time he has the heart to do it. I have no heart, nor has the present Democratic administration, to let men made poor by accident become pauperized by intent. If that be economy, then make the most of democratic treason. I do not care for the economy of cheap skates, nor for the patriotism that sees merely the purse.

Beware the attitude of cheapness that feeds upon its own proud flesh. Those who begin in the name of such economy to deny fellow citizens the right to work can so easily end by denying them the right to vote. I do not charge this as a wholesale intention. But I report honestly what I hear the whisperers whispering

when they congregate "to cloakroom" the new poor. Their bitter whisperings remind me of the odious blandness of a British co-lonial surgeon. He told me that in South Africa he did not ordilonial surgeon. He told me that in South Africa he did not ordinarily use anesthetics in his operations. He long ago discovered, he said, that the natives did not pain as Englishmen do. It's not honesty that's lacking here or there; it's imagination. Yet honesty is not enough—not if it be deaf to the suffering of others or dumb to its own squelched sympathies.

Reconstruct now for yourselves the psychology which leads Republicans to skip lesson after lesson that we Democrats have learned from their experience and ours. They want to diminish Federal responsibility for relief so that they may edge out the work relief to which the Federal Government is committed. They want

recieral responsionity for rener so that they may edge out the work relief to which the Federal Government is committed. They want to get rid of work relief because a dole's cheaper. They plump for this sort of "cheapness," largely, they say, because they want to force men off relief into private jobs. "But where are the private jobs to absorb 10,000,000 men?" "That's easy," reply the Republican wiseacres. "They're waiting, just around the corner, if we'll only stop this spending for relief."

ш

Well, now, who says that Republicans are not men of faith? Why, that's a faith not only to remove mountains of debt, but to build mountains of prosperity and morale. Who's to take the risk, however, of the Republican faith that if we stop relief, we won't any longer need it? Aye, there's the rub! The unemployed, of course, are to take the risk that this grand faith is more than

of course, are to take the risk that this grand faith is more than cruel theory.

This is the final issue on the matter of relief; Republicans want relief cut so that private jobs will return; Democrats want jobs to return so that relief may be cut. The question is: Who shall take the risk, the weak or the strong? Shall some who hope to become the new rich pauperize the new poor to further their own prospects? We Democrats do not see how the defenseless can be justly asked or expected to become the bulwarks of industrial confidence. It is really fitting that the giant say to the pigmy, "Buck me up now, and watch me lick the depression?"

The very psychology of this situation shows, I think, that the trouble with America is not primarily economic. The trouble is with our conscience. We know that men are more important than money, we Americans of all people know that; but we haven't yet fully made up our minds to put men before money and thus keep first things first. Hence our terrible sense of guilt, which impairs united effort and seeks insistently for a scapegoat. We must learn this final lesson: That it's creditable to have a guilty conscience, but that it's suicidal to be ruled by it. Let's not invite a Hitler by letting our guilty consciences get us down. We can forearm ourselves by beholding clearly the trinity of our guilt.

trinity of our guilt.

First, our Christian conscience hurts us. Why? Hear this text, you Christians—hear and understand: "Whoso hath this world's goods, and seeth his brother have need, and shutteth up his goods, and seeth his brother have need, and shutteth up his bowels of compassion from him, how dwelleth the love of God in him"? Second, our Democratic conscience hurts us. Why? Hear this text, you patriots—hear and understand: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness." Third, our industrial conscience hurts us. Why? Hear this text, Senator Tart—from the Republican mayor of one of your hardest-hit cities, Mayor Burton of Cleveland—only one of the 90 percent of American mayors, ladies and gentlemen, who have praised W. P. A.—"The crisis that remains is an industrial and manufacturning crisis * * * W. P. A. work relief is especially well suited to this need * *. The working habits of these men are at the foundation of American industry * * *. It would are at the foundation of American industry * * *. It would be an industrial tragedy, both from the point of view of the public and of the workers themselves, to throw away their productive time

and capacity."

This, my Republican and Democratic friends, is the terrible trinity of our common guilt: Guilty discipleship, guilty citizenship, guilty workmanship. And the guilt of neglected workmanship is the greatest among them; for it means holding off the day of plenty, leaving it visible to all, but available to few. On whom, now, shall we take out this our mortal sense of guilt? Shall we soak the fortunate rich? Shall we pauperize the honorable poor? Shall we wait around in the hope that God will give us the easy victory of a 1929 prosperity? Or shall we stomach our own guilt in the larger faith that those who bear one another's burden double their own joys and cut their griefs in two?

Ten million men are, after all, too many millions to get mean bout. Of our guilt, therefore, I ask you: "Shall we 'give it' and about. Of our guilt, therefore, I ask you: 'be mean, or can we 'take it' and be men"?

Announcer. That was a Democratic point of view on "Unemployment and Relief—Federal or Local Responsibility?" as presented by Representative T. V. Smith, of Illinois. Now Senator ROBERT A. TAFT, of Ohio, presents a Republican point of view.

Senator TAFT, of Office, presents a Republican point of view.

Senator TAFT, Citizens of the United States of America, I do not quite understand the guilty conscience which Professor SMITH seems to have regarding the present relief situation. Apparently he feels guilty because the W. P. A. is only employing 3,000,000 men when he wants it to employ 6,000,000, and is only spending two and a quarter billion dollars when he wants it to spend four and a half billion dollars. In a ferment of emotion the Government is to employ, at higher wages, every man who chooses

to apply. Where the money is to come from is no concern of true new dealers. As long as a few rich people remain in the United States they will take the money away from them, and when they are gone the millennium will arrive.

The Administration does not share any guilty conscience. The W. P. A. has always planned to reduce the present number on W. P. A. in April, May, and June, even if it received the full appropriation, and plans to dismiss men steadily during the next fiscal year until by July 1, 1940, there will only be one-half the number of men now employed. Today the present Democratic Congress regards even the administration's program as dangerously expensive.

Before considering the question of Federal and local responsibility, let us see why high relief costs are so dangerous. It is not a question of taking the money away from the rich or the large corporations. The increased relief cost will be paid by rich and poor alike, and will bear most heavily on those average workmen standing today on their own feet and earning a living for their family. Once our tax bill took 5 percent of the national income; today it takes 20 percent. When it took 5 percent, the money could be raised from the wealthier people, but if we confiscate today all incomes over \$5,000 a year, we will not pay the present cost of government for more than 6 months.

The Federal Government has turned more and more to indirect taxes, excise taxes, pay-roll taxes. It is not true today that State taxation bears more heavily on the poor than Federal taxation. The soak-the-rich tax bill produced a few hundred million, but when the new dealers wanted real money they turned to the pay-roll tax, costing the people one billion and a half dollars a year. Who pays the pay-roll tax? It either comes right out of the workman's pay envelope, or it goes into the cost of every product that labor goes into, and that is every product that the average workman buys. Today the average workman, through the increased price of the things he buys, pays 20 percent of his earnings to the Government. Do you see what this means? When the cost of Government is further increased today, and relief is the heaviest cost, the workman's income buys less, in effect he has less income. The truth is, the only way people can be supported without working, or working on projects which do not produce a cash return, is by making the people who are working turn over, in taxes and higher prices, part of their earnings to their neighbors, who are either less fortunate or less efficient. The more the Government takes away from a man who is working, the less incentive he has to work, the greater the threat of an entire Nation on relief.

There is no more serious problem than relief today, but, for heaven's safe, let's approach it in the content of the content takes away from a man who is working, the less incentive he has to work, the greater

There is no more serious problem than relief today, but, for heaven's safe, let's approach it in the spirit of calm considera-tion of facts, and not in one of guilt and emotion.

tion of facts, and not in one of guilt and emotion.

Relief is an age-old problem. There have always been unfortunate people, incapacitated by misfortune or age, or unable to obtain work. There have always been orphans to be cared for, aged people without families, widows with children, and many other groups. The responsibility has always been recognized as a strictly local responsibility. First of all, we have recognized as a obligation on relatives and family, and then on neighbors. Charitable people have established orphan asylums, old people's homes, and general charities, which provided relief in the homes of those needing relief. The work of private charities has been supplemented by State and local institutions, and the laws of nearly every State recognize the obligation of the city or the county or the township to see that the poor are taken care of, and provided at least with the essentials of food and clothing necessary to preserve life. The administration of relief prior to the de-

vided at least with the essentials of food and clothing necessary to preserve life. The administration of relief prior to the depression of 1929 was a strictly local concern, and because the problem was not of great size it was entirely possible to handle it by cooperation between private charity and the local government. The depression of 1929, however, changed the entire picture, and the steady increase of unemployment multiplied the financial burden many times. In the early days of the depression the activities of private and local charity were first expanded. President Hoover created the President's Emergency Relief Organization, which encouraged the development of State and local unemployment-relief committees, which by the late spring of 1931 were functioning actively in 227 large cities, about 2,000 small cities, and in over 1,000 counties. By 1932 the committees were forced to turn more and more to the States and local governments to provide relief money from increased taxes and local governments to provide relief money from increased taxes and local governments. Then it became apparent that even local resources were inadequate, and the first Federal aid was extended, at President Hoover's request, in July 1932 through the Reconstruction Finance Corporation, which arranged to loan \$300,000,000 to State and local governments. arranged to loan \$300,000,000 to State and local governments.

The idea that W. P. A. prevented starvation is a complete fallacy. There never was a time under either Hoover or Roosevelt in which any needy people were allowed to starve or freeze. Everyone admitted that the primary responsibility was on the States, and secondarily on the Federal Government. The Democratic platform of 1932 said: "We advocate the extension of Federal credit to the States to provide unemployment relief wherever the diminishing resources of the States make it impossible for them to provide for the needy."

The Federal Government was called in not on any theory that relief was primarily a Federal problem but because under the conditions which existed, and the tremendous cost of relief, the State and local governments were unable to provide the necessary money. Almost the only tax which the local governments can levy with full

LXXXIV-App-

effect is the real-estate tax, and this had already been pushed to high levels, and was completely used up in the support of the ordinary functions of schools, roads, and local government.

Various plans of relief were tried, but the most satisfactory form in Ohio and many other States was that in force about 1934, when relief was administered by boards of public-spirited citizens, serving without compensation, with an administrative force largely drawn from the private charitable and community cheef or early attents. from the private charitable and community-chest organizations, but paid by the State or local government, which derived most of the money used from the Federal Government. These committees administered both direct and work relief, and did so on an efficient

basis.

The big mistake was made when the Federal Government took over the management of relief and curtly dismissed the local boards instead of financing the States. The overhead organization is topheavy and expensive. Out of approximately \$900 spent per case, per year, which figure includes the average contributions of local sponsors as well as Federal expenditures, the W. P. A. worker gets only about \$600. Rules are issued from Washington, without regard for special local conditions. Projects are approved or disapproved on the basis of applications submitted in writing, and supported by delegations traveling to Washington. Looking only to the report of the Democratic Sheppard committee, which conducted ported by delegations traveling to Washington. Looking only to the report of the Democratic Sheppard committee, which conducted investigations in a few States in 1938, the W. P. A. was extensively used for political purposes. The supervisory force was largely appointed, as in Pennsylvania, on a political-patronage basis. Men were threatened with loss of their jobs unless they voted right. Even the number of W. P. A. appear to have been dictated by political consideration; otherwise there seems to have been no good reason for the increase in numbers on W. P. A. just before the 1936 election, when business was improving, the decrease in numbers on W. P. A. in the latter part of 1937, when there was no election and business was getting rapidly worse, or for the peak employment of nearly 3,300,000 men for a brief period before the November 1938 election. November 1938 election.

We hear tremendous criticism of the inefficient manner in which W. P. A. work is done. Some of this criticism is exaggerated, but much of it is not, and the reason for it is that responsibility for improvement lies far away in Washington. How can an administrator here hope to know what goes on on thousands of work projects from the Atlantic to the Pacific?

Professor Smith implies that local administration means the end of work relief. Of course this is not true. Work relief was conducted by local administrations before it was conducted by the city of Cincinnati today. But certainly work relief and direct relief must be contoday. But certainly work relief and direct relief must be conducted by the same authority if they are to be coordinated, and that authority must be closely related to the unemployment-compensation office. Undoubtedly work relief may be less demoralizing than direct relief, but if the project is poorly managed, or if it is obviously made work which is doing no good to anybody, work relief itself may be as demoralizing as direct relief. How much moral stamina was preserved when W. P. A. spent \$150,000 to count the trees in the city of Cleveland? Local administration is more efficient because it can give work relief to those who will really benefit by it, and only to such people. Local officers respond much more quickly to local public opinion. They are more quickly advised of chiselers. They are more quickly advised of chiselers. They are more quickly advised of obvious inefficiency on particular projects. They know better what projects are worth while, and what are not worth while, and what projects fit in better with a program of local improvements.

The solution for the present relief problem, in my opinion, is to

The solution for the present relief problem, in my opinion, is to return the administration of relief to the States and local governments, somewhat as is proposed in the bill introduced by Senator Barbour, of New Jersey. I believe that work relief and direct relief should be consolidated under local administration, and the local people should determine how much work relief is really advantaged. A new section should be added to the Social Security Act, tageous. A new section should be added to the Social security Act, authorizing the Social Security Board to put up two-thirds of the money spent locally for work relief and direct relief, but each locality should be required to put up one-third of the total cost of the entire program. However, a special Federal board should pass on applications for a larger percentage to be supplied by the Federal Government, where conditions of special community poverty or extraordinary unemployment may exist. Such a board should be judicial and not political in nature.

Federal assistance should be conditioned on the adoption by

Federal assistance should be conditioned on the adoption by each State of a definite legislative plan for direct relief and work relief. Such a plan should provide for a non-partisan board and the selection of relief administration officials under civil-service requirements. We must not substitute local politics for Federal requirements. We must not substitute local politics for Federal politics, and there is no reason why the Federal grant of money should not be used to prevent it. Other conditions should insure that the State plan for direct relief would reach all needy persons and meet certain financial standards.

The system which I have proposed was suggested to the President nearly a year ago by the Associated Community Chest Organizations of the United States, which have had practical experience with relief. It was rejected then by the President and Mr. Hopkins, but today committees of the Senate and House

of Representatives are considering the plan.

Professor Smith says that relief is a Federal responsibility, and I am prepared to admit that the Federal Government has a responsibility to assist financially in this emergency situation. But when he says that there is a Federal responsibility for administration because of the superior ability of the Federal Gov-

ernment, he is attacking the entire constitutional system of the United States. The same argument would transfer to the Federal Government the administration of the schools and of every other local activity. As a matter of fact, the Federal Government has not shown that it has any superior ability, except a superior ability to tax and tax and spend and spend.

The independence of the people and the permanence of democracy depend on the administration of local affairs by local governments. In the field of relief it should be more efficient; should provide more value for the money paid out; get relief to the people who really need it, and get it to them without politics or favoritism.

favoritism.

Pending Legislation Affecting Home Owners' Loan Corporation

EXTENSION OF REMARKS

HON. ALONZO D. FOLGER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1939

LETTER FROM HON. FRANK W. HANCOCK, JR., MEMBER OF THE FEDERAL HOME LOAN BANK BOARD

Mr. FOLGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement received by me from Hon. Frank W. Hancock:

> FEDERAL HOME LOAN BANK BOARD, Washington, April 13, 1939.

Hon. A. D. Folger,

Member of House Banking and Currency Committee,

Member of House Banking and Currency Committee,
House of Representatives.

Dear Lon: In response to your recent inquiry, the Board of Directors of Home Owners' Loan Corporation is glad to give you a general statement of its views on the various bills affecting it which have been referred to your committee.

While differing in specific provisions, most of these bills, in common with similar proposals advanced in recent years, have for their essential purpose the liberalizing of the plan on which the loans of the Corporation were written. The board has already gone carefully and extensively into the merits of these proposals on a number of earlier occasions. In each instance, it has been forced to conclude that the program had best be permitted to go forward on the present basis, and that any legislation designed to change the plan on which the Corporation's loans are now being repaid is both unneeded and unwise.

repaid is both unneeded and unwise.

A few fundamental considerations may help to clarify the issues in question. The refinancing job of the Corporation was accomplished by using the credit of the Federal Government in place of the exhausted credit of home owners. Through the use of this of the exhausted credit of home owners. Through the use of this Government credit, the Corporation's borrowers obtained the benefit of loans more liberal than urban home owners have ever before enjoyed in this country. The average loan is slightly over \$3,000, and the payments come to approximately \$24 per month, which is usually less than the rent for equivalent accommodations. It was not intended, however, to grant to the Corporation's borrowers outright Government subsidies. When the Corporation was put into operation it was planned by Congress to be self-liquidating. The loans were to be repaid with interest sufficient to cover the rate paid by the Corporation on its bonds, through which the necessary capital was obtained, plus the costs of operation and the necessary reserves for unavoidable losses.

From past experience it can be said with certainty that the present interest rate of 5 percent is necessary to pay the interest on its

From past experience it can be said with certainty that the present interest rate of 5 percent is necessary to pay the interest on its bonds, to meet operating expenses, and to cover losses. Each year since the beginning of operations the Corporation has shown a deficit even with the present 5-percent rate, despite continuous effort to keep expenses down. This defict had reached \$40,893,291.81 at the end of the fiscal year 1938 and had increased to \$47,670,283.75 on November 30 of that year. In arriving at these figures provision has, of course, been made toward a proper reserve for losses which may eventually be sustained.

Should the interest rate he reduced the Corporation would face

may eventually be sustained.

Should the interest rate be reduced the Corporation would face a much larger deficit. The loss of revenue would have to be defrayed by the taxpayers in the shape of appropriations direct from the United States Treasury. At the same time only slight benefit would accrue to the individual borrower, as the reduction in his monthly payments would be so slight as to make little difference in his ability to carry his loan. A reduction to 3½ percent would reduce the average monthly installment by only \$1.80, but it would cause a loss to the Corporation of \$203,658,000 over the remaining average life of the Corporation's active loans. Even a reduction of only one-half of 1 percent, to 4½ percent, would cause a similar loss to the Corporation of \$69,017,000.

Other proposals look to the extension of the time of payment of the Corporation's loans. These would extend the period of amorti-

zation to 20, 25, or even as much as 40 years, with a recasting of the borrower's account so as to reduce his monthly payments to an amount sufficient to retire the remaining balance of the loan over

the extended period.

The Corporation does not regard these proposals as needed or sirable. Most of its borrowers are meeting their present moderate payments in regular stride, and for them an extended repayment period would be unnecessary. At the close of the year 1938, after eliminating loans authorized for foreclosure and those paid off in full, the Corporation had on its books some 827,000 active accounts. In 701,000, or about 85 percent of these, the record was satisfactory, the borrowers being either current or practically so, or else meeting all current obligations and making regular additional payments to provide for the retirement of earlier arrearages. The status of only about 15 percent of the borrowers' accounts could be classed as unsatisfactory, and the majority of these appear to have difficulties which are of a temporary nature only.

As to those borrowers who find it difficult to meet the full amount of their stipulated payments, the Corporation has and is exercising broad powers to grant extensions. The act in its present form gives the Corporation discretion to extend the time of any payment, and the Corporation's regulations provide for liberal use of this authority. Its records will show that, in keeping with the spirit of the act, it has granted or permitted extensions and adjustments in more than a quarter of a million cases.

As to those borrowers who are unable to meet their required payments, it will be recognized that the Corporation has followed a most liberal policy. The power to grant extensions already exists, and is being used to the fullest practicable extent. ready exists, and is being used to the fullest practicable extent. As to those borrowers who are easily able to make their present payments, and these are the vast majority, the extension of the time of repayment would not supply a needed service, and would reduce the amount of the current collections of principal which are needed for the retirement of the Corporation's bonds. It should be noted also that the average borrower from the Corporation is well along in years, and any 'considerable extension would place beyond his reasonable life expectancy the time when he will own his home clear of debt and be freed from further payments.

ments.

Other provisions of several bills are aimed more directly at the foreclosure problem. These usually take the form of a prohibition on foreclosures for a specified period, or a provision that borrowers shall not be required to make payments of principal or interest for a specified period.

The Corporation has, of course, been obliged to foreclose a certain number of the approximately 1,000,000 loans originally granted. No matter how liberal the terms, there are always some borrowers who cannot or will not pay. The real question is whether the Corporation's foreclosure experience is in any sense disproportionate or has proved in any single instance unfair or disproportionate, or has proved in any single instance unfair or uniust

A survey of the mortgage and real-estate holdings of the private lenders in 82 large American cities, these holdings of the private lenders in 82 large American cities, these holdings selected in such a way as to put them on a comparable footing with those of the Home Owners' Loan Corporation, shows that, as of the close of the year 1936, the aggregate number of one-family to four-family properties acquired by these institutions represented approximately 20 percent of the total original number of the mortgages involved. Up to the close of the year 1938, with the peak of its foreclosure activity already well behind it, the Corporation had acquired but 12 percent of the total number of properties on which it had made loans. This record is all the more impressive when it is recalled that the Corporation, instead of selecting preferred loans, dealt exclusively with people whose credit had already broken down to such a degree that, except for the Corporation's intervention, their homes would have been lost through foreclosure.

homes would have been lost through foreclosure.

It becomes pertinent then to inquire as to the causes of the foreclosures which the Corporation has brought. A considerable number of these cases are accounted for by the abandonment of the property by the borrower. Other foreclosures are caused by the death of a borrower who left no heirs sufficiently interested in the property to assume the obligation, or by other complications, such as foreclosure by a second mortgagee. It is obvious that under no circumstances should the Corporation be prohibited from foreclosing in cases of this sort, but the proposals for prohibition of foreclosure or for suspension of the obligation to pay for a definite period would have this effect.

In another considerable segment of the Corporation's foreclosures the cause of foreclosure is that the borrower has deliberately failed to make payments that were well within his means. It is difficult to see any basis on which it can logically be argued that borrowers who are well able to meet their payments should be allowed to live in their homes, rent free, at the expense of the

be allowed to live in their homes, rent free, at the expense of the taxpayers, many of whom, without Government assistance, are earnestly striving to pay from their own meager incomes the mortgages on their homes.

Elimination of these elements leaves those foreclosures in which Elimination of these elements leaves those foreclosures in which there was an actual inability to pay. The Corporation extends every consideration to these borrowers, and its policy is exceedingly lenient. Taking all the cases where the Corporation has been obliged to approve foreclosure, the loans, at the time foreclosure is authorized, are on the average delinquent both as to principal and interest to the approximate extent of 20 monthly payments and average 2 or 3 years in arrears in taxes. It may be concluded, therefore, that the Corporation's borrowers who are wholly unable to pay are extended approximately the same consideration that would be given them under the moratory provisions of the bills now before your committee. To the extent that this period of leniency would be extended further, the effect is merely to put off the day when foreclosure proceedings must be brought.

brought.

The difference, however, is that these bills would establish a blanket moratorium under which the Corporation would be unable to foreclose even in cases of abandonment, death of a borrower without heirs, and similar circumstances. This blanket moratorium would extend equally to the borrower who is comfortably able to pay and who should not be relieved from paying, and to the borrower who is unable to pay and who now receives the benefits of the Corporation's lenient foreclosure policy.

General moratorium provisions would have the effect of inducing

General moratorium provisions would have the effect of inducing borrowers well able to pay to defer making their regular payments and allow them to accumulate until the end of the moratorium. At that time they would find themselves in a position where many of them would be unable to pay this accumulation, whereas they would have been able to carry their regular monthly payments in the course. A blanket moratorium would also greate a present of in due course. A blanket moratorium would also create a period in which the Corporation would be deprived of those current principal repayments which it must have for the retirement of its bonds as they mature. The Corporation at present handles its loans on an individual case basis, extending leniency where leniency seems calculated to enable the borrower ultimately to pay out his home. Under the authority which it now has it can do this and still make its regular collections, necessary for bond retirement, from the

its regular collections, necessary for bond retirement, from the vast majority of borrowers who are well able to pay.

The Corporation feels that it should be free to exercise this discretion in each individual case. It feels also that an attempt to take this discretion away from the Corporation and put it in the courts would be impracticable and unworkable. The determination of these matters involves finely shaded discriminations and the weighing of intangible factors which can be successfully performed by an administrative agency but could not be as well handled if the question were made a subject of litigation. The cost to the Corporation and ultimately to the taxpayers, through attorneys' fees and through court costs, which in most cases would have to be borne by the Corporation, should not be overlooked in considering whether it would be wise to substitute the discretion of the courts for that of the Corporation.

With regard to deficiency judgments, the policy of the Corpora-

With regard to deficiency judgments, the policy of the Corporation is now so liberal that it is clear no legislation is needed. In those foreclosures which are due to inability to pay, the Corporation writes off the deficiency immediately and completely. Where the borrower has willfully defaulted though able to pay, the Corporation, nevertheless, gives credit on the deficiency for the full value of the property as appraised on a liberal basis, and even in those cases it may result that the amount of this credit is sufficient to wipe out the deficiency entirely. Where a balance remains ficient to wipe out the deficiency entirely. Where a balance remains in this latter type of case the borrower, of course, has the benefit of the local law defining the property that is exempt from forced

It will thus be seen that the Corporation's present policy gives the borrower all the benefits which a liberal deficiency statute would give him. The liberality of the policy is revealed by the fact that in all its foreclosures the Corporation had, through the end of December 1938, collected less than \$200,000 through the enforcement of deficiency decrees against other property of the borrower. In 97.66 percent of its foreclosure cases the Corporation

has made no attempt whatever to enforce a deficiency.

In a few jurisdictions it is necessary to make a slight variance as to the time when the release is executed. Here the release is as to the time when the release is executed. Here the release is not given until the end of the redemption period, and the deficiency is retained until the end of the redemption period, not for the purpose of levy and sale on property of the mortgagor other than the mortgaged property, but because under the local law the Corporation would not be entitled to the rents and other income of the foreclosed property during the redemption period if it gave an immediate release

an immediate release.

The Corporation feels that legislation should not be enacted which would require it in the case of willful default to do more than credit the borrower with the full value of the property, and that proposals for the abolition of all deficiency judgments by the Corporation are unwise. It also feels that this legislation is undesirable because of the effect it would have in some jurisdictions on the Corporation's right to the income of the property charged of redemption.

during the period of redemption.

We cannot but feel confident that a careful consideration of the facts and information given in this letter will convince you and other members of your committee that it would be practically impossible for the Home Owners' Loan Corporation to change cally impossible for the Home Owners' Loan Corporation to change or modify its program in such a way as to be more liberal toward its borrowers and at the same time discharge the obligation and responsibility imposed upon it by the Congress. We are always mindful of the fact that, in keeping with the genius and spirit of this legislation, our first duty is the protection and welfare of the borrower or home owner. We desire, however, to make it very clear that, though in our best judgment—based upon 6 years of experience—none of the proposed legislation is either needed, wise, or desirable, we stand ready and willing to carry out to the best of our ability any program which the Congress in its wisdom may authorize.

Sincerely.

Sincerely,

The Foreign Born

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1939

RADIO ADDRESS BY HON. EMANUEL CELLER, OF NEW YORK, ON APRIL 13, 1939

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD I include an address delivered over the Mutual Broadcasting Co. national network, station WOL, Washington, D. C., Thursday, April 13, 1939:

At the base of the Statue of Liberty in New York is a plaque containing the following glorious lines written by that great poetess, Emma Lazarus:

"Give me your tired, your poor,

Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore,
Send these, the homeless, tempest-tossed, to me;
I lift my lamp beside the golden door."

I would forever hold up the lamp of welcome to the politically homeless and the victims of cruel political and religious tortures abroad. Our door, in that regard, should always remain unclosed, if only on a crack. Most assuredly a reasonably limited number of political and religious refugees can be readily taken care of without injury to our economic conditions. For example, we might well admit 10,000 or so child refugees 14 years of age or younger from Nazi Germany in the next 2 years. Guaranties would have to be made by organizations and individuals that these children would not become public charges.

The right of asylum was often expressed by the great Thomas Jefferson, whose birthday, incidentally, we celebrate today. He was born on April 13, 1743—196 years ago today. It is well to recall to all the alien batters and all the alien hunters that Thomas Jefferson proposed the draft of the Declaration of Independence to contain this complaint against George III.

"He has endeavored to prevent the population of these States; for that purpose obstructing the laws of naturalization of foreigners, refusing to pass others to encourage their migration hither."

There are still many George III's in this land today.

It is well to recall that Thomas Jefferson eloquently led the fight against the Alien and Sedition Acts of 1798, which resulted in their repeal. He restored the principle of asylum.

In his inaugural address of 1801, Thomas Jefferson asked the

In his inaugural address of 1801, Thomas Jefferson asked the famous rhetorical question:

"Shall we refuse the unhappy fugitive from distress that hospitality which the savages of the wilderness extended to our forefathers arriving in this land? Shall oppressed humanity find no asylum on this globe?"

As a Democrat I appeal to another Democrat, the Honorable Senator Robert R. Reynolds, of North Carolina, who has, I fear, been somewhat harsh in his heavy strictures upon the alien. I recall to his memory the Jeffersonian principles of asylum and equality of opportunity for immigrants, reaffirmed in the Democratic Party platforms in the following words:

"That the liberal principles embodied by Jefferson which makes ours the land of liberty and the asylum of the oppressed of every nation, have ever been cardinal principles in the Democratic faith."

I want to follow Abraham Lincoln, who wrote the Republican

I want to follow Abraham Lincoln, who wrote the Republican Party platform of 1864, wherein was set forth:

"Resolved, That foreign immigration, which in the past has added so much to the wealth, development of resources, and increase of power to the Nation, the asylum of the oppressed of all lands, should be fostered and encouraged by a liberal and just policy."

I respectfully remind Senator REYNOLDS that many of the great I respectfully remind Senator Reynolds that many of the great names of Revolutionary history are those of early settlers with likewise came here to evade torture and persecution—Schuyler from Holland, Herkimer from Germany, John Jay from France, Livingston from Scotland, Clinton from Ireland, Morris from Wales, Baron Steuben from Prussia, Hoffman from Sweden, Haym Solomon from Poland. These men realized that here there was no caste, no autocracy—only democracy, where brains are kings and service and brawn prime ministers.

and service and brawn prime ministers.

To me it seems anomalous when the descendants of the first settlers "turn up their noses" at recently arrived immigrants. These proud and haughty ones, if they were to trace their ancestry back far enough, might find that, although some call themselves Colonial Dames or Sons or Daughters of the American Revolution, they may be descendants of those who came from European almshouses and jails. During colonial times, "assisted

immigration" was the vogue, if not the accepted practice, in many European nations, which drained their poorhouses and prisons into the Colonies. Over 50,000 criminals were sent to the Thirteen Colonies by Great Britain alone.

I often grow impatient when I hear aspersions cast by the descendants of such "indentured" immigrants—particularly upon the recent refugees who come fleeing religious and political persecution, who come here to escape the concentration camps of Hitlerized Germany, the evils of communism, and the political crueities of the Italian fascisti.

cruelties of the Italian fascisti.

I shudder to think what this country would have been without immigration. Our debt to the immigrant, even to those who came from foreign shores to settle the Senator's own State, is incalcu-

lable-immeasurable.

Let me point out that our Census Bureau, in its publication entitled "A Century of Population Growth," concluded that by 1900 immigration had contributed 30,000,000 souls to our popula-

It is strange but true that we always regard the stranger with suspicion—a suspicion that diminishes as we grow to know the stranger and grow more friendly with him. It is the case of the "dislike of the unlike." The alien that reaches our shore is somewhat different than we and there is always an instinctive fear or dislike of him. It is strange but true that the Revenue and the order of him.

what different than we and there is always an instinctive fear or dislike of him. It is strange but true that the Romans never distinguished between "alien" and "enemy." The Latin word "hostis" is interchangeably used to designate both.

We in the cities who are closer to the alien and know him better, rightfully trust him. Those in the rural South and West do not so often rub elbows with the alien. They do not know him. I say to those who would strike at the alien, "get to know him better," "learn to understand him."

We enticed the foreigners to come here in droves when we needed

say to those who would strike at the alien, "get to know him better," "learn to understand him."

We enticed the foreigners to come here in droves when we needed them. We offered them every inducement. Many of our States, clamoring for population, offered full political participation to the alien immediately upon his mere declaration of intention to apply for citizenship. Upon his mere word, it gave him full citizenship rights. This anomalous situation remained in force in at least a dozen States until the beginning of the World War, Alabama, Arkansas, Arizona, Indiana, Kansas, Michigan, Missouri, Nebraska, North Dakota, South Dakota, Texas, and Oregon.

Not infrequently some would-be patriot arises with ashes on his head and says: "America should be for Americans." But what is an American? Is he an Indian, exclusively? That same pseudopatriot never describes an American. In New England, "American" might mean a combination of English, Scotch, or Welch, who in turn would be bred of Dane, Pict, or Scot, with perhaps a strain of French or Dutch. In Pennsylvania, "American" very likely might be a Quaker or Plattdeutsch. In the Gulf region, "American" would be a French-Spanish combination. In the Middle West and Northwest, Scandinavlan and German; Spanish-Mexican along the Rio Grande.

My definition of "American" would be one who is loyal to the flag and the Constitution and who plays the game fair, be he alien or citizen.

One thing is certain—that when these same pseudo-patriots.

flag and the Constitution and who plays the game fair, be he alien or citizen.

One thing is certain—that when these same pseudo-patriots seek to Americanize, you can jolly well take it for granted that they are always trying to Americanize someone else and not themselves. Perhaps if they would start in on themselves, they would make great strides in making this a greater country.

I take this opportunity to explode a number of false theories advanced concerning the alien. One would think, from some false outpourings we hear over the radio and from the written fulminations of antialien organizations, that aliens are flooding the land. This is contrary to fact. The Department of Labor tells us that from 1931 to 1938, 227,004 more persons left the country than entered. We have been losing population and will continue to lose in the next decade—at least 50,000 persons per year—unless conditions change.

the first decade—at least 30,000 persons per year—amiess conditions change.

Immigration and emigration are purely economic problems. When we have prosperity immigration increases. Great numbers wish to come in. When we have a depression emigration increases. Great numbers return to their land of origin. The financial curve

wish to come in. When we have a depression emigration increases. Great numbers return to their land of origin. The financial curve and the immigration curve run parallel.

The alien population in the United States, according to the Department of Labor statistics, is just a trifle over four million. These people are applying for citizenship far faster than the naturalization machinery of the country can absorb them. Despite the discouragement to citizenship because of high fees, red tape, bureaucracy, and long delays, they are nevertheless taking the oath of allegiance as rapidly as the United States judges can hear their vows. They are accused of tardiness in applying for naturalization. Many have not the money therefor. The present fee of \$7.50 is entirely too high. It buys shoes for the children and food that might otherwise mean starvation for loved ones, in these days of economic stress. I have a bill to reduce the fees to \$2. Most of the 4,000,000 aliens came here when this country was glad to have foreigners for hard manual labor at low wages. Most of them have done valuable work in helping build up this country. They have supported families and paid taxes. Hundreds of thousands served this country in the World War but that did not make them citizens. In some cases, cost of naturalization is from \$10 to \$40 or \$50. This is so particularly if certificates of registry are required and witnesses' fees are to be paid.

In a recent study of 4,169 noncitizen families, it was indicated that every noncitizen head of a family has, on the average, three American-born children depending upon him for support.

three American-born children depending upon him for support.

One-half of all aliens are over 50 years of age, and death takes no holiday. Don't you see that eventually this whole alien problem will settle itself? They will eventually all be citizens or will have died. The so-called alien peril is a myth and is due to deliberate misinformation developed by professional patriots, Fascists, Communists, and Nazis, who are busily exploiting aliens and minorities for their own financial ends. There are also many racketeers who trade in patriotism and in stirring up strife, as well as an enthusiastically misguided clergyman who should some day rue the havoc he has created.

racketeers who trade in patriotism and in stirring up strife, as well as an enthusiastically misguided clergyman who should some day rue the havoc he has created.

As in the case of any new organization, so with the beginning of our country. All were "charter members" in 1776. We were not fussy about aliens then. We had no prejudices against new-comers. We needed them. The Constitution included everyone as citizens. As a matter of fact, Martin Van Buren was the first President actually born in the United States. The seven who preceded him were all born subjects of the British Crown.

It is difficult to reconcile the aspersions now cast upon aliens with the history of our country, which is a history of aliens. It is difficult to understand how any man in public life, who is himself a descendant of immigrants, can rant and rail against the more recent immigrants. It reminds me of the story of the person who bragged that his ancestors came over on the Mayflower. His friend, however, said his ancestors came over when they had stricter immigration laws.

It has been charged by the enemies of aliens that nearly all aliens are criminally inclined and that our prisons are loaded with them. This is utterly false. The truth is that the percentage of criminality is lower among aliens and foreign-born generally than among native Americans. For details, see the Wickersham report and 1935 figures of the Department of Justice. The uniform crime reports of the Federal Bureau of Investigation show that on a percentage basis twice as many native-born white. Federal Bureau of Investigation show that on a percentage basis twice as many native-born white. Federal Bureau of Investigation show that on a percentage basis twice as many native-born white. Federal Bureau of Investigation show that on a percentage basis twice as many native-born white. Federal Bureau of Investigation show that on a percentage basis twice as many native-born white. centage basis twice as many native-born white were arrested and finger-printed as were foreign-born white. Federal Bureau of Investigation statistics show that of each 100,000 native white per-

vestigation statistics show that of each 100,000 native white persons, 570.9 were arrested and finger-printed during the calendar year 1938, while, for the foreign-born white, the corresponding figure was 209.2. Thus the alien is less criminal than the native.

It is generally charged that most of the "reds" and Communists are aliens. This is utterly false. Who are the two outstanding Communist leaders—Foster and Browder. One is a New Englander and the other is a native of Kansas. Their coleaders, Clarence Hathaway, James Ford, Robert Minor, and William Patterson are not aliens. Practically all the party membership and leadership of the Communists are native. As was pointed out by Louis Adamic some while ago, the three leading Marxist literary critics, Hicks, Cowley, and Arvin, are also of old New England stock.

It is strange, but true, that radical movements in any country are habitually attributed to the foreign-born. John Palmer Gavit, in his excellent book, Americans by Choice, points out: "Bismarck

are habitually attributed to the foreign-born. John Palmer Gavit, in his excellent book, Americans by Choice, points out: "Bismarck assured the Germans that socialism could not take permanent root in Germany because it was of English origin, while Gladstone declared that the social democratic doctrines could not abide in England because they were imported from Germany."

"In truth and in fact, among a really prosperous and contented people radicalism is an academic affair; the common man is not interested. It is only when social and economic conditions produce extremes of wealth and poverty, and when primary discontent with the basis and atmosphere of daily life is widespread, that political radicalism of any kind attracts any but the fireside debaters."

In other words, collectivism, radicalism, and communism have

In other words, collectivism, radicalism, and communism have no particularly geographical or racial origin. It is well to point out that much of socialism and collectivism can be found in the teach-

no particularly geographical or racial origin. It is well to point out that much of socialism and collectivism can be found in the teachings and writings of such natives as Horace Greeley, George Ripley, Charles A. Dana, Parke Godwin, Higginson, Channing, Margaret Fuller, Hawthorne, and James Russell Lowell.

In the last Presidential election only 80,159 Communist votes were cast out of a total popular vote of 45,646,817. Hardly any peril there. Forty-five States permit Communists to vote.

Our experience with the aliens in our midst during the war gives the lie direct to those who would sneer at them. Our Provost Marshal General, in his report of 1918, page 86, second report: "The great and inspiring revelation here has been that men of foreign and of native origin alike responded to the call to arms with a patriotic devotion that confounded the cynical plans of our archenemy, and surpassed our own highest expectations."

It is charged that from three to five million aliens are in jobs that rightfully belong to citizens now out of work. This is utterly ridiculous. In the first place, there are only 4,000,000 aliens and of these more than one-half are women. They are usually house-wives. They do not compete for industrial jobs. In all likelihood, 200,000 to 250,000 are children and they are listed as aliens. More than one-half are over 50 years of age, and thus unemployable. They are being supported by American-born children. Thus the aliens holding jobs or competing against Americans for jobs are comparatively negligible in number.

Economists might well consider the question whether or not the encouragement of entrance into this country of say, German and Austrian refugees, in a goodly number would or would not hasten economic recovery by establishing more jobs. I am informed that on November 21, 1938, the British Home Secretary stated in the House of Commons that as a direct result of the recent settlement of 11,000 German refugees, 15,000 British workmen had been given employment.

Within the last 5 years t

and German refugees having brought with them and rebuilt in their new home an annual business of \$10,000,000.

The Viennese industries producing bead bags and tooled and gilded leather goods have moved to Belfast and the north of London, where Austrian refugees are teaching Irish and English girls the secrets of their crafts.

In the west of England Czech craftsmen are establishing their toy industries. Jewish manufacturers of silk underwear from Berlin have already invested \$5,000,000 setting up factories in

Technicians in the dye industries and in the making of optical glass have taken their secrets to South Wales and are rebuilding there, employing British workmen.

there, employing British workmen.

The distinguished Senator from North Carolina advocates fingerprinting and registration of every alien in the United States. This would serve to intimidate all noncitizens by setting up procedures of registration which would involve endless "red tape" and bureaucracy. It would only serve to confuse further the immigrant and set more unnatural barriers across his path. Incidentally, such a system could be successfully used against citizens by blackmallers and schemers. Citizens might have to carry around their birth certificates or naturalization papers to prove citizenship. The way would be open for all manner and kind of skullduggery.

citizenship. The way would be open for all manner and kind of skullduggery.

I am unopposed to fingerprinting, provided it embraces citizens and noncitizens alike. I am opposed to any distinctions. The distinguished Senator says countless thousands slip across the borders annually. Records disprove this. The immigration authorities have always maintained a careful watch. The Bureau of Immigration and Naturalization can readily give figures to

of Immigration and Naturalization can readily give figures to scotch such a charge.

It is so very easy to wax patriotic and speak of "American jobs should go to Americans first" and in this way infer that the alien is taking bread out of the mouth of the native. This is but to create a scapegoat of the foreign-born, an attempt to blame him for unemployment and depression evils and difficulties. Such declarations are highly destructive and delay, if they do not prevent, the solution of our economic difficulties.

At this time, I do not seek any change in our quota laws. I am willing to let well enough alone, except that I would admit some of the refugee children from Germany.

I would oppose all manner and kind of discrimination and inequality against the alien.

I would reduce the fee for citizenship so as to encourage, to the fullest, aliens to embrace naturalization.

I would reduce the fee for citizenship so as to encourage, to the fullest, aliens to embrace naturalization.

I would pass House Joint Resolution 115, introduced by the Honorable William T. Schulte, Representative from the State of Indiana, to codify the naturalization and immigration and deportation laws. They are a hodgepodge, complex, and confusing. These should be made clear and understandable.

I feel that the place of the foreign-born in the United States today is symbolized by the following news clipping:

"Frank Rusoti, paper-mill worker, renounced an Italian fortune rather than forfeit his American citizenship. A sizable fortune awaited Rusoti if he would return to his native Italy. His father, a wealthy engineer, died abroad last month and left his estate to Rusoti, providing that he make Castel Mona, Italy, his permanent residence.

"'I would rather be a mill worker here than King of Italy,' Rusoti said. 'My American citizenship means more to me than any other possession. I'm relinquishing my claim to the money.' Rusoti, 42, came to the United States when he was 9. He grew up in Milwaukee, Wis., and fought with the American Army in the World War." World War."

Neutrality

EXTENSION OF REMARKS

HON. MELVIN J. MAAS

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1939

Mr. MAAS. Mr. Speaker, no single subject holds the attention of the American people more at the present time than our neutrality policy. The question of war or peace for the United States is involved in this decision. Seldom has Congress been called upon to make such a momentous

The vast majority of Americans desire to avoid a war. Certainly there is an overwhelming sentiment in Congress to avoid war.

Action upon our present so-called neutrality law is imperative as important sections of the law expire May 1. The extension of these provisions or their modification, or even their repeal therefore is now receiving most earnest and urgent consideration in Congress.

The danger in our present law is that it is not self-enforcing, and the question of its enforcement or nonenforcement is left to the discretion of one man-the President. When our neutrality law is enforced, it is not actual neutrality at all, since its practical result is to make us a party to aggression. Small, or peace-loving nations, without huge military machines and great war supplies, are then denied access to the very essentials necessary to defend themselves. So, in reality, we do not treat both sides alike. On the other hand, neutrality means to be neutral, to treat all nations exactly alike.

Our greatest guaranty of peace is to mind our own business, keep out of the quarrels of European or Asiatic nations, and to maintain such a Navy, air force, and Army as

will insure this hemisphere against aggression.

No law can guarantee our peace any more than a prohibi-

tion law guaranteed us temperance.

An important part of neutrality is to abstain from governmental assistance in arming one nation against another, and to abstain from giving governmental aid to either side.

We once took sides in a European quarrel and sent millions of American youth and billions of American dollars overseas, all in vain, however. We should have learned that we cannot solve Europe's problems.

We have all we can do to solve our own problems.

We have no obligations to intervene in European affairs, and experience shows that we cannot accomplish any constructive results to them or ourselves if we do butt in.

The greatest service we can perform to the ultimate cause of peace and the preservation of democracy is to keep war and its civilization-destroying ravages out of this hemi-

We can best assure this by adopting a policy of genuine neutrality. This means that the decision of war or peacewhich is the real question involved in taking sides, whether economically or otherwise-should not be left to one man, even though he be the President.

Such a vital national decision should be left in the hands of

There is no need for us to become involved in a European war. We are likely to, however, if high governmental officials continue to make irresponsible and intemperate statements and attempt to make secret commitments that will involve us.

No better policy has yet been found than that of Teddy Roosevelt, which was to "speak softly and carry a big

stick."

Grants to States a Species of Bribery

Those who are charged with the responsibility of preserving our Government may themselves provide the machinery by which it can be destroyed.

Constitutional restraints are disregarded, their purposes lost sight of, and there is resort to unique and subtle devices to circumvent them.

EXTENSION OF REMARKS

HON. DONALD H. McLEAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Monday, April 17, 1939

ADDRESS OF HON. DONALD H. McLEAN, OF NEW JERSEY, AT THE ANNUAL DINNER OF GEORGE WASHINGTON UNIVER-SITY LAW ASSOCIATION, WASHINGTON, MARCH 18, 1939

Mr. McLEAN. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following address I made at the recent annual meeting of the alumni of the law department of Columbian-George Washington University. The occasion was in honor of Walter C. Clephane, a graduate and for many years professor of law. Mr. Newell

Elison, of the District of Columbia bar, presided. Other speakers were Dr. Cloyd H. Marvin, president of the university; William C. Van Vleck, dean of the Law School; Hon. James M. Proctor, associate justice of the District Court of the United States for the District of Columbia; and Mr. Joe De Ganahl, president of the Student Bar Association.

Mr. President, Dr. and Mrs. Clephane, ladies, and gentlemen: Tonight we honor Walter C. Clephane, doctor of laws, professor emeritus of law, on the occasion of the fiftieth anniversary of his graduation from the Columbian-George Washington University Law School. For 39 years he has honored the school and been revered as one of its teachers. It is a distinction that I enjoy sitting here with him tonight, but it gives me no greater enjoyment than when L sat under him I sat under him.

I was not given a subject. It was indicated to me that all that could be said about Professor Clephane, the old Columbian and George Washington University, and the class of 1889 would have been said by others, and that I might choose my own subject. With all deference to Dr. Clephane and his class of 1889, the

merits of the class of 1906 are also worthy of note.

The class of 1906 entered the law school in the fall of 1903. never had been and never will be a better class. Henry St. George Tucker, William Reynolds Vance, and Ernest G. Lorenzen came with us as the first full-time professors the school ever had. Dr. Tucker

brought with him the honor system.

Our class did not produce many, I would be surprised if any at all, who would be characterized today as liberals.

Our knowledge of the principles of constitutional law was acquired under the teaching of John Marshall Harlan, then an Associate Justice of the Supreme Court of the United States. His life in that frontier State of Kentucky as a politician soldier. Member clate Justice of the Supreme Court of the United States. His life in that frontier State of Kentucky as a politician, soldier, Member of Congress, and judge equipped him to be a great advocate of the American system of constitutional government. His legal philosophy was built upon the foundation of an almost religious reverence for the Constitution. He admonished us that we could render no greater service than to contribute to its preservation. We spent 2 hours each week with him on its fundamentals against the day when we might be called upon to render such service. One sometimes wonders if the time thus spent served any useful purpose. purpose.

We are warned against subversive practices and propaganda. are told that Communists and Fascists and other organized groups would overthrow our Government by force. Serious as we know would overthrow our Government by force. Serious as we know that threat to be, there is a more serious challenge beyond it. The danger is that those who are charged with the responsibility of preserving our Government may themselves provide the machinery by which it can be destroyed. We are permitting and encouraging weakening practices. Constitutional restraints are disregarded, their purposes lost sight of, and there is resort to unique and subtle devices to circumvent them. Political purposes and circumstances of the times create tendencies toward concentration of power and authority in a centralized government, which tration of power and authority in a centralized government which will destroy the sovereignty of the States and render them mere administrative agencies of the Federal Government.

What made the Government established under the Federal Con-What made the Government established under the Federal Constitution successful was the restraints which were imbedded in its checks and its balances. The framers of the Constitution knew from the knowledge they had of the history of the world that to avoid autocratic power restraints were necessary to keep those who might become entrusted with the Government within proper bounds for the preservation of liberty. By disregarding these restraints the power of the Federal Government is extended, and the more that power is extended and our everyday life directed from Washington, the further the Government becomes removed from direct popular control.

from Washington, the further the Government becomes removed from direct popular control.

Under authority of present-day enactments, the President may by Executive order alter or supplement the provisions of law.

In many instances trial by jury has been abolished by the substitution of boards and bureaus with the power to impose fines for violation of statutory provisions.

The States and their essential agencies have enjoyed immunity from Federal taxation, and the Federal agencies immunity from taxation by the States. This rule was not expressed in the Constitution. It was established by John Marshall as an essential part of our constitutional law to prevent the destruction of our dual system of Government, on the theory, as both Marshall and dual system of Government, on the theory, as both Marshall and Webster said, that "the power to tax involves the power to destroy." Today's thought would abolish that rule. Federal officers, without authority of law, have set up corpora-tions under State laws for carrying on Federal activities. It is an

tions under State laws for carrying on Federal activities. It is an abortive practice and a unique procedure. Employees of a given department will execute a certificate of incorporation and file it in one of the States under the State Incorporation Act. The invested capital is a contribution by the Federal Government. The corporation claims for itself all of the rights and privileges of an artificial person, and at the same time demands immunity from obligations imposed by State law, claiming to be an agency of the Government of the United States. One such corporation will borrow Government money from another. They have been used as distributing agencies for relief funds. This device is used to avoid all statutes providing that employees of the Government to avoid all statutes providing that employees of the Government shall be chosen from the classified civil service, and those other statutes directing the manner in which officials shall discharge their duties.

The Constitution provides that treaties with foreign nations shall be made by and with the advice and consent of the Senate, but our commercial relations with foreign nations are controlled to a very considerable extent by treaties which no longer are given the dignity of being designated as such or being submitted to the United States Senate for ratification. It is contended that in making them the advice and consent of the Senate is unnecessary because they are not treaties but agreements. Such a distinction cannot be supported by anyone's definition of either sary because they are not treaties but agreements. Such a distinction cannot be supported by anyone's definition of either word. A treaty is an agreement. It differs from any other agreement only in that it is a treaty with a foreign nation, but Congress, in disregard of constitutional restraint, allows our trade treaties with foreign nations to be negotiated entirely by the State Department. Such agreements affect the revenue. Under the Constitution, revenue measures should originate in the House of Representatives; but under the present system they originate with the Secretary of State.

of Representatives; but under the present system they originate with the Secretary of State.

The inadequate revenue systems of many States have made it difficult for them to finance the numerous activities of present-day demands. The Federal Government, taxing on a national basis with tremendous resources made available by the system of direct taxation, under the sixteenth amendment, is called upon to assist in various enterprises alleged to be for the welfare of the Nation as a whole, and there has developed, as a direct result, a system whereby subsidies are granted to the States. The suggestions for Federal aid uniformly come from States less fortunate, hoping to benefit through the medium of Federal taxation out of the resources of others. By accepting these subsidies the States must conform to certain requirements laid down in the Federal statutes, admitting a degree of supervision and control which of itself threatens State independence.

The practice of granting subsidies is not new, but until recently it came within the scope of the activities intended for the Federal Government. The improvement of navigable waters was as an adjunct to interstate commerce and national defense; likewise, the grants of public lands to States for maintaining colleges required

adjunct to interstate commerce and national defense; likewise, the grants of public lands to States for maintaining colleges required of the students a limited amount of training and the study of military science. Grants were made to railroads, but with the idea of developing land belonging to the United States; subsidies granted for the purpose of building ships and the development of the merchant marine provided that the ships should be used as a part of the national defense and in the transportation of the mails.

The practice of granting subsidies to the States for public works and essential State activities has expanded rapidly in recent years

and essential State activities has expanded rapidly in recent years with the idea that the public health, public roads, and education are matters in which the States have a common interest, and because their importance transcends State boundaries, and, most recently, with no justification than the necessity of assisting the

States in granting relief and in aid of economic recovery.

In 1925, during the administration of President Coolidge, the appropriations for these purposes amounted to \$110,000,000 annu-

appropriations for these purposes amounted to \$110,000,000 annually, as compared with the billions now being appropriated. The dangers incident to the practice have frequently attracted attention. Professors Allen Johnson and William A. Robinson refer to it in their book, Readings in Recent American Constitutional History, published in 1927. On January 13, 1921, the Governor of Wisconsin in his annual message to the legislature, referred to it as a "species of bribery" and recommended that every project presented under the pretense that the State would receive bounties of the Federal Government be "closely scrutinized." On April 9, 1924, the General Assembly of the State of Maryland memorialized Congress by a joint resolution requesting and urging the repeal of all laws which authorized appropriations to the several States in the form of Federal aid on condition that similar appropriations be made by the respective States, the reason similar appropriations be made by the respective States, the reason given being that under this system a State was compelled to undertake work which it might not wish to undertake or lose its share of the Federal appropriations, in which case it would be compelled to contribute in taxes to the work of other States of which its people disapproved and from which they derived no benefit.

Recently the House of Assembly of the State of New Jersey enacted a resolution of peculiar significance. It petitioned Congress to provide the means whereby a constitutional amendment could be adopted limiting the amount which the Federal Government could raise by direct taxation through the medium of the income tax.

In time of economic distress the people look to their Government for aid. The plea of necessity results in short-sightedness as the consequences of these Federal contributions. Under the measures enacted by Congress to provide relief and bring about recovery from depression conditions, contributions were made on condition that like amounts would be contributed by the States; also, that working conditions dictated by the Federal Government should govern the operation and specified materials should be used. There is pending in Congress a bill pursuant to which the Federal Government is to make contributions to the States for educational purposes, but in order to obtain such contributions, the State must conduct its educational system according to the dictates of the Federal Bureau of Education. Congress has also provided for making large contributions of money to the farmers, but to obtain such contributions, the farmer must comply with the dictates of the Federal Government as to the kind and extent of the crop he can produce. of the crop he can produce.

The obvious political significance of these Federal grants makes it easy for those in control of the purse strings to comply with the

demands. Thus the power of the Federal Government is increased and bureaucracy, once established, expands itself. The political mind, in its desire for perpetuation in office, is ever ready to yield mind, in its desire for perpetuation in office, is ever ready to yield to those influences which will provide for a constituency benefits which overwise might not be enjoyed by those possessing the voting power. These elements are peculiarly active at this time, and they direct our thoughts to a day when the States will no longer be separate, independent entities, possessing their own sovereignty, but will be mere administrative agencies of a strong central government.

The energyment of the systemth amendment is removable for

The enactment of the sixteenth amendment is responsible for the rapid increase in the practice of granting subsidies to States. It was more difficult when the requirement was that taxes had to

It was more difficult when the requirement was that taxes had to be raised by apportionment among the States. The sixteenth amendment gave the Federal Government the power of direct taxation, and there is no limit to which that power may be exercised. There can be no quarrel with the States marshaling their resources in an emergency, but there should be a return to normal conditions as soon as the emergency is passed. In the exercise of emergency activities it is logical that the State should be recognized as being allowed to solve its own problems and use its own agencies. There is a suggestion that would make temporary relief agencies a permanent activity of the Federal Government. We are told, for example, that it is contemplated to have a permanent board with a reservoir of approved public works always available so that when a downward economic trend threatened, the Federal Government could take quick, effective measures to halt the downward curve and bend it upward before economic harm were done. ward curve and bend it upward before economic harm were done.

Maybe so. But any observer of the idiosyncracies of human nature knows that some way would be found to open the floodgates of that reservoir around election, even in prosperous times.

It is possible under our present system and practice for large sums of money to be appropriated annually to be spent by the Executive without cermarking or other designation the form of

Executive without earmarking or other designation, the form of the legislative enactment being an ostensible compliance with the Constitution, but actually a mere subterfuge to ease the conscience of the legislators and administrative officers. This method of using money and disregard of constitutional restraints can create the instrumentality by which America may become a totalitarian State with every appearance of legality.

It may be said that the dectrine of States' rights has no place the transfer of the constitution of the

in our present-day existence; that it was settled with the Civil War. What the Civil War determined was that we are an "indissoluble Union of indestructible States." It was never intended that the great sovereignties that made up the Union should be puppet States or mere administrative agencies of the Federal Government. The controversy for supremacy between the States and the Federal Government began the moment the Constitution was sent out of Government began the moment the Constitution was sent out of the Convention to the States for ratification. It has continued ever since. The desire to preserve the liberty which had been won at so much sacrifice and hardship has been the basis for most of it.

The doctrine that Justice Harlan supported was an even course

The doctrine that Justice Harlan supported was an even course between strong nationalism and State rights, and he was quick to attack any infringement by the Federal Government upon what he deemed the legitimate powers of the States.

Increase of population, the development of means of transportation and communication have added to our governmental problems. As developments have come new conditions have arisen, but dangers of concentration of power in a strong central government should give us as much concern as they gave the founders. Our Government has met every emergency which has arisen for 150 years, and, although the country has grown in size and activities have become more numerous, the experiences of the past are as an assurance of the future. "The habits of a thinking people in a free country," said Washington, "should inspire caution in those entrusted with its administration, to confine themselves within a free country," said Washington, "should inspire caution in those entrusted with its administration, to confine themselves within their respective constitutional spheres. The spirit of encroachment tends to consolidate the powers of all the departments in one, and thus to create, whatever the form of government, a real despotism. Let there be no change by usurpation; for though this in one instance may be the instrument of good, it is the customary weapon by which free governments are destroyed."

Reclamation of Arid Lands and Conservation

EXTENSION OF REMARKS

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Monday, April 17, 1939

EXCERPTS FROM NATIONAL PARTY PLATFORMS

Mr. ANGELL. Mr. Speaker, for 47 years-with some exceptions-the Republican and Democratic Parties have included in their platforms planks having to do with the reclamation of arid lands and water conservation. This subject is still one which is vital to the welfare and interests of our country, and in a consideration of this problem it is of interest to study and compare the various pronouncements of the political parties on this subject and it is useful to have tabulated this record for study and comparison.

The following are the platform statements referred to:

REPUBLICAN NATIONAL PLATFORMS ON RECLAMATION

Excerpts from Republican national platforms expressing the position of the party on reclamation are as follows:

[Convention of 1892 at Minneapolis]

ARID LANDS

We favor cession, subject to the homestead laws, of the arid public lands to the States and Territories in which they lie, under such congressional restrictions as to disposition, reclamation, and occupancy by settlers as will secure the maximum benefits to the people.

[Convention of 1900 at Philadelphia] LAND LEGISLATION

In further pursuance of the constant policy of the Republican Party to provide free homes on the public domain, we recommend adequate national legislation to reclaim the arid lands of the United States, reserving control of the distribution of water for irrigation to the respective States and Territories.

[Convention of 1904 at Chicago] REPUBLICAN ACHIEVEMENTS SINCE 1897

We have passed laws which will bring the arid lands of the United States within the area of cultivation.

[Convention of 1908 at Chicago] CONSERVATION OF FORESTS

We commend the work now going on for the reclamation of arid lands, and reaffirm the Republican policy of the free distribution of the available areas of the public domain to the landless settler. No obligation of the future is more insistent and none will result in greater blessings to posterity.

[Convention of 1912 at Chicago] RECLAMATION OF LANDS

We favor the continuance of the policy of the Government with regard to the reclamation of arid lands; and for the encouragement of the speedy settlement and improvement of such lands we favor an amendment to the law that will reasonably extend the time within which the cost of any reclamation project may be repaid by

within which the cost of any rectangues project may be repeated by the landowners under it.

We favor a liberal and systematic policy for the improvement of our rivers and harbors. Such improvements should be made upon expert information and after a careful comparison of cost and

prospective benefits.

[Convention of 1920 at Chicago]

RECLAMATION

We favor a fixed and comprehensive policy of reclamation to increase national wealth and production.

We recognize in the development of reclamation through Federal action, with its increase of production and taxable wealth, a safe-guard for the Nation.

We commend to Congress a policy to reclaim lands and the establishment of a fixed national policy of development of national resources in relation to reclamation through the now designated Government agencies.

[Convention of 1924 at Cleveland]

RECLAMATION

Federal reclamation of the arid and semiarid lands in the West has been the subject of intensive study in the Department of the Interior during the past fiscal year. New policies and methods of operation have been adopted which promise to insure the successful accomplishment of the objects sought. The completion of this reorganization plan is regarded as one of the achievements of the present administration in the interest of farmers immediately and of all the people ultimately.

[Convention of 1928 at Kansas City]

RECLAMATION

Federal reclamation of arid lands is a Republican policy, adopted under President Roosevelt, carried forward by succeeding Republican Presidents, and put upon a still higher plane of efficiency and production by President Coolidge. It has increased the wealth of the Nation and made the West more prosperous.

An intensive study of the methods and practices of reclamation has been going on for the past 4 years under the direction of the Department of the Interior in an endeavor to create broader human emportunities and their financial and economic success. The money

opportunities and their financial and economic success. The money

value of the crops raised on reclamation projects is showing a steady and gratifying increase, as well as the number of farms and people

who have settled on the lands.

The continuation of a surplus of agricultural products in the selling markets of the world has influenced the Department to a revaluation of plans and projects. It has adopted a 10-year program for the completion of older projects and will hold other suggestions in abeyance until the surveys now under way as to the entire scope of the work are completed.

[Convention of 1932 at Chicago] CONSERVATION

The wise use of all natural resources, freed from monopolistic control, is a Republican policy initiated by Theodore Roosevelt. The Roosevelt, Coolidge, and Hoover reclamation projects bear witness to the continuation of that policy. Forestry and all other conservation activities have been supported and enlarged.

The conservation of oil is a major problem to the industry and the Nation. The administration has sought to bring coordination of effort through the States, the producers, and the Federal Government. Progress has been made, and the effort will continue.

DEMOCRATIC NATIONAL PLATFORMS ON RECLAMATION

Excerpts from Democratic national platforms expressing the position of the party on reclamation are as follows:

[Convention of 1900 at Chicago]

ARID LANDS

We favor an intelligent system of improving the arid lands of the West, storing the waters for purposes of irrigation, and the holding of such lands for actual settlers.

[Convention of 1904 at St. Louis] RECLAMATION OF ARID LANDS

We congratulate our western citizens upon the passage of the We congratulate our western citizens upon the passage of the law known as the Newlands Irrigration Act for the irrigation and reclamation of the arid lands of the West, a measure framed by a Democrat, passed in the Senate by a nonpartisan vote, and passed in the House against the opposition of almost all the Republican leaders by a vote the majority of which was Democratic. We call attention to this great Democratic measure, broad and comprehensive as it is, working automatically throughout all time, without further action of Congress, until the reclamation of all the lands in the arid West capable of reclamation is accomplished, reserving the lands reclaimed for home seekers in small tracts and rigidly guarding against land monopoly, as an evidence of the policy of domestic development contemplated by the Democratic Party should it be placed in power.

[Convention of 1908 at Denver] NATURAL RESOURCES

We repeat the demand for internal development and for the We repeat the demand for internal development and for the conservation of our natural resources contained in previous platforms, the enforcement of which Mr. Roosevelt has vainly sought from a reluctant party; and to that end we insist upon the preservation, protection, and replacement of needed forests, the preservation of the public domain of homeseekers, the protection of the national resources in timber, coal, iron, and oil against monopolistic control, the development of our waterways for navigation, and every other useful purpose, including the irrigation of arid lands, the reclamation of swamplands, the clarification of streams, the development of water power, and the preservation of electric power generated by this natural force, from the control of monopoly; and to such end we urge the exercise of all powers, national. oly; and to such end we urge the exercise of all powers, national, State, and municipal, both separately and in cooperation.

[Convention of 1916 at St. Louis] CONSERVATION

For the safeguarding and quickening of the life of our people, For the safeguarding and quickening of the life of our people, we favor the conservation and development of the natural resources of the country through a policy which shall be positive rather than negative, a policy which shall not withhold such resources from development but which, while permitting and encouraging their use, shall prevent both waste and monopoly in their exploitation, and we earnestly favor the passage of acts which will accomplish these objects, reaffirming the declaration of the platform of 1912 on this subject.

The policy of reclaiming our arid lands should be steadily adhered to.

[Convention of 1920 at San Francisco] RECLAMATION OF ARID LANDS

By wise legislation and progressive administration we have transformed the Government reclamation projects representing an investment of \$100,000,000 from a condition of impending failure and loss of confidence in the ability of the Government to carry through, such large enterprise to a condition of demonstrated success, whereby formally arid and wholly unproductive lands now sustain 40,000 prosperous families and have an annual crop production of over \$70,000,000, not including the crops grown on a million acres outside the projects supplied with storage water from Government works. Government works.

We favor ample appropriations for the continuation and extension of this great work of home building and internal improvement along the same general lines, to the end that all practical projects shall be built, and waters now running to waste shall be made to provide homes and add to the food supply, power resources, and taxable property, with the Government ultimately reimbursed for the entire outlay.

[Convention of 1924 at New York] RECLAMATION

The Democratic Party was foremost in urging reclamation for the arid and semiarid lands of the West. These lands are located in the public-land States, and, therefore, it is the duty of the Government to utilize their resources by reclamation. Homestead entrymen under reclamation projects have suffered

from the extravagant inefficiencies and mistakes of the Federal

Government

The Reclamation Act of 1924, recommended by the Fact Finding The Reclamation Act of 1924, recommended by the Fact Finding Commission and added as an amendment to the second deficiency appropriation bill at the last session of Congress, was eliminated from the bill by the Republican conferees in the report they presented to Congress 1 hour before adjournment. The Democratic Party pledges itself actively, efficiently, and economically to carry on the reclamation projects, and to make equitable adjustment for the mistakes the Government has made.

[Convention of 1928 at Houston] CONSERVATION AND RECLAMATION

We shall conserve the natural resources of our country for the We shall conserve the natural resources of our country for the benefit of the people and to protect them against waste and monopolization. Our disappearing resources of timber call for a national policy of reforestation. The Federal Government should improve and develop its public lands so that they may go into private ownership and become subjected to taxation for the support of the States wherein they exist. The Democratic administration will actively, efficiently, and economically carry on reclamation projects and make equitable adjustments with the homestead entrymen for the mistakes the Government has made and extend all practical aid to refinence reclamation and drivings projects. all practical aid to refinance reclamation and drainage projects.

No specific mention of reclamation was made in the Democratic national platforms of 1932 and 1936.

America's Policy in a Warring World

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1939

RADIO ADDRESS BY HON. EMANUEL CELLER, OF NEW YORK, ON APRIL 11, 1939

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the Record, I include a radio address I delivered over station WEVD at New York on Tuesday, April 11, 1939:

The slimy betrayal of the "Munich Pact," followed by the rape The slimy betrayal of the "Munich Pact," followed by the rape of Czechoslovakia, has done more than anything I know of to open our eyes to the dreadful dangers that beset democracies. Theretofore most peace-loving people seemed to think that fascism and nazi-ism were not as black as they were painted, but the so-called "appeasement" at Munich and the aftermath thereof has, I hope, brought the democracies to their senses. The natural reaction of the ordinary and decent mortal is to shrink away from the horrors of war. But we are commencing to realize that the more we seek to retreat from Fascist and Nazi horrors the more we play into the hands of these brigands and cutthroat bandits. We can no longer keep our heads buried in the sands like ostriches.

Shall it he isolation and retreat as involved in the present.

Shall it be isolation and retreat, as involved in the present Neutrality Act, or shall it be appropriate preparedness? Shall it be "wishful" waiting or shall we face the issue clearly and intelligently and courageously, and if we face that issue, what shall

we do about it?

We do about it?

Lewis Mumford, in his recent book, Men Must Act, states: "Sheer inertia still makes people minimize the danger; in a recent storm people stayed in their houses on Long Island, convinced that the incoming waves would not reach them, because the tides had never climbed so high before. Too late, many unfortunates discovered that the rules that held in the past did not apply to this particular tornado; the waves swept in.

"To fancy that Fascism will sweep over the world and leave America untouched, merely because we wish to be let alone, is to imagine that we will be protected by a miracle." Such words must give us pause.

must give us pause.

Frankly, I am convinced that the present policy of legislative neutrality or isolation will not keep us out of war. Isolation is as defunct as is the League of Nations. As former Secretary of State Stimson said before the Senate Foreign Relations Committee, "In a world which has become 'far too small and interconnected and interdependent' a policy of isolation cannot be effective." Our experience has been indisputably that when a law to the syrved on a leave scale, no important particulars the war has spread on a large scale, no important nation such as the United States can stay out.

Roy Howard of the Scripps-Howard papers, speaking over the radio from London last Wednesday said only a miracle could prevent our being involved in any war that sweeps Europe. Mrs. Franklin D. Roosevelt says her recent transcontinental tour convinced her that people are beginning to doubt that the United States can isolate itself from the rest of the world.

We cannot lose sight of the fact that radio, television, radiophotography, trans-oceanic flights, the magnitude of international trade, high-speed airplanes, the well-nigh annihilation of time, has brought nations closer together and made of the oceans mere streams. Virginio Gayda, fascism's leading newspaper spokes-man, threatened on April 10, that Italy and Germany would soon meddle in American affairs and that the United States is "not protected by distance."

The best hope of remaining at peace does not lie in attempting to make ourselves immune to the effects of war after it has once started, but in making declaration and outbreak of war itself less

started, but in making declaration likely.

In the name of neutrality and isolation, we heretofore adopted a rigid policy which aided the culprit and aggressor nations, and particularly denied help to the persecuted and victim nations. That sort of isolation and neutrality actually leaves the choice with foreign nations as to whom we can carry on our trade and

That sort of neutrality made us insensible to Fascist and Nazi brutality.

The present Neutrality Act provides that its terms become effective immediately upon the proclamation by the President of a state of war between two or more nations, but in practice it becomes highly difficult for the President to proclaim such a state

In the case of China the President, honestly endeavoring to register general public sentiment, refused to issue the proclamation so as to put us, as far as possible, on the side of China. In other words, Japan's cruelties forced us to want to help China. We could not say we were neutral. We emphatically were not. We did not issue the proclamation. Therefore, we, in effect, aided Japan, who could "come and get" supplies and scrap iron for war. Such neutrality, growing out of a desire to be isolated, is in common parlance "the bunk." In the case of Spain, again following public opinion, the President issued the neutrality proclamation, because our people wanted to be consistent with England and France in their non-intervention policy. The result in each instance—in China and in Spain—was that we helped a side we apparently did not wish to help. This sort of neutrality invites and encourages the Berlin-Rome-Tokyo axis to press forward to more brutal conquests—conquests which, unless stopped, will threaten and imperil our own interests and safety. It is a policy that encourages the bully to grow greater and more rapacious on what he feeds until he is strong enough to reach out and even threaten our own security.

We must make it affirmatively plain that in time of war or even

strong enough to reach out and even threaten our own security.

We must make it affirmatively plain that in time of war or even in time of undeclared war, as in the case of Germany against Czechoslovakia, Italy against Albania, that American supplies, food, armaments, and implements of war will be freely available to nations acting in self-defense but that our Government, acting jointly through our President and our Congress, will be prepared to brand the aggressor in any foreign war, will be prepared to point out and name treaty violating nations and will be prepared to ostracize them and withhold from them such supplies, food, and implements. That in effect is the so-called Thomas amendment. Such a policy may cause culprit nations to look before they

to ostracize them and withhold from them such supplies, food, and implements. That in effect is the so-called Thomas amendment. Such a policy may cause culprit nations to look before they leap. It may cause bullying nations to remember that we stand in the offing ready to throw our aid against them. It will, doubtlessly, be a deterrent to war with us.

I am unwilling to stake my country's future on what the pacifists and isolationists call the "impregnability" of the Atlantic and Pacific oceans. Alone, they no longer will protect us. We must arm to the teeth. We must establish a navy second to none. We must augment our land forces. Congress will soon pass with alacrity the program of defense legislation our President has recommended. We are to build eight new battleships, establish more war bases, dry docks, a third set of locks at Panama, and build more airplanes. We are preparing, through barter of wheat and cotton, to secure an ample supply of strategic war materials such as rubber, hemp, and tin. That will be the best warning, short of war, that brigand nations will understand. At least it will drive home to them our determination at all costs to maintain drive home to them our determination at all costs to maintain our democracy.

I want America to be thoroughly "prepared"—now! President Wilson stressed the need for neutrality and "preparedness" was rather belatedly forced upon him. Timely preparedness would have saved us much life and property.

The isolationists want us to remain supine. I want to face the issue—realize there is danger and meet it. I do not want to wait until the swastika airplanes are over New York or troop ships laden with black shirts are outside Boston Harbor. I want to arm now. Today we have the choice of weapons. Tomorrow our choice is gone. That choice may stay the hand of the invader.

And what about the infiltration of dangerous Nazi and Fascist doctrines. Franco's triumph undoubtedly will encourage the spread of fascism in South America. The Argentineans are thoroughly aroused over Nazi spying. At the Lima Conference, swastikas and Italian and Japanese flags far outnumbered American flags in the popular decorative scheme. Only the Lord knows how widespread is Nazi espionage in this country. Will the isolationists still remain inactive and inert? Will they still remain what Secretary Hull calls "storm-cellar thinkers" or be "like mutes in a thunderstorm; they just close their eyes and think the lightning cannot strike them."

Assuredly, merely being neutral does not contribute to our And what about the infiltration of dangerous Nazi and Fascist

Assuredly, merely being neutral does not contribute to our peace. I am convinced that peace is something positive. It is not mere absence or negation of war It must be striven for.

It can only come from constructive effort. It can, in part, come from amending our Neutrality Act, by denying supplies to aggressors, by aiding victims economically, and as President Roosevelt suggested, by methods "short of war but stronger and more effective than mere words.'

We should continue to deny helium to Germany. It is well to continue the countervailing punitive duties on German imports. It is well to make loans to China and grant economic subsidies to Brazil, and in other ways aid victim nations for the purposes of encouragement and for reinforcement of their resistance against aggressors. We can go much further, if need be, e. g., we can supply about one-third of the world's raw materials. Much of that supply can be withheld from culture the resistance against aggressors.

about one-third of the world's raw materials. Much of that supply can be withheld from culprit nations and supplied to their victims. Apparently force is the only argument that Nazis and Fascists understand. Warnings and pious remonstrances and the glowing programs of isolationists are as unavailing as water on a duck's back. I am convinced that the ultimate aim of the Fascists and Nazis is to break down our own democracy. Somewhere in their program of destruction appears the name "United States." The only way they can be prevented from carrying out their nefarious purpose is by creating an army, pays, and an air force that will make way they can be prevented from carrying out their herarious purpose is by creating an army, navy, and an air force that will make it impossible for them to attack successfully. Furthermore, to place stumbling blocks in their paths and to make even their approach to this program more difficult, we must, I repeat, by amending our Neutrality Act, give as much as possible of aid and comfort to their victims. I am most loathe to build a great war machine even for defense, but that choice is forced upon us. He is a fool who thinks that peace can be secured on more agreeable terms. We already know that the policy of appeasement only makes the lion stronger that peace can be secured on more agreeable terms. We already know that the policy of appeasement only makes the lion stronger and does not lessen his ferocity. It is high time we took some positive action to prevent Fascist bullying and blackmailing. To prevent their fighting the weak and conquering with frightfulness the helpless. Assuredly inaction, neutrality, and isolation are the allies of nazi-ism and fascism. The need is what Thomas Mann calls "soldierly readiness."

The greatest deterrent to fascism and nazi-ism appears is their

The greatest deterrent to fascism and nazi-ism rapacity is their

knowledge that we are ready to fight.

My philosophy in this connection stems from Alexander Hamilton. In battling for the Constitution of the United States Hamton. In batting for the Constitution of the United States Hamilton said that an adequate defense was always essential. He said that it would be easy for imperial governments "to fabricate pretenses of approaching danger" and that when such desired appearances might have been worked up by some foreign power, it would have to be "appeased again by timely concessions." Hamilton's words sound strangely familiar although uttered more than a century so. He said it was necessary to be ready in advence to meet words sound strangely familiar although uttered more than a century ago. He said it was necessary to be ready in advance to meet such situations far ahead of their appearance. He also noted that "the ceremony of a formal declaration of war has of late fallen into disuse." He noticed that actual hostile action usually preceded the formal state of war. He said "the rights of neutrality will only be respected when they are defended by an adequate power. A nation, despicable by its weakness, forfeits even the privilege of being neutral."

The policy of so-called cash and carry advocated by Senator PTITMAN would be a deliberate favoring of the strong as against the weak. It may temporarily aid France and England, whom we want to aid. They could come and get it and pay cash. But

the weak. It may temporarily aid France and England, whom we want to aid. They could come and get it and pay cash. But suppose they were defeated by Hitler and Mussolini in combination. Then Hitler and Mussolini could come and get it and pay us. How can we avoid a sort of benevolent neutrality toward Great Britain? It would be a fatal day for us if the British sea power were broken. Would a Fascist-Nazi naval axis respect the Monroe Doctrine as Great Britain has—not by a damned sight. And what about Japan? She would be greatly benefited by the so-called cash-and-carry principle as against defenseless China, who could not come and get it.

not come and get it.

Tobacco Under the Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. DANIEL A. REED OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1939

Mr. REED of New York. Mr. Speaker, the prosperity of the American tobacco farmer is in a large measure

dependent upon foreign markets. Evidence of this fact is that in the 5-year period 1926-30 approximately 40.7 percent of the tobacco produced in this country was exported. For these exports we received an average annual payment of \$144,500,000.

Figures of the United States Bureau of Agricultural Economics show that in no year between 1932 and 1937 was the tobacco farmer in as advantageous position as he was in the 5-year period 1926-30. Even though prices have varied there has been relatively little change in exports, ranging from 396,000,000 pounds in the low year of 1935, to 441,-000,000 pounds in the high year 1934. However, the variation in crop production has been much greater, going from 1,021,000 pounds in the low year 1934, to 1,564,000 in the high year 1932. On the other hand, the farmers received an increasingly larger amount for their exports each year from 1932 through 1936, with a slight decrease in value in 1937, the greatest increase being from 1933 to 1934. In 1934 they received \$42,200,000 more for their exports than in 1933, although the quantity of exports was only 2,000,-000 pounds more. From these figures it is difficult to see where either the Roosevelt farm program or the reciprocal trade agreements have been of any value to the American tobacco farmer as we are still below the 1926-30 average both in volume and value of exports, in proportion to the crop exported.

The question then arises, Just what has the State Department done to further American exports? We find that they have received concessions of reduced tariffs from Colombia and Cuba, but neither of these countries has ever been an important buyer of tobacco. In fact, Cuba is one of the world's important exporters of tobacco. In the year 1929 these countries bought but 125,000 pounds of tobacco from us, and have bought much smaller quantities since. We find further that Belgium, the Netherlands, Guatemala, and Nicaragua bound their tariffs while France agreed to buy a minimum quantity in the year 1936. This quantity, however, was much below the 1929 level or even the level of 1932.

If we total the entire exports of all these countries which made any type of concession, we find that in 1937, a year in which all of these agreements were effective the entire year, they exported but 69.1 percent as much tobacco as they did in 1929, whereas our total exports of tobacco were 76.8 percent of the 1929 level and the exports to all other countries were 78.4 percent of the 1929 level.

We find further that from 1932 to 1937 our exports to other countries increased by 14.7 percent, whereas from 1932 to 1937 our exports to concession countries decreased by 26.1 percent. Again the question is raised, of just what value have these trade agreements been to the American tobacco grower?

The Foreign Policy

EXTENSION OF REMARKS

HON. JOSEPH J. O'BRIEN OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, April 17, 1939

ADDRESS BY HON DANIEL A REED, OF NEW YORK, AT ROCHESTER, N. Y., APRIL 12, 1939

Mr. O'BRIEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. DANIEL A. REED, of New York, before the Rochester Association of Credit Men, Rochester, N. Y., April 12, 1939:

Mr. Chairman, ladies, and gentlemen, to be invited to fill a return speaking engagement by the Rochester Association of Credit Men is an honor which I appreciate and for which I thank you. I am delighted to speak in the home city of my distinguished colleague and your able Representative in Congress. You may rest assured that he is discharging his duties with fidelity and ability. Representative Joseph J. O'BRIEN is a man whom we all like, and we relicked that you have sent him to represent you in Congress.

we rejoice that you have sent him to represent you in Congress.

The issue that is uppermost in the minds of the people concerns our foreign policy. I know that the preponderant sentiment of American citizens is against having this Nation maneuvered into a foreign war. The danger that such will be the ultimate result

a foreign war. The danger that such will be the distinct result is the most serious and disturbing public question of the hour. If the future is to be judged by our past experience, I say that even a strong public sentiment against war will be of little consequence in preventing our entering the bloody cockpit of

There is no doubt whatever that the overwhelming majority of

There is no doubt whatever that the overwhelming majority of the American people was opposed to the United States entering the World War in 1917, but we went in.

If ever there was a time when a free, sovereign people should make their opinions and convictions on this all-important question felt in high places, that time is right now. The pressure of public opinion in opposition to engaging in a foreign war should be constant, firm, and continuous. Only in this way, if at all, can the people save themselves from a repetition of the bitter experience of 1917.

can the people save themselves from a repetition of the bitter experience of 1917.

This is no time for men, occupying high places in our Government, to be rattling the saber and bully-ragging foreign rulers over the radio. There is quite enough for the Administration to do here at home to put our governmental house in order without engaging in a foreign situation that is none of our business, even though our sensibilities may be shocked by what is taking place abroad. We may deplore the events taking place in Europe, but for us deliberately to interfere or make threats, charges, and countercharges because of foreign governmental actions, of which we disapprove, is to adopt a very dangerous national policy.

I recall the situation in 1914, 1915, 1916, and the early part of 1917. All during that time the people of the United States were opposed to taking any part in the World War. There was no general demand in this country for war, not even after the sinking of the Lusitania, May 7, 1915.

President Wilson voiced the sentiments and answered the hopes

President Wilson voiced the sentiments and answered the hopes and the prayers of millions of men and women when he, in a speech in Milwaukee, in 1916, said:

"I pledge you that, God helping me, I will keep you out

of war.

Again, President Wilson, as late as June 30, 1916, in an address to the New York Press Club, spoke in perfect harmony with the prevailing public sentiment when he said at that time—which was just 9 months and 7 days before the United States declared

"I get letters from unknown men, from humble women, from "I get letters from unknown men, from humble women, from people whose names have never been heard and will never be recorded and there is but one prayer in all these letters: 'Mr. President, do not allow anybody to persuade you that the people of this country want war with anybody.'"

I repeat, for the sake of emphasis, that this was the state of public opinion 9 months and 7 days prior to a declaration of war by the Courtes.

I repeat, for the sake of emphasis, that this was the state of public opinion 9 months and 7 days prior to a declaration of war by the Congress.

The stealthy steps taken in 1916, under the guise of preparedness, to lead this nation to war came to fruition in the declaration of war, April 6, 1917.

I had an opportunity to see something of the World War in 1917 and 1918. It will startle you, I am sure, and sadden you to learn that we have today 66,898 service-connected World War mental cases receiving care by our Government. This is a very conservative figure; it includes only those cases in which the mental disease is the major aliment. It does not, for example, include men whose major illness is tuberculosis and the mental ailment secondary. In every case the family and friends have had to prove, without doubt, that the neuropsychiatric disease is due to service in the World War. Following their shocking experiences in the World War these young men of 20 years ago, taken from a peace-loving race, unused to the war-mindedness of Europe, have increased their numbers from 28,000 in 1923 to nearly 67,000 in 1938.

What the World War did to the moral and mental balance of this Nation is best exemplified by the living hell which these 67,000 young Americans have had to endure during the past 20 years.

Terrible and horrible as the last war proved to be, destructive as it was to property and to human life, the instruments of death and violence then cannot be compared with the efficiency of modern implements of human destruction which are now available for wholesale slaughter of human beings and the demolition of the products of civilization.

able for wholesale slaughter of human beings and the demolition of the products of civilization.

The cost to the nations involved in the last war is estimated

at \$200,000,000,000. Can any person conceive what the cost of a modern World War will prove to be? Millions of lives were sacri-ficed then and among them thousands of innocent women and children. Villages were blotted from the map. Large parts of industrial cities were wiped out. The cost to our own Nation was over \$51,000,000,000. Our own Army casualties were 350,300 men—all this in only a few months of actual fighting.

The heartaches and the suffering of our soldiers and their parents, wives, and children have been pouring over my desk for

parents, wives, and children have been pouring over my desk for over 20 years.

I say to you that this Nation is not war-minded; the people do not want war. The verdict of peace or war should be settled, not by saber-rattling officials, not by irresponsible face-saving Cabinet officers, but by a sovereign people who, if war comes, must bear the burden and the responsibility for its consequences.

I leave to you men whether we are following a safe, sane, and wise foreign policy. I leave it to you whether it is the part of wisdom for officials to indulge in attacks upon governments with which this Nation is at peace. I leave it to you whether it is wise to mind our business or, instead, to let officials interfere with and

meddle in foreign brawls until they create a situation that will

meddle in foreign brawls until they create a situation that will make our entrance into a war inevitable.

I shall turn now to a brief discussion of another vital issue. The people are at last becoming tax conscious. It is about time. You see, when I entered Congress 20 years ago the United States was still technically at war. Millions of men were idle; none, however, were permitted to starve, none went hungry. The national affairs were put in order. The unemployed found jobs and at good wages. A debt of over \$26,000,000,000 was the heritage of the World War, and this presented a problem. I recall that this debt was reduced at the rate of \$1,000,000,000 a year for almost 10 years. Taxes were reduced five times and to a point where less than 2 percent of the people paid any income tax at all. Thrift was the slogan. Encouragement to business was the policy and business responded to this treatment.

Now, the policy is to tax and to spend. This program has

business responded to this treatment.

Now, the policy is to tax and to spend. This program has been in operation since 1933 and still continues. When the world crash came in 1929, this country felt the impact, but by 1932 all sound economists declared that the United States was on the way to recovery. All the nations involved in that world-wide financial crash have made rapid recovery since 1932 except the United States. Now, where do we stand today as a Nation? This Government has enacted, during the past 6 years, 10 revenue acts or tax bills, each of which has been an increased burden on business. Ten times in the past 6 years this administration has gone into the treasury of business enterprise and into the pockets of the taxpayers for more funds to spend. I say to you that under these tax measures there has been collected a total of over 22 billions of dollars.

This vast sum has been spent. But this is not all. The administration has borrowed over \$16,000,000,000, and this also has been spent.

spent.

We have heard frequent promises made that the Budget would soon be balanced. Instead of that, an intimation came from high official quarters that Congress would be asked to raise the debt limit to \$50,000,000, There is little comfort for the overburdened tax payer from this announcement. The statement that the national debt is \$39,950,000,000 is misleading because the gross national debt is over \$45,000,000,000.

national debt is over \$45,000,000,000.

It must be remembered that in addition to the national debt of \$39,950,000,000, there are other Government obligations in the hands of the public, fully guaranteed by the Government, amounting to \$5,416,700,000. The whole story of the public debt does not end with these figures because there are authorized, but unissued, guaranteed obligations amounting to \$9,485,000,000. Once these authorized obligations are issued, the crushing debt burden resting upon the shoulders of the people will be some \$60.000,000.000. \$60,000,000,000.

I know that these figures, as speech material, are dry and deadly but they present some very striking human problems which I feel it my duty to discuss. I shall bring this debt question to bear on your local situation. To merely mention billions of dollars is as fruitless as to say "pop corn." I may make this subject more dramatic and persuasive, however, if I use some information a little more concrete.

The cost of government in the United States, local, State, and Federal, in 1937 was over \$17,000,000,000. Do you realize that to produce this sum the entire income from all sources in 21 States is required? That is to say, 21 States, if the entire burden had fallen upon them, would have had to sacrifice the entire income of every individual and every business within those State for 1 year to pay it.

I want to be a little more specific on the question of the cost of government. A document came to my desk, presenting certain facts that are most illuminating, but not pleasant to contemplate. The facts are authentic, but dramatized. Now then, to pay the annual cost of government—local, State, and national—for the veer 1927 required. year 1937 required:

"All the oil in Oklahoma and Texas.
"All the gold of California.

"All the silver of Nevada.
"All the copper of Montana.
"All the wheat of Kansas and Dakotas.

"All the corn of Iowa.
"All the manufacturing of St. Louis and Kansas City.
"All the aluminum bauxite of Arkansas.
"All the dairying of Minnesota.
"All the hard toil of the Nebraskans.

"All the coal of Colorado.

"All the coal of Colorado.
"All the phosphate of Idaho.
"All the ranches of Wyoming.
"All the apples of Washington.
"All the lumber of Oregon.
"All the sugar beets of Utah.
"All the mines of New Mexico.
"All the produce of Arigons.

"All the produce of Arizona.

"Add all the income from these and, to that, add the many millions which make up the rest of the income from these States, and you will have the cost of government, local, State, and Federal in the United States."

I want to bring you still closer to this tax problem. The march of the taxpayers on Albany is some evidence that taxation is a live question in the Empire State. If you men are interested in this question of the national debt burden as it relates to New York State a few more statistics may not bore you.

The population of New York State is 12,588,066. The assessed

valuation of taxable real estate in 1938 was \$25,623,867,926.

I want to call your attention to the fact that New York's share of the New Deal debt, on a per capita basis, incurred since March 4, 1933, amounts to \$2,416,908,672, which is 9.4 percent of the assessed valuation of the taxable real estate.

assessed valuation of the taxable real estate.

I shall go one step further to bring the figures close to your own doorstep. First, let us take Monroe County, and I will give you, briefly, a few facts as the New Deal debt relates to this fine county. The population of Monroe County is 423,881. The assessed valuation in 1938 of all real estate, including improvements, totaled \$257,794,887. \$767,224,667.

\$767,224,667.
The share of Monroe County's New Deal debt, incurred since March 4, 1933, will, on June 30, 1940, be \$81,385,152, or 10.6 percent of the assessed valuation. This is conservative because it is based on President Roosevelt's Budget figures for the 1940 Budget as to what the debt will be on June 30, 1940. I need not mention that the Budget figures will be exceeded, for that is a safe and reasonable assumption. able assumption.

Assuming that you still feel like an economic royalist, I shall deflate you with a few figures as they relate to the city of Rochester. The population of your city, based upon the 1930 census, is 328,132. As I could not obtain the assessed valuation for 1938, I find the assessed valuation for 1937 to be \$616,465,546.

Your city's share of the New Deal debt since March 4, 1933, will on June 30, 1940, \$62,001,344, or 10 percent of the assessed

valuation.

valuation.

Now, I ask you men, where do you think such a program of national debt increase is taking you? Can there be but one end to this never-ending spending and deficit program other than national insolvency? Has this orgy of squandering public funds brought about recovery? I do not need to answer this question. This administration has spent in 6 years almost 40 billions of dollars, and still 13 millions of persons are unemployed and 20 millions are on relief.

millions are on relief.

Where is the money coming from for all this spending? banks and insurance companies are financing the bulk of it. But when the final day of reckoning comes the policyholders and the bank depositors will be the sorry victims—and do not make any

mistake about it.

As you men know, when a private individual continues to spend more than he earns he becomes bankrupt. When this occurs his property is taken over by the bankruptcy court and a settlement is made on the basis of existing assets, say 30 cents or 10 cents

is made on the basis of existing assets, say 30 cents or 10 cents on the dollar.

But now I ask you, how does a central government meet its obligations when it continues to spend more than it receives, to the point where it cannot dispose of its obligations? I will say to you that a central government never goes bankrupt; it does not settle up on the basis of assets by paying 30 cents or 10 cents on the dollar; it piles up more credit and pays its debt in full, not by 30 cents or 10 cents on the dollar, but with a 30-cent or a 10-cent dollar. And then it authorizes every other debtor to pay his debts in the same 30-cent or 10-cent dollar.

I might bring this a little nearer home by stating that if this country continues to spend and go further and further into the red it will result in \$110,000,000,000 worth of life insurance being paid in dollars that have no purchasing power. It means that college endowments will be paid in the same kind of dollar. Billions in savings deposits will be paid in dollars without value. That is where a taxing, spending, borrowing policy takes a nation.

If I were to make a suggestion to you credit men, I would have you approach Government problems very much as you would in

you approach Government problems very much as you would in passing upon a private risk. I believe you would inquire into the reputation of the applicant for thrift or extravagance. I believe you would wish to know whether his funds were being wisely and prudently used or squandered for boondoggling projects and electioneering. You would make these inquiries and, undoubtedly, tioneering. many more.

Neutrality

EXTENSION OF REMARKS

HON. PEHR G. HOLMES OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1939

Mr. HOLMES. Mr. Speaker, the international situation and the fearful peril of a world war is, at present, of uppermost concern. This fear is in the minds and the hearts of virtually every American, as well as everyone on the other side of the Atlantic.

Here in our own country we are faced with many vitally important problems of Government and business-economic problems, social problems, unemployment relief, labor, taxes, farm surpluses, the railroads, and many more. All of these matters are engaging the attention of Congress, and are pressing for some solution and settlement.

But all of them are overshadowed by the war-thunder clouds hovering over Europe and the danger that, if war comes there, our own country sooner or later will be drawn into war.

I believe the American people, above all else, desire peace and escape from involvment in war. I believe that every policy of Government, and every act of Congress, and every act of the executive branch of the Government, ought to be directed toward insuring the United States, not only safety and security for our own people and our own landand that means national preparedness and strong defense against attack-but also, all of our policies should be so directed as to insure, so far as is humanly possible, against our involvment in the conflicts between the dictators and the democracies of Europe.

I am sure that that course is the one which the American

people, in vast majority, desire and demand.

We may be wholly sympathetic to the position of England and France; we may abhor the conduct of the dictators; we may denounce them; we may well hope that their ruthless conquests in Europe, and their cruel suppression, and, indeed, extermination of small defenseless nations, may be stopped; but that does not mean that we propose to plunge our own country into a European war. And we must see to it that it does not result in our being drawn into such a war, through our own blunders.

Thus the question of our foreign policy is of paramount present concern. Foreign policy is a many-sided matter. It is the question of what commitments, if any, we may make to any foreign government or combination of governmentsthe things that are embraced in the phrase "entangling alliances." We should have none. We should strictly mind our own business.

It is the question of what we say, and do, in an official way with respect to dictators.

It is the question of what course we shall follow and what we shall do, and refrain from doing in the event that war does come.

What is then to be our neutrality policy? How shall we remain neutral? How shall we keep out of a European conflagration? There are two opposing ideas as to how we should deal with the neutrality question.

One idea is that Congress should give the President unlimited discretion to handle neutrality matters as he sees fit, to issue trade embargoes, if he deems it expedient to do so, or to withhold them; to apply economic pressure; to decree aggressor nations; and to specify the terms and conditions of trade with belligerents.

The proponents of such an arrangement contend our neutrality needs to be elastic-needs to be shaped according to future contingencies, and is impossible of advance determination. The President, naturally enough, wants Congress to delegate to him full authority in these things, with no strings attached. He wants to be able to handle our international relations with a free hand. He wants a discretionary neutrality.

I do not favor that method. I am not willing to entrust, to any one man, these numerous decisions. I believe a neutrality policy that is undefined, and unpredictable, invites all sorts of trouble, and danger of leading us into foreign war.

I believe that our position with respect to neutrality, and which would really do more good with respect to trade with belligerents in the event of war, should be defined by statute—by act of Congress—in order that our own citizens shall know exactly where we stand, and what to expect, and that all the world may know.

When it comes to defining our neutrality position by act of Congress three courses are open to us.

First. We may specify that in event of war we shall suspend all trade and intercourse with both sides, and with all the parties to the war. That is the view of the extreme isolationist.

Second. We may specify that in the event of war we shall embargo all trade and intercourse with the nation or nations who are the aggressors, but continue trade as before with the other side and lend them all possible aid. That is the view of those who believe we should stand with England and

Third. We may specify that in the event of war we shall embargo all munitions of war to all the belligerents, both sides: but as to all other trade we should do business with all on a cash-and-carry basis.

The existing neutrality statute, enacted by Congress 2 years ago, and said then to be intended as a temporary stopgap pending the enactment of a permanent statute, will expire at the end of this month.

The present statute embargoes munitions and war supplies as enumerated in the bill when the President, by decree, finds a state of war to exist. But this has not turned out to be as simple as it sounds because of the present technicality of Japan and the dictator states in Europe who wage war without declaring war, and this presents to our own Government an exceedingly delicate diplomatic matter.

We have seen this particularly in the case of Japan's war upon China. The President, although empowered to do so, has not to this day officially declared a state of war to exist and has not applied the embargo provisions of the present neutrality statute.

The present statute provides, also, that after the existence of a state of war has been declared, then the aggressor nation shall be specified, and at that point our neutrality ceases, because we then suspend all trade with the aggressor nation but continue to trade with the other side.

If Congress at the present session fails to agree upon new neutrality legislation then, with the expiration of the present temporary statute, we will be without any statutory provision respecting neutrality or foreign trade in the event of

All that will remain is the existing statute, prohibitory against any foreign nation which has defaulted to us on payment of its war debts from obtaining new loans in this country, which means, as a practical matter, that neither England nor France may look to this country for financial

I believe that our country should announce to the world, through the medium of an act of Congress, that we will not supply munitions of war to any nations at war.

I am in favor of putting our trade and commerce with all the nations engaged in war on a cash-and-carry basis. Cash because we do not propose to lend financial aid; carry because we do not propose to risk the sinking of American ships and the loss of American lives on the high seas if another world war is in progress. We learned from bitter experience in the last World War that such losses are well calculated to bring us into the war.

All these questions respecting our neutrality policy need to be resolved on a realistic and practical basis. We need to decide first whether we are really seeking to avoid being drawn into armed conflict between other nations. We need to decide second whether we are really proposing to remain neutral in event of war or whether, instead of being neutral, we intend to take sides.

I believe we as Americans should mind our own business and that our every thought and effort should, during any war period, be devoted to our own home problems. publican form of government should be preserved: yea, we should strengthen it. We should make it work more effectively and more efficiently. We have the machinery, the men, and the will. Let us all go to work in the United States for our own people's happiness, contentment, and well-being.

I want our country to avoid war, and I want our country to follow a course of strict neutrality in event of war.

Embargoes against aggressor nations and trade with their adversaries is not neutrality. It is just the opposite-it is taking sides.

In conclusion let me express the hope that is in the hearts of every American at this moment, the hope that a conflagration of war in Europe may be averted; but if it is to be otherwise, then by all means that the United States may remain out of it.

The Farm Problem

EXTENSION OF REMARKS

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1939

RADIO ADDRESS BY HON. H. CARL ANDERSEN, OF MINNESOTA, ON APRIL 13, 1939

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. H. CARL ANDERSEN, of Minnesota, over the Columbia Broadcasting System, Thursday, April 13, 1939:

Fellow Americans, it is not as a Member of Congress from the Seventh District of Minnesota that I wish to speak to you in this 15 minutes so kindly accorded me by the Columbia Broadcasting System. But it is rather as a man who has for years farmed for a living, who knows what drought means, who has raised large crops at times, as his neighbors have, only to see these crops sold at less than what it cost him to produce them. With that background, my friends, I want to contribute my little bit toward a solution of the farm problem in our great Nation today—a cancer gnawing at the vitals of our country and which threatens to break down our great democracy eventually, if not threatens to break down our great democracy eventually, if not

removed shortly and forever.

On March 28, in a speech before the House in connection with the proposed appropriation of \$250,000,000 for parity payments, I made this statement:

"Secretary Wallace has admitted before the House Committee on Agriculture that to carry into effect section 303 of the Agri-cultural Adjustment Act of 1938 would require seemingly hopeless sums of money. In other words, the Secretary tells the Congress that the present act does not and never will give the farmers cost of production or parity prices. This being the case, then why not quit beating around the bush and adopt the cost-of-production bill?"

The cost-of-production bill is the answer to the most aggravating question facing Congress today, "How can prosperity be restored to this Nation?" It is not a bill aimed only at aiding the farm. It is a prosperity measure for every man, woman, and child in America. It might just as well be called a business re-

child in America. It might just as well be called a business revival bill or reemployment act of 1939.

Certainly, it is directly intended to provide the farmer of America with a market for his product at a price which will cover cost of production on that portion domestically consumed. What can be more just? It will provide a farm income of \$15,000,000,000, only 20 percent of our national income for 35 percent of our people. Is that asking too much for the greatest one industry of America? Give the farmer of America that income and every factory, every industry will start its wheels spinning to take care of the market created by that vast purchasing power. Give the farmer that income, even less than due him according to population, and 12,000,000 American citizens will not be tramping the streets looking vainly for work. There will be work for

to population, and 12,000,000 American citizens will not be tramping the streets looking vainly for work. There will be work for every one who really wants work and the communistic and fascistic theories of today will leave our country forever.

Just the other day the Agriculture Committee of the Senate unanimously endorsed for passage the cost of production bill. What does that mean? It means that each and every one of those United States Senators agree that the present Agricultural Adjustment Act has failed in its primary purpose, and that is, to give parity or cost of production to agriculture. Now you will want to know just what this cost of production bill contains and why these Senators as well as many Congressmen, including myself, feel that this is the answer to our agricultural problem. Let me give you eight main points or reasons why this bill should

Let me give you eight main points or reasons why this bill should be made into law.

First. It will place a floor under the farmers' products just as a minimum has been given to labor in interstate traffic, under the Wage and Hour Act. This minimum price will apply only to that portion of agricultural production consumed in our own Nation. It has been aptly stated in the hearings on this bill that no decent American citizen wants to eat food which has been produced at a loss by another American, the farmer, any more than that farmer wants to buy manufactured goods which are the products of sweatshops and ill-paid labor.

Second. This bill prevents the flooding of our own American markets, as in recent years, by farm products grown by coolies in the Far East. The backbone of our agricultural price structure cannot be broken by foreign manipulation.

Third. It provides for the exportation of our excess farm production of any crops of which we might have a surplus.

Fourth. The surplus will be sold, if there proves to be a surplus, in the world market at the world price. This bill does not endeavor to control world prices for agricultural products as does our Gold Act, which is proving ruinous to our Nation in attempting to control the world price of gold. At this point may I quote

from a speech of my colleague, Congressman August H. Andresen, of the First Minnesota District: "You American people will be surprised to learn that the United States Treasury has made an outright gift or subsidy to foreign gold speculators and foreign governments in the amount of \$3,551,850,184.30 since January 1, 1934, under the New Deal's gold and silver policy. And yet, during this same period, our American farmers have been paid a total of \$2,509,251,410 in parity and benefit payments, a billion dollars less than the gift to foreigners under the legislative action of the New Deal."

Fifth. The cost-of-production bill provides that no money will be taken from the taxpayer for administrative costs. All such expense comes out of the sale of the exportable surplus. Any balance from the sale of the surplus is refunded to the producer.

Sixth. This bill keeps the good features of the Agricultural Adjustment Act of 1938. We will still have the provisions for soil conservation, for adjustment in freight rates, and for finding new uses and new markets for farm products. It provides for the continuation of the Surplus Commodity Corporation, for loans on agricultural commodities, which, by the way, has been the best feature of the present act. This bill provides for crop insurance and retains section 32 of the present act to aid agricultural exports.

Seventh. The cost-of-production bill knocks regimentation out of our agricultural dictionary. Farmers may produce as much as their good soil will yield without restriction, fully supplying our home market without competition from foreigners. No farmer wants to be told by a swivel-chair theorist what to plant, where to plant, or how to plant. We, as farmers, may recover our own self-respect and initiative that is our American prerogative, and produce all we may choose or can produce, our only limitation being the percentage share that the individual farmer may sell at the cost-of-production price for home consumption.

Eighth. This measure, quoting from the report of the Senate committee, provides the simplest machinery with no cost to the Federal Government, no restriction or regimentation of the farmers, and assures a cost-of-production price to the farmers of this Nation. This bill, when and if enacted into law, will give the farmers of the Nation an annual cash income of approximately \$15.000.000.000.

\$15.000,000,000.

Surely in our great America, decent prices can be paid the farmer for the food he produces and a decent wage to the laboring man for his work in our factories. No businessman can remain long in business if he has to sell his product at a loss. And yet, the one real basic industry of our great Nation, the one main cog in the much-heralded national defense, the all-important basic industry of our country, is slowly crushed into peasantry. Our farm buildings throughout the Nation need paint and repairs to preserve what has already been built.

Today this administration, or any administration, could take millions of self-despising men off of relief rolls and make self-respecting citizens of these same men and let them earn decent wages manufacturing the paint and fencing we farmers need and would like to buy, the automobiles and radios and refrigerators and electrical appliances that all the farmers wish they could purchase;

Today this administration, or any administration, could take millions of self-despising men off of relief rolls and make self-respecting citizens of these same men and let them earn decent wages manufacturing the paint and fencing we farmers need and would like to buy, the automobiles and radios and refrigerators and electrical appliances that all the farmers wish they could purchase; the new machinery we need to replace the old held together by baling wire; the clothes that every farm woman would like to secure for her family; yes, in fact, the thousands of manufactured articles of labor we farmers could and would buy if our income was what it ought to be. Give to the farmer everywhere in the United States a decent price for his products and you will see the factories of our Nation, with their arteries filled with richness from the soil and not from Wall Street or munition sales, roar along in mighty production, blackening the skies with their smoke, trying to fill the demand for goods for their own market, the greatest market in the world, the farmer of the United States.

Who are the greatest opponents to giving the farmer a guaranty

market in the world, the farmer of the United States.

Who are the greatest opponents to giving the farmer a guaranty of a minimum price for that portion of his products consumed in our own country? It is none other than the grain gamblers and commodity speculators who, like leeches sucking the blood of their victims, fatten on the ruination of agriculture. Why in the name of common decency and good judgment should a gang of speculators set the price for what we, as farmers, produce? Is it more fitting for the Chicago Board of Trade to prescribe what the farmer is entitled to for his long hours of labor or shall our Congress not assume this great responsibility and set a minimum price for our foodstuffs, a price fair to consumer and producer alike?

foodstuffs, a price fair to consumer and producer alike?

Union labor in interstate traffic was guaranteed by the last Congress minimum wages for maximum hours of 40 hours per week. Why not be consistent and give consideration to the farmer for his products, produced not on 40-hours-a-week basis but nearer 100 hours per week, as all of you know? Has not the United States Steel Corporation decreed for years the cost of steel f. o. b. Pitts-burgh? Does not General Motors set the price to a nickel on their many cars cluttering up the highways of our Nation today? Does International Harvester consult the board of trade as to the price for farm machinery the farmer must buy? Coal costs the farmers on the prairies so much per ton, whether they can afford to buy it or not. Has not the price of a loaf of bread remained very nearly the same, whether I receive \$1 per bushel for my wheat or 51 cents, as I did last August. Everything the farmer buys is manufactured by factories and sold at a profit, or these factories could not remain in business.

Our great Nation can better afford to adopt the cost-of-production bill, just unanimously recommended by the Senate Committee on Agriculture, than to see our great farming industry, the greatest one profession in America, continue its slide, greased by foreign imports, downward toward peasantry, and eventually into those beautiful pastures of content in the lands of dictators, there to feed on the luscious propaganda of fascism and communism.

feed on the luscious propaganda of fascism and communism.

May I request of you people listening to this broadcast to think about this vital subject? Decide for yourselves whether or not the farmer of our Nation is entitled to be paid what it costs him to produce the food for our 130,000,000 people. Decide for yourselves if it would not be good business to give agriculture a push along the road to recovery, and take with it into honest employment the millions now subsisting on a dole. Ask yourself these questions, people of America, and if you agree, why not urge your Congressman and Senators to back up this measure? Give them an opportunity to know your opinion.

tunity to know your opinion.

Give the farmer cost of production, a fair price for the food you consume, and he will be able to stay on the tax roll and off of W. P. A.

Give agriculture the same rate of interest that industry enjoys and by refinancing the farm mortgages rather than foreclosing on the home we will prove that the farmer's long years of work leads elsewhere than to poverty. Far better, people of America, to enable a farmer to preserve the ownership of the farm that has been his for years than it is to ruthlessly knock his family out of their homes, to be resettled later on at some far-distant point at the taxpayer's expense.

Minnesota-Nature's Finest Playground

EXTENSION OF REMARKS

HON. OSCAR YOUNGDAHL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1939

Mr. YOUNGDAHL. Mr. Speaker, spring is just around the corner. I know the Members of this House must be thinking of vacation, of a cool and quiet place to relax and rest from committee hearings and debate. Why not come to Minnesota this summer for a week or a month in nature's most ideal vacation land?

It matters little what you desire on a vacation, Minnesota has everything.

If it is golf, Minnesota has everything from the partesting tournament courses of Minneapolis to the deer-trail marked fairways of northern Minnesota where a bear, a moose, or a porcupine may be your gallery.

If it is boating, no State can offer more variety. Launch your canoe in any one of Minnesota's 10,000 lakes, shoot rapids, run white water, or paddle serenely over sky-blue waters. Board a steamer for a cruise on mighty Lake Superior or travel the Father of Waters from its source in Itasca State Park as far as New Orleans, if you wish. The Mississippi travels 745 miles in Minnesota alone.

If it is scenery, none can offer you greater contrasts. From the fertile pastures of southern Minnesota's great dairy farms to the untamed wilderness of Superior National Forest, Minn., 11,000 miles of improved highways carry you through an ever-changing panorama of beauty spots. Here you will find the wonders of nature's great cathedral reflected in the blue waters of quiet lakes, or the rugged grandeur of Minnesota's palisades.

If it is fishing, you have never fished until you have won your fight with a speckled or rainbow trout in one of Minnesota's ice-cold spring-fed streams. Bass, wall-eyed pike, Great Northerns, and a dozen other varieties of game fish keep in condition for a battle in cool, sparkling lakes. Until you have thrilled at landing a Minnesota muskie, you do not know lake fishing.

If it is historical interest you search, come and visit Grand Portage, where French voyagers sang their paddle songs and landed their cargoes of furs long before railroads were conceived. Grand Portage remains the only port in America open to all British ships. Come to Pipestone, the land that was always a peaceful sanctuary for Indians of every tribe as they came to quarry rock for their peace pipes. Visit old Fort Snelling, built in 1819, when a white man was still a

strange sight to the Indian. Stand inside its famous old round tower and relive again the days when Minnesota and the Great Northwest were a wilderness. Travel the routes of Father Hennepin, Colonel Zebulin Pike, Daniel du Lhut, Father Marquette, or any one of the other scores of adven-

If it is just quiet and seclusion, the whisper of the wind in the pines and the hemlocks and the tamarac at night, the appetizing smell of bacon and coffee over the campfire as you lie back to watch a perfect sunset, then by all means come to Minnesota. Here you can find the country's finest lodges with all modern accommodations, or a private lake where you need not see another white man all summer.

Minnesota offers you nature's finest playground. Minneapolis is the gateway to summer's paradise. Come and

enjoy it.

Not Too Late

EXTENSION OF REMARKS

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, April 17, 1939

EDITORIAL FROM THE WASHINGTON STAR OF APRIL 16, 1939

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial from the Washington Star. It is particularly apropos at this time when the Senate is considering the Sunnyvale project which was left out of the second deficiency bill by the House. Millions of dollars being spent for air expansion are liable to be wasted unless our research facilities are able to keep abreast of the airplane industry.

NOT TOO LATE

It is not yet too late for Congress to rectify an error which might conceivably mean the difference between victory and defeat for this country in the event of our becoming involved in a major

As a part of the national-defense program, President Roosevelt recommended to Congress the establishment at Sunnyvale, Calif., of a second basic research laboratory for the National Advisory Committee for Aeronautics. The committee now carries on all basic aviation research for the Nation in a single laboratory at Langley Field, Hampton, Va.

basic aviation research for the Nation in a single laboratory at Langley Field, Hampton, Va.

The Bureau of the Budget approved the appropriation of funds for the project, which has been strongly endorsed by the Army and Navy. Their reasons are obvious and should be sufficient for Congress. In case of a major war involving this country our need for air defense would be paramount. This defense cannot be static. Airplanes must continuously be improved. Improvement can come only through research. In event of war, the type of research carried on at Langley Field would at once become indispensable to our superiority in the air, hence to our security.

Obviously, if an enemy could destroy our aviation research, he would have gone a long way toward gaining aerial supremacy, especially if he possessed aggressive, capable research workers who could continue the rapid improvement of his aircraft while we frantically tried to replace what had been lost.

Langley Field would become an immediate and primary goal for enemy bombers. It would be worth heavy losses to the enemy to destroy the laboratory there. Yet all of our basic aeronautical research is so condensed at this one point that a squadron of bombers, in one attack, lasting a matter of a few seconds, could wipe out the whole plant.

It is apparent that for security we should have at least the second of the

out the whole plant.

It is apparent that for security we should have at least two such major research bases, with duplication of all essential facilities. European countries have established not two, but many such laboratory centers as far apart as their geographical limits will permit. This is especially true of Germany.

We should have at least two bases and they should be so far

we should have at least two bases and they should be so far apart as to be inaccessible to enemy air raids from one base or from the same fleet. This does not mean that a separation of 25 miles, as has been proposed in Congress, or 100 miles, or even 500 miles, is sufficient. Defense experts of both services joined in recommending the Sunnyvale site after careful and deliberate

study.

It would be little short of criminal if our national security in this matter were to be sacrificed to a matter of sectional pride or mere political expediency. And it appears that some of this feel-

ing may be behind rejection by House and Senate committees of the Sunnyvale project. The cost is irrelevant. It is less than that of providing a squadron of four-engine bombers; 1 percent of the cost of the air defense program would do the job.

The fact that the Sunnyvale matter has been disapproved by the Appropriations Committees should not end the fight. There is definite promise that it will not. Further efforts will be made to obtain funds for this essential project, and Congress should consider well the whole matter before it adjourns.

· Cancer Education

EXTENSION OF REMARKS

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Monday, April 17, 1939

ARTICLE BY DR. GEORGE GALLUP

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Gallup poll and description of the necessity for education in the treatment of cancer:

[From the Washington Post of April 16, 1939]

CANCER ERADICATION HAS PROGRESSED—BUT MORE IS NEEDED TO ERADI-CATE FALSE IDEAS OF DISEASE

(By Dr. George Gallup, director, American Institute of Public Opinion)

Opinion)

New York, April 16.—Medical men, research workers, and public health authorities are training their biggest guns today on the solution of one of America's most serious afflictions—cancer. They know that the great majority of cancer cases can be cured if treatment is taken in time, and so the present drive against the disease is aimed first of all at the education of rank-and-file Americans. What do these ordinary Americans know about cancer? How do they regard it? How far has the campaign of education progressed? To answer some of these questions which interest the public and medical men alike, the American Institute of Public Opinion has conducted a Nation-wide survey among men and women in all walks of life. The publication of the survey during what has been set aside by President Roosevelt as "Cancer Month" gives ample evidence that as far as the public is concerned cancer is the most feared of American diseases. feared of American diseases. The survey shows:

1. Cancer education has progressed to the stage where the ma-jority of Americans know that it can be cured if treated in time. 2. Nevertheless, many Americans still think cancer is incurable,

and many others have erroneous ideas about it. About one person in five thinks the disease is contagious or "catching," and an almost equal number say they don't know whether it is contagious

3. In spite of the progress in public understanding of the disease, cancer is dreaded far more than other leading causes of death, such as heart disease, pneumonia, or tuberculosis.

These findings, which add something to what cancer research now knows, indicate that much still remains to be done in the field of educating the public.

MAJORITY KNOW CANCER CAN BE CURED-IF

Fortunately, the majority of Americans have already realized that cancer can be halted or cured, if discovered in time and treated by surgery, X-ray, or radium. The institute asked a cross section of men and women in all parts of the country: "Do you think cancer is curable?" Nearly two in every three said they thought it was, many of them offering the proviso, "if caught in time."

People in eastern United States, where the greatest efforts have been made so far toward cancer education, were more aware of this fact than some of the westerners and southerners, who often took a more pessimistic view.

Doctors have discovered that many people have erroneous ideas about cancer, and today's survey shows that some of these theories are widespread. Commonest of all misinformations is the idea that cancer is "catching."

The institute asked: "Do you think cancer is contagious (or 'catching')?" Although cancer education has tried to remove this unfounded fear, the answers were:

Contagious _ Don't know. 21 Not contagious____

The institute found that almost every other person has some theory or other about what causes cancer. Bruises, wounds, and skin irritations were named most frequently.

APPENDIX TO THE CONGRESSIONAL RECORD

Other suggestions—some of them showing wide misinformation include: Smoking, drinking, vaccinations, colds, infections, warts and moles, a bad diet, canned foods, certain kinds of cooking vessels, modern diet, too much milk, lack of vitamins, electric shocks and burns, using dirty dishes, adulterated food, the use of vinegar, the use of food preservatives, too much acidforming foods, overheated foods and drinks, swallowing phlegm, swallowing unchewed foods, swallowing seeds, coal dust, and sunburn.

burn.

Others were: Ulcers, using clay pipes, syphilis, poor living conditions, high-pressure living, operations, childbirth, improper workings of the glands, poor circulation, indigestion, eating meat, using pepper, using spicy foods, and getting chills.

Some thought that "jealousy," "resentment," "bad thoughts," or other mental states might be causal factors.

Younger persons showed less misinformation than older persons, and, as might be expected, persons in the upper and middle income levels showed better information than those less well-to-do.

CANCER IS FEARED MOST

The institute found that cancer is almost universally more dreaded than the other diseases with high yearly mortality rates. The institute asked which of the four—heart trouble, pneumonia, tuberculosis, or cancer-they would least like to have. The replies were:

Cancer 76	Felt	Seite
		76
	Tuberculosis	13
Heart trouble 9		9
Pneumonia2	Pneumonia	2

These figures are especially interesting in view of the fact that cancer ranks below heart trouble as an actual cause of death, and that pneumonia, the third commonest cause of death, is named by only 2 percent of those interviewed.

The reasons for these choices, the comments show, are (1) the feeling that there is less chance for recovery from cancer, (2) belief that cancer patients suffer more, and (3) belief that unchecked cancer means a "lingering" affliction.

FAVOR UNITED STATES ASSISTANCE

Representative EDITH NOURSE ROGERS (Republican), Massachusetts, has introduced a bill in Congress to provide Federal money to the States for cancer work during the next fiscal year, and the institute survey shows that such an appropriation has the strong support of public opinion.

Ninety percent of those interviewed said they approved the \$3,000,000 assistance plan.

THE PUBLIC'S IDEAS ABOUT CANCER

Following are the questions and replies in a Nation-wide survey by the American Institute of Public Opinion, conducted for the purpose of seeing how the American people regard cancer: Do you think cancer is contagious—"catching"?

Deportation of Aliens

EXTENSION OF REMARKS

HON. JOSEPH W. BYRNS, JR. OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Monday, April 17, 1939

RESOLUTION OF THE SENATE OF TENNESSEE

Mr. BYRNS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Senate of the State of Tennessee:

Resolution memorializing the Federal Congress to enact adequate legislation providing for speedy deportation of all alien residents who do not signify their willingness, desire, and intention to become citizens of the United States within a reasonable time after entry into the United States of America

Whereas it is estimated that there are approximately 8,000,000 residents within the boundaries of the United States of America,

who have neither become naturalized nor filed any declaration of intention to become citizens of this Nation; and
Whereas this large group of alien residents provide a fertile field for agitators and organizations who are not in sympathy with

Whereas it is the sense of the State Senate of the State of Tennessee that this large group of alien residents should not be permitted to enjoy the freedom and privileges of this Nation without assuming the corresponding duties and obligations of citizenship:

Resolved by the Senate of the State of Tennessee, That the Federal Congress be, and it is hereby, requested to direct its attention to this condition and to enact adequate legislation which will proto this condition and to enact adequate legislation which will provide for speedy deportation of all alien residents of this country who do not within a reasonable time signify their willingness, desire, and intention and qualify to assume the obligations of citizenship and become citizens of these United States of America; be

Resolved, That the secretary of the State be, and he is hereby, directed to transmit properly authenticated copies of this resolution to each member of the Tennessee congressional delegation and to each of the United States Senators from Tennessee.

1939 Versus 1917

EXTENSION OF REMARKS

HON. JAMES SECCOMBE OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, April 17, 1939

ARTICLE FROM THE CANTON (OHIO) ECONOMIST

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ira E. Bennett, which recently appeared in the Canton Economist:

[From the Canton (Ohio) Economist]

(EDITOR'S NOTE.-I am indebted to Mr. Ira E. Bennett, Washing-(EDITOR'S NOTE.—I am indebted to Mr. Ira E. Bennett, Washington, D. C., for the interesting article below. For many years Mr. Bennett was editor in chief of the Washington Post. He is intimately familiar with the issues and causes which brought about our participation in the World War and, as a consequence, is deeply concerned over the position our Government is now taking with regard to the European crisis.

with regard to the European crisis.

The following paragraphs are taken, verbatim, from the most recent correspondence I have received from Mr. Bennett. I am happy to pass along the reaction of this seasoned newspaperman.—F. H.)

1939 VERSUS 1917 (By Ira E. Bennett)

After a year of futility in trying to organize the United States for war in 1917, a happy solution of all difficulties was proposed by President Wilson to Congress—and he was promptly turned down. His proposal was that he should be given power to revamp all executive departments and agencies and to take control of American industry, commerce, labor, and agriculture, "for the better utilization of resources and industries, for the more effective exercise by the President of his powers as Commander in Chief of the land and naval forces, and for the successful prosecution of the war."

Congress refused to pass the bill which had been carefully drafted by the executive department. There was talk of "dictatorship" and "multiplication of useless agencies." One element in Congress proposed that a war cabinet be created, to be directed

by Congress.

The war was fought under the old-fashioned notion that the The war was fought under the old-lashloned notion that the constitutional rights of citizens should be respected. Congress even refused to censor the press, or empower the President to suppress "nonessential industries." Moreover, when it was proposed to take the profit out of war, Congress rejected a bill to that effect, for this quaint reason: Nobody, it said, would produce without a profit. It pointed to the coal famine which had resulted when producers were denied a profit.

out a profit. It pointed to the coal famine which had resulted when producers were denied a profit.

But Congress was not a slacker. It shared the universal American desire to conquer Germany. So it elaborated and passed a joint resolution proposing a constitutional amendment to prohibit manufacture or transportation of intoxicating liquor. This was calculated to throw the fear of God into Germany. The amendment was promptly ratified, and in due time Congress gave it teeth by passing the Volstead Act. Germany surrendered before the Volstead Act became a law.

Six months after the United States entered the war it occurred.

Six months after the United States entered the war it occurred to Congress that trading with the enemy should be prohibited. Germans in neutral countries had already siphoned millions of gold from this country, besides immense supplies of war material. Another prohibition act was that which punished espionage—but American bridges, terminals, and naval magazines had been blown up before the act was passed.

The art of sabotage was new in this country. Congress enacted a law authorizing seizure of enemy ships in American waters, but the Germans had already beaten Congress to it by wrecking the machinery in the ships and even sinking some of them.

It was not until December 1917 that Congress declared war on

Austria-Hungary, although an Austrian Ambassador had been dismissed as early as 1915 for instigating sabotage. The German Embassy in Washington financed conspirators in Paris, one of

Embassy in Washington financed conspirators in Paris, one of whom, Bolo Pasha, was captured and executed.

President Wilson's theory in remaining friendly with an enemy was that Austria-Hungary was secretly trying to break away from Germany. The Austrian Emperor skillfully convinced both Wilson and Lloyd George that he was really friendly, and it was not until Austrian and German Armies befuddled Italy with pacifist propaganda and then smashed the Italian Army that President Wilson asked Congress to declare Austria-Hungary an enemy. But even then he advised Congress that the United States had no real quarrel with Austria-Hungary and did not intend to attack her. All he wanted was to see a more liberal government at Vienna. Austro-Hungarian propaganda and duplicity prolonged the war at least a year.

year.

The American people were patriotic. As soon as war was declared there was a demand for universal service. But action was delayed for a couple of months because the House chairman of the Military Affairs Committee happened to be a pacifist who refused to sponsor a draft bill. Fortunately, the ranking member on the Republican side was more robust. He was a Jew, born in Germany. He acted for the committee in pushing the bill through the House, and it became a law June 6, 1917.

After the war President Wilson told a Senate committee that he knew nothing of secret treaties among the Allies, providing for their mutual distribution of German colonies, until he arrived in Paris. Then he found that all the spoils were allotted leaving

in Paris. Then he found that all the spoils were allotted, leaving America out, and that these secret treaties were sacred obligations which must be observed. So the mandate system was set up, whereby each of the Allies—except Italy and Russia—received what had been promised. The colonies were made safe for the democracies

Naturally, such ignorance on the part of the United States can-not happen again, for the excellent reason that foreign govern-ments no longer make secret treaties—of course not. There is no occasion for the further distribution of German colonies among

no occasion for the further distribution of German colonies saled select democracies.

This American blunder is cited merely to illustrate the comic side of the World War, and not as an experience which might be valuable in the next war, if taken to heart.

In the next war American efficiency must be the rule. It is already provided for—all that is necessary is the abdication of Congress. A bill has been carefully drafted, transferring all needed powers to the President, just as President Wilson proposed in 1918. This bill has been prepared by military and naval officers who realize only too keenly that civil rights and peacetime activities of the people are fatal obstacles to efficiency.

The mobilization of the American people, under strict regulation

of the people are fatal obstacles to efficiency.

The mobilization of the American people, under strict regulation by a single authority, is to insure successful prosecution of the next war. The blunders and flounderings of 1917 and 1918 are not to be repeated. At the sound of the war trumpet the country is to be transformed, and every citizen must learn the goosestep of discipline. The world has moved since 1917. American experts have learned a thing or two! They will save democracy by making the discretership.

it a dictatorship.

Thomas Jefferson and Financial Reforms

EXTENSION OF REMARKS

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 18, 1939

ADDRESS BY HON. EDWARD C. EICHER, APRIL 13, 1939

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Honorable Edward C. Eicher, Commissioner, Securities and Exchange Commission, at the annual dinner given in Wichita, Kans., on April 13, 1939, by the Jeffersonian Club:

Mr. Chairman, all of us should be thankful that, in today's dark world, we in America can still meet and pay tribute to Thomas Jefferson, secure in the knowledge that we are traveling the road which he laid out over 150 years ago. In honoring him, we honor ourselves, for no people could ask for greater honor than to live in his tradition under a government which seeks to achieve his ideals. And it is particularly fitting that tonight this celebration

should be held on the soil which, in 1803, became part of our great country because of his characteristic foresight, courage, and statesmanship.

manship.

Jefferson has been properly called "the most conspicuous of American apostles of democracy." His principles have become the very foundation of our form of government and the basic ideals of our society. He was an aristocrat by birth and position—nevertheless he proclaimed that "all men are created equal." He was the possessor of substantial wealth and many privileges, yet insisted that all men "are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness." Consistently, in practice and in theory, he fought the special privileges sought by those whose sole claim to extraordinary favor was the accident of birth or the unearned spoils of speculation. He denied all but the natural aristocracy of talent and achievement.

It is only normal that many of the New Deal reforms have their

It is only normal that many of the New Deal reforms have their roots in Jefferson. This is the party of Jefferson, and it is his party not only in name but in deed. I believe it to be particularly appropriate that I should discuss tonight those great accomplishments of the New Deal that are embodied in the three basic statutes which the Securities and Exchange Commission administers. My discussion will demonstrate, I feel confident, that although revolutionary changes have occurred in the fields of business and finance since Jefferson's day, these three statutes are soundly based upon his

Jefferson's day, these three statutes are soundly based upon his philosophy.

All three of those acts, namely, the Securities Act of 1933, the Exchange Act of 1934, and the Holding Company Act of 1935, seek essentially the same objective. That objective may be simply stated to be the prevention of the abuse of financial power—to help make it impossible for the handful of people who possess great power in the financial world to oppress the rest of us; and to help bring about conditions in which all the people will have an opportunity to obtain for themselves a fair measure of the good things of life.

tunity to obtain for themselves a fair measure of the good things of life.

This is an effort in which the people of Kansas played a pioneer part. It is with some pleasure that I recall that back in 1911, when eastern promoters were swarming through the Middle West unloading stocks and bonds of doubtful value upon trusting farm folk, the Kansas Legislature enacted a law to control stock fraud and stock swindling in the State. Thus, of all the States in the Union, Kansas became the first to adopt a "blue sky" law. Today nearly every State in the Union has a "blue sky" law of one type or another, and the work of the State enforcement agencies cannot be too highly praised.

and the work of the State enforcement agencies cannot be too highly praised.

But with the growth of the country since 1911 stock fraud and swindling and the more subtle forms of financial juggling became a matter of national concern. And so it was in 1933 that President Roosevelt asked the Congress to enact legislation governing the sale of securities. I give you the President's own words:

"There is * * an obligation upon us to insist that every issue of new securities to be sold in interstate commerce shall be accompanied by full publicity and information, and that no essentially important element attending the issue shall be concealed from the buying public.

"This proposal adds to the ancient rule of caveat emptor, the further doctrine let the seller also beware." It puts the burden of telling the whole truth on the seller. It should give impetus to honest dealing in securities and thereby bring back public confidence."

confidence."

"What we seek is a return to a clearer understanding of the ancient truth that those who manage banks, corporations, and other agencies handling or using other people's money are trustees

To accomplish these aims of the President the acts operate in various ways. The Securities Act—the "truth about securities" statute—requires that all material facts be fully and truthfully dis-

statute—requires that all material facts be fully and truthfully disclosed before stocks, bonds, and other securities are offered for sale in interstate commerce or by use of the mails. Its purpose is to prevent promoters and bankers from taking money from investors on the basis of misleading or incomplete disclosure. It requires that persons selling securities should tell the people just what they are offering, so that an informed judgment can be made. It outlaws the shell game and the well-known sale of a pig in a poke. The disclosure required by the Securities Act was not solely designed to protect individual investors against fraudulent misrepresentations or to prevent individual persons from profiting as a result of their deceit. To be sure, that is one of its objectives, and, proceeding on the Jeffersonian belief that people are endowed with sense enough to make sound judgment, it required that investors be supplied with complete and reliable information to enable them to form an intelligent independent conclusion as to the merits of securities. The law contemplates that, with the aid of full knowlsecurities. The law contemplates that, with the aid of full knowledge, investment can be, as it should be, a matter of private choice of the investor and not merely a form of tribute paid to a financial of the investor and not merely a form of tribute paid to a financial oligarchy. But the act has a much broader purpose in view—a basic economic function that is of tremendous importance. As a matter of economic theory, the growth of business in a profit system is regulated and directed, in part, by the willingness of investors to risk their funds in enterprises. The idea is that the collective judgment of investors as to whether it is profitable to invest funds in a particular enterprise is a partial check upon the desirability and wisdom of this enterprise, and thereby contributes to the public interest which is obviously best served by successful

LXXXIV-App-96

undertakings. If investors buy securities without exercising any judgment as to the merits of the business upon which those se-curities rest, this economic function is not performed, and the flow of capital to business to that extent lacks guidance and direction. Now, if investors are not given full information about the company in which they are asked to invest their funds, they cannot make the business and economic judgment which is necessary if this

function is to be performed.

Prior to the Securities Act, in many thousands of situations, material facts were not supplied to the investor. His purchase—and the purchases of all investors—in such cases had no more economic significance than if they were betting on whether the Treasury receipts in the Kingdom of Siam would increase or decrease. Failure to supply such information was, without doubt, one of the causes of the mad orgy of financing which took place one of the causes of the mad orgy of financing which took place during the twenties and resulted in the disastrous overcapitalization of many business enterprises. The Securities Act, by forcing disclosure of all material facts, makes it possible for investors to exercise this intelligent sort of judgment on the business risks and prospects of the enterprise. It therefore makes it possible for the flow of capital to be guided, by the collective judgment of investors, into channels where it can be used with profit, not only to the individual investor but to the Nation as a whole. I repeat that the importance of this function can hardly be overemphasized.

that the importance of this function can hardly be overemphasized.

But disclosure of all material facts when securities are first offered for public sale is not enough. Many of the most spectacular and ruinous collapses of individual fortunes, which have had an injuri-ous effect upon the whole Nation, have taken place because of abuses in the markets where securities are bought and sold. The insider—the officer or director of a corporation who in law and good morals is charged with a duty to protect his stockholders good morals is charged with a duty to protect his stockholders, has on occasion been found using his advance knowledge of its business to make money for himself, at the expense of those stockholders, by buying or selling securities on the market; men comprising the inner circle of the great stock exchanges, the pool operators, and the speculators have all manipulated the machinery of trading in securities to make private fortunes at the expense

of other people.

of other people.

No one has more vigorously condemned speculators who seek to enrich themselves at the expense of their fellow citizens in disregard of even the rudimen's of fair dealing than Jefferson. His historic controversy with Hamilton over fiscal policy was in large measure due to his antagonism to speculators. He believed that Hamilton's fiscal program was designed to benefit the speculator, or at least would have that effect. Their fight was particularly bitter in connection with Hamilton's proposal to redeem at its face value the paper money issued during the Revolution. Most of this money had been hought up by speculators, and Jefferson engosed Hamilton's been bought up by speculators, and Jefferson opposed Hamilton's proposal because it meant enriching such speculators who had contributed nothing to the national welfare. For the same reason he opposed Hamilton's program for the assumption of the State debts by the Federal Government, for it was clear that the original lenders to the States had sold their State warrants to speculators at low prices. Jefferson's comment upon the passage of the assumption bill was that "Twenty million has been thrown in as pabulum to the stock-jobbing herd." Today history concedes that he spoke truly when he said that the assumption of State debts would never have been ratified if the men who profited by the operation had abstained from voting.

abstained from voting.

The opposition to speculation expressed by Jefferson is not unusual. The masses of people, from Biblical days to the present, have always resented the sharp trader. In a complex industrial economy such as ours, however, we must be careful to distinguish between the sort of speculation which is to be condemned, on the one hand, and the honest and proper trading which is an essential part of our economic machinery. Our difficulties and disasters in this field have arisen not because men bought and sold securities freely, but because some men who had inside information or were freely, but because some men who had inside information, or were in a position to make the rules of the markets to suit themselves, or who were ruthless and reckless, willfully proceeded to deceive, cheat,

and outmaneuver the rest of us.

It is to stop this kind of speculation that the second basic statute that I have mentioned—the Securities and Exchange Act of 1934—was passed. This act can perhaps best be thought of as a code of fair practice for the stock exchanges and securities markets—a set of rules designed to bring about equality of opportunity and fair dealing for all who desire to buy or sell and to prevent undue

Its effect is not merely to prevent John Doe from taking unfair advantage of Richard Roe. The practices which it outlaws have a basic effect upon our entire economy. The collapse of 1929 is so basic effect upon our entire economy. The collapse of 1929 is so fresh in our minds as to make it unnecessary for me to dwell at any length upon its causes. Within the securities field methods were prevalent by which a relatively small number of persons were trading in securities in a way that destroyed the useful economic function of this process to the great detriment of the entire Nation. As a congressional investigation revealed, this uncontrolled speculation was an important cause of the credit inflation which led in turn to the panic of 1929. President Roosevelt, responding to the well-nigh unanimous public demand for Federal control over these practices, recommended the adoption of legislation "for the regulation by the Federal Government of the operations of exchanges dealing in securities and commodities, for the protection of investors, for the safeguarding of values, and, so far as it may be possible, for the elimination of unnecessary, unwise, and destructive speculation." tive speculation."

The response was the Securities Exchange Act of 1934, which created the Securities and Exchange Commission and gave it regulatory powers over securities transactions and over national securities exchanges. The enactment of this legislation symbolized a triumph of the people over the financial operators who profited unfairly at the expense of defenseless investors. Pool operations, unrestricted "margin" transactions, "wash sales," and similar practices were put under the ban.

Index this statute great progress has been made by the Securities

unrestricted "margin" transactions, "wash sales," and similar practices were put under the ban.

Under this statute great progress has been made by the Securities and Exchange Commission, in cooperation with the forward-looking members of the financial community, toward establishing a fair and open market place for securities, in which people may deal without fear of trickery or deception—and in which prices may be established by economic law rather than by the manipulations of speculators. The task has not been an easy one for the Commission or for the security traders. Most of the difficulties that have arisen have been worked out at the conference table; and it is the exception, rather than the rule, for either party to disregard this sensible and intelligent method of coordinating the efforts of government and the objectives of the financial groups. Indeed, the dominant groups in the exchanges seem to have accepted the fact that their activities are appropriate matters for public regulation. On the other hand, I feel certain that neither the Government authorities nor public opinion will tolerate any attempt, however subtle, to impair the effectiveness of this regulation. Pools and other devices by which the public is induced to hold the bag for clever manipulators will no longer menace the security of investors and the soundness of our economy.

These two statutes, the Securities Act and the Exchange Act, will not of themselves assure the solvency and efficient operation of business. Business and economic factors, beyond the purview of those statutes, must determine whether our industries and mercantile establishments are efficient solvent and successful. The

those statutes, must determine whether our industries and mer-cantile establishments are efficient, solvent, and successful. The purpose of these acts in this respect is merely to regulate the financial machinery so that it will not operate as a cancerous growth on business. It is only in connection with public-utility holding-company systems that Congress has vested the Securities and Exchange Commission with a measure of power over the fundamental economics of any branch of business.

These public-utility systems are of peculiar public concern. The law has long placed gas and electric companies in a separate category because of their intimate effect upon the life and well-being of all the people and because of their peculiarly monopolistic characteristics. For many years they have been subjected to a large degree of regulation by State and local governments. In many States the rates they may charge and the services they may perform are controlled by agencies of the local government, and the securities that they may issue must be approved by such agencies.

This regulation, however, was to a large degree rendered nugatory by a variety of factors. Chief among these factors was the forma-tion of corporations which themselves sold neither gas nor electricity, nor any other commodity, but which bought securities of scattered operating companies with money obtained through the scattered operating companies with money obtained through the sea of their own securities. These companies, generally speaking, were not subject to regulation, and by a variety of practices which I shall not attempt to describe they virtually nullified the regulations of companies. tion of operating companies' rates and securities by State agencies. More than that, they became tremendous engines of economic and financial power. A single individual, like Insull, using these holding companies, could buy up control of dozens of electric and gas companies and thus vitally affect the lives and well-being of millions of people; and he could obtain this enormous power by means of money that he got from the public at large. He might not have one cent of his own money in the enterprises, but he could control hundreds of millions of capital and draw off millions in profits for

Let me give you an idea of the extent to which power and wealth have been concentrated by means of the holding-company device in this field. The five largest public-utility holding corporations together show consolidated assets of more than \$7,000,000,000. One holding company alone—the Electric Bond & Share Co.—has consolidated assets of \$2.600,000,000; North American Co. has over \$1,200,000,000 of consolidated assets; and three other holding companies each have more than \$1,000,000,000 of consolidated assets. When you remember that each of these companies is run by mortal men, with human failings, that each has one man as its president and a few men as directors, I think you will agree that we face an appalling situation. So much wealth simply cannot safely be placed in the control of a few men—particularly in an industry which vitally and directly affect every man, woman, and child in this Nation. This state of affairs has been appropriately called a "form of private socialism, inimical to the institutions of a free Let me give you an idea of the extent to which power and wealth

"form of private socialism, inimical to the institutions of a free

people."

More than this, recent history shows that this power can be and has been abused. Corporation has been pyramided upon corporation has been pyramided upon corporation. tion; millions of dollars of holding-company securities have been tion; millions of dollars of holding-company securities have been sold to the public that are without any substantial basis in the assets or earnings of the issuing corporations; exorbitant charges have been made for so-called services rendered by the holding-company systems to operating companies; overloaded corporate structures have resulted in excessive rates to the millions of families that use gas and electricity; and the concentration of control in the hands of a few people over properties scattered all over the country has resulted in inefficiency, waste, and a form of absentee landlordship which involves many of the hateful aspects of feudalism. feudalism.

All of these things the Holding Company Act seeks to correct. It provides machinery whereby the Securities and Exchange Commission can prevent excessive and unwise issues of securities; regulate charges for engineering, accounting, and other services; control the dealings between companies in the same holding-company system; simplify the crazy pyramids of these systems and bring order and sense to the complex corporate structures; and compel

order and sense to the complex corporate structures; and compel holding companies to give up control over empires which are so large as to constitute a public menace and that are so scattered as to be inefficient, wasteful, and anarchistic.

I have not the time to do more than mention these provisions of the act. In my opinion this statute is one of the most precious achievements of this administration. I am glad to have had a part in its drafting and enactment into law while I was in Congress, and I am glad that I now have the opportunity to participate in its administration as a member of the Securities and Exchange Commission.

In its administration as a member of the Securities and Exchange Commission.

The personal allusions I have just made bring to mind the strenuous fight that was waged in 1935 by special interests to defeat the Holding Company Act in the House of Representatives. The interests won the first round in June, but the Senate investigation of lobbying activities conducted by Senator (now Justice) Black during the summer caused enough misled Congressmen to see the light so that the bill became law in August.

Among the Members of the House who voted for the bill on

see the light so that the bill became law in August.

Among the Members of the House who voted for the bill on final passage was your own Congressman, the Honorable John M. Houston. Not the least of my satisfactions in being with you tonight is the opportunity it gives me to meet face to face so many of Jack Houston's home folks in the district that he represents with such great distinction in the Nation's Capital. I shall carry through life the delightful recollections of our happy and, to me, helpful associations through the years that I served with him as a fellow Member of the House. This progressive and discriminating congressional district will, I am sure, keep him at his post as long as he can be persuaded to stay, to continue as the worthy successor of that other distinguished son of Kansas, the Honorable William A. Ayres, with whom I also served in the House, and whom I am also proud to call my friend.

William A. Ayres, with whom I also served in the House, and whom I am also proud to call my friend.

To return from my digression, permit me now to consider one aspect of the Public Utility Holding Company Act that I think it appropriate to comment upon at greater length, since it is so closely allied to the basic philosophy of Thomas Jefferson. Jefferson had an abiding faith in the capacity of the people to govern themselves, and a firm distrust of financial institutions which were so power that see that the property with the right of the people to control their ful as to interfere with the right of the people to control their own destinies. You will recall his great fight upon the first Bank of the United States. He fought this proposal because he believed that the bank would become an instrument by which the moneyed interests could exercise an unhealthy influence over the Government. The danger he feared, namely, that execessively large and powerful financial agencies (of which some of the public utility holding companies are examples) can exercise excessive influence upon our governments, is much more serious today than it was in Jefferson's time. It need not remind you that in some States the great helding governments, is much more serious today than it was in Jefferson's time. I need not remind you that in some States the great holding companies have in the past poured millions of dollars of money, obtained from the people through charges for electricity and gas, into propaganda and political campaigns. These and many similar facts were developed at length in the notable investigation of public utilities conducted by the Federal Trade Commission, of which your own Billy Ayres is a valued member.

Jefferson saw that the best answer to this problem was to make it possible for the people to govern themselves and to control their own institutions. This cannot be done, of course, if private institutions are more powerful than the people themselves or the people's government. And unquestionably the great public-utility holding companies have in the past been in this category both politically and financially.

people's government. And unquestionably the great public-utility holding companies have in the past been in this category both politically and financially.

The Holding Company Act gives the Securities and Exchange Commission the power to put an end to this intolerable situation. It is designed to make our public utilities, under private ownership, more responsive to the interests and needs of consumers and investors and to save the industry itself from the ruin to which a few financial wizards were fast carrying it. It makes it possible for the control over local companies—which enter virtually every home in every city and village—to be exercised by the people through their local governments. It requires that every holding company restrict its operations to a single area or region which is not so large as to impair the advantages of localized management, efficient operation, or the effectiveness of regulation.

These simple words—localized management, efficient operation, and the effectiveness of regulation—are, in my opinion, a new charter of democracy for the people of this country. They are of tremendous significance as applied to the vital electric and gas industries, which are literally the nervous system of our national economy. But, more than that, I believe they point the way to a greater, healthier, and more stable America of tomorrow.

America must move forward; and the emphasis upon the breaking

America must move forward; and the emphasis upon the breaking America must move forward; and the emphasis upon the breaking up of feudalistic financial empires and upon the strengtnening of regional businesses and regional financial control, which is found in the Holding Company Act, points the road along which we may travel with profit. Too long has this section of the country—the far West and the South—been bound to the great financial centers of the East by the interwoven golden threads of remote but effective control. Too long have the essential industries of these regions been in bondage to the financial centers of the country. The result has been the unsympathetic administration which always ac-

companies absentee rule and the slow starvation which always occurs under the typical absentee landlord who feels no obligations to or dependence upon his tenants.

Under the leadership of William O. Douglas, who next Monday lays down the chairmanship of our Commission and takes his seat as a Justice of the Supreme Court, the Securities and Exchange Commission has made a beginning, within the narrow scope of its powers, on the task of regionalizing and localizing the Nation's financial machinery. In this, I am happy to say, we have had excellent cooperation by progressive leaders of industry and finance who are sincerely concerned over the necessity for putting our business and financial house in order. We have encouraged regional and local markets for securities; we have started a study of the financial needs of small business and of ways and means to meet those needs; we have attempted to standardize and simplify our regulatory duties under the statutes so as to facilitate the issue and sale of small amounts of securities to obtain capital for small enterprises; and under the Holding Company Act a variety of measures have been taken—in addition to those I have already described—that are designed to encourage local participation in the profits and control of local business. This is, of course, a bare beginning on a problem which has been too long neglected and which now imperiously demands solution. Under the leadership of William O. Douglas, who next Monday

beginning on a problem which has been too long neglected and which now imperiously demands solution.

There is one further aspect of the work of the Securities and Exchange Commission upon which I wish to comment. Jefferson wrote: "The execution of the laws is more important than the making of them." If that was true as to the laws that were in force in Jefferson's day, it is particularly true of the administration of these upwards by complex and technical laws that Generals and the complex and technical laws that Generals are the complex and technical laws. of those unavoidably complex and technical laws that Congress has entrusted to our Commission. It is only natural, therefore, to find that the Securities and Exchange Commission, like many similar that the Securities and Exchange Commission, like many similar agencies, has been given the power to determine whether or not certain activities should be permitted or proscribed, and under what circumstances others may be conducted. Such authority was necessarily conferred upon the Commission in order that it might adequately cope in the public interest with the intricacies of expanding business activities that are Nation-wide in their impacts and therefore beyond the control of State and municipal governments.

ments.

Administrative adjudication is flexible and pliable. The administrative agency is the mechanism by which a responsive government works responsibly; a means by which informed judgments may be made on a multitude of technical problems that are vital to the public interest. It would be hopeless to attempt to exercise the workaday powers of government by any other means. And administrative agencies have creditably borne their responsibility. Administrative agencies have been critically judged and, in impartial quarters, have been found not wanting.

Administrative agencies have been critically judged and, in impartial quarters, have been found not wanting.

In the heat of political debate these great nonpolitical reforms of the New Deal are often forgotten. They are overlooked simply because they are no longer a subject of debate—because they are accepted almost unanimously. With characteristic courage and sympathy for the needs of the Nation, President Roosevelt drove with the the heat of the foundation. sympathy for the needs of the Nation, President Roosevelt drove right to the heart of the financial evils. He called for and obtained laws governing the activities of those who descerate the temple of democracy with dishonest financial schemes. He insisted that in their dealings they be governed by old-fashioned, simple standards of honesty and fair play. He demanded that the control over the Nation by a handful of powerful and selfish men in the East be broken. What he has accomplished here is a monument which will long stand as another great memorial to the vitality of the real brand of Jeffersonian democracy in this country. It is in the best American tradition. It is in the best Jeffersonian tradition. It is in the best Roosevelt tradition. Without Roosevelt, and without such other far-seeing liberals as Jack Houston, Billy Ayres, George McGill, Ed Patterson, Randolph Carpenter, and Katherine McCarthy, that Kansas has contributed to our national councils, the program would not have been possible. Most of the bills were enacted into law over strenuous opposition from vested interests which always resist every effort to suppress monopolistic activities or to deprive them of valuable franchises for exploitation. These measures are all necessary to preserve the capitalistic system These measures are all necessary to preserve the capitalistic system for the common good and to prevent its destruction. In that sense,

for the common good and to prevent its destruction. In that sense, I say that they are truly and genuinely conservative.

How much governmental intervention there must be in the process of translating these laws into action that will effectively "promote the general welfare" depends upon industry. In this connection I quote a pertinent paragraph from an address delivered by Chairman (now Justice) Douglas a year ago:

"The social and economic objectives which will be won in this country have been clearly defined by the administration. If industry regulates itself in accordance with these standards, there will be no need or excuse for prodding from Government. If industry—whether it be an exchange on the one hand or a utility company on the other—will work with the law rather than around it, setting the pace in tune with the national will, as defined by the legislation, it will produce results which will make it necessary for Government it will produce results which will make it necessary for Government

to act only in a residual role.

"I know that there are sufficient brains, courage, and integrity in business to do this. Those who made industrial America can provide anew a leadership under this new social contract. They will find cooperation in those terms in Washington. They will find fairness, intelligence, and tolerance, and genuine assistance in solving their problems. If they will recognize and accept the new social contract which the times and the affairs of men have written and which this administration has articulated, they will find that they

can assume a real position of leadership and proceed under their own motive power without pushing and prodding by government."

Before I conclude, may I refer to the comment too often made that Thomas Jefferson opposed change and the expansion of governmental regulation. I think it is time that this notion be corrected. If it is true that Jefferson affirmed his belief that the government which government which government which government which government which government which governs least governs best it is also true that government which governs least governs best, it is also true that

he lived to decry it.

he lived to decry it.

It is utterly superficial to appraise Jefferson's political philosophy as expressed in his early writings, apart from the institutions of his time. His was essentially an agrarian outlook. Jefferson thought in terms of individuals, families, and small communities, quietly managing their own affairs. In 1816 he wrote to a friend reaffirming his basic faith in the citizenry and its ability to govern. At the same time, he acknowledged that the government which he had envisioned in his early youth was necessarily "a government restrained to very narrow limits of space and population."

Because Jefferson deemed it the duty of government to promote the welfare of the man, he knew that democracy would not work unless it accepted the principles of change. Shortly before he became President, Jefferson expressed his impatience with those who "look backward instead of forward * * * and recur to the annals of our ancestors for what is most perfect in government." And later he wrote:

And later he wrote:

cannot be touched nor modified, even to make them answer their end, because of the rights gratuitously supposed in those employed to manage them in trust for the public may, perhaps, be a salutary provision against the abuses of a monarch, but it is most absurd against the Nation itself." "The idea that institutions established for the use of the Nation

against the Nation itself."

The powers which Jefferson during his long years of struggle against tyranny and privilege thought should alone properly be entrusted to government proved inadequate when he became the responsible head of the Nation. And it is a credit to him as a thinker that he saw so many of the weaknesses in his earlier opinions and modified his views as he realized their deficiencies. As an outstanding advocate of "free commerce with all nations, political connections with none," he later sponsored the imposition of an embargo; as an outstanding opponent of the First United States Bank he is reported to have urged his party to support the creation of the Second Bank of the United States; and as an advocate of strict construction of the Constitution he was prepared to ignore his earlier ideas in order to justify his purchase of the Louisiana Territory. Enough has been said to show that Jefferson took a broad view of the Constitution in practice. We are now not concerned with pushing forward our geographical frontiers as was Jefferson and his age, but we are still concerned indeed, we are greatly concerned—with adapting our laws, habits, and institutions so as to improve the lot of mankind and to destroy and institutions so as to improve the lot of mankind and to destroy its bondage to privilege.

It is interesting to find that less than a decade after his retirement from public life he wrote to a friend:

"Some men look at constitutions with sanctimonious reverence "Some men look at constitutions with sanctimonious reverence and deem them like the Ark of the Covenant—too sacred to be touched. They ascribe to the men of the preceding age a wisdom more than human, and suppose what they did to be beyond amendment. I knew that age well; I belonged to it and labored with it. It deserved well of its country. It was very like the present, but without the experience of the present; and 40 years of experience in government is worth a century of book reading; and this they would say themselves were they to rise from the dead.
"I am certainly not an advocate for frequent and untried changes

"I am certainly not an advocate for frequent and untried changes in laws and constitutions. I think moderate imperfections had in laws and constitutions. I think indersate imperiections had better be borne with, because, when once known, we accommodate ourselves to them and find practical means of correcting their ill effects. But I know also that laws and institutions must go hand in hand with the progress of the human mind. As that becomes more developed, more enlightened, as new discoveries are made, new truths disclosed, and manners and opinions change with the

new truths disclosed, and manners and opinions change with the change of circumstances, institutions must advance also and keep pace with the times. We might as well require a man to wear still the coat which fitted him when a boy, as civilized society to remain ever under the regimen of their barbarous ancestors." Jefferson lived too early to visualize clearly the industrialism which began to appear on the horizon in his later years, but he was conscious of its coming. By 1816 he was prepared to acknowledge that the agricultural society of his day was yielding its supremacy and that a place must be made for industrialization in the Nation. By that time his party had moved far on the road toward nationalism. Sentimentally Jefferson could only road toward nationalism. Sentimentally, Jefferson could only regret this trend, but, as a wise and understanding statesman, the aged leader looked down from his Virginia mountaintop not

disapprovingly.

disapprovingly.

Jefferson, accordingly, if he were to apply the talents of his statesmanship to the solution of today's pressing problems, would certainly stress the need for greater buying power in the masses of our citizens who produce the wealth of the Nation. The deficiency in such mass buying power is at least one (and probably the most important) of those business and economic factors that are beyond the purview of the Securities Act and the Exchange Act, and that, as I have heretofore stated, can alone determine whether our industries and mercantile establishments are efficient, solvent, and successful. I speak of the subject here not as an S. E. C. Commissioner but as a middle westerner to whom these problems have tremendous significance.

As a practical matter, the word "masses" is synonymous with the farmer and the laboring man. They are the two legs of our great "economic man," and unless both legs are strong and healthy he cannot stand erect. And this he must be able to do, else our profit system will not survive. Nor can we expect the return of normal reemployment unless he does stand erect.

The numerical importance of workers in agriculture and workers in industry in our population is so great that they are unquestionably the key to normal reemployment, if for no other reason than their reciprocal capacity to consume one another's products. In Jefferson's time American agriculture bartered its surplus products. for industrial goods from Europe. I say "bartered," because there were then no appreciable tariffs or other artificial impositions to

were then no appreciable tariffs or other artificial impositions to interfere with fair exchange. There can be no doubt that in these times Jefferson would be the first to recognize the unbalance that exists as a result of the progressive shrinkage in the comparative exchange value of the money return, both gross and per capita, that now for almost two decades has been occurring in agriculture and only to a lesser degree in labor.

Knowing these things, our Government seeks to achieve a larger income for both these basic economic groups by protecting the farmer from surplus-glutted markets and by helping labor to protect itself from labor surplus. National welfare requires—in fact, sound and lasting prosperity requires—that the farmer receive a reasonable profit over his costs of production and that the wages of labor be maintained.

of labor be maintained.

A government which had a farm program and no labor program would be as hopelessly lopsided as one which had a labor program.

A wage earner who cannot earn a fair would be as nopelessly lopsided as one which had a labor program and no farm program. A wage earner who cannot earn a fair wage, can never pay a fair price for his goods, nor can he consume a fair amount. A farmer who cannot sell his products at a fair price and in fair volume can never consume the products of industrial labor. Farmers and labor are the Siamese twins of our capitalistic economy. They cannot live alone. They cannot move in different directions. Jefferson saw this at the beginning. Roosevelt sees it now velt sees it now.

Today—thanks to a government that stands ready and willing to help both labor and agriculture to attain a healthy balance—they each have a great opportunity. Labor can increase its annual wage level, establish a true partnership with industry, and, with the farmer as an ally, can become a powerfully constructive force in

our national economy.

If, therefore, in the light of our expanded industrialism, one would speak with that kind of unenlightened literalism which is always inaccurate, it might be said that we can have no Jefferis always inaccurate, it might be said that we can have no Jeffersonian democracy because we no longer have a Jeffersonian country. But his statements on the essential ends of government have never been successfully challenged. Certainly it cannot be gainsaid that in any age, those who are beneficiaries of an unjust economic and social order would do well to keep his philosophy in the background. While conservative in the highest and truest—the most altruistic and democratic—sense, his precepts contain no comfort for the stand-patter or the reactionary. Rather his was the conservation that stems from the admonition Rather his was the conservatism that stems from the admonition of the Apostle Paul to "prove all things" and then to practice conservation by "holding fast to that which is good." Jefferson's teachings insist upon human values and call for change whenever such values are forgotten or disregarded. It is no wonder that he has never been a favorite of the money changers and that the

unfortunate have ever regarded him as their champion.

It is said that the last whispered words of John Adams' failing breath were: "Thomas Jefferson still lives." Thomas Jefferson has passed from the earth but John Adams' words were true. They are still true and they will continue to be true so long as men shall yearn for peace and freedom.

W. P. A. Pressure

EXTENSION OF REMARKS OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1939

Mr. GRANT of Indiana. Mr. Speaker, the Congress has now appropriated an additional sum of \$100,000,000 for W. P. A. for the present fiscal year. When this is added to the original appropriation for this agency of \$1,425,000,000 and the first deficiency appropriation of \$725,000,000, passed by the present Congress in its early days, we find that there is a total appropriation of two and one-fourth billion dollars for the Works Progress Administration for the fiscal year 1939. This is important to keep in mind not alone for the staggering sum that it represents but to bring us to a realization that after 6 years of priming the pump with its constant approach toward national bankruptcy, we still have some 11,000,000 or more unemployed, and business threatened by confiscatory taxation and hesitant to go ahead. These facts should give us all cause for much concern.

Will the administration work with Congress in a sincere effort to make the present appropriation reach as far as possible for the benefit of those people for whom it was intended, or will it carry on its policy of unconcern in its effort to prove to the country that its original estimates were right and that Congress was wrong? Would the administration rather win an argument than make a real attempt to cut out waste in the administration of the taxpayers' money?

The problems that we have before us do not revolve about the question as to whether or not these people actually in need shall be given aid. All are agreed on that. The question is, rather, Shall we continue to pile up an ever-increasing national debt to burden our children and their children in the face of the fact that 6 years of experimentation have shown its futility? The question is whether we shall continue to appropriate billions of dollars of the taxpayers' money in the face of generally accepted facts of waste, extravagance, and partisanship in its administration.

We are hopeful that the investigation that is now under way by the Appropriations Subcommittee will make it possible to enact remedial legislation to cure these glaring evils.

In my home city of South Bend, Mr. Speaker, we are fortunate in having a township trustee who is taking it upon himself to make a case-by-case investigation of W. P. A. employees to determine those not actually in need. Already the investigation has made some startling disclosures. This investigation should have been made long ago by the administrative offices of W. P. A. itself. It is now long past due, and it is encouraging to report that there are those in public office who are anxious to correct the evils that exist in the administration of this agency.

In addition to the fact that there are those on the rolls who are not entitled to such assistance, I submit that some effort should long since have been made to effect economies and to reduce wastes in administration. It was shown in the hearings in the last deficiency appropriation that for the month of January 1939 W. P. A. spent \$150,174.22 for communications and \$488,929.62 for travel and subsistence. If this agency has any concern for the taxpayers of America or for the solvency of our Federal Government, what reasonable excuse could be given for such excessive expenditures? In the name of justice to the American people of this and the next generation, it is high time that we called a halt to such waste and extravagance.

It was also shown in the hearings, Mr. Speaker, that for a 6-month period W. P. A. carried on its Federal art projects at a net cost to the Government of \$19,000,000, and that the W. P. A. is nearing completion of a building on the site of the New York World's Fair that will cost approximately \$250,000, such building to be used to exhibit the glories of W. P. A. to the world. It is a far cry from the abiding concern of the American people in their unfortunate brethren to the wholly unwarranted and unjustifiable promotion of theatrical projects and the construction of a permanent building that is proposed to be donated to the city of New York at the conclusion of the fair.

Mr. Speaker, those unfortunate people on W. P. A. who, as victims of the world conditions in the early thirties were unable to carry on, do not want W. P. A. jobs but rather want real jobs at real wages. They are coming to the realization that a continuation of the present program holds out nothing secure for them in the future. The security that they want comes from an opportunity to work, to send their children to school and to college, and to provide for them in a manner that they as American citizens are justly entitled. They realize, more and more every day, that this cannot and will not come under a continuation of the present program of waste, extravagance, and uncertainty.

A few days ago Elliott Roosevelt, second son of the President, is quoted by the newspapers as saying:

The pump-priming theory was an abortive means to an end—a hit-or-miss program. The New Deal planners seem to have over-

looked the fundamental fact that without healthy competition and adequate returns there can be no healthy trade.

The jobs in private industry that these people want cannot come until this "healthy trade" is returned.

The President, speaking in Pittsburgh on October 19, 1932, said:

I regard reduction in Federal spending as the most direct and effective contribution that Government can make to business.

After 6 years of reckless experimentation, it is high time that this "direct and effective contribution to business" be made.

Mr. Speaker, I ask leave to include in my remarks a well-considered and thorough editorial, entitled "W. P. A. Pressure," which appeared in the issue of April 10, 1939, of the South Bend Tribune.

The editorial is as follows:

[From the South Bend (Ind.) Tribune of April 10, 1939] W. P. A. PRESSURE

So long as any persons not in need of the relief are maintained by the W. P. A. there cannot be any excuse for withdrawing W. P. A. relief from needy persons. The township trustees in St. Joseph County are to be commended for making an issue of that. Every taxpayer should give maximum support to the trustees in their effort to avert an increase in local direct-relief costs that cannot be justified by actual conditions. So long as the W. P. A. administrative expense account is inflated there can be no legitimate excuse for penalizing needy persons.

excuse for penalizing needy persons.

It looks as if an effort is being made to stir up resentment among the truly needy against legislators in Washington who are trying to bring about a relatively small reduction in the W. P. A. appropriation for the remainder of this fiscal year. The entrenched, extravagant W. P. A. bureaucracy, with Presidential assistance, is assuming a rule-or-ruin attitude. It is a dangerous game, socially as well as economically, and every thoughtful American should be deeply resentful and determined to thwart those bureaucrats.

deeply resentful and determined to thwart those bureaucrats.

They have not submitted proof that the appropriation sought by them is vitally necessary. Their plan evidently is to inflict suffering upon some W. P. A. dependents and rely on a wave of emotionalism to bring about a congressional surrender. If the W. P. A. appropriation reduction were to make actually necessary a cut in the amount paid to truly needy persons, it could be spread without dropping any needy person from the roll. As matters stand, however, there is no conclusive evidence that W. P. A. payments to truly needy persons must be cut at all.

ever, there is no conclusive evidence that w. F. A. payments to a dry needy persons must be cut at all.

W. P. A. workers and the general public ought to be impressed by the fact that no economy has been undertaken in the higher reaches of the W. P. A. The high bureaucrats who are throwing needy W. P. A. workers onto direct local relief because Congress is honestly trying to solve a serious financial problem have not reduced their administrative expenses. For administration they are spending \$5,000,000 a month. For telephoning and telegraphing they spend \$150,000 a month. The W. P. A. administrative expense every month is more than the administrative expense of the Reconstruction Finance Corporation, the Civil Service Commission, the Interstate Commerce Commission, the Securities and Exchange Commission, the Railroad Retirement Board, the Federal Trade Commission, the Federal Power Commission, and the Social Security Board.

It is the most inflated administrative agency in the generally

It is the most inflated administrative agency in the generally bloated Federal Government. Its infliction of distress upon needy W. P. A. workers has an ugly implication that no genuine American can consistently ignore. It ought to reduce administrative expenses considerably and expel the "chiselers." Then the appropriation, even if Congress cut it by \$150,000,000, probably would be adequate for maintenance of the truly needy on the present scale.

Repatriation of Filipinos

EXTENSION OF REMARKS

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 17, 1939

Mr. WELCH. Mr. Speaker, the bill H. R. 4646, which passed the House today, is to encourage the voluntary application of noncitizen Filipino residents in continental United States, its territories, or possessions to return to the Philippine Islands, their transportation to be provided for by our Government.

This bill is for the reenactment of a law which has been in force and effect for 4 years and offers further opportunity for Filipinos to return to their native home if the application is filed prior to December 1, 1940.

A great many Filipinos are now on relief, and inasmuch as the last W. P. A. relief bill contained a provision prohibiting aliens from securing relief, it is, therefore, most urgent that this bill be enacted into law so that they can return to their homeland and be taken care of from the resources of their own country and thereby not only lift the burden from the United States insofar as relief is concerned but also would help the unemployment situation in this

The only Filipinos who are eligible to United States citizenship are those who served in the Army and Navy, and, as stated above, being aliens, would preclude them from receiving relief under the recent law just passed by Congress.

The departure of the Filipinos from this country is absolutely voluntary and is not to be considered as a deportation matter. However, if a Filipino returns to his native land, he will not be permitted to return to this country, except as an alien-quota immigrant, which is limited to 50 immigrants per year, as provided for under the Immigration Act of 1924.

As stated before, the Government is offering to pay the expense of their return, including their sustenance, which should be taken advantage of by the Filipinos due to economic conditions in this country. It has been said the Philippine Islands have known no depression and I am sure the Filipinos could find work there and thereby make a place for the Americans to obtain the work they have been doing, and thereby diminish the number of our own citizens on relief rolls.

The enactment of the legislation is very imperative in view of present conditions and I sincerely trust, if passed, the Filipinos will appreciate what is being offered to them to return to their homes and friends and to an environment which is familiar to them.

Neutrality

EXTENSION OF REMARKS

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 18, 1939

EDITORIAL FROM THE FORT WAYNE (IND.) NEWS-SENTINEL OF MARCH 30, 1939

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following editorial by William J. Gross, which appeared in the Fort Wayne (Ind.) News-Sentinel on March 30, 1939:

[From the News-Sentinel, Fort Wayne, Ind., of March 30, 1939] PASS HOUSE BILL 163

One, and only one, bill before the Congress at this time (or, more accurately speaking, before the House Committee on Foreign Affairs) has even a reasonable probability, if enacted, of assuring

American neutrality in a foreign war.

That bill (H. R. 163) was introduced last January 3 by Representative Louis Lublow, Democrat, of Indiana. At the command of administration forces, acting on instructions direct from the White House, this measure has slumbered in committee ever since—despite the fact that it unquestionably represents majority

American opinion.

This is not to be confused with the so-called Ludlow amendment, This is not to be confused with the so-called Ludlow amendment, a proposal to write into the Federal Constitution a requirement that no war other than a war of defense be waged by the United States outside of the Western Hemisphere except after a referendum vote of the whole American people.

The Ludlow amendment or war referendum amendment is one thing; the other Ludlow bill, accurately entitled "A bill to establish the neutrality of the United States," is another thing.

For the moment, public attention should be concentrated on the Ludlow neutrality bill; and public petition should be addressed to Representatives and Senators demanding that this bill (H. R. 163) be enacted into law.

It is important that such demands be registered promptly and urgently to offset the stampede toward the distinctly unneutral measure introduced by Senator PITTMAN (S. J. Res. 97) to please

the White House.

The Ludlow bill (H. R. 163) is short and simple.

It provides that upon the outbreak of war between two or more foreign nations, the President "shall issue a proclamation forbidding (1) exports of all kinds and (2) loans and credits to said belligerent countries or to the nationals of said belligerent countries." Nothing "discretionary" about that. Nothing left to Presidential judgment. In the event of a foreign war, the President shall do so and so.

And this mendatory prohibition by the President "shall be made.

And this mandatory prohibition by the President "shall be made effective in a similar way by proclamation against nations that may enter the war subsequent to its outbreak and the nationals of said nations and to factions engaged in a civil war."

The Ludlow bill (H. R. 163) further makes it unlawful for any vessel of American registry to be chartered or used to transport goods in violation of the President's proclamation forbidding shipments, and it prescribes penalties.

It also provides that upon the outbreak of war between two or

at also provides that upon the outbreak of war between two or more foreign nations the President shall issue a proclamation notifying American citizens that "travel on the vessels of belligerent nations shall be at the traveler's own risk."

H. R. 163 also wisely provides that "whenever during a war between two or more foreign nations it shall come to the notice of the Secretary of Labor that any alien is engaged in the United States or any possession thereof in propagands activities other than tween two or more foreign nations it shall come to the notice of the Secretary of Labor that any alien is engaged in the United States or any possession thereof in propaganda activities other than the legitimate exercise of free speech, and by such activities is seeking to win the favor of the United States for one or more of the belligerents or otherwise to interfere with the neutrality of the United States, the Secretary shall immediately order the arrest of such alien and shall as soon as practicable deport him to the country from which he came."

This Ludlow neutrality bill also contains the perfectly wholesome provision that "recruiting in the United States in behalf of any belligerent foreign nation is forbidden," and sets the penalty for violating this prohibition at \$10,000 or imprisonment for not more than 5 years, or both. If law to that effect had been on the books a couple of years ago, the "red" brethren would not have found it so easy to enlist American boys for deadly duty in the Loyalist armies of Spain in a combat unit bearing the inappropriate title of "Abraham Lincoln Brigade."

Finally, the Ludlow neutrality bill provides that "whoever (1) disguises the identity of a consignor or (2) camouflages the nature or the destination of goods intended for ultimate delivery to a belligerent nation or to nationals of a belligerent nation shall be subject to a fine of \$10,000 or imprisonment for not more than 5 years, or both."

If it's neutrality the American people want, then they should by all means demand that their Congress enact H. R. 163. No other pending measure so simply, clearly, and straightforwardly provides for American neutrality, makes a policy of neutrality mandatory upon the people and their President, and thereby lessens the risks of all that war must mean.

of all that war must mean.

Spare the Prisoners

EXTENSION OF REMARKS

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 18, 1939

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. MARTIN J. KENNEDY. Mr. Speaker, in these days of hypocrisy and chicanery, with shadows and overtures of blood and thunder, it is refreshing to hear the voice of religion and human love calling the world to peace and mercy. It is even more refreshing to have a newspaper, steeped as the press necessarily is today in stories of war, crime, and human degradation, devoting editorial thought to praise and endorsement of the call to peace and mercy.

The calm, clear voice of His Holiness Pope Pius XII, in a message to Franco, asked the victor to spare the innocent. Today the Herald Tribune, in most convincing language, approves the message. Congress should join in this sentiment, which I am sure every Member of the House shares with me. This is the editorial, a model of fine sentiment and clear reasoning:

> [From the New York Herald Tribune] SPARE THE PRISONERS

It was in singularly moving words that Pope Pius spoke to "his beloved children of Catholic Spain," and with accuracy described the "cruel ruins" heaped up by the war. His praise for those who died for their faith was natural and deserved.

Yet it is the broader plea, underlying his whole address, which will especially stir sympathy the whole world around. He spoke of "those who have been deceived into errors of materialism." He applauded the victors' policy of pacification, which he declared to be in accord "with the wise principles inculcated by the church" and defined as "justice toward crime but benevolent kindness toward those who have been led astray." So far as phraseology goes he adopts the language of General Franco, to whom he gives high praise. The spirit in which the words are interpreted is what matters, however, and there can be no mistaking the fatherly and generous tone in which His Holiness, speaking in the Spanish tongue across the waters of the Mediterranean, addressed his followers in the peninsula.

erly and generous tone in which His Holiness, speaking in the Spanish tongue across the waters of the Mediterranean, addressed his followers in the peninsula.

Memory turns back to a noble precedent. The episode occurred in another and earlier war in which the passions of religion and revolution were also strangely mingled—the tragic struggle of the Catholic royalists of La Vendée, in the west of France, to halt the French revolutionists. In a bloody defeat at the Battle of Cholet, in 1793, the leader of the Vendéan peasants, the Marquis de Bonchamp, was mortally wounded. His soldiers, overwhelmed by his fate, resolved to execute the republican prisoners in their hands, to the number of 5,000, according to tradition. Dying, the last words that the general spoke were "Grace aux prisonniers!" His men obeyed the command, the prisoners were spared, and the words appear carved on the monument to Bonchamp in the Vendéan town on the banks of the Loire, where he died. Americans can, perhaps, feel an especial interest in them, since the soldier who uttered them gained his first military experience in the American Revolution.

We have refused to believe that General Franco will interpret his policy of pacification in an ungenerous sense, and we shall continue to hope that our faith will be justified by events. By the letter of his formula he could slaughter almost anyone. Applied in the spirit urged by Pope Pius, it would end the lives only of those guilty of actual crimes of violence and no others. Political disagreement, as conscience, would go free. Civil war, when fanned by the flames of religion and revolution, has a long and bloody record to its discredit. Yet, as in 1793, that past has been lit by moments of noble generosity, to be long remembered by mankind. General Franco has the opportunity to stand with these great of spirit. May he accept it wholeheartedly!

Whose War Would It Be?

EXTENSION OF REMARKS

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1939

EDITORIAL FROM THE MILWAUKEE JOURNAL OF APRIL 13, 1939

Mr. THILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of April 13, 1939:

> [From the Milwaukee Journal of April 13, 1939] WHOSE WAR WOULD IT BE?

Can President Roosevelt and the Washington Post commit the United States in advance to a war if Britain and France either decide there shall be a war or have war forced on them?

This question has suddenly taken the place of all others in the

This question has suddenly taken the place of all others in the forefront of America's anxiety.

Mr. Roosevelt, on ending his vacation in Georgia, told the Georgians, "I'll be back in the fall if we don't have a war." That could mean "if war doesn't come to Europe." The Washington Post raised the question whether it could not equally mean "if war has not come to the United States." And the President read the Post's article to correspondents with approval.

No one who knows this country can imagine that the American people will approve going to war by fall. Even if the worst befalls in Europe and the great powers are at war tomorrow, it is inconceivable that this country could be forced into war to defend itself by the end of the summer. And that is the only kind of war which

the Government has any excuse for entering until the Nation is plainly convinced that no other course is open.

The editorial article to which President Roosevelt calls attention argues that war can still be averted "if the free nations are willing to show that they will take a stand before it is too late." Taking

a stand, it explains thus:

"Nothing less than a show of preponderant force will stop them (Germany and Italy), for force is the only language which they understand."

The "force" meant is the declaration that Britain, France, such allies as they can command—and—the United States shall make it clear that they will fight if the Rome-Berlin axis goes beyond a certain line.

certain line.

The theory has some merit and deserves to be examined. It is that in the event of any prolonged European war the United States would ultimately be drawn in. This is what many Americans believe. And, further, that it is common sense and realism to make this clear in advance and so—we hope—avert war.

The argument is that if Germany had known in 1914 that Britain would fight, she might not have forced war; that if Germany had realized when she began attacking American vessels that America would eventually enter the war and could transport millions of men, she would not have launched the ruthless submarine campaign.

There is a good deal to be said for that theorizing. But it is not enough to persuade the American people that we ought now to issue an ultimatum which, if rejected, would plunge us immedi-

ately into war.

ately into war.

The significant warning of Bernard Baruch only last week against an economic war applies with tenfold force to what the Washington Post openly, and President Roosevelt by implication, proposes. Said Mr. Baruch: "If our economic war fails, we will be in a military war."

America is not ready for a military war until she is convinced that it is inevitable. America to be convinced must know what she is fighting for.

is fighting for.

Who would set the limit to German-Italian aggression? what principle? We have seen the European democracies bristle against aggression, even introduce half-hearted economic sanctions,

against aggression, even introduce half-hearted economic sanctions, and then surrender to the successful aggressor.

What is the principle of justice for which we would fight? Was it right to let Japan seize Manchukuo and go on to conquer China; was it right to recognize Mussolini's conquest of Ethiopia; was it justice for Hitler to take over Czechoslovakia; may the Rome-Berlin axis have Albania and welcome? But if British control of the Mediterranean is endangered; if it is suggested that France let go of some colonial possessions in Africa, then must the free nations of the world spring to arms or hide their faces in shame? Is that the proposal?

We fought a war. We made victory possible. We saw Mr. Wilson trying to insist on some principles of human justice. We took nothing for ourselves. But when the smoke had cleared away, we saw that we had taken a good deal for other nations.

saw that we had taken a good deal for other nations. After that, can we give assurance to any nation or group of nations that "when you say it is time to fight, we will be with

If we had followed the temper of the eastern seaboard in 1915, we would have been in the last war 2 years earlier than we were. Our money would have poured across the Atlantic, and, all unprepared, our men would have dribbled across. Does anyone think that would have been better? For ourselves or even for those who became our allies?

Suddenly, without discussion, has come a crisis in this Nation. Not in 20 years has so grave a decision faced us. It is the duty of Americans everywhere to speak out and say whether they approve entrusting our fate to the decision of any other nation. Today we know no better counsel than the words of Lincoln:

"If there be an object to hurry any of you in hot haste to a step which you would never take deliberately, that object will be frus-trated by taking time; but no good object can be frustrated by it."

Lawlessness-A National Menace

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 18, 1939

ADDRESS BY. J. EDGAR HOOVER, NOVEMBER 14, 1938

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by J. Edgar Hoover, Director, Federal Bureau of Investigation. United States Department of Justice, delivered before the Economic Club at Detroit, Mich., November 14, 1938:

It is indeed a pleasure and a privilege to be permitted to address the membership of the Economic Club, representing as it does the highest level of business and professional intelligence. I am particularly gratified to be able to meet with you to discuss the problem of lawlessness, because as a national menace it has a very definite relationship to economic problems, particularly since the business interests depend upon national and local business security. Organized or the problems of the problems.

interests depend upon national and local business security. Organized crime, unless it is checked to a marked degree, threatens the economic and industrial interests of our Nation.

Crime and criminals have received much public attention in recent years, although crime has existed from the beginning of time. It is, of course, recognized that we always will have a certain amount of crime. None of us can hope that lawlessness can be completely eradicated from the fabric of modern civilization. The warfare between crime and the forces of law and order has been the

warfare between crime and the forces of law and order has been the topic of narration and writing since prehistoric man learned to speak and write. Philosophies and religions center upon a basic theory concerning the struggle between the forces of good and evil. However, we can become too philosophical and complacent about the inevitability of crime as a dominating factor in our civilization. In fact, all of history unites in telling us that when and where crime or a disregard for law and order attains definite proportions the State itself deteriorates. It is the necessity for a firm existing

the State itself deteriorates. It is the necessity for a firm existing basis in our economic life of respect for and allegiance to the forces of law and order that I want to emphasize in my remarks to you. When we pass from the realm of a theoretical consideration of the ever-recurring struggle between the forces of good and evil, we are impelled individually and collectively to face that struggle in our daily lives. Some may say that we of law enforcement have overemphasized the significance and danger of the crime problem; that we have become unduly alarmed at existing conditions. Yet, indisputable figures prove that criminality and criminals today present a problem of disturbing import which must be solved if our traditions and institutions, which have been handed down to us as a heritage of the struggle and sacrifice of our forefathers, are to be safeguarded. are to be safeguarded.

are to be safeguarded.

First and foremost, we can point in terms of actual figures to the criminals themselves who threaten society with their depredations. This army of criminals numbers at the present time over 4,600,000 persons. This number of individuals banded together for any definite purpose might well be considered to constitute a very serious challenge. Four million six hundred thousand individuals constitute as a constitute as a constitute of the viduals constitute an army greater than any that overran Europe and Asia in ancient times. Well organized and armed, it casts an ominous shadow over the peace of the world and threatens our

ominous shadow over the peace of the world and threatens our own individual security and safety.

Are these figures fully understood? Would these facts be more realistic if I pointed out that last year in this country a serious crime was committed every 22 seconds; that 3,879 serious crimes were committed every day; that nearly 1,500,000 serious crimes, such as murder, manslaughter, rape, robbery, burglary, and aggravated assault, were committed during the year; that 37 murders were committed every day; that 1 burglary was committed every 1¾ minutes; that 1 robbery was committed every 9 minutes; and that 1 larceny was committed every 40 seconds?

I shall neither weary nor shock you by relating the extent of other crimes or by going further into the report, not of alarmists, not of hysterical individuals with no knowledge of existing conditions, or theorists who prate of things they do not know, but actual crime reports received from police officials in every section of the country, who are carrying a burden which should be shared by every citizen interested in the peaceful pursuit of his private life.

life.

Perhaps you, as economic leaders, might be still further alarmed if you consider that we are dealing with probably the largest enterprise in the United States, particularly with regard to the expenditures it involves. The annual cost of crime in this country is estimated to be \$15,000,000,000, and it may be said that a \$15,000,000,000 enterprise even in these days and times is large in every sense of the word. This predatory activity levies and collects a yearly tax of nearly \$120 for every man, woman, and child in our Nation.

In order to present the problem in a still more realistic manner, may I say that this \$15,000,000,000 annual cost of crime is 400 percent greater than the national annual cost of education, which is \$3,000,000,000. In other words, the onslaughts of these criminal hordes are costing us 400 percent more than we are spending in the education of the juvenile members of our communities. Perthe education of the juvenile members of our communities. Perhaps if we spent more upon constructive education, our crime bill might be less. It may be further noted that the cost of law-lessness is 25 percent more than our total annual tax bill of approximately \$12,000,000,000.

The menace of crime applies not only to the immediate victims of the criminals. It also affects most intimately the families of these 4,600,000 criminals, who suffer the pangs of humiliation, disgrace, and serious want when breadwinners are incarcerated in institutions for the protection of the public.

Any reference to the crime problem would, of course, be incomplete without calling the attention of practical men to the fact that it is not the ostensible individual criminals alone who must be combated in protecting our communities from the results of crim-

combated in protecting our communities from the results of crim-

inality. Criminals, in their individual capacity, or even collectively, would be practically powerless were it not for the fact that they are supported by a national organization of corrupt bondsmen, fixers, go-betweens, pay-off men, aiders and abettors of an apparently respectable character, harborers, shyster attorneys, crooked physicians, as well as some persons in public office whose support is given either tacitly or actively. It would be difficult to estimate the size of the army that supports the flying squadrons of criminality. Add any estimate, however, no matter how conservative, to the number of known criminals and you will have some general idea of the far-reaching ramifications of the crime problem confronting us.

fronting us.

Too often in dealing with this problem we think only of spectacular crimes of violence. Our citizens feel that if others can be murdered and slugged, maltreated, and robbed at the point of a gun, this can also happen to them, and citizens should entertain this view. However, too little attention is often paid to the most flagrant crimes which are perpetrated behind the guise of psuedo-respectability by certain unscrupulous individuals in banking, finance, industry, and every other walk of life. We cannot forget the untold harm done to thousands of our citizens in our communities by depredations on the part of those individuals who, responsible for the conservative well-being of our financial institutions, have failed in their trust and have gone to jail in part payment for their recreant actions and failure to realize or recognize the sacredness of the responsibility imposed upon them. payment for their recreant actions and failure to realize or recognize the sacredness of the responsibility imposed upon them. These instances of just punishment will not, however, return lost happiness to the unfortunate ones who find their life savings swept away, who are compelled to face their declining years helpless, a burden upon their friends, their relatives, and their communities. The gun-toting hoodlum is far less reprehensible than the despicable thief who, clothed in respectability, violates the confidence imposed in him by thousands of honest but trusting citizens.

citizens.

The crimes of pseudo-respectable crooks are closely alined with the present-day menace of venal, corrupt politics. I feel that the problem of inefficiency, the waste, the stifling influence of corrupt politics with regard to law enforcement will particularly appeal to those accustomed to meeting and solving business and economic problems upon a large scale. Much has been said about the menace of venal politics to modern law enforcement but little has been done to correct the situation. The businessman and community leaders should insist upon honesty in public office. There can be no honesty in a public office which does not permit law-enforcement officers to function independently of all corrupt influences, the worst of which is venal politics. the worst of which is venal politics.

The splendid progress of law enforcement in the past few decades is amazing when we consider the tremendous handicaps and hindrances that it has been necessary to surmount in corrupt, egominded politicians. The real "public enemy No. 1" against law and order is corrupt politics. As businessmen and citizens desirous of our country's good, I know of no more worthy endeavor in which you can engage than in eliminating every vestige of corrupt political influence from the administration of criminal justice.

True public servants interested solely in the general welfare of

cal influence from the administration of criminal justice.

True, public servants interested solely in the general welfare of the people whom they serve, skilled in the science and art of government, must supplant the exponents of lawlessness and greed. The title "politician" is an honorable one, and representatives of this ancient calling, assisted by honest citizens everywhere, must constantly be vigilant to insure against its being alined with lawlessness. Law-enforcement officers are public servants, but they cannot exemplify law and order until and unless they are freed from this appalling burden that hinders and corrupts the proper enforcement of law in so many of our communities.

from this appalling burden that hinders and corrupts the proper enforcement of law in so many of our communities.

It is, of course, unbusinesslike, unnecessary, and highly undesirable, to say the least, that law enforcement continues to be a political football. It is only necessary that you consider the situations existing in practically any large city in order to convince yourselves of the menace of venal politics in law enforcement and the absurdity of the criminal waste resulting from this condition. In one large city, for instance, there have been 31 chiefs of police in 63 years. I wonder what degree of efficiency could possibly exist in the various enterprises for which you as businessmen are responsible if you were compelled to accept a change of administrators at periodic intervals. This, of necessity, would prevent them from acquiring little more than a superficial knowledge of the many intricacies and problems of your business.

In this regard, I might call your attention to the Federal Bureau

In this regard, I might call your attention to the Federal Bureau of Investigation, of which I have the honor to be Director, which during the past 14 years has functioned totally free of all political influence of any kind or nature whatsoever, with regard to appointments, promotions, and every other phase of its maintenance and development. This has been possible, of course, because of the far-sightedness of such splendid officials of the public good as the present Attorney General, Hon. Homer Cummings. That it has been accomplished, however, is an indication that it is an actual, practical possibility, and a necessary condition for efficient and effective law enforcement.

I take pleasure in saying that of the 139 kidnaping cases which have occurred since the passage of the Federal kidnaping statute in 1932, 137 have been successfully and completely solved by the Federal Bureau of Investigation, with the excellent assistance and cooperation of many local law-enforcement officers. It is also with a sense of pride that we have viewed the great growth of the Identification Division from a few hundred thousand sets of fingerprints in 1924 to what now totals over 9,500,000 sets of fingerprints— the largest repository of criminal identifying information in the world—available to each and every law-enforcement official and

world—available to each and every law-enforcement official and agency without cost.

In the field of bank robbery it is interesting to note that since the passage of the Federal bank robbery statute in 1934 such robberies have been reduced by over 75 percent, with the consequent result that bank robbery insurance rates in 35 States have been reduced over 30 percent. In cases of all types investigated by the F. B. I. convictions have been obtained in the Federal courts of over 95 of every 100 persons brought to trial, and, while our total cost of operation last year was \$6,200,000, the total value of recoveries effected, fines imposed, and savings to the Government in cases investigated by the Bureau totaled over \$47,000,000.

ment in cases investigated by the Bureau totaled over \$47,000,000, a return of \$7.64 for each dollar spent.

Another very important phase of law enforcement, or a condition which seriously affects law enforcement and government, is one which desperately needs the intelligent consideration and pracone which desperately needs the intelligent consideration and practical attention of our country's leading economists, businessmen, and industrialists. I refer to the much discussed question of parole. "Whom the gods destroy they first make mad," and if I were a member of the group of professional sentimentalists who misinterpret, distort, and destroy the essential validity of the parole principle, I believe I should fear something more or less immediate in the way of destruction. It may be generally noted that, presumably lacking arguments in refutation, they now indulge in a vicious attack upon the principles and beliefs of those who contend that parole should be a medium for the protection of society as well as a device permitting the release of persons capable of reformation. of reformation.

of reformation.

Through years of experience in the law-enforcement field law-enforcing officials have attained some measure of comprehension as to the scope and importance of the principle of parole. We are real-istically concerned with parole not only so far as its influence upon the individual criminal is concerned but also mainly and basically with the influence of unrestricted, ill-considered parole upon the interests of society. We of law enforcement feel that this is a problem in which we should receive the enthusiastic support of practical men who must grapple with the country's economic problems. All that we ask, those of us who protest against the theories which would set free from our penitentiaries habitual criminals of the most sordid, vicious, irreclaimable types, is that the interests of society be considered first and foremost and that a common-sense viewpoint be taken of the principle of parole as a whole and the execution of that principle in particular.

We join with all those who hold that there are certain types of criminals, youthful for the most part, who are subject to reforma-

We join with all those who hold that there are certain types of criminals, youthful for the most part, who are subject to reformation and rehabilitation. It is well that this is so and it is well that this should be recognized by the practical criminologists of the day in order that every effort can be made to support those who would reclaim for society the members who have strayed from the beaten tracts of rectitude and honor. Reformation, theoretically, is always possible, but reformation, practically, of confirmed, habitual criminals is so rare that in applying the parole principle it becomes a crime and nothing else to indulge indiscriminately in the hope that this type of criminal can be reformed and to make society pay the penalty for what is so often proved to be an error in judgment, based upon a sentimental, ill-considered viewpoint of individual criminals, rather than a consideration of the entire problem.

We need your aid in this crusade for a policy of practical parole

rather than a consideration of the entire problem.

We need your aid in this crusade for a policy of practical parole that will tend to insure the safety and continued protection of the helpless members of society, of your wives and children and the wives and children of the law-abiding elements in all parts of the country. Obviously, since these are in the majority and, obviously, since their interests and safety and their defense against the brutality and violence of those whose only place is behind prison bars is or should be a primary consideration, we feel that we can well appeal to the sound common sense and rational judgment of our citizens to bring about an immediate comprehensive reform in certain corruptions of the original workable theory of parole.

one more point or phase of the crime problem should be brought, I believe, to your attention. All of the law-enforcement agencies in the world combined cannot successfully cope with the criminals that society can produce. With increased scientific methods at the disposal of well-educated criminals, and with a continuing increase in the ratio of criminals produced by society, we might well be pessimistic about the future of the race. It is for this reason that continuing, broadening, and increasing efforts should be made by all of those interested in law enforcement to clarify the stream at its source. its source.

The solution of the crime problem is comparatively statement, and, in the same breath, the most difficult of all human problems in execution. It consists in the rearing of law-abiding problems in execution. It consists in the rearing of law-abiding youth. The functioning of youth movements has an inestimably beneficial effect upon the welfare of the juvenile members of our communities, and any work which improves the moral outlook and character of the younger members of society justifies itself in the dividends which posterity will receive.

Our youthful delinquency is a problem which strikes into practically every home in America. Every parent should give the deepest consideration to this problem because the responsibility

for youth in crime today rests on the doorstep of the home. We have youth in crime because of the lessening of parental responsibility and family discipline. It is due to a tendency to evade responsibility that parents in many instances have allowed their children to stray. In straying, they commit crimes which send so many of our boys and girls into penitentiaries and reformatories, which in reality are "criminal colleges," where they are either educated into further criminality by hardened recidivists or pampered by crime-coddlers into the belief that they can commit new infractions with impunity. commit new infractions with impunity.

None of those interested in law and order can afford to over-

None of those interested in law and order can afford to overlook the splendid work which is being done in the field of crime prevention. The bringing of opportunities to young boys for supervised recreation, affording them possibilities of developing athletic skill in all kinds of sports, bringing them together for rational, decent social diversions, permitting them to acquire a balanced, sane outlook upon life by reason of their association with adults whom they admire and who can directly, by example or otherwise, instill the highest moral principles and ideals—all of these movements are worthy of enthusiastic and continuing support from those interested not only in the problem of crime and the criminal, but in the well-being of humanity at large.

Apprehending criminals and punishing them is only a part of the solution to the problem of crime. Producing honest citizens is the major objective in which we are all interested. This can only be done if the home life is of an uplifting character and if those men and women who have the interest of their country at heart devote some time, thought, and attention to the discharge of this

devote some time, thought, and attention to the discharge of this

most important duty.

Law and order present to the citizens of this country a problem in Americanism, and particularly is this true today. It behooves us to retain that spirit of Americanism that was handed down to us by the founding fathers. We have in this country a treasure us by the founding fathers. We have in this country a treasure which we must preserve, protect, and defend. Subversive alien theories and isms are not only a drastic contrast to American ways of thinking, feeling, and acting, but they stand for a complete overthrow of established ideals of American life and the philosophy of government to which America is dedicated. This encroachment must be met, countered, and overcome. We must hold fast to those original ideals of democracy which were promulgated at the birth of the Nation and which have promoted its growth and development throughout the years.

throughout the years.

Among the essential, native American traits has always been a respect for law and order, a determination that the laws of a demo-cratic country must be enforced and that the free will of the people, as expressed in its legislative mandates and moral codes, must be sacredly observed and obeyed. If they are preserved, there can be no doubt as to the future of law enforcement. The soil that nurtures our cherished institutions and way of life must be kept clean if we are to continue in the unchallenged enjoyment of our inheritance of liberty under law and peace with progress.

Are 3 Years Long Enough to Teach a Deserving Democrat to Pass a Postmaster's Examination?

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, April 18, 1939

Mr. REED of New York. Mr. Speaker, there has been an acting postmaster at Chautauqua, N. Y., since July 1, 1936. Two Civil Service eligible lists have been established, but no one has been appointed from either list. The acting postmaster failed in both examinations to attain a place among the first three applicants. So a third examination has been

If anyone has taken seriously the merit plank in the tumbled-down Democratic platform, or the claims of President Roosevelt and the Honorable James A. Farley to the extension of the merit system, I would remind him that the post offices were first filled with Democratic politicians in the capacity of acting postmasters who are permitted to hold on to the offices until they can pass an examination.

None of the three eligibles in the first two examinations at Chautauqua was acceptable to the Democratic machine. When the third examination was announced I was amused at the efforts to disqualify Mr. George A. Ross, the gentleman who had headed the eligible list in the first two examinations. He lives on the same route, the same distance from

the post office as does the acting postmaster; he has not changed his residence for 10 years; twice he was certified as the highest eligible. When the third examination was announced last fall he was advised by the Civil Service Commission that, on account of his residence, he was not eligible to try this examination.

I brought to light this bit of political chicanery and the decision was reversed, permitting this candidate to take the examination.

In the meantime, however, one of the first three eligibles has grown too old to take the examination. Thus, at last, a deserving Democrat may forge into one of the first three places and the "merit" system may be permitted to operateafter 3 long years.

If the Democrats were to do directly that which they are doing indirectly, civil service would be abolished, the Democratic organization would make the appointments, and the acting postmasters would be confirmed as soon as they could be tutored to pass an examination, even though it required

Obligations to the Federal Government of Farmers in Drought-Stricken Areas of Minnesota

EXTENSION OF REMARKS

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1939

JOINT RESOLUTION OF THE LEGISLATURE OF THE STATE OF MINNESOTA

Mr. H. CARL ANDERSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution recently adopted by the Legislature of the State of Minnesota:

Joint Resolution 17

The Legislature of the State of Minnesota, in regular session assembled, memorialize the Congress of the United States to enact legislation relieving the farmers who gave their notes for feed during the drought years 1933 and 1934 from cash payment

Whereas the citizens of the State of Minnesota witnessed a severe drought during the years 1933 and 1934, which drought worked a tremendous hardship on the farmers of this State and

made it necessary for them to purchase feed for their animals; and Whereas the Federal Government found it necessary to ship large quantities of feed to the drought-stricken areas which was

large quantities of feed to the drought-stricken areas which was sold to the farmers at exhorbitant prices, in excess of the present price tenfold, and for which the farmers gave their note to the Federal Government; and

Whereas it was to the advantage of all the people of our State that those animals should be and were fed; and

Whereas the farmers who were forced to purchase such feed at unreasonable prices have been and still are unable to pay the notes in cash due to the distressing economic conditions which prevail but are willing to discharge them by way of work on Federal or State projects; and

but are willing to discharge them by way of work on Federal or State projects; and

Whereas the Federal Government pays annually to the State of Minnesota large sums of money for relief and road projects, part of which could readily be diverted to the retirement of notes given by the farmers by permitting the farmers to work on Federal projects and on the roads: Now, therefore, be it

Resolved by the Legislature of the State of Minnesota in regular session assembled, That we memorialize the Congress of the United States to enact legislation that will permit the farmers of the State of Minnesota to discharge the notes given by them for feed during the years 1933 and 1934, such legislation to take the following form:

1. Transfer the notes from the Federal department now holding the same to the Federal Emergency Relief Department and grant that department authority to allot such notes to the State of Minnesota in payment of relief appropriation to the State, with authority in the Governor and State relief department to permit the makers of the notes to discharge them by means of labor; or

2. If the legislation set forth in the preceding paragraph is not feasible at the present time due to a lack of time or for other reasons, that the notes be canceled outright; or

3. That the notes be transferred by the Federal Government to the State relief department, with authority granted to the Governor

of Minnesota to prescribe rules and regulations for the honorable discharge of such notes by the makers thereof.

Be it further resolved, That the secretary of state of the State of Minnesota he, and he is hereby, instructed to transmit a copy of this joint resolution to the Honorable Franklin D. Roosevelt, President of the United States, and to each Member of the Senate and House of Representatives of the United States from the State of Minnesota. Minnesota.

The Tennessee Valley Authority

EXTENSION OF REMARKS

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES Wednesday, April 19, 1939

RADIO ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK

Mr. McKELLAR. Mr. President, a few days ago the Senator from New York [Mr. Mead], who now happens to be occupying the chair, delivered a most interesting and instructive address, over the Columbia Broadcasting System, on the Objectives and Accomplishments of the Tennessee Valley Authority. It is an able address. The Senator from New York was on the committee investigating the Tennessee Valley Authority, and has first-hand knowledge of the matters of which he speaks. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be

printed in the RECORD, as follows:

During the past 12 months, as a member of a joint committee appointed by Congress, I have been privileged to participate in a searching and intensive examination into the affairs of the Tennessee Valley Authority. The work of this committee was concluded and its report filed with Congress on April 3.

Three of the Republican members of the committee chose to file minority reports, in which they contend that the investigation has not been thorough. An examination of the majority report is sufficient answer to this contention. Likewise, the record shows that the minority members have been compelled to support their so-called constructive criticism of the T. V. A. with the same discredited arguments used by the opponents of this project since its creation. its creation.

To fully understand the objectives and accomplishments of the T. V. A. and to make any appraisal of its work requires recognition of the fact that the Government of the United States has a solemn obligation to conserve and develop the natural resources of the country for the benefit of its people. During these critical days when the world is striving to avert another great war, it requires little analysis to conclude that if the economic and social security of the countries of the world were secure the present threat to

our civilization would not exist.

In 1933 President Roosevelt addressed a message to Congress in which he recommended the creation of the Authority to be "charged" with the broadest duty of planning for the proper use, conservation, and development of the national resources of the Tennessee River drainage basin * * for the general social and economic welfare of the Nation."

welfare of the Nation."

The question naturally arises, Why was the Tennessee Valley region singled out and given this special treatment? On inquiry, several pertinent facts make their appearance. It is found that since the time of President Monroe the Federal Government has been urged to make the Tennessee River navigable. It is to be remembered that during the late war the importance of this portion of the country in the national-defense program was emphasized by the construction of Wilson Dem and the Musel Shoels. sized by the construction of Wilson Dam and the Muscle Shoals nitrate plants. However, more important is the fact that the social and economic ills which have affected all regions of this country and economic ills which have affected all regions of this country are found to a marked degree in the Tennessee Valley. For example, we find in this particular region the river, a natural highway that could not be economically used due to its undeveloped condition. Floods periodically brought tragedy and destruction to those who had endeavored to build homes and livelihood. The health of the people was jeopardized by prevailing diseases. The soil became exhausted, and the forests were depleted. The income of the region diminished instead of increased, causing many of those of employable age to leave their homes and crowd into the industrial cities. Thus, for the first time, a coordinated effort was made by the Federal Government, through the Tennessee Valley Authority in cooperation with the States, to solve the grave problems of a region. Previously, in other areas, the Federal Government endeavored, with some success, to conserve our natural resources. Waterways were improved. Attempt was made to control destructive floods.

The Department of Agriculture and the Forest Service did heroic work in replenishment of the soil and reforestation of the hillsides. But in the majority of instances the cost of these vast undertakings

has fallen on the taxpayer.

It must be remembered that it takes more than 6 years to over-come the neglect of decades. The wisdom of the Tennessee Valley project, where all of these problems are attacked on the broad front, can be appraised by the accomplishments to date. In addi-tion to the advantage of the coordinated attack, this project will be self-liquidating.

Under its creative act the Authority must provide and maintain a 9-foot navigable channel 650 miles long from Knoxville to Paducah, where the Tennessee River joins the vast inland waterway system of the Mississippi. It is obligated to provide flood control not only on the Tennessee River but also to assist this effort on the lower Ohio and Mississippi.

It is important to note that, as far as may be consistent with these purposes, the Authority is authorized to generate and sell power, to encourage increased use of electricity, and to assist in liquidating the cost of the projects. This latter direction adopts a principle enunciated by President Theodore Roosevelt in 1903 when in considering a similar project, he stated: "The improvement should be made to pay for itself so far as practicable."

The Authority is authorized to construct such dams and reservoirs as are needed to provide the necessary navigation channel and to control the destructive floodwaters. It likewise is empowered to equip these dams with power-generating facilities and to build transmission lines. Important, too, is a direction to the Authority to improve, increase, and cheapen the production of fertilizer.

to improve, increase, and cheapen the production of fertilizer. In addition, it is obligated to cooperate with the States and to plan

for the general well-being of the people living within the area.

Thus, the program set forth in the T. V. A. Act does not depart from the traditional American policy of developing and conserving its national resources for the public use. It is new only in that, for the first time, a program is provided which coordinates all developmental activities in an entire region.

To accomplish the desired results a splendid corps of engineers, headed by Arthur E. Morgan, evolved what is now called the "unified plan." This plan, using the basic material compiled by the Corps of Army Engineers, provides for the construction of an interlocking series of dams and reservoirs on the main stream and interlocking series of dams and reservoirs on the main stream and the tributaries of the Tennessee River. The dams are so designed that they can be operated as a system in order to obtain the most efficient navigable channel and provide maximum control of destructive floodwaters. Most of these dams will be equipped with generating facilities which will turn the waste water into power to be made available at the lowest cost to domestic and rural consumers or directed by the set.

be made available at the lowest cost to domestic and rural consumers, as directed by the act.

Even though only four of these dams are now completed and in operation, the results achieved prove conclusively the feasibility and merit of the unified plan. Not until all of the dams on the main stream are completed will Knoxville be linked to the Mississippi with a 9-foot navigable channel. However, already the value of these dams in controlling destructive floods has been demonstrated, and power is being distributed for the benefit of urban and rural consumers.

It is with reference to the generation and sale of electricity that

and rural consumers.

It is with reference to the generation and sale of electricity that the controversy regarding the T. V. A. has been most bitter. Private power companies have for many years concluded that they had a natural monopoly in the areas they served, and any competitive influence has been greatly resented and discouraged.

Had the Federal Government been content to forego the benefits available from the generation and sale of power and burdened the taxpayers with the cost of the navigation and flood-control features of this undertaking, most, if not all, of the objections of the T. V. A. would have been removed.

The term "yardstick" has been used rather freely in these past 5 years, and until the committee made this investigation its meaning has been much confused. The committee finds that the rates charged to the ultimate consumer of T. V. A. power are a fair yardstick of what rates should be, whether produced by private utilities or by Government operation.

An attempt is made to discredit the power operation of the

An attempt is made to discredit the power operation of the T. V. A., and the yardstick has been violently criticized as unfair. Whether through ignorance or with intent, the result has been to add confusion to a question already complex. It has been asserted that because T. V. A. power is produced by multiple-purpose structures, and the T. V. A. is not obligated to pay taxes on its physical properties, but only on its gross revenue, the wholesale rates of the T. V. A. are subsidized and are not, therefore, comparable with

the T. V. A. are subsidized and are not, therefore, comparable with the rates of private utilities. Unfortunately, these critics fail to distinguish between fact and argument, nor do they recognize the difference between wholesale T. V. A. rates and retail T. V. A. rates. It should be clearly understood that in producing electricity the taxpayers of this country are not subsidizing the T. V. A. in its power program. The committee's engineers, in their impartial study, have obtained convincing evidence that, without any subsidy, the T. V. A. wholesale rates are sufficient to cover all costs to the Government, including interest on investment, all taxes, and still provide a profit.

the Government, including interest on investment, an ease, and still provide a profit.

The T. V. A. yardstick is not in the wholesale operation but in the retail distribution. The evidence shows that the T. V. A. wholesale rates are substantially the same as the wholesale rates of private utilities for power delivered to the distributor. The retail rates are fixed in the contracts made by the T. V. A. with its distributors,

and the evidence shows that, even though T. V. A. retail rates are lower than those charged by private utilities, the revenues provide a fair profit after paying all costs any private distributing power company is obligated to pay. Thus the real yardstick is in the spread between the wholesale rates and the retail rates charged to the ultimate consumer.

In this connection it is interesting to note that since the T. V. A. commenced its power operations and initiated its retail rates in the Tennessee Valley area, retail rates of private utilities have been decreased at least one-half, power consumption has considerably increased, and a fair return is still being made by the private power

companies

companies.

Equally important to the taxpayers of this country is the fact that the impartial study made by the committee's own engineers establishes that, within 50 years, the revenues received from the sale of power will be sufficient not only to pay all operating expenses and capital charges for the power-generating facilities, but also to liquidate the entire investment for the multiple purposes. But this is not all of the picture. Much has been said concerning the fertilizer program of the T. V. A. Its importance can only be emphasized when one accepts the fact that, should the present practices in soil depletion continue, within 240 years the fertility of all of the land in this country will be lost, with the resulting degeneration of our form of civilization.

The Authority has been successful in improving fertilizers more effective than any developed to date, and, coupled with its soil-

effective than any developed to date, and, coupled with its soil-replenishment program, eroded hillsides and exhausted farms are being rapidly reclaimed. Satisfying two great needs, the control of water and the conservation of natural resources, scarred forests are being replanted; eroded and gullied lands are being terraced and covered.

To encourage the development of local industries, mineral de-posits and other natural resources are being developed. Thus, emphasis is being given to all phases of economic and social life,

emphasis is being given to all phases of economic and social life, with the objective of providing a well-rounded, balanced economy. Obviously, in a program as comprehensive as that being carried on by the T. V. A. differences of opinion will exist. Such differences did exist between the former Chairman and the other two members of the T. V. A. Board. However, after making an exhaustive investigation of the charges made by the former Chairman, the committee is convinced that such charges were unfounded and that the T. V. A. is in the hands of well-qualified men, absorbed in performing an efficient job of public service.

It has been asserted that the T. V. A. invades the rights of the sovereign States. In my opinion, one of the most hopeful things is the amicable and cooperative relationship of the Authority to the States. Problems are being solved which could not be done alone either by the Federal Government or by the States. The technique which has been developed by the T. V. A. in this mutual work is an outstanding contribution to Federal and State relationships.

tionships.

Today Congress is concerned with national defense. Today Congress is concerned with national defense. In 1917 the country faced a similar grave concern. At that time it was decided as an aid to national defense to construct the nitrate plants at Muscle Shoals. The nitrate plants were not completed until the war was over. Today these plants are in existence and can be used, among other things, for the manufacture of phosphorus, a wartime need. In the Tennessee Valley rich deposits of war minerals have been located and are now susceptible of development, a work in which an availability of abundant power will be a vitally important factor.

The navigable channel will connect this region with some of the largest producing and industrial centers of the country through the inland waterway system, and in addition will have an outlet to the sea. This territory, lying behind natural fortifications, is an important asset in national defense. However, much more important is the fact that this program carried on by the T. V. A. demonstrates that the economic and social stability of a country is its best defense.

is its best defense.

Is its best defense.

The benefits of the Tennessee Valley program are not confined to the seven valley States, but its influence extends over the entire country. It points the way for the coordinated development and conservation of the natural resources in other regions elsewhere in the country. Through experiments and demonstrations it has shown the way to replenishment of the soil. Its fertilizer developments will be of immeasurable benefit to the farmers of this country, no matter where located. The yardstick provided by the T. V. A. retail rates not only affords a means of comparing retail rates in other localities but assists the private utilities in developing methods of distribution whereby electricity can be made available to the domestic consumer at the lowest possible cost.

Obviously, time does not permit any extended description of all of the elements that made up the T. V. A. program. On the question of the yardstick, hours could be spent explaining its application and the benefits to be derived. The fertilizer program is a dramatic story of man's effort to save the land.

The point must be emphasized and be kept clear that, although

The point must be emphasized and be kept clear that, although the primary objective of the dams constructed on the Tennessee River and its tributaries is to provide for navigation and the control of floodwaters, such programs as soil replenishment, reforestation, development of natural resources, and regional plansing and the recovery which has received and that recovery which has received and ning, are all interrelated, and that power, which has received so much emphasis, is important only in relation to the other parts of the program and as a means of liquidating the expenditures Address by Hon. Edward C. Johnston to Brazilian **Publishers**

EXTENSION OF REMARKS

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES Wednesday, April 19, 1939

RADIO ADDRESS BY HON. EDWARD C. JOHNSTON, AUGUST 31,

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the RECORD an interesting radio address delivered by Hon. Edward C. Johnston, vice president of the Western Newspaper Union, over Hora do Brasil, the Government radio hour, Rio de Janeiro, Wednesday, August 31, 1938.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I appreciate very deeply this opportunity afforded through the invitation and kindness of Dr. Lourival Fontes, director of the Brazilian Propaganda Department, to say a few words to you and to convey the greetings of my colleagues amongst newspapermen in the United States to the publishers of Brazil and to all of you

listening in at this time.

I left Washington by airplane last Saturday afternoon and I left Washington by airplane last Saturday afternoon and boarded the Panair Clipper in Miami Sunday morning, arriving in Rio early last Thursday afternoon. Each stop-over which the great Clipper ship made en route to Rio opened new vistas of interest. From Trinidad southward I enjoyed the extremely pleasant companionship of Mr. Warren Lee Pierson and his charming wife. Mr. Pierson, as you doubtless know, is president of the great United States Export-Import Bank. He has come to Brazil to study how his great bank may be of assistance in stimulating the increasing trade relationships between your country and mine.

At Belem came aboard the Clipper ship your Dr. Evandro Chagas, of the Institute Oswaldo Cruz. Mr. and Mrs. Pierson and I considered ourselves very fortunate indeed to meet this distinguished sidered ourselves very fortunate indeed to meet this distinguished scientist. During the following 2 days aboard the airplane Dr. Chagas was most kind in conveying to us interesting and authoritative information regarding the part of Brazil over which we were then flying, and told us much about the problems, obstacles, and then flying, and told us much about the problems, obstacles, and accomplishments of the people of these areas. May I be permitted here and now to congratulate most heartily the people of Brazil on their good fortune in having such a devoted public servant whose special talents are thus made available to the service of all the people in Brazil? The tremendous practical value of the great work which Dr. Chagas and his associates of the Institute Oswaldo Cruz are doing, is, I am sure, universally appreciated.

I believe the people of Practice.

I believe the people of Brazil generally know much about the I believe the people of Brazil generally know much about the great world's fair which will be inaugurated in New York next April. I wish to assure all of you listening in that the world's fair authorities are especially anxious to welcome visitors from Brazil to see that you are well taken care of, and with the assurance that every facility will be extended to you at this great exposition, of which the theme will be The World of Tomorrow. Sixtytwo nations will participate. Over 60,000,000 visitors are expected to attend the exposition.

to attend the exposition.

Shortly before I left New York City the officials of the United States Maritime Commission announced the inauguration of the new steamship service to the east coast of South America. Three new steamship service to the east coast of South America. Three fine turboelectric ocean liners, the Brazil, the Argentina, and the Uruguay, which President Roosevelt has been pleased to refer to as the "good-neighbor fleet," start with the first sailing from New York on October 8. This new, improved, American-flag passenger service will be classed among the finest luxury passenger liners in the world. With this fortnightly service of luxury ships, the authorities of the New York World's Fair earnestly hope that many, many citizens of Brazil will avail themselves of this improved steamer service or the faster Clipper ships of Panair and come to New York during the exposition. You may be assured of a sincere and cordiel welcome. a sincere and cordial welcome.

During this week you have had further practical evidence of our good-neighbor policy in the presence of our newest airplane carrier, the great ship *Enterprise*, and the *Shaw* now in Rio Harbor.

It is unnecessary, I am sure, for me to refer to the traditional friendship of our two great countries. Here is a case where, over the years "actions speak louder than words." For more than 100 years this friendship and mutual regard has prevailed. Now, I think you will agree, the people of both countries have come to a realization of this very real partnership. What are the reasons

for this enduring friendship? What are the controlling forces which have brought it about? Is it not the great gifts of nature showered on both of our countries? Is it not also due in large measure to the spirit of adventure and the spirit of enterprise which have motivated both of our peoples? And is it not the spirit of fair play throughout which has actuated both peoples? This has surely contributed greatly to our enduring friendship? Indeed, I think you will agree that no national mysticism and no kind of political demagoguery will ever secure the support of public opinion in either of our respective countries to suspend temporarily or abandon this friendship of our two Nations.

Last Sunday as we flew over the great delta at the mouth of the

Last Sunday, as we fiew over the great delta at the mouth of the Amazon, I was reminded of an old story, which, it seems to me, carries a moral that is significant in view of recent and apparently impending developments in Europe. It seems that in the old days of the sailing vessels, a ship sailed from Newcastle, England, with a cargo bound for the Rio de la Plata. As the story is related, the ship experienced many severe storms. Day after day it was buffeted by hurricanes until it was well off its course. They were short of water. They had no condensers in those days. The ship floundered about until her supply of fresh water aboard was exhausted. Presently they sighted another vessel. One of the sailors went up the mast and when they came within hailing distance he called, "Water, water, for God's sake give us water." The response from the other vessel came back, "Dip your buckets where you are." Again the sailor on the mast called "Water, water, we want water." And the final response came as the ship slowly pulled away, "Dip your buckets where you are." In desperation, as the space lengthened between the two vessels, they put a bucket overboard, pulled it up, and found it filled with fresh water. The floundering ship in fact was less than 100 kilometers off the mouth of the Amazon, and, as you all know, the mighty Amazon retains its stream and carries fresh water out into the Last Sunday, as we flew over the great delta at the mouth of the off the mouth of the Amazon, and, as you all know, the mighty Amazon retains its stream and carries fresh water out into the ocean for a hundred kilometers.

When we of the two Americas, North or South, are assailed by any of the alien political philosophies so foreign to our traditional democratic institutions, let us remember the words of the great Bolivar. You will recall he maintained that "the people should Bolivar. You will recall he maintained that "the people should grow up by the hard knocks of experience, but always with the ultimate heritage of manhood ever held before them." Let us, the citizens of the 21 republics of the two Americas, then, be not led astray when we are assailed by these philosophies alien to our traditional democratic institutions; let us stand together and "dip our buckets where we are." Let us continue to "dip our buckets" in the fresh waters of democracy and not be led into the brash, salt waters of the various European "isms" by whatever name they may be called.

In closing may I sgain express my appreciation of this concre

In closing may I again express my appreciation of this opportunity to talk with you? When I leave your beautiful Rio aboard the Pan American "thunderbird," as the Peruvian Indians first called the airplane, southbound for Argentina and up the west coast of South America, it is with the profound hope that I may be permitted to return soon for another and much longer visit to your marvelous country.

Withdrawal of Thomas R. Amlie Nomination

EXTENSION OF REMARKS

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES Wednesday, April 19, 1939

LETTER FROM THOMAS R. AMLIE AND PRESIDENT'S REPLY THERETO

Mr. SCHWARTZ. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter signed by Thomas R. Amlie, under date of April 7, addressed to the President of the United States, and the President's reply thereto of April 15. The letters relate to the matter of the nomination of Mr. Amlie to be a member of the Interstate Commerce Commission and the subsequent withdrawal of his nomination.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

> 138 HOUSE OFFICE BUILDING, Washington, D. C., April 7, 1939.

President Franklin D. Roosevelt, The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: On January 24, 1939, you sent my name to the Senate as a minority nominee to the Interstate Commerce

Commission. A reactionary press and an unscrupulous political cabal immediately seized the occasion to transform the public debate and the Senate hearings over my confirmation into a veri-

table witchcraft trial.

Because I had in the course of my 8 years' agitation for a permanent solution of our mass unemployment problem expressed doubts at times as to the ability of unregulated capitalism to solve this problem, I was branded as a Communist and subverter of American institutions. Because I had expressed my sympathy for the late loyalist government of Spain I was accused of being an accomplice in the "promiscuous slaughter of Christians and their apostles." Because I had at various times proposed Government of the religence I was accused of wishing to when our apostles." Because I had at various times proposed Government ownership of the railroads I was accused of wishing to wipe out the savings of widows and orphans.

The bitterness of the attacks directed against my confirmation The bitterness of the attacks directed against my confirmation recalls the similar campaign directed against the confirmation of Justice Brandeis 23 years ago. However, in Justice Brandeis' case, his long career as a fighter for the public good, during which he clashed with so many powerful interests, and the consequent fear of what he might do in his position of authority as a Supreme Court Justice may serve to explain the bitterness of the campaign against his confirmation. In my own case, the modest character of my public career, and the relative lack of power of an Interstate Commerce C Commerce Commissioner belie such an explanation. As the magazine Time observed, I could do the railroads no harm and might serve to stir up the Interstate Commerce Commission to activity.

The real explanation of the savage attack on me lies not in my own deeds or misdeeds but in the political calculation that by branding me as a Communist and an antichrist, a real blow—a blow below the belt, to be sure, but nonetheless a real blow—could be struck against you, Mr. President, and your administration.

The fact that your responsibility in nominating a minority member of the Commission is strictly limited and does not involve ac-

ceptance of the political philosophy of the nominee or of the party he represents does not interfere with this calculation. When the whole campaign is based on witchcraft psychology, it is futile to

whole campaign is based on witchcraft psychology, it is futile to carp at the lack of logic at any of the stages.

You will recall how in the British electoral campaign of 1924 the Conservative Party press published a purported letter of Gregory Zinoviev, head of the Third International, giving instructions for the setting up of a Communist dictatorship in Great Britain. The letter was, of course, a forgery, but the Conservative Party won power on the basis of that letter. Many times during the past 2 months I have wondered whether it is not the intention of the American conservatives to turn me into another fake Zinoviev letter and conduct the campaign of 1940 on the basis of garbled and adulterated extracts from my Forgotten Man's Handbook.

You can understand my embarrassment under these circum-

and adulterated extracts from my Forgotten Man's Handbook.

You can understand my embarrassment under these circumstances. The thing nearest my heart is, of course, the desire to get the American people to do some fundamental thinking on the problem of unemployment and the danger to democracy in the economic disfranchisement of 20 percent of our population. Under other circumstances, I should have welcomed the high-powered publicity given to my economic writings of the past 8 years. But a hearing and debate on the nomination of a minority member to the Interstate Commerce Commission hardly offers a free and proper the Interstate Commerce Commission hardly offers a free and proper forum for the discussion of such topics. I have felt that in justice to you, who passed only on my qualifications to serve as a minority member of the Interstate Commerce Commission, I should refrain from forcing a debate on the floor of the Senate—where I could

nom northing a departe on the noor of the senate—where I could not myself defend my views—on the merits of the various economic proposals which I had advanced since I entered Congress in 1931. There is one issue, however, which, though it has nothing to do, or rather should have nothing to do, with the question of my fit-ness to serve on the Interstate Commerce Commission, I should ness to serve on the Interstate Commerce Commission, I should have liked to see fought out not only on the Senate floor but before the whole American people. I refer to the right of a minority party to proper participation in the process of democratic government. It is the position of my critics that under the Constitution I am, of course, free to advocate any ideas I please, but it is grossly improper for the national administration to appoint me or any member of a similar political group to take part in the work of a governmental commission. This is equivalent to setting up a doctrine of second-class citizenship. Full citizenship, full participation in democracy, is to be accorded only to those whose ideas are acceptable to the American Liberty League; to the rest, only second-class citizenship.

able to the American Liberty League; to the rest, only second-class citizenship.

With dismal ignorance and unmitigated arrogance, the partisans of such a doctrine speak of it as Americanism. A glance at American history and at American traditions reveals what would have happened had this doctrine prevailed. This doctrine would have barred from full citizenship Abraham Lincoln, who wrote that it was wrong that "some have labored, and others, without labor, have enjoyed a large proportion of their fruits," and that it is a "worthy object of any good government" to "secure to each laborer the whole product of his labor as nearly as possible."

The same doctrine would have condemned Thomas Jefferson as a despicable red for suggesting that "a little rebellion now and then is a good thing." "The tree of liberty," he said, "must be refreshed from time to time with the blood of patriots and tyrants. It is its natural manure." Yet Thomas Jefferson became the third President of the United States, and the revered founder of the Democratic Party.

Democratic Party.

The same doctrine would have condemned to second-class citizenship Benjamin Franklin, who, in 1783, wrote:

"All the property that is necessary to a man, for the conservation of the individual and the propagation of the species, is his natural of the individual and the propagation of the species, is his natural right, which none can justly deprive him of; but all property superfluous to such purposes is the property of the public, who, by their laws, have created it, and who may therefore by other laws dispose of it, whenever the welfare of the public shall demand such disposition. He that does not like civil society on these terms, let him retire and live among savages. He can have no right to the benefits of society, who will not pay his club toward the support

And yet these utterances did not bar Benjamin Franklin from playing a leading role in the Convention of 1787, which drafted

our present Constitution. It is because I see what it would have done to the past of America that I fear for the future of American democracy if such a doctrine is once allowed to take hold and become a guiding precedent. It matters very little whether I serve as Interstate Commerce Commissioner, but it matters very much whether the leaders of the American people continue to serve the cause of

For this reason I have been extremely anxious to see fought out For this reason I have been extremely anxious to see fought out the issue of the democratic right of progressive groups to take part in our government. But I have at length concluded to request you to withdraw my nomination as Interstate Commerce Commissioner, because I do not believe that there is any great eagerness among the members of either the Democratic or Republican Party in the Senate to defend the great principle of minority representation. I desire no reluctant nor apologetic champions of my position, and I have no wish to conciliate those who cannot read the signs of the times. the signs of the times.

The people are becoming impatient with temporizing measures. If unemployment is to be eliminated, if equality of opportunity for the average man is to be restored, and if every American is to be insured the right of a job, "radical" measures are necessary. "Radical" measures are as necessary to meet the urgent needs of the largest people of the Nation in readition measures are as necessary to meet the urgent needs of our day as they were to meet the urgent needs of the Nation in 1787 when Washington said to the Constitutional Convention: "My wish is that the Convention may adopt no temporizing ex-pedients, but probe the defects of the Constitution to the bottom, and provide radical cure."

I am satisfied that it is not necessary to continue the fight for purposes of personal vindication, since even Senator Reed, speak-ing for himself and his Republican colleague, declared at the

hearings:

"I do not think anybody has ever questioned Mr. Amlie's character or integrity, or his very great ability. It seems to me unnecessary to add anything upon either of these three points. It is do not think Mr. Amlie needs any defense as to his character and integrity, and surely in his lengthy statement before this sub-committee he has demonstrated ability. Now, whatever views the members of the subcommittee may hold, or conclusions they may reach, certainly on neither one of these three points is there any controversy."

I deeply appreciate the confidence you have reposed in me by I deeply appreciate the confidence you have reposed in me by nominating me to this post, all the more so since I have so frequently been a critic of New Deal policies. It is unfortunate, but not altogether surprising, that such a high spirit of responsible nonpartisanship should be regarded by timid politicians as a dangerous political liability, and by a hysterical press as a veritable trafficking with the devil.

Very sincerely yours,

THOMAS R. AMILTE

THE WHITE HOUSE, Washington, April 15, 1939.

Hon. Thomas R. Amlie.

House Office Building, Room 138, Washington, D. C.

My Dear Mr. Amlie: I have your letter requesting me to withdraw your nomination as a member of the Interstate Commerce Commission. I am doing so shortly.

I deeply regret that a certain type of opposition should deprive the Interstate Commerce Commission of one as able and as whole-

heartedly devoted to the public service as you are.

You and I have often differed on important issues, but I can assure you nothing has occurred to alter my belief in your qualifications to serve as a minority member of the Interstate Commerce Commission.

Those who for political reasons have called you a Communist do not perhaps realize that such name calling ill serves the democratic form of government which this Nation as a whole wishes to

A quarter of a century ago I too was called a Communist and a wild-eyed radical because I fought for factory inspection, for a 54-hour-a-week bill for women and children in industry, and similar measures. You are still young, and I hope that you will continue to work for the improvement of social and economic legislation under our framework of government.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

Jefferson Day Dinner

EXTENSION OF REMARKS

HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES Wednesday, April 19, 1939

ADDRESS BY HON. JOSEPH F. GUFFEY, OF PENNSYLVANIA, APRIL 14, 1939

Mr. RADCLIFFE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from Pennsylvania [Mr. GUFFEY] at the Jefferson Day dinner held at Uniontown, Pa., on April 14, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, the proudest tradition of the Democratic Party is the fact that it owes its beginning and its political creed to the immortal Thomas Jefferson. Conscious of that fact, I am happy to join you tonight in paying honor to the greatest liberal leader the world has ever known.

To give Jefferson first rank among those who sought to make

To give Jefferson first rank among those who sought to make democracy a living fact may seem like exaggeration. Yet, I feel confident that if you examine the record without prejudice or preconceived notions, you will agree with me that the magnificent form of government which we enjoy today had its inspiration to a large degree in the voice and pen of the sage of Monticello. In many respects, the age in which Jefferson lived was similar to our own. He saw the rise of dictatorship in Europe during the Napoleonic era and he recognized the menace to human liberty and heaviness that stems from the hourdless ambition of smell.

and happiness that stems from the boundless ambition of an allpowerful ruler. At an earlier time, he saw the French Revolution at first hand, sympathizing with many of its aims while deploring the terror and tyranny which it brought about. He was a driving force in the struggle of the colonies to win their independence from the mother country and in the subsequent battle to establish

from the mother country and in the subsequent battle to establish a just and lasting form of government on American soll.

Jefferson lived in a time of turmoil and furious conflict in human affairs. Although a philosopher at heart, he did not remain apart from the arena of practical affairs, but devoted all his great energies to the triumph of the cause in which he so passionately believed. He was respected and admired by those who knew him, and reviled and hated by those who misunderstood his purpose. He knew the terrible wrongs and cruelties that men inflict upon each other in the heat of passion, and yet he never lost faith in his belief that popular government was the salvation of mankind. of mankind.

Today democracy in the United States is having a rebirth. In the light of happenings in Europe and elsewhere we have a new understanding of what it means to enjoy freedom of speech, freedom of thought, and liberty of conscience. We appreciate, perhaps more than ever before, what a blessing it is to have a voice in Government and the right to work out our own destiny, free from the dictates of a political overlord who places his own pride and ambition above the general welfare. From platform and pulpit and through the press the lesson is being hammered home that the right of popular sovereignty is the noblest heritage we possess. Refugees from other lands, made homeless and penniless by ruthless oppression, look to America as the brightest beam of light in a darkened world.

In this new evaluation of the worth of democracy we should reexamine the part played by Thomas Jefferson. The Declaration of
Independence is rightly looked upon as the fountain spring of the
American way of life. This sublime charter of human rights expressed the basic idea of decent government held by most of the
delegates who attended the convention at Philadelphia, but the
stirring phrases employed to express the idea were very largely the
handiwork of Jefferson. He phrased the preamble, which set forth
the fundamental truth that "governments derive their just
powers from the consent of the governed," and he added the undying truth that in a free society every citizen is entitled to the
"unalienable right to life, liberty, and the pursuit of happiness."

These truths, set forth by Jefferson in clear and forceful language, are the foundation stones of free government. In the
century and a half since they were first written they have become
familiar to every school boy and school girl in the land. They have

familiar to every school boy and school girl in the land. They have influenced the growth of government and guided the course of public action. They have stood the test of time and lived to vindicate those who dared to believe that men were fit to govern themselves. Countless other men since then have tried to sum up the meaning of democracy in a few words, but no one has ever achieved what Jefferson achieved in those brief and brilliant sen-

tences of the Declaration of Independence.

Thomas Jefferson performed another great labor in the task of protecting and preserving the fundamentals of American liberty.

When the original Constitution was framed, the founders did an excellent job of setting up a form of government that would be stable and lasting. They wanted to establish a Nation that would be strong enough to withstand internal disorders and the threat of foreign aggression. They accomplished their purpose in the document which was struck off at Philadelphia, Jefferson was in Paris at the time on a diplomatic mission. When the new Con-Paris at the time on a diplomatic mission. When the new Constitution was brought to his attention, he immediately saw a defect, which, in his judgment, might prove fatal. There was no Bill of Rights explicitly guaranteeing to the citizens of America the degree of personal and political security which they had a right to expect.

Jefferson was unmoved by the argument that these fundamental rights were implied in the new organic law. Acting without de-lay, he put his pen in motion once again to bring about the changes he thought necessary. At his instigation, James Madison introduced in Congress the first 10 amendments to the Constitution which have since become known as the Bill of Rights.

It is not too much to say that Jefferson's foresight in sponsoring the Bill of Rights was one of the greatest contributions to free government ever made in the history of mankind. It has been well described as a bloodless revolution—a victory as important to the future of the young republic as the victories of the Revolutionary War itself. Through his efforts the basic rights of free men were set forth in words so simple and plain that they could never be meighternested. never be misinterpreted.

never be misinterpreted.

The proudest boast of the United States is not the fact that a higher standard of material living has been achieved here than anywhere else on earth. Far more important is the fact that the individual still has liberty of conscience and freedom of action. The humblest citizen is able to voice his thoughts on political questions without fear of reprisal. He can worship as he likes without State interference and he can rest secure in his own home without fear of arrest and detention at the hands of some tyrannical Government official who happens to be in power at the moment. We owe these blessings to the existence of the Bill of Rights which Jefferson fathered.

It was during Jefferson's two terms in the Presidency that the

Rights which Jefferson fathered.

It was during Jefferson's two terms in the Presidency that the struggle really began between those who wished to make the new republic a bulwark for the protection of special privilege and those who wished to make it a democracy in fact as well as in name. The idea that the people should have control of their own political destinies was abhorrent to those who believed with Alexander Hamilton that the best government was the one which Alexander Hamilton that the best government was the one which served only the best people—meaning, of course, those who owned the Nation's wealth. In his gallant struggle to overthrow the forces of autocracy and to secure the rule of the people, Jefferson laid the groundwork for the great political party which, ever since that time, has been carrying on the battle for the preservation of popular government. Despite occasional lapses and the mistakes of a few misguided leaders, I think it can be stated honestly that the most constructive force for liberal government this country has ever known has been the Democratic Party. It

honestly that the most constructive force for liberal government this country has ever known has been the Democratic Party. It was true in the time of Jefferson, Madison, Monroe, and Andrew Jackson; it was true in the period when Woodrow Wilson was in the White House; and it is true today under the guidance of that matchless leader of men, President Franklin D. Roosevelt.

Jefferson gave the Nation political freedom in the Bill of Rights; Jackson drove out the last foreign invader, serving notice to the world that the United States intended to remain free and independent; Roosevelt is waging the good fight to make economic freedom the companion of political freedom. He has persevered against tremendous odds and when the political firing has died down I predict that his accomplishment will take rank with those of his illustrious predecessors.

When reforms are in process of taking shape it is easy for those who oppose them to employ the methods of obstruction—to block the wheels of progress under the pretext of doing what is

to block the wheels of progress under the pretext of doing what is best for the public good. Every single step taken by the present administration to make Government the servant of the people has been opposed by those who profited under the old order of things. They fought the insurance of bank deposits, the enactment of social security, the adoption of minimum-wage laws, the measures for relief of the farmers and the unemployed—in fact, every single piece of legislation designed to protect men and women against the hazards of a harsh industrial system. These wholesome reforms were condemned as un-American and socialistic by those who dislike progress, simply because the purpose of these measures was to improve the standards of all the people instead of a privileged few.

The present administration has been compelled to undertake an

unprecedented series of reforms, because the general welfare was neglected and forgotten during the years when three successive Republican administrations were in power at Washington. The United States was allowed to fall behind other nations in adopting protective measures for those classes of citizens who were victims protective measures for those classes of citizens who were victims of the economic system. President Roosevelt has been reviled and abused for daring to do what should have been done years before. He has placed constructive reforms on the statute books, and these reforms will never be erased by any political party because the American people will never stand for their repeal. No matter what the critics of the moment say, history will show that Roosevelt was right and that, like Jefferson, he was able to see far beyond the limits of those who sought to block his path.

There are two great duties which devolve upon the occupant of the White House, regardless of what political party he happens

to be a member. He must foster domestic stability and prosperity and he must guard the Nation against foreign aggression or foreign war. I submit that in a time of unprecedented world disorder and economic upheaval, President Roosevelt has performed those two solemn duties with the greatest possible degree of success. He has brought the ship of state safely through the tempest and given

has brought the ship of state safely through the tempest and given a new breadth and a new meaning to the tenets of democracy. Who are his critics? First, we have the eminent gentlemen who brought about the economic debacle of the early 1930's by their blundering and short-sighted leadership. He rescued them from disaster, and now they complain that in doing so he rescued the rest of the people as well. What did they propose to substitute for the Roosevelt leadership? Does anyone contend that the Nation would be better off if the Republican candidate of 1932, Mr. Hoover, had been given another term in office? Does anyone contend that had been given another term in office? Does anyone contend that the weak and inexperienced Mr. Landon, the Republican candidate of 1936, would have been able to cope successfully with the series of world shocks that have occurred in the last 2½ years? Who can say what would have happened in the explosive field of foreign

of world shocks that have occurred in the last 2½ years? Who can say what would have happened in the explosive field of foreign affairs if Mr. Landon had been at the helm?

Amidst the constant clamor of those who seek to fog the issue, it is well to remember that President Roosevelt has been eminently successful in keeping the United States free of foreign entanglements and disastrous wars. Without sacrificing a single basic American right, he has consistently avoided the causes and incidents that lead to armed conflict, despite the fact that chaos has superseded order and justice in the sphere of world relations. He skillfully avoided entanglement when a cruel war in the Orient threatened to involve American rights; he kept the country aloof from the tragic Spanish conflict, the Ethiopian conflict, and the successive crises that have threatened to inflame the whole of Europe. Could any of his critics have done better in serving the cause of peace? Foreseeing the growing menace of imperialism abroad, he had the wisdom and the courage to undertake the rebuilding of defensive armaments before it was too late. Thanks to this wise policy, the United States stands before the world unchallenged and unafraid because it has the power and the might to defend its honor and its people against aggression.

A single misstep in the handling of delicate foreign negotiations during the past few years could have brought disaster. Under the wise guidance of the President, no misstep was taken. He has preserved the national honor and at the same time confounded those self-appointed guardians of the peace, who, by their unfounded attacks upon the purposes of the Chief Executive, sought to weaken the position of this country in its dealings with foreign powers. I submit that no other man now in public life could have done the job as well as he has done it. The cause of peace is safe in his hands.

foreign powers. I submit that no other man now in public life could have done the job as well as he has done it. The cause of peace is safe in his hands.

The past 6 years have been a period of imperishable gain for the United States. The administration has gone ahead courage-ously at the task of curing old wrongs and abuses in the economic system that should have been corrected years ago. The type of reckless speculation with other people's money that brought on the business depression of the Hoover administration has been outlawed for all time to come. The banking system has been overhauled and made to operate for the benefit of all the people. Labor has been given a new bill of rights and the farming population has been given an ew bill of rights and the farming population has been given more consideration by Congress than it ever had before. The faith of millions of Americans in the worth of democratic institutions has been restored.

We know from experience that it is impossible to accomplish even the most badly needed reforms in political life except after prolonged and bitter struggle. The forces of reaction are powerful and they never yield until resistance is no longer possible. I do not contend that everything President Roosevelt has attempted

do not contend that everything President Roosevelt has attempted has been perfect. He has never made that claim for himself. But I do wish to point out that those who criticize him most severely never gave him the slightest aid in bringing about those reforms, the necessity for which is now conceded by every fair-minded man. The President found only hostility when he should have found helps befored him dead unreceptive experience experience.

minded man. The President found only hostility when he should have found help; he found blind and unreasoning opposition when his efforts should have been applauded by every man who had the interests of his country at heart.

As a Democrat, I am proud of the record of constructive reform achieved by the Democratic Party during the past 6 years. Taking over the reins of government at a time when chaos and fear were in the saddle, it has moved steadily forward along the path of decent and progressive government laid out more than a century ago by its immortal founders, Thomas Jefferson and Andrew Jackson. For the apathy and indifference of the previous Republican leadership, it has substituted decisive action and a sympathetic understanding of modern needs and problems. In fact, the thetic understanding of modern needs and problems. In fact, the mighty task of restarting the economic machinery of the Nation was accomplished, not with the aid of the Republican Party, but over its stubborn opposition.

The United States may look to the future with confidence and hope. Secure in the knowledge that a firm foundation has been

hope. Sective in the knowledge that a firm foundation has been laid for prosperity at home and peace abroad. We are coming through this period of world adjustment, that has proved too severe for many other nations, with our liberties intact and our form of government stronger than it ever was before. It is a triumph for democracy, due in large measure to the high purpose and dauntless courage of our leader, President Franklin D.

No War For Us

EXTENSION OF REMARKS

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES Wednesday, April 19, 1939

EDITORIAL FROM FARM JOURNAL AND FARMER'S WIFE

Mr. BONE. Mr. President, in the city of Philadelphia is published a magazine bearing the title "Farm Journal and Farmer's Wife," one of the best-known farm publications in the United States. Its popularity is indicated by the fact that the May 1939 issue has a circulation in excess of 2,400,000 copies. So, it is probably as representative a farm journal as is to be found in the United States.

In the issue of May 1939 appears an editorial on war, headed "No War For Us." I ask unanimous consent that this editorial from the Farm Journal and Farmer's Wife be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Farm Journal and Farmer's Wife of May 1939]

NO WAR FOR US

Are we Americans, without full information, being tricked into

Are we Americans, without full information, being tricked into supporting another world war?

Europe's age-old feuds are flaring. The greeds and hatreds that poison and corrupt the old Continent are seething. Across the Atlantic cynical statesmen, ruthless leaders, 500 differing ethnologi-

cal groups, and ignorant populations growl in a godless turmoil.

The bitter game of Old World diplomacy is played for personal and national aggrandizement. Principle has small part in such maneuvering, except as artificial bait for American idealism.

The common people of Europe do not want war. But wars do come whom provide principles and the provider of the pro

come where proud kings, pagan dictators, and scheming ministers count each boy baby as one more stalk of cannon fodder and each girl baby as a future brood mare.

These are times for Americans to be just as realistic as Europe's cunning contrivers.

Americans owe Europe nothing. This country cannot hope to regulate international morals, nor to establish morals where there

We were propagandized into trying to regulate Europe in 1917. The reward of our idealistic response was the killing of our boys, waste of our substance, depression, unemployment, two decades of disturbance, unpaid war debts, and a world reputation as the great suckers of all history.

There need be no next time for the United States. But there will be unless the wisdom of the people provided.

There need be no next time for the United States. But there will be, unless the wisdom of the people prevails. The fathers and mothers of America who will provide the soldiers have both the wisdom and the courage for peace.

But do the Nation's leaders? Does the press? Does the radio, blaring its hourly alarms into our ears?

Can Americans resist the penetrating propaganda that foreign nations are trying to filter into our minds? That depends almost wholly upon the common-sense citizens of the farms and towns. The power of propaganda's appeal to our emotions cannot be overestimated. It fires our prejudices, inflames our feelings, warps our judgment.

That is why we are writing this editorial now. A time may come when the truths in this page may be branded as unpatrictic.

That will not happen, however, and our country will not go to war, if these printed words can rouse the fervor that will move the two and one-half million families of Farm Journal and Farmthe two and one-half million families of Farm Journal and Farmer's Wife, and their friends, to write today to their Senators and Congressmen, to speak up in their meetings, to talk with their neighbors. You can create public opinion for an America at peace. Send stern and vigorous warning to your servants in Washington, by voice, letter, resolution, and wire. Don't ask them—tell 'em! America's best contribution to peace in the world lies in the strict minding of our own business.

Most of our ancestors came to the New World for exactly that purpose. Seeing no future as pawns and cannon fodder in Europe's power politics, they came here to be free—free to worship and to work as they chose.

work as they chose.

Let's keep the kind of America they made!

Saber rattling in Washington will not keep it so, and will not make peace, abroad or at home. Epithets by important officials saying "we do not like" some foreign governments are childishly stupid and unforgivably dangerous. They may express our true feelings, but they don't serve our determination to keep America at peace.

You know what will happen if ever the United States again becomes the sucker for Europe.

America's young men, boys from our farms and small towns, will go out to face bullets, poison gases, and disease in camp and

True prosperity will disappear from the hopes of this generation and the next. A nation with a \$40,000,000,000 debt and a foreign war on its hands can expect the virtual disappearance of private property rights.

Rigid regulation will determine almost every act of life. Remember meatless days, gasless Sundays, and the sugar rationing of 20 years ago? They were nothing. * * Each citizen is to be told where he shall work, what his wife and children shall do, how much they all shall be paid. This is dictatorship.

No one can guess how many years a war may last. Certainly the years of after suffering will be many. Probably the post-war years would see no return to free government.

Why risk all or even a part of this misery in another vain effort to reform the Old World, with its new kinds of czars and kaisers and tyrants?

America is between two wide oceans. We can stay at peace. We can preserve the rights of man, religious freedom, liberty to choose, if we will—by refusing to be drawn in, and compelling our leaders to listen to the will of the people.

No "aggressor nation" can hope, even with aerial warfare, to bring armies sufficient to occupy our territory. Their only possible chance would be to acquire landing bases in the Western Hemisphere.

sphere.

James Monroe realized that more than a century ago, and laid down the Monroe Doctrine. That is a simple warning to Europe to stay out of the Americas.

And George Washington warned Americans to stay out of Eu-

rope. Washington and Monroe gave us foreign policy enough.

Maintain strong defensive power. Make America economically strong. See that we have, within our own boundaries, every supply needed for Army, Navy, air force, and for our civilian population.

And let's see that the Nation's leaders, now in effect sicking Europe on to fight, keep their minds on America's real problems. We have no desire to sprout world heroes.

Americans would rather lead the world in prosperity, in peace,

and in courageous Christian decency, than in slaughter.

Death of Col. John Jacob Astor in the "Titanic" Disaster

EXTENSION OF REMARKS

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES Wednesday, April 19, 1939

ARTICLE FROM THE ATLANTIC CITY PRESS OF APRIL 15, 1914, AND LETTER WRITTEN BY E. A. HIGBEE

Mr. SMATHERS. Mr. President, I ask unanimous consent to have published in the appendix of the RECORD an article which appeared in the Atlantic City Press, Atlantic City, N. J., on April 15, 1914, in which Mr. Daniel H. V. Bell, city clerk of Atlantic City, paid a tribute to Col. John Jacob Astor at a ceremony of the Spanish War Veterans observing the second anniversary of the Titanic disaster, together with a copy of a letter written by the Honorable E. A. Higbee, under date of April 16, 1914, to Mr. Daniel H. V. Bell, congratulating him for the beautiful language contained in the eulogy of Col. John Jacob Astor.

There being no objection, the article and letter were ordered to be printed in the Record, as follows:

[From the Atlantic City Press of April 15, 1914]

IN MEMORY OF TITANIC TRACEDY—SALUTE FIRED OVER DEAD OF THE SEA FROM DOWNTOWN PIER YESTERDAY

In the heavy rain that came driving out of the northeast yesterday the members of Col. John Astor Camp, No. 28, United Spanish War Veterans, observed the second anniversary of the *Titanic* disaster in ceremonies held on the seaward end of the Million Dollar

Following a salute from the camp's battery, Rev. Dr. Thomas J. Cross, pastor of the Chelsea Baptist Church, delivered a patriotic address, and his reference to the acute situation in Mexico provoked cheers from the large crowd that had gathered despite the

City Clerk Daniel H. V. Bell delivered an eulogy on Colonel Astor's conduct during the panic aboard the disaster. Mr. Bell said:

"Two years ago on the broad Atlantic, in the darkness of the night, the forces of Nature and of man met; a mighty vessel of the sea and a stern sentinel from out of the frozen north. Instantly occurred a tragedy of the sea that sent a shock of horror throughout the modern world. Men, women, and children were awakened from slumber to face the hardest fate that old ocean holds for travelers. holds for travelers.

"We are here today beside that same ocean to commemorate the memory of one who freely gave up his life on that occasion. And to learn anew a lesson of patriotic devotion that from the earliest days of this Republic has ever upheld, the lofty ideals of the American soldier. From the days of Washington to the present time the soldiers of our country have willingly answered to every

call of duty.

"On the *Titanic*, out of the multitude, was a figure heroic. Possessed of great wealth, with every allurement that life can hold to one who has the capacity to enjoy it, he put all things aside— "Women and children first'—and bravely did the work go forward. "Col. John Jacob Astor had heard his country's call during the days of '98. Gave from his own purse to the American Army the Astor Battery, and to make his service complete enlisted for the war. His record as citizen and soldier of the Republic was full and complete. complete.

"But in that hour when the souls and hearts of men and women

"But in that hour when the souls and hearts of men and women were tested as in a fiery furnace, Col. John Jacob Astor answered every test. And gave the last full measure of his devotion to humanity. He gave his life that the weak and helpless might live—'Greater love hath no man.'

"In paying our tribute to his memory let us not mourn, but rejoice and be glad, that when the time of danger came Col. John Jacob Astor proved to the world, if proof were needed, the worth of an American gentleman and the valor of the American volunteer soldier." soldier.'

ATLANTIC CITY, N. J., April 16, 1914.

Mr. Daniel H. V. Bell,
City Clerk, Atlantic City, N. J.
My Dear Mr. Bell: I read in the Evening Union of yesterday
your very eloquent and interesting eulogy of Col. John Jacob
Astor, who gave his life in consideration of others.

Astor, who gave his life in consideration of others.

I want to express to you my appreciation and admiration of what you said. I have not had the pleasure of reading anything for sometime that so impressed me as did your address. I know of nothing in the English literature that says so much, so forcibly, and eloquently in so few words as that except Lincoln's Address at the dedication of Gettysburg.

I am not prone to thus compliment people upon what they say and you may therefore rest assured that this is not said in the spirit of flattery, but from the deep sense of appreciation as above

spirit of flattery, but from the deep sense of appreciation as above stated. I have cut it out of the paper and will paste it in my scrapbook to be handed to my children as one of the things which I regard as worthy of perpetuation. Yours very truly,

E. A. HIGBEE.

Foreign Aggressors-Address by Father Coughlin

EXTENSION OF REMARKS

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Wednesday, April 19, 1939

RADIO ADDRESS BY FATHER CHARLES E. COUGHLIN, APRIL 16, 1939

Mr. LUNDEEN. Mr. President, I ask unanimous consent to print in the Congressional Record the very able and eloquent address of Father Charles E. Coughlin, delivered over the radio Sunday, April 16, 1939. It deserves careful reading and should receive the thoughtful consideration of the United States Senate and the great American public.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"Where can I obtain profitable work?" asks the laborer. "How can I save my farm and sell the fruits of my toil at a profit?" questions the farmer.

"How is it possible to procure security for my children?" is the worry of every parent.

These should be questions of prime concern. Unfortunately, however, the mind of America is concentrated upon European affairs in general and, in particular, upon the stark probability of our engaging in wer. our engaging in war.

That we are so inordinately concerned with Europe and its dictators, its aggressors, and its imperialistic plunderbunds is lamentable. It means that we have permitted ourselves to become putty in the hands of the propagandists. It means that we have forgotten why our ancestors fled from the unbearable hardships imposed upon them in England, Ireland, France, Poland, Germany, Italy, and every other country abroad. And possibly it means that we are leging our natifolic enpreciation for those stalwart men who are losing our patriotic appreciation for those stalwart men who rallied around George Washington, who suffered at Valley Forge, who risked their lives to establish a new country with new ideals independent of European intrigues and oppressions. And, above all, it means that we have permitted ourselves to be distracted from solving the problems of our national depression.

Meanwhile we grow very indignant at the mere mention of the phrase "unjust aggressor," forgetting that 30,000,000 Americans are victims of local aggressors. We wax very idealistic at the sound of the word "democracy," forgetful that if we engage in a foreign war there will be no more democracy.

As a preface to the remarks I am about to make, let me state that no real American, should extend any support or four to-

As a preface to the remarks I am about to make, let me state that no real American should extend any support or favor towards either nazi-ism or communism. These forms of government are totally foreign to our concept. Furthermore, insofar as we Americans do not profess the doctrines of imperialism; insofar as our Nation was established in direct opposition to British imperialism, we entertain no fondness for that form of government. Consequently, even though President Roosevelt's peace efforts fail, we are not prepared to assist Germany or Russia or imperialistic France and England in their European wars.

All of them have been unjust aggressors in the strict meaning of the word. None of them are democracies in the American meaning of the word.

meaning of the word.

As for Germany and Soviet Russia, no one whose opinion is valued disputes the charge of "unjust aggressor" to these

governments.

As for Great Britain, all Americans are not in agreement. Many deny that Great Britain has been an unjust aggressor; others affirm it.

Permit me to remind you that Great Britain has been and is an unjust aggressor. As such she is not deserving of the expenditure of one American boy's life.

How did England acquire her far-flung colonies? By sword an conquest. As far back as the year 1172—nearly 800 years ago—Great Britain began to play the role of the unjust aggressor against Ireland.

In the year 1795 when the Irish people endeavored to emulate what our founding fathers accomplished in 1776, history records that the English troops slaughtered 160,000 sons of Erin—in the

name of aggression.

In 1916 and again in 1919 England sent her Black and Tan troops throughout Ireland to encroach upon the liberties of thousands and thousands of innocent, defenseless citizens who were deprived of their homes, their property, and oftentimes their lives—in the name of aggression.

Almost to this present year Britain kept the yoke of oppression firmly fixed upon more than 3,000,000 Irish people—in the name

Following the seizure of Ireland, Scotland and Wales succumbed to the unjust aggressors operating from London. Territory after territory fell within the orbit of the British Empire, not through

purchase, but through the force of arms, until today approximately one-fourth of the entire world is British owned and dominated.

And this is the empire which today is clamoring about unjust aggression—an empire which is paraded before us as a democracy; an empire that insists upon others ceasing their unjust aggressions while she holds fast to India, Egypt, and parts of Ireland and to the unpaid billions we loaned her.

Not so long ago Italy was thoroughly condemned for its unjust aggression against the Ethiopian people. No one in America defends the Italian policy in that instance. But how many of our rends the Italian policy in that instance. But how many of our excited population realize that in 1920 both the imperial Republic of France, together with imperial Britain, signed an agreement with Italy to encroach upon the territory of Ethiopia? The agreement read that if and when Ethiopia was conquered, the railroad leading from the capital of French Somaliland to the capital of Ethiopia was to be ceded to France and that the territory around Lake Tana in Ethiopia was to be given to Great Britain. Italy's share was the land itself.

These are the facts of the Ethiopian agression—facts which indicate that Italy alone was not the unjust aggressor.

Some Americans maintain that the United States is likewise an empire because of its aggressions in Cuba and the Philippines. Following 1898, what was our attitude toward Cuba? We expended them properly and energy to medicarize at least in extended. pended men, money, and energy to modernize, at least in part, the little island and to restore it to the people to whom it belonged. That was our identical attitude toward the people of the Philippines. Our democracy has never been an imperialism by which we won at the point of a bayonet vast territories and held them to exploit the people resident there for our own commercial

benefit.

What business have we Americans taking sides with such an unjust aggressor now that Britain fears the dissolution of her ill-

gotten empire?

As for Europe, it is still Europe. Its entire history has been a history of aggression. Following each hateful war, European diplomats gathered around the council table; the victors dictated a peace treaty which the vanquished were forced to sign-a peace treaty which in every instance proved to be another scrap of paper. Not one international document terminating an European war has

been honored by its signatories.

Who, therefore, entertained the thought that the Treaty of Who, therefore, entertained by all its participants? Does not the Versailles would be honored by all its participants? Does not the vast majority of historians regard it as an unjust document?

Was not its chief objective the dismemberment of the German

Empire?

Did it not impose a fine of \$57,000,000,000 upon a penniless people from whose treasuries there had been removed the last ounce of gold?

Did it not shackle the German people to the pillar of oppression when it virtually forbade her to trade with other nations: Did it not dispoil Germany of all her colonies?

And in a spirit of revenge and barbarism instead of peace and humanity, was not the Treaty of Versailles instrumental in removing more than a million milk cows upon which depended the little children for their food?

Certainly Germany signed the Treaty of Versailles because there was no alternative—a treaty that will go down in history as the most inhuman aggression ever committed against any people in the entire history of the civilized world; an aggression which was not aimed at the Kaiser and at those who were responsible for Germany's participation in the World War, but at the poor, victimized people who remained behind when the malefactors had fled in

When we, therefore, become aroused at the mention of the word "aggression," what aggression equals in its cruelty, its injustice, and its insanity the aggression perpetrated by the Treaty of Versailles? The majority of historians recognized even at the time of its composition 20 years ago that it was the breeding ground for more

composition 20 years ago that it was the breeding ground for more aggressions and for another war.

Twenty years have passed and behold those who were the unjust aggressors at the peace table of Versailles—particularly Britain and France—are now loudest in advertising to the world the unjust aggressions of Germany and Italy. According to the theories of England and France, any nation which desires them to surrender their ill-gotten goods or to restore their ill-gotten colonies is an aggressor.

The sacred status quo must not be disturbed even though it runs foul of the law of self-preservation.

There are other reasons which escape the notice of most persons

There are other reasons which escape the notice of most persons which explains why Europe has been a constant battleground throughout the centuries—reasons explaining why the territory of Poland has been partitioned and repartitioned; why Alsace-Lorraine has been an international football; why the Balkans have been a constant powder keg of revolution; why European nations for more than 200 years expended more money upon arms, munitions, and war than upon peace and prosperity.

Consider these facts: The population of Europe comprises approximately 425,000,000 persons. They are crammed into a little territory practically equivalent in area to the States of Texas and Oklahoma combined. The majority of Europeans is forced to dwell upon land which is totally unproductive of many commodi-

territory practically equivalent in area to the States of Texas and Oklahoma combined. The majority of Europeans is forced to dwell upon land which is totally unproductive of many commodities such as cotton. Their struggle for life always has been a struggle which we Americans in nowise appreciate—we with our vast expanse of territory, with our flowing fields of grain, with our well-equipped factories, and sources of natural wealth.

our well-equipped factories, and sources of natural wealth.

Is it any wonder that 425,000,000 persons constantly cry for more territory; constantly demand expansion? Is it any wonder why the "have-not" nations constantly have had recourse to arms against the "have" nations, especially when unsound peace treaties and wicked programs of economy were conceived to starve the masses and prosper the few?

Keeping these thoughts in mind, is it not evident that Europe's problems are primarily economic problems? The struggle impending in Europe today, therefore, is not based so much upon ideologies of government as it is upon economics. Positively there can be no lasting settlement and peace for Europe until the European nations themselves are willing to break down the economic barriers by which the "have-nots." "have-nots."

"have-nots."

What Englishman admits that 45,000,000 inhabitants of his little island can subsist upon its lean, hard soil, which is devoid of many of Nature's gifts? England could not manage. Therefore she was forced to adopt the policy of imperialism; forced to build a navy and merchant marine; and forced, according to her philosophy, to exploit India, Australia, and South Africa for the maintenance of her own population. The same analysis holds good for Belgium, for Germany, for France, and for Italy. Russia alone, of all the European nations, is self-sustaining.

I repeat, therefore, that the problem of peace in Europe is primarily an economic problem. It is impossible for 425,000,000 people to subsist in contentment penned up in quarters no larger than Texas and Oklahoma and not one-half so fertile and productive.

That is the reason why every generation of Europe's "have-not"

That is the reason why every generation of Europe's "have-not" nations has risen up in protest against the subjugation imposed upon them by the victors in the previous war. And that same reason will obtain as long as Europe is Europe; as long as the present economy predominates.

For ages the history of Europe has been a history of unjust aggressions. Wherefore the cry of "unjust aggressor" is nothing new. It was raised in the days of Kaiser Wilhelm II. It was on the lips of the Frenchmen in the days of Napoleon Bonaparte. It was the same cry which impelled Charles V in the fourteenth century to reduce the peoples of Europe under his sovereign rule.

LXXXIV-App--97 Being advised of this, why should we Americans of this generation be deceived by a catchword when it is so evident that Europe can never have peace as long as it protects its age-old economy of might and oppression and as long as the economic destinies of Europe are wedded to gold?

No wonder there is unrest in Europe today. Both Great Britain and France, who have dominated European trade for centuries, have insisted that commerce be carried on through the transfer of gold. The "have-not" nations lacking gold are compelled of gold. The "have-not" nations lacking gold are compelled either to submit to exploitation, or to starve, or to form alliances against their economic aggressors.

against their economic aggressors.

Supposing the United States of America were divided into 48 nations; supposing the people of Iowa or Kansas or Nebraska, where there is no gold, were forced to trade with the people of Illinois or Kentucky or New York on the basis of gold or else starve; would they be content? That is absolutely the sentence imposed upon the majority of European nations today by France and Frederick they are the United States in whose coffees three-fourths. and England and the United States in whose coffers three-fourths of the commercial gold of all the world is hidden.

While Mussolini and Hitler are engaged in their recent terri-

torial aggressions, the financial aggression perpetrated by the goldhoarding nations has done more to breed wars and unrest amongst the European nations which lack both colonies and gold than has

other factor.

It is true we Americans do not like the dictatorial forms of government in Germany, in Italy, and elsewhere. We prefer our own democratic system. Nevertheless, it is time for us to recognize that the advertised opposition to the Fascist nations is not so much related to the forms of government which they sustain as to the fact that the warmongers in America, in England, and in France are more concerned about the prospect of the gold-lacking nations combining against the gold-hoarding nations. Opposition to them solely because of their political ideologies is pure propagated.

Basically, the disturbances in Europe are more than political. They are economic and financial. Those who endeavor to tell us they are only political are either unmindful of the facts which I have cited, or are accomplices trying to deceive the American people to perpetuate the poverty, the exploitation, and the misery which an immoral system of finance and economy has foisted upon every

an immoral system of finance and economy has foisted upon every nation of the Old World—the same system which fails to abolish the depression in the New World.

If America goes to war, the outcome will be no different than that following the World War. Propaganda will advertise that we are virtuous in helping to save democracy. But the truth is that we are helping to perpetuate the power of the international bankers. Since the year 1694, when the privately owned Bank of England was established, its owners gradually gained domination over the destinies of Europe and the monopoly of industry. But most important, this bank and the other central, privately owned banks established gold as the medium of international trade. As a result, nations without gold were practically outlawed.

Always Great Britain has been successful in getting other people

Always Great Britain has been successful in getting other people to fight her wars and protect the fruits of her age-old gold policy of aggression. Therefore Great Britain will defend her possess today and tomorrow until the last American doughboy is dead.

It is almost ludicrous to find that we Americans are more anxious to engage in Europe's chronic wars to defend the status quo of iniquity and oppression than are our neighbors to the north,

in Canada.

Our Nation is a giant in territory compared to pigmy Europe.

Our population is small compared to the large masses of people who are huddled together from Moscow to Madrid. Our natural resources are infinitely superior to those of the old land. Our constitutional form of government, our superior training in mechanics, and our well-trained executives are without doubt the finest in the modern world. Despite all that, we have 12,000,000 unemployed, modern world. Despite all that, we have 12,000,000 unemployed, 22,000,000 on the dole, more than one-third of our population lives below the bare standard of existence, and \$16,000,000,000 of this lurid gold is buried at Fort Knox, Ky. Shall we who will not use it to rectify our economic conditions at home engage in a world war to starve out of existence those who have no gold abroad? Shall we be duped by the international bankers to preserve their status quo, which literally drains the lifeblood from India, from Africa, and from Australia, to maintain an oligarchy of wealth in their palaces and force the masses to live in their hovels?

Ladies and gentlemen, my criticism is in nowise leveled against the people of England and France, whom I deeply respect and with whom I sincerely sympathize. It is intended only for those who have exploited them, together with the people of Europe and the people of our own country. All peoples want peace. Peace can come only with justice, and justice can flourish only when men and women of any country are permitted to live and earn their bread free from the artificial impediment of gold.

If there need be talk of war, let us organize our forces in America

If there need be talk of war, let us organize our forces in America to make war upon this same oligarchy of gold which has closed our factories, confiscated our farms, bred class hatred in the hearts of our citizens; but let us do it in a peaceful, American, intelligent, and devectation manner.

and democratic manner.

Be not deceived by the mirage of glowing words which pictures the blessedness of social reform or the charity which begins abroad and closes its eyes to the needs of home.

Be not deceived by the fictitious appeal to democracy which exists nowhere in all the wide world as it does here in the United States of America

Be clear-headed, practical men and women, capable of facing facts as we find them, and judging reformers, internationalists, and warmongers in the scale of results rather than in the scale of promises.

Once the European chancelories are notified through the passage Once the European chancelones are notined through the passage of a neutrality act that we in America refuse to supply men, munitions, and money to fight their ever-recurring wars, then, and not until then, will Chamberlain, Daladier, Mussolini, Hitler, Stalin, and the rest of them sit down at a common table to discuss their common needs for the purpose of arriving at an agreeable peace and of abandoning the policy of a forceful gold aggression.

If history has taught one important lesson it is this, namely, that European wars never settled anything and never will settle anything as long as they are conducted upon the basis of sustaining

thing as long as they are conducted upon the basis of sustaining the status quo of exploitation. History has also taught us that the peace treaties which concluded every European war were notorious for their force and notable for their lack of justice. That is why they have been scraps of paper, as they should be scraps of paper. That is why they have been breeders of bigger and better wars.

In 1914 European dislocates who were numbers of the oliganths.

In 1914 European diplomats who were puppets of the oligarchs of wealth sounded the trumpets of patriotism and beat the drums of war. But in 1914 it was well known that the victims of war, for the most part, would be the young men who fought in the

trenches

In 1939 there is not the same readiness to declare war on the part of the diplomats or their financial masters. The oligarchs in London, Paris, Berlin, Rome, and Moscow and in every other capital are aware that the 1939 style of front trenches will be their palaces and their front lawns upon which destruction will rain down from bombing planes—destruction with its poison gas and disease germs; destruction not for the young men in the trenches but for the diplomats, the aristocrats, and the financial oligarchs who support economic aggression and create wars.

To summarize, therefore, what I have said, remember what a small portion of this world Europe is; what a tremendous population lives upon its soil; what a perpetual struggle for existence is necessitated by reason of an economic system which is maintained to protect the great empires which, with bayonet and gun and gold, conquered more than one-quarter of the world's territory. Remember that the gold nations insist that trade be carried on through the medium of gold. Remember the law of self-preserva-In 1939 there is not the same readiness to declare war on the

through the medium of gold. Remember the law of self-preserva-tion which from the beginning of time until the end of time will always agitate the oppressed to rise in rebellion. More than 20 years ago we Americans were deceived by the sanctimonious references to democracy. Instead of making the world safe for that ideal form of government we made it safe for depression; safe for the old corporate graters which her header depression; safe for the old economic system which has been flooding us with bonds and debts, with poverty and financial slavery.

As much as we dislike Hitler and his persecutions; as much as

As much as we dislike Hitler and his persecutions; as much as we detest Stalin and his atheism; as much as we are out of tune with England and France and their imperialism which subjugates more than 400,000,000 people in Asia, we Americans of this generation are convinced that our place is in America. We are determined that it is our business to fashion a foreign policy which will keep us absolutely free from European and Asiatic entanglements.

My fellow Americans, I am absolutely convinced that the common peoples dwelling in Europe do not want war. They detest war. What is difficult for us to understand is why certain leaders in America are courting a world war even before it happens. They

in America are courting a world war even before it happens. They seem to be disappointed because Mr. Chamberlain signed the Munich Peace Pact. In fact that was the signal for us to cast aside all our traditions and to begin playing the game of "might is right" on the other side of the English Channel. Moreover, since 1937 we, the most peace-loving Nation in all the world, have witnessed our official spokesmen parading a vocabulary of belligerency which matched anything either Mussolini or Hitler or Stalin ever enurgicated. ever enunciated.

In October 1937 Mr. Roosevelt intimated that there was danger of European aggressors coming to America to destroy us. What absurdity! Referring to what was happening in Europe, he said: "If those things come to pass in other parts of the world, let no one imagine that America will escape, that it may expect mercy, that this Western Hemisphere will not be attacked." It was on that occasion that he invited us to cooperate in quarantining the dictator nations.

Following that speech we began to ask ourselves, "What of the League of Nations? What of the World Court? Did not the American people and the United States Senate once and for all settle those questions?

"Is our President going over the heads of the people and the Senate to establish a new League of Nations described as democ-racies—nations which were really the gold-hoarding nations of the universe, dominated by the international bankers?

"Did this Chicago speech mark the passing of our ancient tradi-

tion of no foreign entanglements?

"Was Uncle Sam about to become the policeman of the world with the hope of restoring law and order and justice on the other continents at the very moment when our own country was suffering from more lawlessness, more disorder, and more economic privation than at any other time in its history?

"Did this quarantine statement of Mr. Roosevelt mean that our first line of defense would be established wherever an international banker and gold worshiper decided to move it?"

It is true that in 1937 the flames of passion were beginning to burn flercely in Europe. It is true that every informed man and woman in America knew how wicked the Peace Treaty of Versailles

was—that it kindled those flames of passion.

Was not Chicago, then, the opportune place and 1937 the opportune time to invite the European leaders to undo the harm which resulted from Versailles or was it the proper place and time

to add oil to the conflagration?

Following Chicago there was occasion for the President to visit Canada for the dedication of an international bridge. Speaking in the name of the people of the United States, Mr. Roosevelt said that if Canada were attacked, the United States would not stand

idly by.

Why obtrude such militaristic thoughts upon a peaceful people; and who, in the name of common sense, can attack either Canada or the United States 3,000 miles distant from Europe and 6,000

miles distant from Japan?

Then came the President's message to Congress in January of this year. He said: "Words may be futile but war is not the only means of commanding a decent respect for the opinions of mankind. There are many methods short of war, but stronger and more effective than mere words, of bringing home to aggressor government of the contract of the contract.

ernments the aggregate sentiments of our own people."

What methods did he mean? The boycott? Although Germany and Italy choose to live under a different form of government than the one which we sustain, what unjust aggression have they made against the United States?

Every person understood whom President Roosevelt meant on that occasion because his spokesman, Senator Key Pittman, some days before this message to Congress, officially informed America that the people of the United States do not like the Government

that the people of the United States do not like the Government of Japan nor the Government of Germany nor any form of dictatorial government, communistic or fascistic.

Certainly we American people do not like the Government of Japan, of Germany, or of England, for that matter. We do not like them in the sense that we like our own better.

And finally came the Warm Springs speech as Mr. Roosevelt was terminating his spring vacation. "I will be back in the fall if we don't have a war."

How many Americans are aware that, according to our Constitution, it is not the business of President Roosevelt or any other President to determine our foreign policies? That is the business of the United States Congress.

the United States Congress.

Was it the United States Congress that said we would back European democracies against dictatorships in every way short of

war? It was not.

Now, I ask you: What is the reason for all this war talk in America? Why are we so interested in protecting democracy where there is none? Why are we so determined to preserve the status quo of the Peace Treaty of Versailles, which every person recognizes as unjust? Why are we so anxious to meddle in European affairs when we have such great difficulty in handling our own?

Pause, my fellow Americans, to recollect that the disaster which is about to overwhelm Europe is of Europe's own making, a small territory overpopulated with teeming, starving masses; 425,000,000 persons exploited by an unjust economic system predicated upon gold and operated by the oligarchies of finance.

Why should America or Americans become a party in perpetuat-

Why should America or Americans become a party in perpetuating such injustices?

Why should we forsake our own problems and sacrifice our youth and our wealth and our property to sustain a status quo to which the common people of Europe themselves are opposed?

Why, therefore, should we consider writing a neutrality act which will permit our President, first, to name the unjust aggressor and, secondly, to sell arms and munitions and airplanes to the nation against whom he deems the aggression had been committed and thereby incur the enmitty of the other nations?

gressor and, secondly, to sell arms and munitions and airplanes to the nation against whom he deems the aggression had been committed and thereby incur the enmity of the other nations?

Why should we be distracted from the manifold economic problems which oppress us and thereby become participants inevitably in the world war which will follow?

If we serve notice upon Britain and France, upon Germany and Italy and Russia, that in no way will we participate in their continental affairs any more than we will permit them to participate in our continental affairs, there will be no world-wide confiagration. Sooner or later the nations of Europe will sit down at a council table and revise their programs of economic aggression and decide to live as God intended them to live—as neighbors and as brothers of Jesus Christ. The status quo of exploitation must be abandoned. Justice for all must prevail.

Meanwhile Washington is filled with propagandists who talk of peace and democracy and who desire war and dictatorship. There are more than 4,000,000 members in the League for Peace and Democracy, which is wedded to communism—the same organization which petitioned Congress to lift the embargo on Spain, the same organization which applauded the slaughter of Christians in Spain. These propagandists are active. They are intelligent. They are resourceful. And, above all, they are in league with the Bolsheviks, whose main desire is to keep America in turmoil, to inject America in war, and to see American democracy vanish in the smoke of destruction as it has in every other country.

What opposition can you offer to them? The officials of the League for Peace and Democracy are the front men for the warmongers.

Will you permit them to proceed unchallenged under the banner

Will you permit them to proceed unchallenged under the banner Will you permit them to proceed unchallenged under the banner of peace and democracy—peace that means war and democracy that means bolshevism! If I know the American public who fought the League of Nations propagandists, who defeated the World Court radicals, who triumphed over the reorganization bill advocates, I am sure that once again the Paul Reveres will ride; the steadygoing American men and women will rise to action this week and next week in defense of George Washington's principle "of no foreign entanglements."

There is still the United States Senate with whom these forces

There is still the United States Senate with whom these forces must contend—a Senate safeguarded by the Constitution of our

Nation.

With your moral support it was the United States Senate which kept us free from the World Court and the League of Nations. It was the United States Senate which kept us from lifting the embargo against Spain. It will be the United States Senate which will succeed finally in passing a neutrality act that will be a neutrality act and therefore in nullifying the policies of hate and bleedshed and of world wer. bloodshed and of world war.

Erasing from our hearts all animosity toward all peoples— English, French, German, Italian, Russian; and toward all races— Jew or gentile—let us contribute our part toward formulating a policy of world peace. Let it be a peace established upon the firm foundation of justice, not upon the quicksands either of financial

or commercial aggression.

To accomplish this objective, under God, stand by the Senate and

In addressing a letter to a group of students who asked some enlightenment on European conditions, Senator Borah said:

"It was the democracies of Europe which wrote the secret treaties

"It was the democracies of Europe which wrote the secret treaties by which all the spoils were divided even before the World War was closed. It was the democracies of Europe which wrote the Versailles Treaty, not a peace treaty, but a spoils treaty. It was the democracies which for twenty-odd years refused to make any changes in the Versailles Treaty looking toward peace.

"These European powers, whatever may be their idea of ideology or political views, pursue one and the same course when they come to deal with international affairs. They all alike violate treaties, disregard the most fundamental principles of right, pursue methods which inevitably lead to war, and then call upon the United States, Canada, and other nations to save them from their own intolerable and vicious methods."

I have every reason to maintain confidence in our United States Senators. There are many more of the same caliber as Senator Borah, whom I have just quoted. Possibly they may be influenced by the filthy propaganda of the war mongers. But most probably I am certain that they will be influenced in behalf of peace if you and your neighbors take time to write a letter this week imploring them as your representative to stand by the Constitution insofar as it is the business of the Senate to determine our foreign policies and to write a neutrality law which will keep America free from all foreign entanglements.

Hell's Canyon

EXTENSION OF REMARKS

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES Wednesday, April 19, 1939

ARTICLE BY RICHARD L. NEUBERGER

Mr. McNARY. Mr. President, the current issue of Harpers Magazine contains an inspiring and comprehensive article, Hell's Canyon, the Biggest of All, by Richard L. Neuberger, an able columnist of the Oregonian, published in Portland, Oreg.

The article is particularly pertinent and timely because of the survey being made by the National Park Service as to whether this project reaches the high standard of national parks.

I ask unanimous consent that it may be printed in the Appendix of the Congressional Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Harpers Magazine] HELL'S CANYON, THE BIGGEST OF ALL (By Richard L. Neuberger)

For nearly a century now it has been axiomatic that the Grand Canyon of the Colorado River is the deepest cleft on earth. That Canyon of the Colorado River is the deepest cleft on earth. That this is not true is a fact which geographers are just beginning to recognize. The Grand Canyon is not so deep as the basalt and granite gash made by the Snake River between the States of Oregon and Idaho in the Pacific Northwest. Along a mountain-serried stretch where the brawling waters of the Snake twist northward, Hell's Canyon averages 5,510 feet in depth for 40 spectaular miles. Here 6,000-foot expanses are not uncommon. At one point the canyon is 7,900 feet deep, a mile and a half from rim to river. This considerably exceeds the 6,100-foot maximum depth of the Grand

The canyon hollowed out by the Colorado River is 217 miles long; that by the Snake River, 189 miles. The Grand Canyon is 15 miles from rim to rim at its widest point; Hell's Canyon, 10 miles. The famous Bright Angel Point towers 5,650 feet above the Colorado; the bluff of White Monument, an equal horizontal distance from the Snake, is 5,922 feet higher than the river. In the Grand

Canyon the Colorado River drops approximately 10 feet a mile; the Snake in Hell's Canyon descends about 12½ feet a mile.

Both chasms are built of many levels. These levels rise terrace-like above the rivers. From the water only the first rims can be seen, but there are many rims beyond until the last embayments are reached.

Peculiar to the Grand Canyon are its lavish coloring and its array of buttes, mesas, rock temples, and flat-topped hills. The walls eroded by the Colorado are more or less uniform; they are long sheer cliffs approximately 1,500 feet high to the level directly

The Snake, however, is flanked by shale slides, then by timbered slopes, and finally by granite and lava precipices. Where Hell's Canyon spreads out below Hat Point its sides consist of countless Canyon spreads out below Hat Point its sides consist of countless evergreen hills and bare basalt crags piled on top of one another in magnificent disordered array. A few miles downstream the scene changes sharply, and water-worn granite and basalt sweep down to the Snake in majestic stratified escarpments amazingly like the buttes that typify the Grand Canyon of the Colorado.

Dr. Otis W. Freeman, of the American Geographical Society, one of many authorities who concede the greater depth of Hell's Canyon, says that it is certainly "both the narrowest and the deepest gash in the North American continent." The Geological Survey has lately called attention to it as one of the great scenic resources of the Nation. Why, then, has it been overlooked?

Only its remoteness and inaccessibility can account for the fact that Americans are almost completely unaware of its existence, that encyclopedias and atlases and other sources of general information scarcely mention it, and that the thorough Britannica accords it only passing reference.

accords it only passing reference.

п

The name of this chasm is symbolic. The frontiersmen of years ago called it Hell's Canyon because of its sinister splendor. Escarpments of granite rise from the river like gloomy battlements. On wet, windy days wraiths of clouds swirl and break around the lagged basalt crags far above. No gulf anywhere has rougher rock surfaces. Bluff is piled on bluff in huge torn chunks of black and lagged basalt crags far above. No gulf anywhere has rougher rock surfaces. Bluff is piled on bluff in huge torn chunks of black and gray lava. Sheer and rugged walls are interspersed with slides of shale and ragged hillsides of cheat-grass. Creeks tumbling down long gullies add their pittance to the river. The Snake surges an angry white through much of the abyss. At a dozen rapids its foam-topped waves are still wearing away the rock. "La maudite rivière enragée!" exclaimed the early French-Canadian voyagers, and the pioneers of the Oregon Trall paraphrased them in English: "The accursed mad river." Here and there in the canyon, hackberry bushes and Ponderosa pines and Douglas firs, growing tenaciously on steep slopes and fringelike bars, provide contrast for the harsh bleakness of the precipices.

The sun's rays reach the waterway at the bottom of the chasm only a few hours each day, particularly in the winter months. The nocturnal tones of the cleft are broken only when sunlight softens the rim rock and the shadow from one bluff gently blankets the opposite wall. Then Hell's Canyon seems filled with a thin blue haze; seen from afar up its craggy trench, it is like the background of one of the painted fantasies of Maxfield Parrish. In such interludes, brief though they are, the reaches of the mountain river show themselves clean and clear, and the canyon takes on enough color to lose some of the ominous aspect that in 1812

enough color to lose some of the ominous aspect that in 1812 brought this quaintly worded report from Robert Stuart of the Pacific Fur Co. to his chief, John Jacob Astor:

brought this quaintly worded report from Robert Stuart of the Pacific Fur Co. to his chief, John Jacob Astor:

"The whole body of the River does not exceed 40 yards in width and is confined between Precipices of astonishing height, Cascades & Rapids succeed each other, almost without intermission, and it will give a tolerable idea of its appearance were you to suppose the River to have once flowed subterraneously through these mountains, and in the process of time, immense bodies of Rocks were detached occasionally from the ceiling till at length the surface of the Heights descended into the Gulph and forms at present the bed of this tumultuous water course. Mountains here appear as if piled on Mountains and after ascending incessantly for half a day, you seem as if no nearer the attainment of the object in view than at the outset."

Hell's Canyon has not the bright glory or magnificent mesas of the cleft of the Colorado. Its grandeur is the majestic mystery of sheer size. The bottom of the canyon is a pit of unbelievable depth. From it the rim seems studded with tiny green bushes—until Forest Ranger Fenton Whitney says they are Ponderosa pines 100 feet high. Up the side ravine dug by Deep Creek a wanderer with stout wind can climb, after hours of terrific effort, to the top. The Snake, way below, is now a slender strip of green; white flecks indicate rapids with waves as high as breakers. Upward, rim succeeds rim to a horizon dim and far off. The climber seems standing in the core of the world, like Astor's courier of long ago who, too, made the heartbreaking ascent of "mountain * * * piled on mountain."

Ages ago there was no Hell's Canyon. The events directly responsible for its creation began in the Cenozoic Era, just as the remote forerunners of man were coming on the planet.

Over the granite uplands of what is now the Pacific Northwest poured the Tertiary lava flows. They inundated dales and valleys and came to rest against peaks and ridges like water shoving at a dam. The liquid basalt buried some hills

rock quilting the land, the crust of the earth began to stir again. The Wallowa Mountains were joited 10,000 feet into the sky near where the border of Oregon now is. The Seven Devils Range was wrinkled almost as high along the present boundary of Idaho. After this rampant vulcanism, ice sheets moved out of the north and sheathed the region. They gouged out lakes and began U-shaped dips that would later be canyons. One of these dips was between the outlying ramparts of the Wallowas and Seven Devils. Then the ice melted and receded. Into the jumbled mass

of granite and lava a river pushed, the Snake.

The river is still pushing today. A mile through the hardened lava flow the Snake has cut, and into a thousand feet of the granite bedrock besides. The foothills of the Wallowa Mountains lie along the western rim of the chasm. The steep slopes of the Seven Devils form the opposite wall.

A college triend of mine named Arms, Pure is one of the few

Devils form the opposite wall.

A college friend of mine named Amos Burg is one of the few men who have risked going by boat through both Hell's Canyon and the Grand Canyon. Some of his observations are significant. He says that to look up from either the Snake or the Colorado at the rimrock so far above makes one dizzy. Despite its murky and forbidding appearance as compared with the Grand Canyon's splurge of color, Burg calls Hell's Canyon "a more hospitable abyss." This is primarily because of regional characteristics. The Grand Canyon is part of the arid Southwest. Its vegetation is negligible. No soil cloaks the rocks. The Colorado River is full of silt and sand and practically devoid of fish life. It carries a million tons of "dust bowl" sludge through the canyon each day.

The somber Hell's Canyon, by contrast, is typical in many respects of the lush Pacific Northwest, although it is outside the rain belt of that fertile region. Trees dot the bars and upper slopes. There are trout and sturgeon in the Snake and occasionally even a giant Chinook salmon from the mouth of the Columbia 500 miles away. The defiles that merge with Hell's Canyon are gloomy and narrow, but through them pour clear mountain creeks. Deer introduced artificially into the Grand Canyon frequently die; bighorn sheep and deer and elk lived in the chasm of the Snake before the white man came. So, paradoxically, the very qualities that give Hell's Canyon its grim aspect actually make it more a land of the living than the gayly tinted canyon of the Colorado.

The Grand Canyon is cut through a desert plateau. That is why it is easy to get to and why the many times of the canyon.

The Grand Canyon is cut through a desert plateau. That is why it is easy to get to and why the many rims of the canyon are as level as a railroad grade. Hell's Canyon penetrates two mountain ranges. That is why it is difficult to reach and why its rims are irregularly broken.

ш

The Snake River is the least-known major waterway of the continent. Millions of Americans have never heard of it, yet it is more than three times as long as the Hudson and its drainage area is eight times as great—including nearly all of Idaho and parts of Washington, Oregon, Wyoming, Utah, and Nevada. Only three rivers in the United States—the Columbia, the Colorado, and the Tennessee—excel it in hydroelectric power potentialities. Compare its 18,081,000,000 kilowatt-hours of latent energy with the 3,017,000,000 available in the Potomac River, for example. The Snake is 1,033 miles long and the principal tributary of the vast Columbia River system, which is second in the country only to the network formed by the Missouri and Mississippi.

The Snake is primarily a wilderness river, more so than any other stream in the Nation. It drains our last great frontier. Its basin, though twice as large as the State of New York, contains considerably fewer people than the city of Buffalo. The biggest population center in the basin is Boise, the Idaho capital, with 21,500 inhabitants. There are about 4 persons per square mile in the Snake River basin; in Massachusetts each square mile

mile in the Snake River basin; in Massachusetts each square mile

with 21,000 innabitants. There are about a persons per square mile in the Snake River basin; in Massachusetts each square mile has 528 persons, and even in rural Iowa there are 44. From its origin just west of the Continental Divide to its meeting with the Columbia, the Snake flows through a lonely hinterland.

After rising near Yellowstone National Park, it courses through Jackson Hole in Wyoming and then rushes toward Idaho in a chasm half a mile deep. The chasm bisects the Teton Range and is called the Grand Canyon of the Snake River—a name conferred by men who knew nothing of the infinitely greater canyon 600 miles downstream. Continuing into Idaho, the Snake cuts a wide valley for 65 miles and then flows on to the soil-mantled rock of the Snake River Plain. Here is one of the principal irrigated sections of America. Four million acres need only moisture to produce almost any crop. Two Federal dams span the river and plenish the canals which crisscross the 120,000 acres of the Minidoka potato and beet-sugar project. This important chore requires huge draughts of water, but the hard rock underneath the reclaimed land returns to the river nearly all the water used. So the Snake as it leaves its peaceful plain is at full force for the grim business ahead. grim business ahead.

grim business ahead.

It moves faster now. Into it pour the Thousand Springs, the outlet of prehistoric creeks that got lost beneath the lava ages ago. These subterranean streams constantly add to the Snake enough water to provide each inhabitant of the Nation's cities with 120 gallons a day. At the hamlet of Milner the river begins a gorge through the basalt plateau. By this time it is a chute of foam plunging over a succession of cataracts and crashing down the 212 feet of Shoshone Falls.

At Huntington it touches the Oregon boundary. Here the outlying palisades of the Wallowas and Seven Devils begin to enclose the waterway. Passengers on the Union Pacific get a tantalizing glimpse of the head of the canyon as its trains clatter across the

Snake and use two locomotives to climb out of that frowning terrain. Sixty miles down the river from Huntington the practically deserted mining colony of Homestead is the lone settlement along this wildest stretch of all. Below Homestead the ever-rising slopes straighten into the crags of Hell's Canyon. This is the river's supreme achievement.

Hell's Canyon falls away near the Idaho town of Lewiston.

There the river, at last free of its granite and basalt shackles, flows westward across 141 miles of Washington wheatland. At its end-

westward across 141 miles of Washington wheatland. At its ending in the Columbia it is a mighty waterway with a greater average flow than the Colorado or the Rio Grande. The rivers meet about midway between the huge dams which the Government is constructing on the Columbia at Grand Coulee and Bonneville. How little do we know about this country of ours! No room for the German refugees, we say almost categorically—yet the Federal Government owns more than half the land of the vast State of Oregon. Are the unemployed going to be on our backs forever? we ask in despair; yet Grand Coulee Dam will make fertile a potential farming section twice as large as Rhode Island. There is no place for the surplus population to find sanctuary, we lament—yet the national forests alone in the Snake River Basin are as big as the whole State of Maine, and one rural county in Washington with a whole State of Maine, and one rural county in Washington with a handful of inhabitants is as big as Delaware, Connecticut, and Rhode Island combined—and there are 10 people a square mile in Oregon and 6 in Idaho, against 537 in New Jersey and 214 in Pennsylvania

White space on the United States census maps means fewer than two persons a square mile. The only white space east of the Mississippi River is a tiny patch indicating the swampy Everglades of Florida. But white space almost predominates in the great basins which the Columbia and Snake Rivers have carved in the Pacific Northwest. In these pages not long ago Carl Dreher wrote that the outpost regions, always an avenue of escape from the dilemmas of civilization, have been closed. Yet Congress recently authorized Secretary Ickes to open for settlement in the far West 5-acre tracts of public land equal in aggregate size to the State of Texas; and the Secretary has just quarreled with the Governor of Washington over whether a new national park shall encompass a million or only 600,000 acres. Perhaps the frontier is gone as the force in our national development which Frederick Jackson Turner considered it—yet can we wholly forget that the wilderness is still so boundless that in it many of our geographers and encyclopedists have lost track of the deepest canyon in America, if not on earth? White space on the United States census maps means fewer than have lost track of the deepest canyon in America, if not on earth?

Only once did the most famous exploration in American history ever turn back. That was when Lewis and Clark encountered the "miles of white water and snow-covered mountains" of the Salmon River Canyon, which enters the Snake in Hell's Canyon. "This formidable barrier." as Captain Clark called it, proved too much for formidance parrier, as Captain Clark caned it, proved too much too them. Wearly they climbed out of the main tributary of the Snake and sought another route through the fastnesses. They finally reached the Snake itself near Lewiston and paddled down it to the Columbia. Hungry and exhausted, they sent Sgt. John Ordway up the river to look for fish and the roots of kouse plants. He was the first white man to see Hell's Canyon. Meriwether Lewis, in that autumn of 1805, had been the first to see the river and Captain Clark named it for him. But today other rivers honor the explorer's name, and whether the Snake is named for the Snake Indians or because of its serpentine windings no one is certain.

Not so many years ago a hunter on the river unearthed the great frontiersman's branding iron:

US Capt. M. Lewis

John Jacob Astor corresponded with Jefferson and read the journals of Lewis and Clark. He decided that it might be profitable to

John Jacob Astor corresponded with Jefferson and read the journals of Lewis and Clark. He decided that it might be profitable to own a string of trading posts between the Plains and the Far Northwest. The Pacific Fur Co. was organized and Astor dispatched a ship, the Tonquin, to the mouth of the Columbia by sea.

The principal party of 64 men he sent overland in 1811 under the leadership of Wilson Price Hunt, who was in charge of the venture in the field. This was the first push toward the sundown after Lewis and Clark. The trek was uneventful until the party stood on the banks of the Snake River. Against his better judgment, Hunt agreed to follow the churning waterway to the Columbia. It was a fatal blunder. Near the present village of Milner the expedition lost five canoes and its best voyager, Antoine Clappine. A Scotchman, saved by clutching at a rock, named this vortex the Caldron Linn, meaning boiling water.

The adventurers continued on foot. Uplands turned into mountains and the men were in Hell's Canyon. The bluffs became so steep they could not get down to the river for water. They dropped kettles on ropes, an experiment which frequently failed. When they tried to follow the Snake, "it passed through such rocky chasms and under such steep precipices that they had to leave it and make their way, with excessive labor, over immense hills, almost impassable." It was a winter of famine, the Indians said, and the men were driven to munching on moccasins and beaver pelts. Once they were spared starvation only by a channe shot that killed a bighorn sheep. The Devil's Scuttle Hole they called a particularly ominous part of the cleft, and Ramsay Crooks, who years later became president of the American Fur Co., attempted to lead a handful of men over the wall of this dreadful place. After a day of slippery climbing the famished wayfarers "found they were not half way to the summit, and that mountain

upon mountain lay piled beyond them in wintry desolation." They crawled back into the chasm.

A third of the way through Hell's Canyon, Hunt disconsolately gave the order to turn back. He had lost two more members of the party and a third had gone mad. Others refused to brave the chasm any farther. Astor's hopes and plans never survived that ordeal. The morale of the expedition was gone. The men who eventually reached the Pacific Ocean in February of 1812 were not the confident voyagers who 5 months earlier had neared the Caldron Linn. Disaster capped disaster; the crew of the Tonquin was massacred by Indians and the stockaded settlement was finally

Caldron Linn. Disaster capped disaster; the crew of the *Tonquin* was massacred by Indians and the stockaded settlement was finally abandoned. Today Astoria, at the mouth of the second greatest river of the United States, is a salmon-fishing colony. For 20 years after Wilson Price Hunt's tragic journey no white men peered into Hell's Canyon. Then westward trudged a romantic, vagabonding army officer in the fur trade, Capt. Benjamin L. E. Bonneville, on whose possible secret military mission Bernard De Voto speculated some months ago in this magazine. It was characteristic of Bonneville that he wanted to find out for nard De Voto speculated some months ago in this magazine. It was characteristic of Bonneville that he wanted to find out for himself if Hell's Canyon could not be made a route to the Columbia. Yet he confessed to trepidation when he saw the Snake twisting between "tremendous walls of basaltic rock that rose perpendicularly from the water edge, frowning in bleak and gloomy grandeur." Two horses stumbled in swift eddies and were swept away; the riders saved themselves by grabbing hold of rocks. The cliffs loomed higher and steeper, in places overhanging the river. At last Bonneville, like Ramsey Crooks before him, tried to climb over the walls, and after ascending to what appeared to be the summit, "found the path closed by insurmountable barriers." Daylight showed Bonneville and his followers that "although already at a great elevation, they were only as yet upon the shoulder of the mountains." For the first time in his life the soldier of fortune admitted discouragement. He led the way back into the gulf in search of another exit. search of another exit.

A week of struggle and effort eventually got the party out of the canyon. As he sat on the last rim and looked down on the Snake far below and remembered 4 years of wandering across the

Shake far below and remembered 4 years of wandering across the Nation, Bonneville wrote in his journal:

"The grandeur and originality of the views presented on every side beggar both the pencil and the pen. Nothing we had ever gazed upon in any other region could for a moment compare in wild majesty and impressive sternness, with the series of scenes which here at every turn astonished our senses and filled us with

That was the end of Hell's Canyon as a way to the rich valleys of the Oregon country. The oncoming settlers shunned it, and the covered wagon trains forded the Snake above Huntington and creaked away from the Wallowas and the Seven Devils. A few bold pioneers traveled to the head of the canyon but none attempted to pick a trail through its depths. Some called the cleft Box Canyon and others referred to it as the Seven Devils Gorge, but mostly they spoke of it as Hell's Canyon and agreed that the name was appropriate.

A century has passed since the days of Bonneville, yet the canyon of the Snake River is still remote and difficult of access.

Only about 175 people live in the hinterland between Homestead

Only about 175 people live in the hinterland between Homestead and Lewiston. Some of these are ranchers back in lonely draws in the hills. Others are cowpunchers with scattered herds of cattle to watch. Along the river itself a prospector here and there sifts the gravel bars for gold which Mr. Roosevelt's government will buy at \$35 an ounce. On narrow flats in the upper canyon an occasional dilapidated barn or gaunt cabin tells where a settler retreated before so hostile an environment.

Some of the backwoods inhabitants have radio sets operated by atteries, but it is 100 miles to the nearest doctor and as far to a

Some of the backwoods inhabitants have radio sets operated by batteries, but it is 100 miles to the nearest doctor and as far to a store bigger than the 2-by-4 tobacco and bean counter which Bill Rolfing keeps in the post office at Homestead. A sure-footed pony can cut down the distance. The W. P. A. Guide for Idaho blames the inaccessibility of the section for the fact that the Seven Devils Range, "potentially one of the richest mineral regions in the world,"

has yet to be tapped for its resources

There is no railroad. About a decade ago the people of Lewiston began clamoring for rail connections with the lower part of the State. Why not a line through Hells Canyon? The Union Pacific made a survey and learned that a right-of-way, if it could be hewed out of the rock at all and maintained between avalanches from above and sudden rises in the river from below, would cost \$198,434 a mile. This initial investment was prohibitive, decided the Interstate Compares Companies. the Interstate Commerce Commission.

the Interstate Commerce Commission.

If there are no rail lines, automobile roads are not much better. Down the Oregon bank to Homestead a careful driver can get, and even a few miles farther on a narrow road, to the abandoned Red Ledge Mine. Over the Idaho wall opposite Homestead a spine-tingling road creeps. It is wide enough for one car. There is no railing. In several places where it is 2,000 feet above the river the road switches back sharply; the motorist must reverse a few feet to make the turns, with his gasoline tank and spare tire hanging out over space. This is not a pleasant drive.

Other methods of getting about are similarly circumscribed. The region is without level tracts that might serve as airplane landing fields. "Never again!" swore the World War aviator who in 1927 flew the length of Hell's Canyon taking aerial photographs for the Union Pacific.

for the Union Pacific.

River travel is equally hazardous. Under favorable water conditions a pair of experienced boatmen, Press Brewrink and "Cap" MacFarlane, can coax their flat-bottomed *Idaho* 95 miles upstream from Lewiston. There, beneath slopes more than a mile high, the rocks block further navigation. On a sandy bar the *Idaho* unloads its cargo of mail and supplies for prospectors and settlers and scoots back to civilization. Other rivermen have not attained this comparative success. Several boats have been lost in the Snake in recent months. Amos Burg twice had his canoe sloshed out from under him on his trip through the chasm. Two engineers from under him on his trip through the chasm. Two engineers drowned when a railroad survey was made. The Salmon River, also in a cleft deeper than the Grand Canyon, is even more unmanageable. It is called "The River of No Return" because of the impossibility of bucking its current. A National Geographic Society expedition termed it "the wildest boat ride in America."

Even on foot this wilderness is traversed with difficulty. Listen to the leader of the railroad survey as he testifies before the Interstate Commerce Commission: "Little that is good and much that is bad can be said of the river and ravine trails. For the most part they are extremely narrow, winding difficult, steep, and

part they are extremely narrow, winding, difficult, steep, and ill-kept."

ill-kept."

A hundred years earlier Wilson Price Hunt had told Washington Irving almost the same thing about the Indian paths. That suggests how superficially time has touched Hells Canyon. This remarkable abyss is virtually unknown even to people living comparatively nearby. Sixty miles away at the Cornucopia gold mine, the girl who kept books said she had heard vague talk of a great chasm beyond the Wallowas. Had she ever been there? She shook her head. Had any of the men at the mine? She knew of none.

none.

All over the Northwest the story is the same. In the Oregon town of Baker, 105 miles from the canyon, the men playing cards in the biggest pool hell in town had scarcely any idea where it was. And, buying post cards in a Baker drugstore, another newspaperman and I assumed heroic stature in the clerk's estimation when with proper modesty we admitted to him that our tattered appearance was the result of a trek to Hells Canyon.

This wilderness has a folklore all its own. There is the yarn of the Squaw Creek hermit who fed his chickens on flour and water until they were blinded by paste—and the fable of the deer on Studhorse Creek that knew so little about men that a hunter could measure them with a tape before shooting.

And in Homestead, Bill Rolfing told me about the "wheelbarrow woman." A middle-aged woman had come down the rutted road from Huntington lugging a massive bundle. She had set it down in the dust and gone back up the road for another just like it.

in the dust and gone back up the road for another just like it.

That was more than Bill could stand. He resurrected a rusty wheelbarrow from his cellar and presented it to her. She disappeared in

barrow from his cellar and presented it to her. She disappeared in the fastnesses on the Oregon shore.

Twelve miles down the Snake from Homestead, Forest Ranger Robert Harper pointed across the river. On a sloping bench of Hell's Canyon a cabin perched precariously. "Who lives there?" I asked. Harper pointed again. Across an open space on the bench—I swear it—a woman pushed a loaded wheelbarrow. After that I was ready to believe the story about the prospector in the Salmon River Canyon who had conferred with Captain Meriwether Lewis the pright before election and heen advised to yote a straight. Lewis the night before election and been advised to vote a straight

Democratic ticket.

Democratic ticket.

How do these people vote? The Smith Mountain precinct in Oregon gave 22 votes to President Roosevelt, 3 to Mr. Landon, 1 to Mr. Lemke, and none to Mr. Thomas. It voted for a public power bill 10 to 8, and endorsed the Townsend plan, 11 to 6. Although overwhelmingly for the President, it inconsistently approved, 12 to 2, an antilabor initiative measure which the A. F. of L. claimed would destroy trade-unions in the State. At the Iron Dyke precinct in Homestead, with a smattering of labor sentiment left over from the bygone mining days, sentiment for Mr. Roosevelt was about the same; but the public-power scheme and the Townsend plan were voted down and opinion on the antiunion bill was equally tlivided. Across the canyon in Idaho the backwoods voters of the Cuprum precinct favored the President over the Governor of Kansas, 33 to 8, and gave Senator Borah a 5-to-2 majority over his Democratic opponent.

over the Governor of Kansas, 33 to 8, and gave Senator Borah a 5-to-2 majority over his Democratic opponent.

Foreign affairs are not discussed with particular zeal by these people. After all, the dark pit below White Monument seems a long way from Seattle and Portland and Salt Lake City, let alone Berlin and London and Shanghai. I would not like to be the recruiting officer who has to convince Herb Potsch that he must sail for Europe to defend his canyon shack on Deep Creek from Esseign aggression.

Fascist aggression.

Fascist aggression.

Yet perhaps the dwellers in the hinterland are not so different.

As Fenton Whitney and I walked down toward the Snake at night, a radio blared loudly in one of the four or five farmhouses in Homestead. We listened. From New York City over a national hook-up a synthetic cowboy was singing Home on the Range.

As soon as winter relaxes its grip on Hell's Canyon the National Park Service will begin an investigation of the region. Should the canyon and the adjacent territory be added to the Nation's public parks? If the report of the service is favorable, Senator McNary, of Oregon, will sponsor a bill in Congress. Borah may help him. Both these men are ardent conservationists, and both are extremely influential. McNary is the Republican spokesman. They may have the assistance of the President, for Mr. Roosevelt likes the hinterland. likes the hinterland.

But should Hell's Canyon be a national park? Why not leave this bit of unknown scenic splendor for those willing to be incommoded to see it? Who wants it cluttered up with professional tourists, tired businessmen, junketing politicians, knicknack peddlers, and glamour girls and boys? Surely it merits a happier fate than that. The acquisitive instinct is powerful, but Bill Rolfing assured me emphatically that he has no desire to turn his country assured me emphatically that he has no desire to turn his country store into a tourists' hotel. Idaho has Sun Valley; Oregon has the sumptuous Timberline Lodge which Mr. Hopkins' W. P. A. built for the wealthy; let these resorts take care of the dude ranchers and the sightseers and the Tyrolean-clad ski artists. Why not leave the Snake River and its chasm for those who would see the West almost as it was when Lewis and Clark arrived? The Forest Service has just set aside 223,000 acres on Eagle Cap above the canyon as a primitive area to be untouched by man; only enough trails for forest-fire protection will invade it.

Eventually, to be sure, Hell's Canyon will probably be a national park. There is something to be said for the argument that America's natural wonders should be available to everyone. I have a hunch, however, that the forthcoming report this summer may be adverse. Railroad connections are 50 or 60 miles away over rugged terrain, and adequate highways would require generous chunks of public money. Washington is not in a spending mood right now unless the spending pertains to national defense; and Hitler can hardly be said to have Freeze-out Saddle as his next objective.

as his next objective.

For a while, at least, Hell's Canyon will probably remain a sort of American Erewhon, tucked away beyond the ranges. Yet what a paradox this is. The palisades of the Hudson, the Virginia Natural Bridge, a dozen other scenic centers would be only rock deformations down there among that dark conglomeration of bluffs and crags and hills and mountains. From the last rim the Snake and crags and hills and mountains. From the last rim the Snake looks like a rivulet, like the river one sees on a panoramic map made from an airplane flying high. How could the Nation have overlooked this mighty cleft, particularly when it was discovered and explored at so great a price in suffering? Down there is where the frontiersmen struggled and froze and starved and turned back. And down there the champing waterway is still at work on

On windless days the only sound from Hell's Canyon is the roar, faint and far off, of the mountain river, gnawing at the rocks

the earth spewed up long ago.

We Can Have Neutrality if We Are Willing to Pay the Price for It

EXTENSION OF REMARKS

HON, LOUIS LUDLOW OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 19, 1939

Mr. LUDLOW. Mr. Speaker, in considering neutrality legislation I take it that the first and most important question we should ask ourselves is, How deeply and sincerely and earnestly do we desire to keep America out of war?

It is one thing if we are just benevolently disposed and altruistically inclined and would like to avoid war, provided it is not too inconvenient to do so and does not impinge too

much upon our pocketbooks.

It is another thing if we are really determined to save America from the horrors of another war and have an inflexible will and an iron purpose to accomplish that end, even to the extent of being willing to sacrifice the profits of commerce with belligerents to keep America at peace with the world.

Unfortunately, there are too many people tied up with various interests who would like to see America kept out of war, with a reservation, the "but" being, "But, of course, we would be foolish to turn our backs on the trade and financial advantages that will come to us when other nations get to

The person who takes that view of our neutrality reminds me of the tightwad at a charity meeting who closed a resounding speech, pouring out sympathy for the underpriviledged and unfortunate, by proposing "three cheers for the poor," but failed to drop anything in the plate when it was passed around.

The contribution to the cause of peace of the type of neutrality advocate referred to is just as worthless as that flamboyant orator's contribution was to the cause of charity.

We may as well make up our minds right now that we will never have any guaranty of isolation from war unless we are willing to pay for it. What is the first fundamental proposition to be considered in writing neutrality legislation? We are not going to have freedom from war unless we are willing to give up the trade profits that drag us into war. We cannot have our cake and eat it, too. We can, in my opinion, have a very great measure of insurance from war if we make up our minds now that we will forego the captivating trade opportunities that first lure, and then betray us when war comes.

After all, is it not better to give up millions in war profits, if need be, without the surrender of a single life, rather than go into a war that will cost billions in money, the deaths of untold numbers of our fine young men, and that may mean the destruction of our free government? Surely it does not require the vision of a seer to see the best end of

that bargain.

There are several outstanding neutrality proposals vignetted on the legislative calendar at the present time and a brief discussion of each of them may be in order. First, I would mention the bill of Senator Thomas of Utah, because I think it is the most unreasonable of all and the one that should be most quickly disposed of. His bill, in substance, would permit the President to name the aggressor in a war between two or more foreign countries and to apply embargoes in accordance with his judgment or desires. This bill is unthinkable.

It would take the war power right out of the hands of Congress and place it in the hands of the President, who already has too much power in respect to making war. power to fix the guilt of a foreign nation is too dangerous a power to exercise unless we are ready to follow it up immediately with our battalions and battleships. The Thomas bill would open a sure and quick way to involve the United States in war and it is a grotesque misnomer to call it a neutrality bill. It should be called "a bill to put the United States into every war that may arise in the future."

Then there is the bill of Senator PITTMAN, of Nevada, chairman of the Committee on Foreign Relations, which, to my way of thinking, is almost as bad as the Thomas bill.

To be sure, the Pittman bill does not make the mistake of trying to name the aggressor, and on its face it does appear to be impartial, but its impartiality is only superficial. It opens up unrestricted trade to belligerents on a "cash-andcarry basis," the title to the goods to pass to the purchaser before the goods leave the water's edge. What this bill would do, therefore, would be to make the United States the ally of Great Britain, France, and Japan, because those are the nations that have the ocean carrying facilities to come to our shores and get our products. Many Americans sympathize with Great Britain and France, but how many sympathize with Japan, and want to help her in her atrocious and barbarous warfare? The Pittman bill is not a neutrality bill. In fact, it is a very unneutral bill. In framing it I fear the author was influenced by his very well-known and extreme predilection in favor of Britain and France.

A vast trade in war supplies, built up with a belligerent. would be a tremendous force to upset the neutrality of the United States. It would have the power of a million hawsers, pulling America into war on the side of the belligerent, with whom our citizens have these favorable trade relations. It is nothing more nor less than human that the beneficiaries of such trade would bear down upon our Government to protect their enormously profitable business, and all of this would add to the complexities of maintaining a status of neutrality, and would certainly enhance the probability of America becoming involved in war. The Pittman bill would expose American neutrality to too many dangers to be seriously considered.

Another proposal, equally untenable in my opinion, is that of Senator King, of Utah, who proposes to repeal all neutrality legislation outright and to rely upon international law.

The best reply to proponents of this suggestion is that there was no neutrality legislation on the books 20 years ago, but that did not prevent us from being dragged into the World War. Our nationals had their rights of the ocean under international law, and by asserting their rights under the doctrine of the freedom of the seas, we became involved in the World War. A mere laissez faire attitude of falling back on international law will not keep us out of future

Because I think it is of the highest importance that we shall have real neutrality legislation with teeth in it that will protect America and keep us out of foreign entanglements, I introduced on January 3, the opening day of the present Congress, House Resolution 163, of the Seventy-sixth Congress, which reads as follows:

A bill to establish the neutrality of the United States

Be it enacted, etc., That upon the outbreak of war between two or more foreign nations the President shall issue a proclamation forbidding (1) exports of all kinds and (2) loans and credits to said belligerent countries or to the nationals of said belligerent countries. Said prohibition shall be made effective in a similar way by proclamation against nations that may enter the war subsequent to its outbreak and the nationals of said nations and to factions engaged in civil war. factions engaged in civil war.

SEC. 2. The penalty for violating such proclamation shall be a fine of \$10,000 or imprisonment for not more than 5 years, or both. SEC. 3. No vessel of American registry shall be chartered or used to transport goods in violation of the President's proclamation forbidding said shipments, and the penalty for violation of this section shall be cancelation of the registration of said vessel.

SEC. 4. Upon the outbreak of war between two or more foreign

nations the President shall issue a proclamation notifying American citizens that travel on the vessels of belligerent nations shall be at the traveler's own risk: *Provided*, That the notification shall not apply to a citizen on a voyage begun in advance of the date of the President's proclamation, if he has had no opportunity to discontinue his voyage after that date.

SEC. 5. Whenever during a war between two or more foreign nations it shall come to the notice of the Secretary of Labor that any alien is engaged in the United States or any possession thereof in propaganda activities other than the legitimate exercise of free speech and by such activities is seeking to win the favor of the Livited States for one or more of the bulliarrents or otherwise to United States for one or more of the belligerents, or otherwise interfere with the position of neutrality of the United States, the Secretary shall immediately order the arrest of said alien and shall as soon as practicable deport him to the country from which he came.

SEC. 6. Recruiting in the United States in behalf of any belligerent foreign nation is forbidden. The penalty for violating this section shall be a fine of \$10,000 or imprisonment for not more than 5 years, or both.

SEC. 7. Whoever (1) disguises the identity of a consignor or (2) camouflages the nature or the destination of goods intended for ultimate delivery to a belligerent nation or to nationals of a belligerent nation shall be subject to a fine of \$10,000 or imprisonment for not more than 5 years, or both.

If we are sincere, as I am sure 99 percent of the people of our country are, in desiring to erect every safeguard to keep America out of war, here, I believe, is a bill that merits the very closest scrutiny. I am confident it would do more than any other neutrality bill that has been proposed to keep us free of foreign entanglements. On the outbreak of war it would be mandatory, under this bill, for the President to issue a proclamation forbidding (1) exports of all kinds, and (2) loans and credits to both or all belligerents.

There are many supplies and manufactured articles, not strictly munitions, which a nation must have to carry on a war, and the export of these articles, as well as arms and ammunition, to belligerents, would be forbidden by my resolution. It is a notorious fact that enormous quantities of scrap iron furnished by the United States to Japan have been a great factor in enabling that power to carry on its unconscionable and atrocious warfare in China.

Are we willing to pay the price of peace which my bill requires? That is a question for the Foreign Affairs Committee and the Congress to consider. As I stated at the beginning, we cannot have our cake and eat it, too. cannot have peace and freedom from foreign imbroglios unless we are willing to do what is necessary to obtain that peace and freedom.

In conclusion I hope that, with proper modesty, I may quote briefly from an editorial printed a few days ago in the Fort Wayne News-Sentinel, one of the leading newspapers of our State, a newspaper which I respect highly, though it is not of my political faith. The editorial says in part:

One and only one bill before the Congress at this time (or more accurately speaking) before the House Committee on Foreign Affairs, has even a reasonable probability, if enacted, of assuring American neutrality in a foreign war. That bill (H. R. 163) was introduced last January 3 by Representative Louis Ludlow, Democrat, of Indiana.

If it is neutrality the American people want, then they should by all means demand that their Congress enact H. R. 163. No other pending measure so simply, clearly, and straightforwardly provides for American neutrality, makes a policy of neutrality mandatory upon the people and their President, and thereby lessens the risks

of all that war must mean.

The Manganese Situation in the United States

EXTENSION OF REMARKS

HON. CHARLES I. FADDIS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1939

LETTER FROM J. CARSON ADKERSON AND COMMENT THEREON

Mr. FADDIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from J. Carson Adkerson, of the American Manganese Producers' Association, of which I received a copy, and of which I presume other Members of the House received one also, and my remarks upon the same and an analysis of its contents:

Comments by Hon. Charles I. Faddis, of Pennsylvania, on J. Carson Adkerson's Letter to the Chairman of the Military Affairs Committee of the House, Dated March 28, 1939

AFFAIRS COMMITTEE OF THE HOUSE, DATED MARCH 28, 1939

Your attention is called to a letter to the Honorable Andrew J.
May, chairman of the Military Affairs Committee of the House, dated March 28, 1939, and signed by J. Carson Adkerson, president of the American Manganese Producers Association. This letter has been circulated to Members of Congress with the intent and purpose again to mislead this honorable body into unwise and unsound legislation regarding strategic materials. I have been a Member of this body for more than 6 years, during which time I have been vitally interested in our deficient mineral problem. I have on more than one occasion come in contact with Mr. Adkerson and his American Manganese Producers Association, so I speak with some authority when I say that, in my opinion, this is one of the most vicious lobbies existing in Washington. It has cajoled Congress into unwise legislation on manganese that has cost the American public some \$70,000,000 in a futile attempt to develop a domestic manganese industry by the imposition of a heavy import duty.

The time has come when the American public should be informed as to the real facts regarding Mr. Adkerson's lobbying activities. I shall shortly present a careful analysis, paragraph by paragraph, of Mr. Adkerson's letter to Mr. May, which will show that it is nothing more than a mass of misleading propaganda. Before doing this, however, I should like to review briefly the previous activities of the so-called domestic manganese producers in order that you may properly appraise this most recent outburst.

Many of you recall the sad plight of the United States during the last war when the inadequacy of domestic resources of manganese ore was so clearly demonstrated. Under exorbitant and unprecedented prices, domestic producers were able to supply but 35 percent of wartime needs, and this material was of such inferior grade that the technique of steel making had to be revised in order to use it. Despite the extraordinary ingenuity of American metallurgi Your attention is called to a letter to the Honorable Andrew J.

metallurgists we were forced to reduce the quality of steel required for munitions purposes, and had we not been able, with great difficulty and expense, to draw on Brazil for greatly expanded tonnages, American industry would have collapsed and been unable to supply the munitions needed to prosecute the war successfully. After the war, millions of dollars were paid by the Government to the wartime producers under the War Minerals Relief Act. erals Relief Act.

erals Relief Act.

With the resumption of normal conditions in trade after the close of the war, prices returned to normal and with it the uneconomic, domestic wartime manganese industry. Domestic producers came to Congress with a plea for a tariff to sustain their alleged industry. They made most extravagant claims as to the possibilities of domestic production under the proposed protection. Congress was misled by their plea, and in the Tariff Act of 1922 provided an import duty of 1 cent per pound on the manganese content of foreign ores imported into this country. During the following 6 years, 1923–28, there was no appreciable increase in production, the total domestic output amounting to less

than 9 percent of our total requirements of high-grade manganese ore and to only 5 percent of that type of ore required for the manufacture of ferromanganese, which is by far the most important alloy used in the manufacture of steel. Despite this failure of the domestic producers to make good their promises, Adkerson requested that the duty be still further increased to 1½ Adkerson requested that the duty be still further increased to $1\frac{1}{2}$ cents per pound, in the hearings on the Tariff Act of 1930. Again extravagant claims were made as to what the domestic industry could do under proper protection. While Congress did not grant all of Adkerson's request at this time, it did extend the previous import duty to ores heretofore exempted.

Results under this increased protection were equally disappointing. Domestic production of high-grade ore decreased from 62,695 tons in 1929 to 20,079 tons in 1932 and increased to only 42,584 tons in 1937, notwithstanding the fact that prices had increased substantially in the latter year. In the 4 years, 1934-37, domestic mines contributed only 1 percent of the ore used in the manufacture of ferromanganese.

facture of ferromanganese.

facture of ferromanganese.

In negotiating the reciprocal-trade agreement with Brazil, the Government finally recognized the futility of attempting to develop a domestic manganese industry by tariff protection and accordingly reduced the duty 50 percent, the maximum cut allowable under the law. Immediately the country was flooded by misleading propaganda from Adkerson's manganese lobby, so victous that eventually the patience of even our forbearing Secretary of State was exhausted, and he was prompted to issue publicly a stinging rebuke to Adkerson and his henchmen, as will be shown later.

The foregoing comparison of promises and performance on the part of the domestic manganese producers would seem to indicate they are either individuals too visionary to face the realities of their situation or individuals engaged in a ghoulish attempt to loot the United States Treasury, either of which would be sufficient grounds for denying them further consideration from the Congress.

In the hearings recently conducted by the Military Affairs Committee of this House domestic producers were given every opportunity to present their case. Some of the witnesses presented clearcut, honest statements without any intent to deceive. A careful study of the record, however, unfortunately reveals that once again Adkerson is up to his old trick of attempting to influence Congress by misleading and false information. Fortunately for the American public they were not successful in this latest effort, as the committee decided that this bill should be framed as an honest nationaldefense measure and not as an undercover means of providing addi-tional subsidies to Adkerson and his greedy crowd. Having failed in dissuading the Military Affairs Committee from pursuing their patriotic duty, he is now engaged in still another program in an attempt again to cajole the Members of Congress into unsound

action.

Careful analysis of Adkerson's activities and his present letter to Mr. May does not indicate that he is a naive or visionary individual unwilling to face realities, but does indicate that he is a propagandist deliberately intent on disseminating misinformation. I singardist deriberately intent on disseminating misinformation. I sin-cerely hope that the Members of this Congress will not be misled by his false and inaccurate statements, but that they will take action to discredit Adkerson and his lobby before the bar of public opinion in order that we may be forever rid of his sinister influence. The following comparison of Adkerson's statements with the real facts adequately supports this request:

J. Carson Adkerson's letter

The expenditure of \$100,-000,000 for strategic minerals should accomplish a twofold purpose. 1. Build up a stock pile. 2. Develop American re-sources. The Faddis bill, H. R. 5191, will not do this. Comments

It is true that the bill has a dual purpose, but it will be noted that the primary objec-tive is "to provide for the com-mon defense." The primary requisite for this purpose is the requisite for this purpose is the immediate acquisition of stock piles, and sections 2 to 6, inclusive, of the bill are designed to accomplish this. Section 7 provides for an investigation of domestic resources of deficient minerals by the Secretary of the Interior with a view to developing ways and means of supplies. ing ways and means of supple-menting stock-pile supplies from domestic resources in the event of an emergency, and to explore the possibilities of encouraging peacetime development of our domestic resources. Nothing should be injected into this bill that would limit its effectiveness as a national-defense measure.

If the bill, in its present form, becomes a law, it is most likely that at the end of the first year the United States Government will be out \$100,000,000 and still there will be no larger stock pile of managenes in the stock pile of manganese in the United States than now exists.

The insinuation in this paragraph of Adkerson's letter is that the Government departments responsible for advocatments responsible for advocating this bill in the interests of national defense would be so negligent as to permit the expenditure of the funds mentioned without advancing the cause of national defense in any way. This insinuation is so conJ. Carson Adkerson's letter-Continued

MANGANESE—continued

Testimony before your committee shows that stocks of manganese ore in United stocks of n United States Government bonded warehouse yards on November 30, 1938, amounted to 851,879 30, 1938, amounted to 851,879 long tons, and that privately owned stocks, on which the duty had previously been paid, would bring the total tonnage of foreign manganese now within the United States to well over 1,000,000 tons. This is the largest stock pile of manganese in the history of the United States.

If \$100,000,000 is made available the first year, it would simply mean the transfer to the Government of 554,000 tons of manganese ore already in the United States and now owned by steel companies, and at the end of the year the net result would be no actual increase of stocks of manganese in the United States; the steel companies would have the American taxpayers' money; American manganese mines would conmanganese mines would continue idle; the United States Government would carry the bag for American steel com-panies; and still there would be no adequate national defense. temptible as to require no fur-

It is true that consumer stocks of foreign manganese ore at the present time are unusually high, but this is due largely to the sharp decline in consumption as a result of the industrial recession in 1938. Adkerson carefully refrains from stating that in 1936, the year of stating that in 1936, the year of substantial activity in the steel industry, domestic stocks of manganese ore dropped to 366,-381 tons, the lowest point in many years. Even in this year the steel mills were running only at about 70 percent of canacity. capacity.

Adkerson's statement is an excellent example of intentional misinterpretation of the purpose of the bill. The object of the legislation is to increase the supply of certain proven deficiency materials in the United States. If the executive depart-States. ments charged with the administration of the provisions of the bill should be so lacking in intelligence and derelict in their duties as to purchase materials already available in this country without adding appreciably to that supply, then the na-tional defense is in the wrong hands. Adkerson's argument, therefore, is of no practical significance. Moreover, if the extravagant claims made by him and other domestic producers in the committee hearings as to the possibilities of developing domestic resources are true there would be no reason for including manganese ore as of strategic importance; but the United States industry uses 20 percent of the world's produc-

cent of this ore so used. The zeal with which Adker-The zeal with which Adkerson is now attempting to divert this \$100,000,000 to his alleged domestic producers is hardly consistent with his testimony. His statement, "American manganese mines would continue idle," infers that many manganese mines in the United States have recently been forced to dispare to the control of have recently been forced to dis-continue operations. The facts continue operations. The facts are that in 1937, notwithstanding the 50-percent cut in import duty imposed in 1936, pro-duction of domestic manganese ore was higher than in any year since 1930. It should be noted, however, that only about 4 per-cent of the national industrial requirements of high-grade ore in 1937 was supplied by domes-tic mines, and during the past 10 years only 7 percent has been obtained domestically in spite of substantial tariff subsidy. These figures show conclusively that for all practical purposes a manganese industry is nonex-istent in the United States.

tion of manganese ore of ferro

grade and imports over 90 per-

With reference to the rotation provision carried in the bill, witness for the Navy De-partment testified before your committee that the purpose of this was to replace manganese in stock pile to avoid "deteriora-tion." The net result of this provision would be to permit Here again Adkerson is engaging in the questionable art of deception at which he is so adept. The record shows clearly that the rotation provisions of this bill were inserted solely for the purpose of safe-guarding stock piles of rubber, silk, and other perishable nonJ. ROTATION—continued

the same steel companies, from time to time, to buy back from the Government this same manganese, presumably at greatly reduced prices, to avoid this so-called "deterioration." It might be added that man-ganese does "deteriorate," but just the same as iron ore and pig iron, or building brick and building stone, will deteriorate.

mineral strategic commodities. Adkerson's loose statement is directed at impeaching the in-tegrity of responsible Govern-ment officials rather than pro-viding the Congress with useful and helpful information. This is typical of the Adkerson technique. Time and again responsible Government officials who have refused to be bludgeoned into supporting his scandalous into supporting his scandalous program for robbing the Public Treasury have been accused of partiality to the "steel inter-ests" or the "international bankers" or, as in this present letter, "followers of an 'interna-tional control of minerals group who are definitely on record as seeking development of manganese resources in forof manganese resources in for-eign countries and suppressing developments in the United States." It is regrettable that certain Members of this Con-gress have allowed themselves to be misled into this program of vilifying honorable and patriotic Government experts.

WAR DEPARTMENT WILL ADMINISTER

Your report says that the War Department may be depended upon to administer the act fairly. However, the bill itself provides for the joint administration by six Government de-partments. The War Depart-ment's hands are therefore tied. Evidence before your committee will show that several of these Government departments are permeated with members and followers of an "international control of minerals" group, who are definitely on record as seeking development of manganese resources in foreign countries and suppressing developments in the United States. The bill does not provide "for the joint administration by six Government departments." It does provide that the Secretary of War and the Secretary of the Navy shall direct the Secretary of the Treasury to make pur-chase of materials in accordance with War and Navy Department with War and Navy Department specifications. Provision is also made, and rightly so, for recom-mendations from other govern-mental agencies qualified to furnish necessary and impartial information and pertinent data, but final responsibility is placed directly upon the national-defense departments. No evidence other than the unsupported statements of this more ported statements of this pro-fessional lobbyist supports the contention that Government departments are permeated with members seeking to suppress development of domestic mineral resources. On the contrary, it was brought out by the committee that the development of mittee that the development of domestic resources to the maximum extent possible was favored by the Government representatives. They were unwilling, however, to endanger the safety of the Nation by placing reliance on a resource already proven inadequate. It is my well-considered opinion that the qualified experts of the Army, the Navy, and other departments concerned can be trusted in the patriotic duty of national in the patriotic duty of national defense. Years of wide discrep-ancy between promises and performance demonstrates conclusively that Adkerson and his cohorts cannot be trusted.

CONGRESS SHOULD OUTLINE POLICY

This same dependency on policy was left by Congress to the administrative departments of the Government in passage of reciprocal trade agreements leg-islation. The President, Frankislation. The President, Frank-lin D. Roosevelt, in his message to Congress, March 2, 1934, ask-ing for this legislation, said: "You and I know, too, that it is important that the country possess within its borders a nec-essary diversity and balance to

It is true that the duty on manganese was halved in the trade agreement with Brazil. In negotiating the reciprocaltrade agreement with Brazil, the Government finally recognized the futility of attempting to develop a domestic manganese industry by tariff protection and accordingly reduced the duty 50 percent, the maximum cut al-lowable under the law. This act was so vigorously protested J. Carson Adkerson's letter— Continued

a rounded national maintain life, that it must sustain activities vital to national defense, and that such interests cannot be sacrificed for passing advan-

In testimony before congressional committee, Francis B. Sayre, Assistant Secretary of

State, said:

"The whole purpose of this program of trade bargaining is this: To restrict the commod-ities covered in the agreement with any specific country to commodities of which that country furnishes the chief source of supply of importation into the United States."

In spite of this, the duty on manganese, the "No. 1 strategic mineral," was among the first items cut through the trade agreement with Brazil, although Brazil supplies only minor quantities of manganese to the United States, Soviet Russia being the major shipper. In the year 1933 Brazil shipped no manganese at all to the United

buke on February 9, 1935:
"I feel that some notice should be taken of the grossly exaggerated and misleading propaganda which is being circulated by the combined lob-bies seeking to kill all efforts to restore normal world trade—a trade upon which the employ-ment of millions in this country ment of millions in this country and tens of millions in the world is dependent. "This propaganda would make it seem that the proposed re-

duction of the duty on man-ganese ore from 110 percent for 1933 to 55 percent will throw many thousands of American wage earners out of employment and wreck a great Nationment and ... wide industry.

"The fog of propaganda cannot obscure the truth. First, the number of wage earners mining manganese ore in the United States is only a few hundred of a total of nearly 45,-000,000 Americans gainfully employed. Despite the tariff benefits of 69 to 110 percent paid since 1922 by the general public, this is the total employment which the industry has been able to offer to Americans. Secondly, the expension of the control of the cont ondly, the amount of American production of manganese after all these years is less than 10 percent of the amount consumed in the United States. The other 90 percent and more The other 90 percent and more must be imported as it has been done in the past. Furthermore, the sum total of the results of domestic efforts to produce manganese has declined for a number of years."

The fact that no imports were received from Brazil in

were received from Brazil in 1933 is related to inactivity in the steel industry for Brazil supplies important quantities of manganese ore to this country and during the last war it was the principal source of supply. The reduction in duty had no appreciable effect on the domestic situation for pro-duction has been of little con-

duction has been of little consequence since the war.

The reference to other agencies leaves an implication but states nothing specific. Considering the fact that consumers in the United States since 1922 have paid some \$70,000,000 in import duties to sustain an industry capable of protain an industry capable of producing only 5 percent of our vital manganese requirements, who dares say that the Presi-dent and the Secretary of State did not perform a patriotic duty and serve the public well when they put an end to this racket to the extent permitted by law.

This statement is an intentional distortion of the purpose of the Buy American Act and of its method of administration.
The act permits exceptions in

cases vital to the public interest. In some instances, where urgent Government programs would have been delayed to the public detriment by insistence on purchases of steel made with J. Carson Adkerson's letter-Continued

CONGRESS SHOULD OUTLINE POLICY-continued

Secretary of the Navy, H. L. Roosevelt, to Senator James E. MURRAY, with special reference to the use of domestic manga-nese under the Buy American law:
"It seems that the State De-

partment is endeavoring to carry out the purpose of the law enacted by the Congress to pro-mote foreign trade and any attempt on the part of the Navy Department to exclude foreign manganese ore admitted under this trade agreement might be held to be in conflict with the action of the State Department."

domestic manganese, the Buy American Act was waived as pro-vided for in the law. In these cases manganese represented only a very small part of the total value of the product. However, in recent purchases of fer-romanganese for a stock-pile reserve, the Navy adhered to the Buy American Act. The aver-age price paid for the domestic material was \$114.45 per long ton, while the low bid on the same contract for imported fer-romanganese was \$78.30 per long ton. The difference, \$36.15 per long ton, or 46 percent, was the protection the domestic industry had by virtue of the tariff and of the Buy American Act. Do these facts sustain the charge that the Government has "consistently refused to enforce the Buy American Act"?

EDUCATIONAL ORDERS FOR MANGANESE

Report No. 283 of the House Military Affairs Committee, ac-companying H. R. 5191 to the

floor, says:
"The committee has written into the bill a declaration of congressional policy, the effect of which is to encourage, as far as consistent to do so, the dis-covery and development of the sources of raw material in this country, and it is felt that the situation is similar to that which requires the placing of what is known as 'educational orders' with dormant and inactive factories."

Under other national-defense bills, "educational orders" provide for the purchase of manufactured products without the usual competitive bidding against imported products, without bond, and under the law there is no specified price limit. Under the strategic minerals bill, there are no such provi-sions to cover the purchase of manganese or other raw materials. In the case of manganese, discoveries have already been made, developments have already been carried forward, and what the producers now want is a market and an opportunity to ship on a parity basis with steel products and under the terms of laws already passed and which should now be fully in effect.

Mr. Adkerson here has utilized the committee's reference to educational orders as a means of introducing statements quite at variance with the facts in the

Even a cursory reading of the legislation authorizing educa-tional orders for munitions would show that competition is intended between manufactur-ers competent to produce the ers competent to produce the munitions in an emergency. The act reads: "* * bids shall be solicited only from such establishments as in the Secretary's judgment will be competent in time of war to manufacture the particular manufacture the particular class of special munitions with respect to which the bid is so-licited." In carrying out this requirement, no contracts have been placed for educational or-ders until at least three qualified producers have been in-vited to bid. Furthermore, contrary to the

statement of Mr. Adkerson, the educational orders legislation makes no stipulation that a performance bond shall be waived. In administering the act a bond may be required when in the judgment of the contracting officer the protec-tion of the Government makes

a bond necessary. With respect to making the awards, the educational orders legislation also provides that "in the determination of which of the solicited bidders is to be awarded any contract, the Secretary shall have regard solely to the selection of such classes of special munitions, and of such bidders as will, in his judg-ment, under all the circum-stances, best serve the interest of the United States and best promote the cause of national defense."

The bill, H. R. 5191, reported The bill, H. R. 5191, reported out by the committee in fact gives far greater protection to possible domestic producers of strategic materials than does the educational orders legislation in protecting the manufacturer of munitions. For example, the combination of existing tariff blus the protection of the protection existing tariff plus the protec-tion of the Buy American Act in effect under this bill gives a total subsidy to the domestic

In testimony before your committee, it was repeatedly stated, in effect, that no one could doubt the patriotism of the administrative departments the administrative departments of the Government and that Congress could depend upon them to protect the domestic manganese industry. Likewise, it might be said that no one could doubt the patriotism of the President of the United States or the Assistant Secretary of State but unfortunately. tary of State, but unfortunately there are other agencies at work within the administrative de-partments of our Government.

Furthermore, the administra-tive departments of the Government have consistently re-fused to enforce the Buy American Act and require the use of domestic manganese in steel purchased for Government contracts, as provided in the

Comments-Continued

EDUCATIONAL ORDERS FOR MANGANESE-continued

producers of manganese of over 50 percent of the foreign price. Further governmental assist-ance is provided the domestic producer through the Bureau of Mines and the Geological Survey.

EXCHANGE OF GOVERNMENT-OWNED COTTON AND WHEAT

This provision might serve to deny American farmers that portion of a foreign market for portion of a foreign market for their privately owned cotton and wheat which they otherwise might enjoy. Particularly, if sold to Soviet Russia, it is possible the Soviets may resell these agricultural products in the world's market at any price they would bring in order to obtain foreign cash or credits, just the same as they have done many times in the past. This would serve to lower the world price of these farm prodworld price of these farm products and thereby injure the American farmer. Most certainly the American farmer has little to gain by this proposed

This provision was inserted This provision was inserted for the specific purpose of aiding the American farmer by helping to dispose of surplus crops. It is expected that those administering the act will not defeat their own objectives by allowing the condition referred to by Mr. Adkerson to arise. In view of the fact that many Government departments will cooperate in carrying out the legislation, I am convinced that his argument has little weight.

FOREIGN DEBTS

Although World War debts are not specifically mentioned, they are included in the provi-

they are included in the provi-sions of this bill.

Domestic manganese produc-ers, as well as producers of other raw materials listed in the hear-ings and subject to purchase under this bill, will ask why they are being specifically called upon to shoulder the World War debts. Certainly, manganese. upon to shoulder the World War debts. Certainly, manganese, the "No. 1 strategic mineral" should not be loaded with this burden during this emergency. Manganese producers, as the producers of one raw material alone, feel that this burden should be shouldered by all, in-cluding domestic producers of

cluding domestic producers of manufactured products.

The expenditure of \$100,000,-000 for strategic materials of foreign origin will hardly be a drop in the bucket toward adequate national defense. There were 38 raw-material items submitted by representatives of the War Department in testimony before your committee as essential to our national defense, necessary to be imported from foreign countries, and subject to purchase under this bill. Even should the entire \$100,-000,000 be spent for manganese alone, it would still not mean adequate national defense in manganese, as no one can foretell how long an emergency may last. Domestic manganese deposits would still have to be developed and mines put into operation, at emergency costs, and it may not be done in time. So why not, during peacetimes, encourage developments of these available materials within the united States when producers are ready to go and, one by one, remove such items from the strategic materials list.

It has long been apparent that if any payment is to be obtained on the war debts owed us it must be largely in ma-terials or goods. The list of strategic materials is composed of commodities not produced in appreciable quantities in this country and therefore most acceptable to us as imports because least in competition with democities producities. domestic production. Mr. Ad-kerson, however, would have us accept foreign manufactured products as well, thus bringing thousands of our factory work-ers into direct competition with ers into direct competition with the low-wage producers of Eu-rope. As a member of the com-mittee I disapprove emphati-cally of any such solution and prefer, as provided in the bill, to accept strategic materials which compete very little with established American industry.

It is conceded that \$100,000,-problems and provide stock piles for use in a national emergency. On the other hand, if the enon the other hand, if the entire sum were to be spent only for the purchase of domestic manganese ore, it is my belief that nearly half of it would be dissipated as a bonus to the domestic producers. In view of the dismal failure of the manganese industry to develop up. the dismal failure of the man-ganese industry to develop un-der 13 years of protection equivalent to an ad valorem duty of from 50 to over 100 percent, Adkerson's suggestion that the entire sum be spent for the encouragement of domestic resources of strategic minerals resources of strategic minerals so that one by one they may be removed from the strategic list, can hardly be given serious consideration. The stock-pile question is purely one of national security or insurance, and as even Adkerson admits that the sum provided in the bill is inadequate, it is all the more J. Carson Adkerson's letter— Continued

Comments-Continued

LOOK AHEAD—continued

imperative that every penny spent should buy the maximum amount of high-grade material

amount of high-grade material attainable.

There is no restriction on anyone attempting to develop possible deposits of deficient minerals in the United States. The incentive of profit is, of course, lacking. The 100-year history of the production of manganese in the United States brings out clearly that only a manganese in the United States brings out clearly that only a small part of the manganese ore produced from domestic mines during the entire history of the United States has been produced at a profit. What benefit can accrue to the United States from the standpoint of national defense by giving some fantastic bonus to domestic producers? If domestic production could be made at current tion could be made at current prices and standard grade, and could fulfill the requirements as to time and quantity, there is no doubt it would be given preference.

It is true that domestic producers of manganese have spent many hundreds of thousands of dollars in a vain attempt to put domestic manganese mines on a profitable basis. With the ex-ception of the work done at Butte, Mont., there has been no real contribution toward national self-sufficiency. The deposit at Butte, from the standpoint of grade and size, is the outstanding deposit in the United States, but even in this case the Montana operation has been marginal, and in most other cases they have been submarginal.

Due to the activities of such organizations as the American Manganese Producers' Association, under the leadership of Adkerson, the Government has Adkerson, the Government has given unwarranted support to promoters as a direct result of which many worthy men have lost heavily, as illustrated by the history of the Georgia Manganese Mining Co., Cartersville Ga.; the Crimora mine, in Virginia; the Three Kidds mine, in Navada: the Miller and Rine-Nevada; the Miller and Rine-hart property, in Arkansas; as well as the Mineral Ridge mine, Virginia, owned at one time by Adkerson himself.

The fact that the steel indus-

try has not thrown money away in a hopeless attempt to de-velop a domestic manganese industry is not surprising. Representatives of steel companies have maintained consistently from 1922 that domestic resources would not support industry and experience to date has proven the correctness of their judgment.

The claim that the domestic producers have had no assistance from the Government may be questioned. As brought out in the testimony before the House Committee on Military Affairs, in 15 years, 1923-37, due to the Tariff Acts of 1922 and 1930, \$66,066,652 in import duties was collected. During this same period only 690,802 tons of domestic manganese ore, much below standard grade, were produced. The

Domestic producers of man-ganese ore have expended years of work and many hundreds of thousands of dollars in the de-velopment of domestic manga-nese and have contributed more toward the solution of the problem of manganese for national defense than all other groups and agencies combined, including the entire steel industry of the United States and all the the United States and all the administrative departments of the Government. This has been done by domestic manganese producers with private funds and not with the taxpayers' money. We justly feel that domestic manganese producers are entitled to proper consideration and encouragement at the and encouragement at the hands of our Government in

the national-defense program.

J. Carson Adkerson's letter-Continued

Comments-Continued

LOOK AHEAD-continued

consumer was thus forced to pay an average tax of \$95.64 on every ton of domestic ore purchased.

Adkerson's proposal is noth-ing more nor less than a scheme to milk the consuming public still more. If the domestic manganese producers are en-titled to further consideration and encouragement at the hands of the Government, let us separate this phase of the question from that of national defense, and not jeopardize the defense, and not jeopardize the welfare and security of a nation of 130,000,000 people by delaying further the acquisition of stockpiles so vital to national security. The domestic producers have never made good their claims in the past and the prospect of their doing so in the future is too remote to be considered further in relation to national defense.

Adkerson's plea for the incor-

To carry out the purposes of the act and the will and intent of Congress "to encourage the of Congress "to encourage the development of these resources within the United States" as expressed in the bill, may we recommend that the language of sections 5 and 6 in Faddis bill, H. R. 5191, be eliminated, and in its place insert the language contained in sections 5 and 6 of the Thomas bill, S. 572, as approved by the Military as approved by the Military Affairs Committee of the Senate.

Adkerson's plea for the incor-poration of clauses 5 and 6 of the Thomas bill in the Faddis the Thomas bill in the Faddis bill, H. R. 5191, is an admission of the inability of domestic manganese producers to meet the primary objective of this bill. Such action would force the Government to delay at least 1 year the accumulation of stock piles so vitally needed in the present situation. By making the waiver of a bond mandatory, bidding on Government contracts would be open to all irresponsible parties under no compulsion to meet contractual obligations. This will encourage the further promotion of unscrupulous mining ventures unscrupulous mining ventures and will react to the detriment of the few responsible producers.

In conclusion, Adkerson's activities in Washington as a lobbyist In conclusion, Adkerson's activities in Washington as a lobbyist have extended over a period of years and indicate that large sums of money have been spent in disseminating propaganda which has delayed consummation of an adequate national-defense program. Aside from the operations at Butte, controlled by the Anaconda Copper Mining Co., and the operations in Cuba, controlled by the Freeport Sulphur Co., which has the benefit of the tariff under existing trade treaties, it is evident that the financing of this campaign would have been a decided drain upon the measure resources of the other have been a decided drain upon the meager resources of the other small operators if they had been asked to contribute their share. It would be pertinent to the Members of Congress to have Adkerson state the sources of his income and thus make evident what interests have been back of his unscrupulous activities.

Problems of Labor Legislation

EXTENSION OF REMARKS

HON. ROBERT RAMSPECK

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 19, 1939

ADDRESS DELIVERED AT LAW INSTITUTE HELD UNDER THE AUSPICES OF THE LAW SCHOOL OF EMORY UNIVERSITY, IN COOPERATION WITH THE GEORGIA BAR ASSOCIATION, AND OTHER SIMILAR ORGANIZATIONS, AT ATLANTA, GA.,

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me on Saturday last:

In ancient days the relationship between workers and their employers was that of master and servant. Today there are some who say that the relationship has been reversed. Of course, I do not subscribe to that statement, but I do realize that many changes have occurred.

These changes have come slowly over a period of hundreds of years and have been accompanied by and accomplished through many bitter struggles.

Partly, at least, because of the bitter struggles, the relation between employer and employee lives in the field of controversy. That is one of the problems of labor legislation.

Many employers, though by no means all of them, seem to resent the changes that time has wrought in this ancient relationship. They view such changes as an interference with their rights. They resist any curtailment of the ancient policy of absolute dictation of the terms of employment by the employer. That is another of the problems of labor legislation.

In the earlier days of our country, the pioneer days, the employee who became dissatisfied with working conditions could, and did, move on to new frontiers, or moved to a new section where free

move on to new frontiers, or moved to a new section where free land was available.

In those days employment was generally in small groups, and the relationship between the employer and his workers was a more personal one. Today working conditions have changed; large corporations have replaced the individual employer; the relationship is no longer so personal. New problems have been created by this change, and the worker, to meet this new status, has organized and seeks to meet group employment by group action in the form of labor unions. That is another of the problems of labor legislation lation.

lation. Business generally tries to lower its labor costs, and I do not quarrel with that effort if the benefits are properly distributed; but we must realize that labor has a stake in this. The constant substitution of machinery for hand labor vitally affects the opportunities of employment, often throws out of employment men and women whose best years have been devoted to a particular occupation, thus making it necessary for them to change their habits of a lifetime. That is a very vital problem affecting demands for legislation. a lifetime. legislation.

All legislation is a matter of compromise. The final form of a legislative proposal must reflect that upon which an agreement can be had by those supporting a certain objective. It does not and cannot reflect the views of those totally opposed to the object

of the proposal.

Since those who support the objective must write their legislation to meet the views of groups favoring it, often they are forced to disregard entirely the interests of persons in opposition. It is well known in legislative bodies that opponents of the object

sought to be accomplished by legislation have little, if any, influence upon the contents of the final form of the law.

As illustrating the opinions I have expressed, I would like to discuss two Federal laws passed within recent years, with which I am well acquainted. It has been my fortune, whether good or bad, to have had a part in the drafting and the passage of both

of these laws.
First, I will discuss the National Labor Relations Act. It was

First, I will discuss the National Labor Relations Act. It was proposed for the purpose of insuring to labor—that is, to the workers—their common-law right to belong to labor unions. The courts had recognized this right, but some employers had effectively denied it to their workers by various means.

This proposal was almost universally opposed by the employers of our country. They denied the right of Congress under the Constitution to deal with the subject. They contended that the proposal was not constitutional and backed this denial with an opinion from more than 50 of the most prominent lawyers of the Nation.

The proposal was considered in an atmosphere of the most bitter controversy. In framing this legislation Congress was denied the refining influence of conservative opinion because that influence was in bitter opposition and therefore was in no position to con-

was in bitter opposition and therefore was in no position to contribute to the contents of the act.

We did not have the benefit of the constructive criticism which we might have received if we could have had support of the objective by large groups of employers. It was necessary to write the bill in accordance with the views of those supporting it.

In my opinion we could have written a better statute if the conditions had been different. If more employers had been willing to support the objective of the act, their influence would have

conditions had been different. If more employers had been willing to support the objective of the act, their influence would have been reflected in the contents thereof.

Being without the benefit of support from the conservative employer, we were forced to write the law to reflect the ultraliberal views of those who did support the objective. The result has not been pleasing to many of our people. I do not challenge their right to their position, nor do I question the sincerity of their opinion, but I do raise the question of whether or not they served the general welfare, or even their own welfare.

I sincerely believe that the objective sought by the National Labor Relations Act was sound, that it was within the powers of the Congress—which view the Supreme Court has sustained notwithstanding the contrary opinion of the eminent lawyers—and I also believe that when the right of employees to organize is accepted generally, labor conditions will be promptly improved.

I do not approve of many things done by the National Labor Relations Board. It is my opinion that Chairman Madden has done his best, under difficult circumstances, to properly administer the law. Mistakes have been made and they have cost dearly in the loss of public confidence in the Board.

I believe that the Board has been mistaken in refusing to hold elections for determining representation of employees upon the

elections for determining representation of employees upon the request of an employer, under proper conditions. The present law gives the Board that right and it should be amended now to require the Board to hold elections, under proper conditions, when requested to do so by an employer.

I also believe that the Board has made many unwise selections of subordinates. These employees of the Board, in many cases, have treated employers without due courtesy and have often appeared to be crusaders in the interest of labor organizations. Such was not the intent of Congress. It has been charged that the Board and its employees have been partial to one faction of the organized labor movement. I do not propose to go into the question of the truth or falsity of these charges today, but I have

the organized labor movement. I do not propose to go into the question of the truth or falsity of these charges today, but I have reached the conclusion that to preserve the purposes of the law, Congress should abolish the present three-person Board and substitute therefor a five-person Board. These five persons should be selected from different sections of the country and it might be wise to have them represent the two major political parties.

In making these criticisms of the administration of this act I am not unmindful of the fact that, in part at least, the responsibility must rest upon those who have continued to oppose the purposes of this statute, even after the Supreme Court had sustained its constitutionality and had approved its legal procedure.

The House Committee on Labor, of which I am a member, will within a few days begin hearings on proposed amendments to this law. I hope that those representing employers will try to help us make it a better law. Any effort to make the law ineffective will, in my opinion, not only fall but may prevent the adoption of proper amendments. May I urge you as members of the great legal profession to advise your clients who are interested in this matter to adopt a helpful attitude rather than to attempt to destroy the act. The latter course will again force Congress to seek support from other sources.

act. The latter course will again force Congress to seek support from other sources.

The Fair Labor Standards Act, generally referred to as the wage and hour law, was also enacted in bitter controversy.

In the beginning we tried to set up an independent board with broad powers of discretion, so that the law might be adapted to the varying conditions existing in this broad land of ours.

Business not only opposed to law in toto but a perfect wave of propaganda was spread over the country to the effect that no more boards or bureaus were wanted, having power to tell business what to do. We were told not to enact the law at all, but if we did enact it, to make it specific and rigid.

The Rules Committee of the House was persuaded to block consideration of the law. The sectional issue was injected into the fight and this finally resulted in the passage of a more drastic law than first proposed.

than first proposed.

than first proposed.

The factional fight in the ranks of organized labor also entered into this controversy. Such were the problems faced by those of us supporting the law. Although in favor of the object sought to be accomplished, I could not vote for the sectional bill finally passed by the House.

When the bill went to the committee of conference representing the two Houses of Congress, we found it possible to make some compromises and to remove some of the harsh features in the House bill. However, we did not secure as reasonable a bill as would have been possible if we had not faced the bitter opposition encountered in the first session in which the matter was considered.

sidered.

Here again the legislation was framed for those who gave it support. The advice and counsel of the conservative element had no voice in the result. By the fury of the opposition Congress was driven to accept the proposals of the more radical thinking groups offering support, and some of their views were incorporated in the law. The injection of the sectional issue by some of our friends in the South brought support from the North, but this support came with conditions more hereby in their effect on our support came with conditions more harsh in their effect on our

section.

The Labor Committee of the House is now attempting to ease some of these harsh conditions, but we cannot now go as far as we could have gone in 1937 if we had then had some support from the

could have gone in 1937 if we had then had some support from the business interests of our section.

Again I do not question the sincerity or the right of those who opposed the law. They certainly acted within their rights; but I again raise the question whether they served themselves, their own interests, or the general welfare. It was evident from the beginning that the bill would eventually pass in some form. In my opinion, it would have been a much better law if that self-evident fact had been accepted and Congress had had the tempering influence of some of those who opposed it to the bitter end.

Times have changed all over the world in recent years. I do not believe that as long as we maintain a free government, a government by the people, we will again see the worker treated as a servant, as one at the mercy of an unfair employer. Rather, I believe that most employers now realize that the rights of labor must be safeguarded, that the fair and reasonable employer must be protected from the minority who seek to attain a competitive advantage

be safeguarded, that the fair and reasonable employer must be protected from the minority who seek to attain a competitive advantage through the exploitation of workers.

Our people are rapidly becoming social minded, but it will always be necessary to curb the minority. That means legislation. I am appealing today to my fellow lawyers to help the Congress and the State legislative bodies to wisely frame the legislation needed to insure our new views on labor relations.

insure our new views on labor relations.

insure our new views on labor relations.

May I urge you to advise your clients to adopt an attitude of cooperation so that we may have the benefit of their experience, the wisdom of your counsel, and the assurance of support for reasonable laws. I believe that such an attitude will result in better legislation, in more peaceful conditions between employer and employee, and that all of this will promote the general welfare.

America and the world today face conditions weighted with the possibility of serious consequences. It is no time for class to assail class. It is no time for bitter factional or sectional differences. If we weather the storms that we may encounter in the coming

years, we must have harmony and cooperation. It will take the combined efforts of businessmen, lawyers, farmers, labor leaders, and all other groups of our people, working in unity and peace, to bring the country we all love safely through the critical period in which we live.

To the accomplishment of this purpose I know the lawyers will do their full share, as they always have done, and I assure you that we of the Congress need and welcome such assistance.

Our Neutrality Policy

EXTENSION OF REMARKS

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA IN THE HOUSE OF REPRESENTATIVES

RADIO ADDRESS BY HON. JAMES E. VAN ZANDT, OF PENNSYL-VANIA, APRIL 18, 1939

Wednesday, April 19, 1939

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me yesterday over the radio:

Good evening, ladies and gentlemen, in a broad sense, neutrality means "taking no part on either side of a contest." Narrowed down to nations, neutrality means "taking no part, directly or indirectly, in a war between two powers." Hence, the big idea

behind neutrality is keeping out of war—other people's wars.

Neutrality, of course, is by no means as simple as it sounds.

On the contrary, nothing in international law is quite so complicated and complex as neutrality. Once war starts, neighboring nations that would be neutral always have had a hard time keeping out of it. As science cut the size of the world by speeding up all means of transportation and communication, it became increasingly difficult to dodge war. And now that civilization chooses up

ingly difficult to dodge war. And now that civilization chooses up sides for war, it has become well-nigh impossible to maintain neutrality in a crowded world.

Nevertheless, some nations succeeded in remaining neutral throughout the World War. What one nation has done, another nation—especially one in such a fortunate geographical situation as the United States—should be able to do. But there must be a will to neutrality before we can find a way to it. No nation can remain neutral for long, however, if it insists upon sticking out its neck. And that's what the United States is doing right now.

In spite of such flippant or fatalistic farewells as "I'll be back in the fall if we don't have a war," some competent and less credulous authorities cite very sound reasons why this so-called inevi-

lous authorities cite very sound reasons why this so-called inevitable European war is 1, 2, or 3 years away. In fact, they see now it can be averted altogether. And in any event, they insist there is no occasion for the American people to have their collective neck stuck out for them.

lective neck stuck out for them.

Even if war does come to Europe, they are confident the United States, at least, could avoid that war. It would be necessary only to remember the lessons we learned in the World War. On the other hand, they are just as sure we are going to get socked on the chin if we keep on asking for it.

History proves the rights of neutrals never have been respected by either side in a major war, unless the neutrals had armies and navies to enforce respect. Hence, a powerful national defense such as we are building is the first essential of neutrality. If both sides in a war realize a would-be neutral is strong enough to turn the tide of war either way by joining one or the other, both sides are likely to respect the rights of that nation.

American unpreparedness in the early years of the World War

American unpreparedness in the early years of the World War affords a shining example of the pushing around a weak neutral gets from both belligerents. First, we were on the verge of a break with Britannia when she waived the rule of "freedom of the seas" to suit her own purposes and declared everything from acetic acid to yeast contraband of war and hauled our ships into price courts.

into prize courts.

After suffering injury heaped upon insult for 2½ years came the rupture with the Central Powers over Germany's ruthless and unrestricted submarine warfare. Suave diplomacy on one side and stupidity on the other, combined with Germany's desperate gamble, were the factors responsible for the eventual decision of the United States to cast our lot with the Allies and win the war for them.

If we had been as well prepared during the period of our outraged neutrality as we are right now, it is quite probable that neither Britain nor Germany would have dared trifle with us in any such high-handed fashion. The bad men of Europe and Asia may make faces at us and call us some uncomplimentary names, but they are going to think twice before they throw any

punches in our direction.

Despite all the efforts of peace-loving men the world over to develop rules to protect the rights of neutrals and keep them out of other peoples' wars, neutrality is something like a cross-word puzzle with a key word missing. With our interests in Europe,

Asia, and South America all differing as widely as those areas are separated, it seems impossible to write a hard-and-fast neutrality law that will fit all three at one and the same time.

law that will fit all three at one and the same time.

In view of the failure of experts to find a foolproof formula for neutrality, I see no reason why I should be ashamed of my amateur standing in that field. I refuse to concede that neutrality is a myth. I still believe it is a powerful instrument of peace. I am for neutrality even if we have to fight for it. I certainly am not going to lie down and say, "Skip it."

However, if the present law has outlived its usefulness, let me tell you the miscalled Peace Act of 1939, proposed by Senator PITTMAN, with the left-handed blessing of the administration, would guarantee our entrance into another world war, if one comes. Moreover, it would automatically make us allies of the so-called democracies.

comes. Moreover, it would automatically make us allies of the so-called democracies.

The Pittman proposal piously professes to treat all nations alike. In reality it would make us the ally of nations in control of the seas. Under it we would hang out a sign, Arms for Sale to All Nations. Any nations which could lay cash on the barrel-head and carry off the arms in their own ships could buy from us. Inasmuch as Britain and France are the only European nations with the cash, the merchant marine to transport and navies to protect their transports, we would actually cast our lot on the side of

their transports, we would actually cast our lot on the side of that pair in any European war.

Instead of the Peace Act of 1939, the title should read: "An act to select in advance the side on which American boys will fight and die in the next war, while the American people pay for the whole show and for any other purposes dictated by Britain and

Certainly, no measure could more perfectly fit British and French policy and purposes if it had been drafted in Downing Street, London, and been okeyed in the Quai d'Orsay, in Paris.

My complaint is not against the side that measure would choose

Street, London, and been okeyed in the Quai d'Orsay, in Paris.

My complaint is not against the side that measure would choose in advance for the United States in the next war. I protest against American boys being thrust into any war on either side in the Old World. I want peace, not war; neutrality, not an alliance that would drag us into Old World wars. And that's what the American people demand.

Let me digress at this point from the narrow question of neutrality to the broader question of peace. Let me also emphasize at this point that I am a Republican and a partisan on domestic political issues. There should be no partisanship on the question of peace.

I wish to commend President Roosevelt for his effort to preserve the peace of Europe. He may have an opportunity to do humanity a priceless service, if Hitler and Mussolini are sensible enough to accept his proposal for a 10- to 25-year peace pact. But there can be no peace unless the so-called democracies are willing also to make some sacrifices in yielding some of the swag they secretly agreed upon before the last shot was fired in the World War and then took at the miscalled "peace" conference at Versailles.

It is quite possible, of course, that Hitler and Mussolini may reply: "No, we had one peace dealt by an American President. It took us 25 years to get out of the strait jacket. We cannot see far enough ahead to pledge action for even 10 years."

Despite the fact that this pair of international hijackers will grab any land where they meet no resistance, both profess to be men of peace. Certainly Mussolini's "invincible legions" have shown no stomach for real war, and Hitler got away with his phantom menace at Munich. Most assuredly, the German people do not want war. After Munich, I am informed by an eyewitness, when the German people realized that war almost came to them, a wave of intense horror swept over them. The German people thought first of defeat, then depression, then inflation—another generation of want and misery.

In view of that, the

toward Addis Ababa; Tunisia.

2. Germany: Polish corridor; present Reich boundaries; oil concessions on a fair economic and mutually advantageous basis in Soviet Russia; the Caspian Sea area; naval base off Spain, Atlantic side.

If that second reply should come, the President would indeed have an opportunity to do humanity a priceless service. He could say he recognized the demands as having possible merit and call a conference of the nations concerned. By open diplomacy at the conference table, the claims could be weighed, and if the nations content to the conference table, the claims could be weighed, and if the nations content to the conference table. tions participating really want peace, a fair adjustment might be made.

made.

Nor would this conference necessarily be a purely altruistic gesture on the part of the United States. It would give us an opportunity to remove all threats against the peace of the Western Hemisphere by presenting our claims for solidarity and the preservation of the Monroe Doctrine in its pristine purity, and, last but not least, we might effect a settlement of the musty and almost forgotten war debts still owing us by our noble Allies. A threat to withdraw economic support might be sufficient to make Britain and France see the light of cooperation.

In return for our services as a patron of peace, Britain might gracefully cede us Bermuda, the British West Indies, and Trinidad in return for credit on her war debt. British Guiana and French Guiana might go to Venezuela; British Honduras to Guatemala and Mexico, and the Falklands back to Argentine.

Mexico, and the Falklands back to Argentine.

While we were at it, an attempt should be made to limit armaments, the size of armies and navies among all the powers concerned. It would be a boon to all humanity to lift the terrific load of armaments, under which the world is staggering to ruin. And in view of our national-defense bill which will amount to about \$2,000,000,000 this year, the American taxpayers would bene-

about \$2,000,000,000 this year, the American taxpayers would benefit enormously from any such agreement.

And now that the President has at least given Europe an opportunity to accept this noble service to humanity, he might render a great service to the American people. There are no strings attached to this opportunity. All he needs to do is to sit down in the quiet of his study next Sunday evening and hold a "fire-side chat" with the American people.

Would it he to much to sek the President to take the American

Would it be too much to ask the President to take the American people completely into his confidence and clear up all the doubts people completely into his confidence and clear up all the doubts and fears that beset them tonight lest the train of events take us to war? Anxious American mothers and fathers, wives, sisters, and sweethearts all over this land of ours will be listening. They are listening to the radios every day and every night fearful lest they hear the fateful words, "America goes to war!" If ever these words come, the listeners know it may be the last time they will look upon their loved ones. To some of the boys who return death would have been merciful. For they would join the thousands of veterans of the World War who now wait for their rendezvous with death in a Government hospital. There they lie, 20 years after the last shot was fired in France, thousands of men still suffering with lacerated flesh, suffocated lungs, shattered legs, mangled bodies, and shadowed minds.

Writers known to be White House intimates assert the recent

Writers known to be White House intimates assert the recent utterances of the President, when added up clearly, imply that the United States would participate in what so many call the inevitable European war. Let the President make this simple state-

ment:

"The United States never again will go to war on foreign soil if I can prevent it."

That's what the American people want to hear. They would rather have that forthright assurance from the President than any

Then let the President transmute his words into deeds and he need never doubt about his place in American history or in the hearts of his countrymen.

The Visit of Crown Prince Frederick of Denmark

EXTENSION OF REMARKS

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 19, 1939

Mr. BOLLES. Mr. Speaker, the United States are being honored at this time by a visit from Crown Prince Frederick and his wife, the Princess Ingrid, of Denmark and Iceland. In a few days they will arrive in the National Capital. My State of Wisconsin is being signally honored by these representatives of one of the most democratic governments of Europe; my district, the one I represent in Congress, will on Monday, April 24, pay tribute to these Danish friends with proper ceremonies at Racine, Wis., where there are 1,800 or more Danish people, descendents of Danish immigrants of 90 years ago.

These are among the finest citizens of our State. They form, with descendants of other Scandinavian nations, Norway and Sweden, the actors in that viking saga of Norsemen written on the shores and in the interior of a new world. They fought recalcitrant nature and built themselves into a prosperous people, taking part in American life, literature, and in religion.

The Danes were early interested in America. It will be remembered that King Christian I of Denmark sent the John Scolvus expedition to America in 1467 to discover the "codfish country." In 1568 King Frederick II sent an expedition to rediscover Greenland. In 1579 he sent another expedition to find Greenland, and after that various parties were sent in 1605, 1607, 1612, 1652, 1653, 1654, and so forth. In 1721 Hans Egede, a Norwegian pastor, was sent to Greenland to take up missionary work, and in 1619 the Norwegian captain Jens Munk was sent by King Christian IV to find the Northwest Passage. Munk rediscovered the Hudson Bay only 8 years after Hudson himself, and took possession of Canada, naming it New Denmark. He had along a Lutheran pastor, Rev. Rasmus Jensen-Aarhus-who was the first Lutheran pastor in America. In 1724, King Frederick IV sent Vitus Bering on an exploring expedition, which resulted in the discovery of the Bering Strait between Asia and North America. In 1733 Denmark bought the Virgin Islands in the West Indies from France, and in 1916 these islands were sold to the United States.

It has been claimed that Henry Hudson was a Dane. However that may be, it is certain that there were Danes with him when he discovered the Hudson River, which he at that time called Mauritius Floden. There were many Danes in those days that made the trip between the Danish West Indies and Denmark and many who were in the service of Holland. Capt. Henrik Christianson, for instance, made 10 trips between New York and Holland in the years 1611-14. In 1614 he was killed by his Indian friend, Chief Orson, at Fort Nassau.

There were many prominent Danes in the Dutch colony at New York; perhaps the most noted of these was Jonas Bronck, whose name is perpetuated in Bronx Borough of New York, Bronx Park, and Bronxville. Bronck came to New York in 1639 and died in 1643. Another Dane who had given his name to a section of our country was Peter Lassen, who in 1841 founded the first permanent American settlement in California. Mount Lassen, the only volcano in the United States, is named after him; also Lassen County, Calif., Lassen Pass, and Lassen's Big Meadows of Feather River. The Danes were distinctive in Washington's army and in all the more recent wars. The Danish farmers, dairymen, and butter makers are famous in this land. The first creameries, the first cow-testing association, the first cooperative dairy farming on a large scale, were established by Danish farmers.

Qualities of good citizenship are highly developed in Danes. Recognition of this was given by Theodore Roosevelt in referring to his friend Jacob Riis as "the best American citizen." Riis was a social worker in the slums of New York, and is the author of "How the Other Half Lives" and "The Making of an American."

With that background of the past, we may give enthusiastic greeting to the representatives of the Crown of Denmark and Iceland. Racine early felt the Danish influence. The first Danish churches were erected there, the people who came there from Denmark became assimilated into the body politic. They became American citizens and while giving loving remembrance to the motherland, its heroes and its traditions, they were Americans.

We greet with kindly hearts and most cordial friendship the Crown Prince and Princess.

Business Conditions in the United States

EXTENSION OF REMARKS

HON. ROBERT F. JONES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Monday, April 17, 1939

ADDRESS BY JOHN E. GALVIN

Mr. JONES of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks made by John E. Galvin at the March 31, 1939, meeting of the Ohio Congressmen and 225 Ohio businessmen in Washington, D. C., sponsored by the Ohio Chamber of Commerce:

I am going to talk to you the same as I would to one of the 1,000 wage earners who are associated with me in a business in Ohio which has been able to make ends meet in only 2 years out

of the last 9.

In a letter that I received in October 1931, when prosperity was just around the corner, an economist who held a very high position in the present administration said that in all of his studies he

had failed to see where action by government had ever helped a country out of a depression and he thought that he saw many instances where it had lengthened it and deepened it. And there was no guaranty that recovery would come soon or for 3 or 4 years yet, and that it would get much worse before it got better. I think that part of this statement "lengthened it and deepened it" applies particularly to measures undertaken by the New Deal and that before we can have recovery there must be action by the Congress to drastically modify, and in many cases repeal these

measures.

During a period of progressive depression it is in the self-interest of individuals to do things which in the interest of the community they should not do. It is in the interest of businessmen to cut down their inventories, which throws men out of work, reduce their pay roll, postpone replacement, and plant expansion activities, convert as much of their assets as possible into cash balances and short-term investment paper. It is in the interest of consumers to restrict their expenditures in order to build up savings as against emergency need in case of unemployment. They do numerous things, and every one of these steps tend to have disastrous consequences for the community as a whole. They all tend to reduce the rate at which potential purchasing power flows into the hands of income receivers and/or to reduce the rate at which income receivers make use of their available purchasing which income receivers make use of their available purchasing power.

Here is where the theoretical economist steps in. He says that

Here is where the theoretical economist steps in. He says that this deficiency in spending by individuals and corporations must be made up by Government spending. However, they don't take into account human nature. After a short time citizens become alarmed at the Government expenditures and they contract their buying in a greater measure than the Government is able to spend, thereby more than offsetting Government action.

The failure of business to expand as expected apparently is causing concern in official circles even though a drop was indicated for the first quarter. The recent statement of Governor Eccles, the foremost proponent of the spend-recovery program, in which he openly challenged Congress to vote the Budget-balancing economies which it seemed to want and which "a great majority of the people appear to believe" would restore business confidence, either is evidence of this concern or is an attempt to shift responsibility. A sharp reversal of the present spending program, however, without a change in the Government's philosophy with respect to capital taxes and profits, would not be very effective in stimulating business. Important as is a balanced Budget, it alone cannot guarantee the confidence which businessmen require before expenditure of capital funds in any volume can be expected. can be expected.

can be expected.

In the first P. W. A. program, Secretary Ickes was allotted the stupendous sum of \$3,300,000,000. This frightened a great many people, but it took him about 3 years to spend that money. Government spending can't compete with private expenditure when business is active, or even inactive. In the 1920's the building industry alone used to spend more than \$3,300,000,000 every 6 months, and that is only one branch of private industry.

These theoretical economists are like the teacher who had a class in arithmetic in a school in one of Ohio's numerous cities who posed the question, "If there were 12 sheep in a field and 5 jump the fence, how many are left?" She asked several pupils and got numerous answers: Some said three; some said nine; and some said

the fence, how many are left?" She asked several pupils and got numerous answers: Some said three; some said nine; and some said six. She asked Johnnie, who had recently moved in from the country, and his reply was "No sheep left." She told him that he was mistaken and that if 5 sheep out of 12 jumped the fence there would be 7 left. His answer to the teacher was that she might know arithmetic but she didn't know sheep. The theoretical economists might know economics, but evidently they don't know human nature.

economists might know economics, but evidency they don't know human nature.

The S. E. C. recently announced that total securities registered in February under the Securities Act of 1933 amounted to only \$21,676,000. This was the smallest gross amount reported for any single month since January 1935. It compares with \$141,000,000 new capital registrations in February last year when business generally was at very depressed levels. Of the total over \$5,000,000 represented exchange issues. Of the \$16,000,000 remaining, proposed for sale by the issuers, over \$15,000,000 was for already established enterprises, only one million being for new ventures.

It is this element in the economic picture which needs correction most. The new capital markets showed some improvement last summer. This was hailed as a sound factor indicating further possible business gains, but it proved to be short-lived. As most

possible business gains, but it proved to be short-lived. As most orthodox commentators on business have been saying, capital expenditures in new as well as existing fields must occur in rather substantial volume before business can be expected to rise much beyond its present level. Efforts made recently to ascertain whether capital expenditures would be made in the Fourth Federal Reserve District this year in any substantial amount were not very fruitful. Some new business was contemplated and about the same amount was being spent for new equipment and repairs as in other

amount was being spent for new equipment and repairs as in other recent years, but a wait-and-see attitude is very prevalent.

My part in this program is to talk particularly about the tax situation. No matter what other action is taken, and there are many that you should take, it will not bring recovery unless you reverse the tax philosophy and repeal or drastically modify these confiscatory, suicidal, and social-objective taxes, and I mean by that not only the undistributed corporate surplus tax, the excess-profits tax, the capital gains and losses tax, the unemployment-insurance tax, and the modification of the corporation tax so that the losses of I was can be used to offset the rains in other years. the losses of 1 year can be used to offset the gains in other years

(probably that should be put in groups of three or four years), but also the punitive personal high income tax on large incomes

and the punitive inheritance and estate taxes.

Of the latter, the President said in his message to Congress in June 1935 that the transmission from one generation to another generation of vast fortunes by wills, inheritance, or gifts is not consistent with the ideals and sentiments of the American people. That's an appeal to class prejudice. Very few fortunes last from generation to generation. The present tax policy is to punish people for being successful, and it is just another example of class betted. O course if we persist in the present nuntitive tax policy. people for being successful, and it is just another example of class hatred. O course, if we persist in the present punitive tax policy, in a few years there won't be any large fortunes to transmit because there won't be any acquired, and when this point is reached the underprivileged third is going to be worse off than ever before. There won't be any Charley Schwabs, Alfred Sloans, Bill Knudsens, Henry Fords, or Walter Chryslers.

You can't redistribute wealth and income and raise the standard of living for when you redistribute wealth the sure result will be a lower standard of living for everybody. Continuing prosperity depends on an increasingly higher standard of living for all groups and classes. The rich man can't be prosperous unless the lower-

depends on an increasingly higher standard of living for all groups and classes. The rich man can't be prosperous unless the lower-income man is also prosperous, and the low-income man will not be prosperous unless the higher-income man is prosperous. The standard of living and prosperity depend upon the production of goods and services, and the largest consumption of these goods and services is in the low-income groups when they have jobs.

I think statistics show that at present more than 89 percent of the income of the people of the United States is in incomes of \$3,000 a year and less.

\$3,000 a year and less.

Some years and less.

Some years ago a very prominent Democrat said that the punitive tax program was this: "Robbing the poor in the guise of soaking the rich." Now, I'm not criticizing the New Deal administration alone. You Republicans don't want to be crying about Mr. Roosevelt's incitement of class hatred and then turn right

Mr. Roosevelt's incitement of class hatred and then turn right around and vote for the retention of these high punitive tax rates. When you do that you know that you are appealing to the mob and to class hatred and envy.

Men with large incomes are the "spark plugs" of industry and prosperity, and if you cripple them the machine won't operate satisfactorily; they are the ones who should take the risk of new enterprises. Businesses have mortality the same as human beings, and statistics show that the average life of a business in the United States is 62/ years and more then 90 percent of all new enterprises.

and statistics show that the average life of a business in the United States is 6½ years, and more than 90 percent of all new enterprises fail. Men with small incomes, as a rule, should not put their money in new enterprises; they should buy securities of established companies, insurance, homes, and the like. Venture capital should be furnished by men with the larger incomes.

Since October 1937 we have been lending money to our wage earners to save their homes and furniture, to help pay their doctor and hospital bills, and for numerous other things when they are hard pressed. These men are sent to me. I take the opportunity of discussing matters with them, and you would be astonished to know the things that interest them. More than 60 percent are interested in taxes. They feel that these high taxes are preventing them from having steady work. Part of my conversation with them usually runs like this: "Jim, if you had an income similar to what Mr. Mellon had, you would be willing to pay from 60 to 75 percent on the income you had over \$100,000 a year." Invariably he says, "Sure, I would." "Well, Mr. Mellon probably paid that." I only use Mr. Mellon as an example for all of them knew of him. "Let's turn it around and look at it from the other end. He was able to pay it, but you couldn't afford to have him pay it. that." I only use Mr. Mellon as an example for all of them knew of him. "Let's turn it around and look at it from the other end. He was able to pay it, but you couldn't afford to have him pay it. In effect the Government is saying to you, 'Jim, you can't have any of Mr. Mellon's money because we are going to take from him 60 to 75 percent of all of his present income above \$100,000, and as a result he is not going to put up a new business here in this community to bid for your services or your boy's services because if he does he stands 9 chances out of 10 of losing his money, and if he doesn't lose it, and the company is successful, we are going to take from 60 to 75 percent of the money he gets from that company.' As a result he doesn't start the new company, and you and your boy have to work for your present employer for the wages he can afford to pay you when he has the work." The answer from the wage earner usually is, "Well, I have never looked at it that way before."

Another question: "Do you play poker?" "Sure!" "Would you sit in a game where some outsider took out of every pot you won 6 or 7 chips out of every 10 in the pot for the 'kitty'?" "I should say not." "Well, that is what business is facing with the Government taking the same percentage from the wealthy businessman." Now, I am not the only fellow who is talking to the wage earner like that. You see signs all over the United States, "Less taxes—more work" and "What helps business helps you," and the wage earner and the low-income man are beginning to understand that, and I think they are going to so express themselves at the polls. In March 1938 I wrote a letter to Senator Bulkley in connec-

and I think they are going to so express themselves at the polls.

In March 1938 I wrote a letter to Senator Bulkley in connec-In March 1938 I wrote a letter to Senator Bulkley in connection with reducing the punitive undistributed corporate surplus tax. I suggested to him that, if the administration was going to insist on having this tax measure, they should give capital expenditures—that is, money spent for improvements and expansion—the same status as dividends, and that this would do three things. It would take a lot of men off the relief rolls; it would decrease the Government's requirements for funds for relief, and would increase the government's requirements for funds for relief, and would increase profits in the capital-goods industries for the Government to tax.

The last paragraph was this:
"An overdose of poison is frequently its own cure, and personally I am not worrying very much about the matter for a thing

that is not right will not prevail. If Congress does not take out of the hands of the vindictive emotionalists and back into its own hands control of the taxing power and the spending of the people's money and substitute a sane and reasonable taxing program for the raising of funds to support the legitimate activities of the Federal Government and all provided the result of the the Federal Government, and eliminate the punitive and social features of the present laws, economic forces will start doing so at the ballot box next November and will complete the job 2 years thereafter.'

That prophecy was fulfilled with much more of a bang than I ever thought it would be.

My income doesn't run up into these high brackets, and I don't want you to think that I am here pleading for the rich man. I am talking for myself and a thousand men who are associated with me in an enterprise out in Ohio, all of whom have been having a difficult time.

difficult time.

In January of this year I wrote to one of our Representatives. was not in connection with taxes but it applies to this discussion

was not in connection with taxes but it applies to this discussion as well as to the one about which it was written:

"I am not worrying about it for the immediate effect it will have upon our company or me for without boasting I may say that the managers of industry have ability above the average and they will be able to take care of themselves. They will at least have all the comforts of life and some luxuries; whereas, the low-income groups are going to be shoved still further into the slough of depression.

"We can't have real prosperity unless the man in the lower income brackets is prosperous, for it is that group that consumes 90 percent of our products, and I am concerned from a selfish standpoint about anything that tends to impair its purchasing power."

Now, these punitive, unfair, confiscatory, and suicidal taxes do impair its purchasing power because they remove and destroy all incentive for the wealthy man to risk his capital necessary to provide the worker with the tools of production. Unless you men of the Congress reverse this trend there isn't going to be any continued recovery. It will probably be saw-tooth in shape with a very narrow base at each tooth that marks recovery and a wide base on each tooth that marks depression. You are going to say, "Well, we have to have the income. We can't cut down these tayes."

to say, "Well, we have to have the income. We can't cut down these taxes."

A few weeks ago Mr. Morgenthau made the statement that he couldn't understand the attitude of businessmen whom he had contacted and who were saying, "Oh! what's the use."

I can understand it because many of them said to me, "What is the use of playing in a ball game where you are called out at first even if you bat out what ought to be a home run?"

I say to you that the patient is desperately ill and these measures that you have taken so far are simply narcotics and anesthetics. They don't cure the patient. The patient needs a radical operation, which will probably for a time make him sicker than he is at the present, but the chances are that if he has this radical operation he will be in very good economic health in a very short time. tion he will be in very good economic health in a very short time. It might be a two or three or even a four-stage operation, the same as the surgeon does when his patient is desperately ill.

If you do this, I believe that practically all employers will within 1 year have signs hanging out reading, "Help wanted." The measure of recovery is going to be in the reduction of unem-

To achieve a reasonably lasting recovery Congress must, among other things, really restore the profit system, repeal all punitive and social objective taxation, and say to all the people of the United States, "Let's go, let's all be prosperous and all enjoy the fruits of our labor and enterprise.

Thank you.

The Oklahoma Run

EXTENSION OF REMARKS

HON. MIKE MONRONEY OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1939

EDITORIAL FROM THE GUTHRIE LEADER

Mr. MONRONEY. Mr. Speaker, at this time I desire to call attention of the House of Representatives to the celebration of the opening of Oklahoma Territory for white settlement.

This week throughout the State of Oklahoma, the fiftieth anniversary of "The Run" is being commemorated. It was

the most dramatic birth of any State.

A large portion of what is now the State of Oklahoma was thrown open to white settlement at high noon, April 22, 1889. At that time, lining the borders of the Territory were more than 200,000 homeseekers, awaiting homes and farms | in the new country.

Because of its dramatic opening, I would like to submit the following editorial from the Guthrie Leader by Raymond Fields, editor and State commander of the American Legion, that graphically describes this historic occasion:

[From the Guthrie Leader]

Today's issue of the Guthrie Daily Leader is dedicated to the purpose of congratulating Oklahoma and Guthrie on the fiftieth

purpose of congratuating Ostational and Ottaine on the internal anniversary of founding.

There is no more single colorful chapter of pioneering in the history of this comparably young nation than the establishment of Oklahoma Territory, the "run for homes," and the subsequent development into a Commonwealth that rivals in wealth,

Culture, and enterprise any of the sister States.

A half century ago, 200,000 persons were assembled on a line that marked the boundaries of what is now seven central Okla-

homa counties.

The line was material in that barbed wire showed where the

The line was material in that barbed wire showed where the surging tide of home seekers must await the signal, in that soldiers of the United States Army patrolled with open holsters to be certain there was no premature infringement of prize territory. For days—yes, weeks—the mass of home seekers had gathered and camped awaiting high noon April 22. This was a cosmopolitan assemblage from every State and Territory in the United States. Hundreds of racial qualities were represented; thousands of provincial and local instincts were blended into the mass.

There was bound to be that element that wished to live the

There was bound to be that element that wished to live the easy life, prey upon the pioneers, take any possible advantage of them. Then there was a necessary group to traffic and barter in food, clothes, and provisions for "the run."

But the impelling thought, the mass hysteria, was land—a

Some were determined to locate on a quarter section, bottom land if possible, but a quarter section. Others had in their mind's eye town lots in communities that would arise into cities overnight

From the prairies.

But the magnet was home—a home they could own themselves.

At noon April 22, 1889, came the bark of the soldiers' pistols.

Headlong across the line came the thousands. Fast-riding horses had been trained for weeks. Plunging teams galloped in double harness, pulling heavy wagons behind them with jangling families clinging to whatever they could grasp. There was buckboard and surrey, even foot racers. Trains filled to overflowing augmented the crowd.

Homes! Homes!

Homes! Homes!

The mass thinned out as the miles wore away. Some were ahead, some behind, some had stakes driven on town sites and the coveted quarter sections.

coveted quarter sections.

Nightfall saw busy tent towns, Guthrie and Oklahoma City having an estimated population of 15,000 each on the first night.

Thousands of campfires fingered skyward from claim-holding pioneers' bivouac. The night was typically springy.

Men walked in files to get water from handy springs. Women busied themselves with preparation of a campfire meal. Children tugged to the skirts of the pioneer woman.

From somewhere in the mass of new homesteeders came the gry

From somewhere in the mass of new homesteaders came the cry into the night: "Oh, Joe! Here's your mule!" It was picked up and carried on, pioneer to pioneer, until it reached Joe whose tethered animal, priceless for the plowing of new lands, had broken away, and the neighborly restoration brought unbounded joy to his open home.

Joy to his open home.

For 50 years, the cry: "Oh, Joe! Here's your mule!" has come down to new generations of Oklahomans, typifying the mutual helpfulness, the neighborliness, the friendship of the people of this State—strangers only for a minute, friends forever thereafter. The story of Oklahoma Territory for the first few days, weeks, months, and years would require volumes.

On the second day permanent preparations were compared.

On the second day permanent preparations were commenced. For these people had cast their lot with the new Territory and they had come to stay. Tents started giving way to lumber structures in the towns, to log and sod lean-to homes on the quarter-

sections.

There was trouble about the "jumpers" and "sooners" to be sure,

There was trouble about the "jumpers" and "sooners" to be sure, but this was scattered, considering the thousands of claims established in so short a time. There was tragedy and even death in defense of claims, but the incidents were comparatively few.

Effigy figures of claim-jumpers hanging with noose around their necks in most of the pioneer towns and villages were gruesome warnings as to how legal claims would be regarded by the people as a whole.

Such, in brief, was how Oklahoma came into being 50 years ago. Anyone living in the State can reflect with pride on her glorious half-century of history, without comparison in the Nation's history. There is no necessity for the referee to undertake writing a picture of the Oklahoma of today. We all know her well,

love and respect our Soonerland.
We can also look to the future with confidence.

We can also look to the future with confidence. The resources have developed rapidly and often with waste, but Oklahoma continues a leader among the commonwealths in respect to natural resources, agriculture, and in some departments, manufacturing. On the occasion of the golden anniversary of the opening of Oklahoma Territory, we can pride ourselves on being Oklahomans and we should take that pride and translate it into future development for our State—our home.

Automobiles Under Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1939

Mr. REED of New York. Mr. Speaker, automobiles are our most important manufactured export commodity, both in value of exports and in number of workers in the industry. Since the volume of exports of this commodity has been retarded by various trade barriers set up by foreign countries, whether or not these barriers have to any marked degree been lowered through the Roosevelt-Hull trade agreements is one of the best tests of the economic success of this pro-

Figures from official sources show that the trade agreements have not been particularly helpful to the automotive industry. In 1937 the value of all domestic exports was 62.9 percent of the 1929 total, while the value of all exports of automobiles, parts, and accessories was 64.3 percent of their 1929 value. However, the value of exports to tradeagreement countries which reduced tariffs to this country was but 60.9 percent of their 1929 value, while value of exports to all other countries was 66.9 percent of their 1929 value. Thus it is obvious that the nine concessions made by foreign countries have not been especially helpful in returning automobile trade in these countries to the 1929 level.

By far the most important branch of the automotive industry is the production of passenger cars. In 1937 the total number of passenger cars and chassis exported was 67.6 percent of the number exported in 1929. However, exports to trade-agreement countries which reduced tariffs were but 57.4 percent of their 1929 number while the exports to all other countries were 71.3 percent of their 1929 number, thus showing more rapid increase to all other countries than to agreement countries which reduced tariffs.

Thus we have found that automobile exports in 1937 were still below the 1929 level and that exports to agreement countries which reduced their tariffs were further below the 1929 level than were exports to the rest of the world. There is no evidence from the trade statistics to prove that the trade agreements have helped the automotive industry as exports to countries which have made no concessions to the United States have increased at a more rapid rate than they have to the countries which reduced tariffs on automobiles. This is further evidence that the reciprocal tradeagreement policy is not reciprocity but a device for lowering tariffs in an unconstitutional and undemocratic manner.

That the United States is the world's most efficient producer of automobiles is questioned by no one. Therefore, if the Roosevelt-Hull agreements had been an economic success our proportion of total world production would be greater today than in 1935 or at least the trend would be toward a greater share instead of a smaller one. But in 1937 world production was 100.9 percent of 1929, United States production was but 89.7 percent of 1929 and the production of the world excluding the United States was 164.9 percent of 1929.

In 1937 Secretary Hull's plea for the extension of the Reciprocal Trade Agreements Act was that the agreements were helping to bring about world peace. A world whose attitude is becoming less belligerent does not think of increased armaments nor of plants which can be converted into munition factories in time of war. Most of the increase in motor vehicle plant capacity in recent years has been part of the military policy of the nations of the world as an automotive plant can quickly be converted into a munitions factory.

World business conditions were better in both 1936 and 1937 than in any of the 4 preceding years. However, in these years we produced a smaller portion of the total world output. Production outside of the United States increased 40.8 percent more rapidly than in this country. At the same time our exports of motor vehicles of a military nature increased materially. It is unfortunately apparent that Secretary Hull's peace efforts have been in vain, for the world is arming for war and producing foodstuffs and war materials as abundantly as possible, regardless of the cost. With such conditions in the world are real reciprocal-trade agreements possible? The State Department is aware of these conditions. Therefore is it not reasonable to assume that their real purpose is to lower tariffs in an unconstitutional and undemocratic manner?

Farm Interest Rates

EXTENSION OF REMARKS

HON. VINCENT F. HARRINGTON OF IOWA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 19, 1939

RESOLUTION ADOPTED BY NATIONAL FARM LOAN ASSOCIATIONS OF ORANGE CITY, HAWARDEN, AND HULL, IOWA

Mr. HARRINGTON. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include therein a resolution adopted by the National Farm Loan Associations of Orange City, Hawarden, and Hull, Iowa. In view of the distressed financial situation of our farmers, I heartily concur in the recommendation that the interest rates on Federal land-bank and commissioner loans be permanently fixed at 3½ percent and the principal payments of these loans be extended over a period of 30 years.

The resolution is as follows:

Whereas long-term loans and low interest rates help materially to stabilize the agricultural industry; and
Whereas the emergency farm loan interest rate of 3½ percent, made possible by special action of the National Congress to the farmer borrowers having Federal land-bank loans, expires July 1, 1940, and the emergency farm loan interest rate of 4 percent, made possible by a special act of the National Congress to the farmer borrowers having land-bank-commissioner loans, expires July 1, 1940; and

Whereas thousands of farmers have Federal land-bank and land-bank-commissioner loans, and because of the fact that the interest rates are not definitely fixed at a low rate and because of the fact that principal payments of at least 5 percent per annum are required on land-bank-commissioner loans there is much

are required on land-bank-commissioner loans there is much uncertainty and indefiniteness in the plans of such farmer borrowers; and

Whereas it appears to be possible to extend lower interest rates to the farmers without an excessive burden to the taxpayer and with almost no administrative costs and that interest rates on Government loans to other industries are considerably less than those fixed for the farmer of the Middle West; and

Whereas it is our opinion that low interest rates and small principal payments accorded to farmers through the Federal land-bank system would contribute much to the stabilization of agriculture: Therefore be it

Resolved, That we, the members of the Sioux National Farm Loan Association, Orange City, Iowa, respectfully petition the National Congress to make the interest rate on all Federal landbank and land-bank-commissioner loans 3½ percent for the life of the loans and that principal payments on land-bank-commissioner loans be extended over a period of not less than 30 years. sioner loans be extended over a period of not less than 30 years: Be it further

Resolved, That a copy of this resolution be sent to our United States Senators, Hon. Guy M. Gillette and Hon. Clyde L. Herring; to our Congressman, Hon. Vincent F. Harrington; and to the land-bank commissioner and the Federal Land Bank of Omaha.

The above resolution was unanimously adopted at the annual meeting of the members of the Hawarden National Farm Loan Association, Hawarden, Iowa, held on February 7, 1939, at the annual meeting of the members of the Sioux National Farm Loan Association, Orange City, Iowa, held on February 9, 1939, and at the annual meeting of the members of the Hull National Farm Loan Association, Orange City, Iowa, held on February 9, 1939, and at the annual meeting of the members of the Hull National Farm Loan Association, Hull, Iowa, held on February 14, 1939.

G. J. Slobe,

Secretary-Treasurer.

Farm Imports

EXTENSION OF REMARKS

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1939

Mr. CARLSON. Mr. Speaker, under leave to extend my remarks in the RECORD I am submitting a comparison of agricultural imports for the months of January and February 1938, and January and February 1939. These figures are secured from the United States Department of Commerce.

	January and February	
Products	1938	1939

The International Situation

EXTENSION OF REMARKS

HON. HENRY C. DWORSHAK OF IDAHO

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 19, 1939

EDITORIAL BY L. R. SCOTT

Mr. DWORSHAK. Mr. Speaker, today Americans are overwhelmed with editorials in large daily newspapers reflecting a concerted effort to inflame their passions and subtly influence them in favor of the so-called democracies of Europe. There is little disposition to present the truth or accurately portray the diplomatic and historical background of affairs in Europe today, so that public opinion may be properly informed.

Editors of large dailies do not always submit their personal views, and necessarily must be governed to a large extent by the policies of publishers. However, there is a large and influential group of editors on thousands of country newspapers in the United States who are constantly in touch with citizens on the farms and in the smaller communities. These editors are solely actuated by a desire to give constructive expression to untrammeled views, and therefore are in a position to reflect this sentiment.

The following editorial written by L. R. Scott, of the Power County Press of American Falls, Idaho, is indicative of how Americans in rural communities view the present interna-

tional situation:

CONGRESS SHOULD NOT ADJOURN

Because of the crisis in Europe Congress should stay in session. Not for the purpose of declaring war but for the purpose of keeping us out of war.

President Roosevelt has stuck his neck out so far into European affairs that he may need help to get it back and hold it. In other words, he has already taken sides in a European war before

it has started.

It has started.

We see no reason yet why we should in any way become involved in their quarrel. They say Germany and Italy have broken treaties. That is true, but England and France have certainly broken their ageement with the United States also to the extent of several billions of dollars that the citizens of this country will have to pay in taxes. They say we must fight to save democracy. It is rather difficult to know how we can ally ourselves with communistic Russia in a fight for democracy.

They say we must fight the totalitarian governments now or fight them alone after they control all of Europe. Perhaps so, but if they have a fight to the finish in Europe it would be 50 years before they would recover sufficiently to wage another war, and by that time North and South America will be some power to be reckoned with. And then we don't know but what England would do the same thing if she won the war. England has tried to control this country by armed force twice in the past and she may want to do so again. Neither Germany nor Italy have ever attempted to take control of the United States by armed force.

Just a few days ago a British statesman in Canada stated that the United States was a parasite because we did not take a stronger stand to protect England and France. Fact is that if it was not

stand to protect England and France. Fact is that if it was not for the money furnished by citizens of the United States to pro-mote Canadian enterprise our neighboring country to the north would still be a frozen desert. And their farmers would be hungry now if they were not allowed to ship their commodities to this country under the reciprocal-trade agreement in competition with

the farmers of this country.
It seems to us that the United States Government should spend millions, or even billions for defense. Tell the kings and dictators of Europe we are not interested in their quarrel. But also tell them not to interfere in affairs of America or any of our possesthere will be war, and prove to them that we mean sions or

exactly what we say.

Shall Congress Investigate the R. F. C.? Destructive Intent Evident in Proposed Loan to M. & St. L. Railway

EXTENSION OF REMARKS

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1939

Mr. ALEXANDER. Mr. Speaker, I have just received the following communication from the International Association of Machinists, Lodge No. 477, of Minneapolis, regarding a matter which is very vital to my district and to laboring men and residents of that section. I shall insert the letter herewith and then make some remarks regarding the Reconstruction Finance Corporation which, I believe, if half we hear about it is true, is about due for a thorough investigation by Congress. The machinists' letter follows:

INTERNATIONAL ASSOCIATION OF MACHINISTS, LODGE No. 477, Robbinsdale, Minn., April 15, 1939.

Hon. John G. Alexander,
House Office Building, Washington, D. C.
Dear Str.: In behalf of Machinists Lodge No. 477, affiliated with
the International Association of Machinists, I am writing you
with reference to the proposed reorganization plan of the Minneapolis & St. Louis Railroad.

We understand that plans for the reorganization are being pushed forward quite rapidly and wish to voice our doubts as to the possibility of every angle being considered in such haste.

e understand that, despite expected denial, the railroad will be divided into two parts; one corporation will own all the good line and all the rolling stock, the other will be the part they have wanted to abandon and will be organized simply for the purpose of abandonment.

Since this was one of the main reasons for the concerted drive against the recent proposed split-up plan, we are, of course, vigorously opposed to this action.

The plan also calls for moving the shops, now located at Cedar Lake, to Marshalltown, Iowa, which would result in a loss of some

400 employed people to Minneapolis.

Also, the proposal calls for \$1,503,000 attorneys' fees—this to be paid in bonds. When you add this to the \$800,000 already paid,

and place that bond load on the new corporation to start with, it will, of course, be difficult to give labor fair treatment.

We wish to go on record as being opposed to this move as

proposed, and ask your wholehearted cooperation in working for a fairer plan for the workers and communities before it is too late. Yours truly,

J. H. GILCHRIST, Recording Secretary.

I have also had similar letters from other groups of citizens and organized labor which are unanimously on record in opposition to the proposal by the Reconstruction Finance Corporation. After watching and having had some close personal contacts with this agency during the past several years, I am wondering if the name should not be changed to Rooters for Communism, Reconstructed Federal Chumps, or Ready for Cleaning. Perhaps the latter is most appropriate if we are to judge from not only this immediate case, but also the recent one in which newspapers have reported they have made arrangements to loan \$6,000,000 to a couple of friends formerly employed in the R. F. C., so they could build a building in Washington, worth perhaps two-thirds that amount in terms of what the same building could be built for elsewhere; and then they lease it to the Government at a rental predicated on the purported or kited cost of the building. So the R. F. C. not only makes a questionable loan of our money, but thus makes it possible to rook the Government over a term of years with an exorbitant rental.

Under the terms of the present loan now proposed to be made to the attorneys and bondholders of the Minneapolis & St. Louis Railway, we find the following interesting facts and figures in a letter from the Railroad Brotherhoods' Legisla-

tive Board of Minnesota:

Hon. John G. ALEXANDER, Congressman, State of Minnesota,

Washington, D. C.

My Dear Congressman: We are enclosing a copy of memorandum dated March 4, 1939, in regard to the petition of Coverdale and Colpitts for allowances of maximum fees in the proposed reorgan-

You will notice in this memorandum that corporation B, which is west of Winthrop, through to South Dakota, and south from Winthrop through New Ulm to Tara, Iowa, will be completely divorced from corporation A, which will operate the lines from Hopkins, Minn., through to Peoria, by way of Albert Lea.

Line B has between 20 and 25 train and engine crews operating upon it as well as a great number of men in other branches of the services which will be completely divorced from corporation.

the service which will be completely divorced from earnings and benefits of corporation A.

We are of the opinion that this reorganization is nothing more than the original dismemberment proposition that was submitted some time ago and upon this basis we feel that the \$5,000,000 loan from the R. Trusting you will give this your careful attention, we remain, Fraternally yours,

F. H. WILSON, Order of Railway Conductors. F. W. SPENCER, Brotherhood of Railroad Trainmen. P. J. Burns,
Brotherhood of Locomotive Engineers.
P. F. De More, Brotherhood of Locomotive Firemen and Enginemen.

In re petition of Coverdale and Colpitts for allowances of maximum fees in the proposed reorganization of the Missouri & St. Louis.

This firm filed a petition with Judge Booth dated February 17, 1939, for maximum allowances for reorganization purposes to which is attached four exhibits, two containing letters from Jesse H. Jones, third a tentative plan of reorganization, and the fourth allowances suggested to reorganization managers in connection with the matter. An order to show cause was issued to be heard on March 6 at 10 o'clock a. m., before Judge Booth. According to this document it empears that Jesse H. Jones is willing cording to this document it appears that Jesse H. Jones is willing to loan \$5,000,000 for an issue of 4-percent 25-year bonds secured against property which would be owned by the first corporation. Exhibit 3 is an outline of money required for reorganization.

Allowances for fees to mortgage trustees and counsel, previously made by the court but not yet paid, to be paid by \$300,000 4-percent income bonds.

In one of Mr. Jones' letters, that of February 11, he writes: "Our commitment will be conditioned upon the remaining part of the railroad, against which we would have no claim, being conveyed to a separate corporation. Our mortgage would provide that no part of the earnings of the road should be diverted to the other corporation."

COMMENT

The total sum requested for fees in reorganization including contingencies is \$1,116,000, of which \$100,000 is to be paid in cash as well as the item for contingencies. The allowances suggested on page 4 of the exhibits are subject to criticism. They amount to \$853,000 out of which \$350,000 would be paid to the reorganization managers and the balance to the receiver, his counsel, officers of the railroad, some employees, and \$10,000 to Mrs. Smith and \$15,000 to Mrs. Bremmer. Officers and employees of the corpora-tion are working on regular salary and it is indeed difficult to see how they would be entitled to anything beyond their salary for how they would be entitled to anything beyond their salary for such work as they may do during the receivership. The receiver is now getting \$25,000 a year. There is also a suggestion for an allowance to Messrs. Carlson and Boutelle, attorneys for preferred creditors, of \$100,000, of which 40 percent is to be paid in cash and the balance in income bonds. This is to be paid out of the sum going to preferred creditors. I do not see why the court should be called upon to treat with compensation this firm is to get from the funds payable to preferred creditors. That is a matter of contract between the attorneys and the clients. Under no possible circumstances would the I. C. C. approve those items and I do not see upon what basis the court can be asked to pass upon maximum allowances to be considered in a reorganization because, maximum allowances to be considered in a reorganization because, after all, the Commission must approve of a reasonable plan together with expenses and fees. In many reorganization plans the Commission has been very severe in its treatment of claimants for

The plan of reorganization seems to fall in line with the testimony and opinions of witness Baringer in Dismemberment case. He stated that the plan then under consideration would save that part of the railroad which could be made to pay, and his judgment included only the line from Hopkins to Peoria. All the rest of the line should be left out of the picture. True, the new plan does not swallow Baringer's idea in full because it includes as a part of corporation A the line to Winthrop and the line from Albert Lea to Fort Dodge and then to Des Moines. That retains That retains for corporation A the favorable connections with business to the south and east through Peoria. The provision that the first mortgage bonds issued by corporation A shall provide that none of the earnings of that railroad shall be diverted to corporation B simply means that corporation B could not live, and in a short period of time it would have to cease operation and the line be abandoned.

To me the plan seems to be entirely inconsistent with the atti-To me the plan seems to be entirely inconsistent with the attitude expressed by officers and managers of the property in the Dismemberment case. They all felt the property could continue to operate, pay its way and earn enough to pay dividends on the mortgage of from ten to twelve million dollars. All parties opposing the dismemberment plan wanted to preserve the present system. This position was taken because it was in the public interest to have the railroad service and because employees should be continued in employment. It is difficult for me to see, in view of these facts, how the receiver and counsel for the receiver and managers of the property can consistently promote this plan. It of these facts, how the receiver and counsel for the receiver and managers of the property can consistently promote this plan. It represents a change of face which doesn't look good. Probably their attitude is influenced by the generous allowances which are provided for in the plan. Unquestionably the plan will be opposed. Employees whose tenure of jobs will be made uncertain should oppose it. Commissions of Minnesota and South Dakota should certainly oppose and it may be that the commission of Iowa will do the same thing. Communities along the line to be served by corporation B should be just as much interested in opposing this plan as they were before because it is just as certain as daylight that corporation B cannot continue to exist. I cannot as daylight that corporation B cannot continue to exist. I cannot understand how second-mortgage bondholders can agree to take

stock for their interest. Under the dismemberment plan they would have been allowed 3 percent, here they get a piece of

worthless paper.

To me the whole plan is so incredible and so notoriously unfair to preferred creditors, second-mortgage bondholders, employees, and the general public that I am certain it will not be approved by the Interstate Commerce Commission.

In other words, only \$2,978,000 are to be used for the purpose of rehabilitating the railroad—a thing which we are all in favor of and realize the need for, not only in the case of this railroad, but most of the railroads of the country-and \$1,116,000 are to be used for attorneys' and receivers' fees. On a loan of \$5,000,000, can any stretch of the imagination justify such a manifest juggling of our public funds for the benefit of a very limited number of people? If we are going to loan money for rehabilitation purposes, let us distribute it so that it will benefit our unemployment situation, as was the original intent when we set up this Government agency.

In view of the apparent misconceptions on the part of the R. F. C. officials of their duty and purpose, and in view of the fact that this same question has previously been before the Interstate Commerce Commission and rejected after full and extensive hearings and investigation, I suggest it is about time for Congress to institute an investigation of the R. F. C. to determine whether there is not malfeasance in the conduct of their duties and to definitely establish proper limitations beyond which they shall not be permitted to go in encroachment on our legislative prerogatives.

The Press Subsidy

EXTENSION OF REMARKS

HON. ROBERT J. CORBETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 19, 1939

Mr. CORBETT. Mr. Speaker, under leave to extend my remarks in the Record, I wish to point out an amazing event—unique, I believe, in the history of our democratic government. I refer to the highly commendable action of the Pittsburgh Press in advocating the elimination of a Federal Government subsidy from which it directly benefits. In this day when pressure groups of all sizes and varieties are seeking to get every possible penny from the Public Treasury; when public morality has sunk to the level that almost everyone is talking about what they can get from society rather than what they can give to society, the attitude of the Pittsburgh Press stimulates like a breath of fresh air in crowded smoke-filled room.

The following editorial from its pages illustrates one of the things we must do if we would win back prosperity and sets an example that requires no comment:

Over the years this newspaper has criticized the subsidies in general and subsidies in particular. Yet each time we point to the mote in the other fellow's eye, we have to remind ourselves of the beam in our own.

For the publishing business has a pet subsidy which is just as indefensible as any other.

The following table, from the Post Office Department's operations of 1938, tells the story:

	Revenue	Cost of han- dling	Deficit
Publications exempt from zone rates on advertising portion	\$1, 997, 695. 89 8, 281, 747. 33 3, 403, 464. 73 9, 461, 878. 80	\$15, 567, 293. 34 36, 696, 510. 93 16, 002, 288. 73 36, 541, 056. 00 8, 115, 069. 74	\$13, 569, 597. 45 28, 414, 763. 60 12, 598, 824. 00 27, 079, 177. 20 8, 115, 069. 74
Total, publishers' second class	23, 144, 786, 75	112, 922, 218. 74	89, 777, 431. 99

The Post Office Department showed a loss of about \$47,000,000 in its 1938 operations. If it hadn't been for the deficit of nearly \$90,000,000 which the Department says it suffered in the handling of newspapers, magazines, and other periodicals—the figures above are the Department's own, of course—then the Postal Service last

of newspapers, magazines, and other periodicals—the figures above are the Department's own, of course—then the Postal Service last year would have shown a handsome profit.

The accuracy of the figures may be open to debate. We can't understand, for instance, how it is possible to compute that the cost of free delivery inside the county of publication—the particular boon of small-town dailies and weeklies—was exactly \$8,115,069.74. Rural mail carriers have to make their rounds anyway. Yet it is only fair to assume that the Department has a dependable formula for assessing the costs of its various services. And whatever formula was used to require a 3-cent stamp for a first-class letter, a 6-cent stamp for an air-mail letter, and the graduated charge for parcel-post mailings—for the purpose of making each of those services self-supporting—should be applied to newspapers and magazines for the same purpose.

Speaking for ourselves, the Pittsburgh Press and the Scripps-Howard organization, of which we are a member, want no free ride at the taxpayers' expense. We are willing to pay the costs of distributing our newspapers. And we should like to see other newspapers and magazines join in asking for abolition of this Government subsidy. Those who refuse need not be surprised if their editorial utterances against the Government's other borrow-and-spend gratuities fail to convince.

The New Deal Administration

EXTENSION OF REMARKS

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Thursday, April 20 (legislative day of Wednesday, April 19), 1939

ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK, APRIL 19, 1939

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address delivered by the junior Senator from New York [Mr. Mead] at the luncheon of the National Democratic Council at the Cosmos Club, Washington, D. C., April 19, 1939.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

When President Roosevelt assumed his present position, condi-

When President Roosevelt assumed his present position, conditions throughout the country were so distressing as to be without precedent in all the history of the Republic.

Economic and business processes were in a state approaching complete collapse. Our financial system, with hundreds of bank closings occurring daily, was in a state of prostration. Deflation had reduced the national income by more than 50 percent. The sources of Federal revenue were dried up. Industry and agriculture were impoverished to a point approaching bankruptcy. America was so near the brink of the precipice of ruin that despair was written on the faces of the people, while terror gripped their hearts. That was the break-down of an old political order; that proved the futility of the forces of reaction.

the futility of the forces of reaction.

President Roosevelt and the Congress, with extraordinary speed and effective decision, invoked the powers of the Federal Government, expeditiously instituting one drastic innovation and reform after another, until finally the situation was brought under control, and hope and confidence displaced terror in public thought. That was in 1932

was in 1933.

was in 1933.

The plans and policies, invoked by the President and approved by the Congress, to save the country from inevitable collapse, to advance the public welfare, to establish order, and promote national prosperity are now commonly referred to as the New Deal.

We are all familiar with that record. We know the reason for its origin. Its accomplishments thus far have resulted in its receiving widespread public approval. The people generally understand and approve the New Deal recovery program; they realize that its operation, sympathetically administered, is intended to promote social justice, greater equity between citizen and citizen, and to enhance national prosperity by observing the principle of balance in social and economic relations.

There is no mystery behind the reason, the source, or origin of

There is no mystery behind the reason, the source, or origin of the New Deal. It is not the handiwork of a President, a Cabinet, or a Congress. The compelling cause that made its creation inevitable as a matter of social and national self-preservation can be traced to the complete break-down of the previous Republican

administration.

Let me declare, as emphatically as I may, that the advent and institution of the New Deal, through the broader function of the

Government to make it operative, is not solely due to the planning of President Roosevelt or the Congress; it came because there

as no other way.

In the light of America's progress in productive efficiency and In the light of America's progress in productive efficiency and social interdependence, it was necessary to protect our country from disasters unspeakable. It emanated from the hearts and minds of the people of America. It was the outgrowth of economic pressure represented by every unemployed worker, impoverished farmer, and bankrupt businessman in the country.

There was no other way, and because there was and is no other way, our critics, after they derisively call the roll of our recovery enactments, are intellectually bankrupt in advancing or proposing any substitute or alternative plan to enhance or protect the public

any substitute or alternative plan to enhance or protect the public

interest.

interest.

The sole purpose of the opposition, leveling as it has a "pop-gun" attack on the recovery program, is to cause confusion of thought through the partisan barrage of accusations, in the vain hope that the people will be confused.

The New Deal recovery program has proved itself. Its multiplied activities coordinate into one broad economic and social plan that maintains intact the integrity of American ideals and institutions, and responds to the character and the needs of our people.

In the light of our Nation's history, political, social, and economic, the New Deal program is working in harmony with our natural development. It follows the course that progress must take. Unless it is sabotaged, it will continue to be a great success.

natural development. It follows the course that progress must take. Unless it is sabotaged, it will continue to be a great success. Every permanent New Deal agency has long since won the approval of the American people, as well as the right to become permanent fixtures in our national set-up. Call the roll of the New Deal agencies and you will find their objectives are to prevent a recurrence of the disaster of 1929, to protect the people's wealth, to conserve their natural resources, and to provide for a greater degree of economic security.

serve their natural resources, and to provide for a greater degree of economic security.

Through higher wages and shorter hours an answer to machine productivity is found. Through the Agricultural Administration Act an answer to productive efficiency on the farm is being worked out. Through pensions and retirement systems an answer for our older worker's problems will be developed.

The presentant of the Tansportation Act, the creation of the

The enactment of the Tansportation Act, the creation of the Bituminous Coal Commission, the T. V. A., the Wagner labor law, the Securities Exchange Act, and every other governmental establishment were prompted by a purpose to protect producers and workers from economic disorganization that overproduction brings.

They diffuse the benefits of technocratic advances. They give us

They diriuse the benefits of technocratic advances. They give us better economic balance.

There exists but one choice between the New Deal recovery program, which was inevitable as a matter of social and national self-preservation, and the futile policies of the National Republican Party. That choice is to stand by the New Deal; to give its sweeping program the support its success, already attained under trying circumstances commands.

sweeping program the support its success, aiready attained under trying circumstances, commands.

There is no choice between the philosophy of our Democratic Government and the violent or despotic types and systems adopted abroad. Their leadership might be more effective for the time being, but their formulas are temporary, transitory, and will pass with the passing of the dictators. Our laws are permanent in character. Theirs are the edicts of a despot.

While violence has been done to democracy in the last score.

character. Theirs are the edicts of a despot.

While violence has been done to democracy in the last score of years, we can dismiss the thought that the new formulas established abroad are lasting or enduring.

Our system has stood the test for 150 years. Every crisis has brought forth successful leadership, because of the intelligence and the patriotism of our people.

Man has tried all types. Democracy best fits his nature, and in more normal times, if he should wander away, he will come back to it again.

Now, looking backward for the moment: We have plugged the leaks, eliminated the evils that led to the crash of the ill-fated Hoover administration. We have adopted a conservation program that will stop the destruction of our resources and preserve the soil for the generations to come.

We have expanded the principles of democracy by giving labor the right to bargain collectively under democratic formula. We have laid the mud sills, deep in our soil, of a vast social-security program, which will expand and develop until it will care for the wildow and orphan, the blind and disabled, the unemployed, and the aged throughout the Nation.

And now, looking ahead at this point, we can see the completion of the reform program and with it a more permanent prosperity, a better economic order. When the legislation, resulting from the monopoly inquiry, becomes a reality—when international order takes the place of international chaos—we may expect to enjoy improved trade and commerce with the nations of the world. When stability of the currency of the nations of the world approaches normalcy, our prosperity will be heightened. Domestic conditions, under the recovery program, are bound to improve in response to enlightened public opinion, and the powerful leadership for peace, asserted by President Roosevelt, must—at least we hope—grow better day by day.

At any rate, when this troubled world has recovered from the hysteria which grips it today, and international relations are normal again, America's New Deal recovery program will prove its effectiveness in establishing a better economic balance and a more enduring prosperity. And now, looking ahead at this point, we can see the completion

enduring prosperity.

To change political theories at this time, to turn back now, to embrace the old order again would be fatal to our political and economic well-being. To advance on all fronts, to perfect the agencies already established, to amend the statutes when improvement will result will lead us onward and upward to enjoy the sunshine of a new day. It will enable us, by the powerful force of good example, to win a world back to the ideals of democratic government.

Jefferson and Monroe

EXTENSION OF REMARKS

HON. CLYDE L. HERRING

OF IOWA

IN THE SENATE OF THE UNITED STATES Thursday, April 20 (legislative day of Wednesday, April 19), 1939

RADIO ADDRESS BY HON. GUY M. GILLETTE, OF IOWA, APRIL 19, 1939

Mr. HERRING. Mr. President, last night there was broadcast over the Columbia Broadcasting System an address by the senior Senator from Iowa [Mr. GILLETTE], delivered at a meeting of the Society of Virginia of the District of Columbia, at the New Willard Hotel, the meeting being in celebration of the anniversary of the birth of President Jefferson and President Monroe.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Nothing could be more fitting than a joint celebration of the birthdays of Jefferson (April 13) and Monroe (April 28), for throughout their public careers their lives were closely inter-

Jefferson, a young man of 33, gave to his country the Declara-tion of Independence. In the same year 1776 Monroe, a youth of 18, laid aside his studies at William and Mary, joined the Army of Independence and fought in every important battle from White Plains to Monmouth, freely shedding his blood at Trenton.

Then he studied law under Jefferson, who was Governor of Virginia, and an intimate lifelong friendship developed.

Jefferson's second greatest contribution to his Nation was probably the Louisiana Purchase. To assure its success he appointed Monroe Envoy Extraordinary, who joined Ambassador Livingston at Paris, and they successfully negotiated the purchase with Napoleon.

Upon retiring from the Presidency, Jefferson recommended Madison as his successor. Madison selected Monroe as his Secretary of State. The War of 1812 went badly until Madison appointed Monroe Secretary of War as well as Secretary of State. Then the tide of battle turned, concluding in Andrew Jackson's great victory at New Orleans.

Jefferson, the lifelong leader of the Democratic Party, endorsed Monroe for the Presidency in 1816. His term of office was one of great progress and prosperity for the Nation. He had the unique distinction at his second election of securing every electoral vote

but one.

So we see that the two great Virginians whom we honor this evening were very closely alined in their public lives.

Virginia, one of the mother States, has contributed among her great sons and daughters some of the outstanding figures of our national history. We find Virginians scattered throughout the world, and they make splendid citizens wherever they go. Speaking of Virginians, upon this very pleasant occasion I am reminded of a story told me by the genial president of this society, Col. Edwin A. Halsey. He said it is generally known that Virginians are proud of their association with the Old Dominion, and told of a little boy who, on a social occasion, was asking each of the are proud of their association with the Old Dominion, and told of a little boy who, on a social occasion, was asking each of the guests where they were born. While the little boy proceeded with this questioning, his father heard him and said, "Son, you must not ask people where they were born because it is not polite. Don't you know that if they were born in Virginia they will tell you, and if they were not, why embarrass them?"

We, in the Middle West, and my own State of Iowa, laugh with you because we feel the same way about our heritage and the prestige of our paye good State.

you because we feel the same way about our heritage and the prestige of our own good State.

I shall address myself this evening principally to the career of President James Monroe.

In commemorating the anniversary of the birth of James Monroe, we instinctively turn to that event which, time has demonstrated, is the crowning achievement of his Presidency. In two brief sentences, of less than a dozen lines, in our fifth President's annual message of December 1823, lies the heart of a political doc-

In clear, concise words, Monroe enunciated the policy of the United States with respect to foreign interference in the affairs of this continent, and his announcement is now regarded an an epitome of the principles of this country concerning the development of the American States. This doctrine is as vital today as it was when it was written, 116 years ago, and the passing years have only served to strengthen it. Its added power and significance are strikingly obvious, as we read it in the light of present-day conditions. I quote:

"The occasion has been judged present or asserting as a service of the strength of t

day conditions. I quote:

"The occasion has been judged proper for asserting, as a principle in which the rights and interests of the United States are involved, that the American continents, by the free and independent condition which they have assumed and maintain, are henceforth not to be considered as subjects for future colonization by any European powers. * * *

"We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers (European powers) to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety."

That is the Monroe Doctrine which its author's biographer Gil-

That is the Monroe Doctrine, which its author's biographer, Gilman, refers to as "a political dictum, which is still regarded as fundamental law, and bears with it the stamp of authority in foreign courts as well as in domestic councils."

Although Monroe and his Secretary of State, John Quincy Adams, as well as Jefferson, Madison, Calhoun, and others whom he consulted, recognized the importance and necessity of such a policy at suited, recognized the importance and necessity of such a policy at the time of its adoption, it is doubtful if either Mr. Monroe or his advisers at the moment realized the lasting effect which his pronunciamento would have upon the future of America and the world. Jefferson, perhaps, with clearer vision than any, comprehended the full import of the proposed declaration of policy. Replying to President Monroe, who had consulted him, as well as the Cabinet, after Prime Minister Canning had proposed to Mr. Rush, American Minister in London, that the United States should cooperate with England in preventing European interference with the erate with England in preventing European interference with the Spanish-American colonies, Mr. Jefferson, in language even stronger than that employed in the Monroe Doctrine, said:

"The question presented by the letters you have sent to me is the most momentous which has ever been offered to my contemplation since that of independence. That made us a nation; this sets our compass and points the course which we are to steer through the ocean of time opening on us. And never could we embark on it under circumstances more auspicious. Our first and fundamental maxim should be never to entendia currely in the fundamental maxim should be never to entangle ourselves in the broils of Europe. Our second, never to suffer Europe to intermeddle

with cis-Atlantic affairs.

"America, North and South, has a set of interests distinct from those of Europe and peculiarly her own. She should, therefore, have a system of her own separate and apart from that of Europe. While the last is laboring to become the domicile of despotism, our endeavor should surely be to make our hemisphere that of

Three years before his correspondence with Monroe, Jefferson had envisioned such a policy as the Monroe Doctrine, and the germ of it is found in a letter to William Short, August 4, 1820, in which Mr. Jefferson refers to the importance of "an American system of policy totally independent of and unconnected with that of Europe," and added:

"The day is not distort when we new formally require a partition."

"The day is not distant when we may formally require a meridian of partition through the ocean which separates the two hemispheres on the hither side of which no European gun shall ever be heard, nor an American on the other; and when during the rage of the eternal wars of Europe the lion and the lamb within our regions shall lie down together in peace * * *."

"The farseeing significance of the Monroe Doctrine, if perceptible to no one else, was at least clearly seen by Daniel Webster," says the late Senator Henry Cabot Lodge. In a speech in the Senate, April 14, 1826, Daniel Webster said:

"I look on the Monroe message of December 1823 as forming a bright page in our history. I will neither help to erase it nor tear it out; nor shall it be, by any act of mine, blurred or blotted. It did honor to the sagacity of the Government, and I will not diminish that honor. It elevated the hopes and gratified the patriotism of the people. Over these hopes I will not bring a mildew, nor will I put that gratified patriotism to shame."

The sugged American conception of the Monroe Doctrine is no.

The rugged American conception of the Monroe Doctrine is nowhere more tersely or better expressed than by the late Champ Clark, when he referred to it as "America's most important contribution to the code of international law," and "the political life preserver of the Western World."

One of the finest tributes paid to Monroe, the statesman, and perhaps the one that more nearly reflects his true character and work, is that of Dr. Alderman, formerly president of the University

of Virginia:

"His strength lay in a spotless character, a robust common sense, and a pure and complete patriotism. By the exercise of these elemental virtues and through the enunciation in his message to Congress on December 2, 1823, of the purpose of the young Nation to preserve forever "America for Americans" and to consider any at-

tempt on the part of European nations to extend their system to any portion of this hemisphere as dangerous to our peace and safety, Monroe enrolled himself among the great never-to-be-forgotten Presidents of the United States."

Jefferson, in his forceful appraisal of his protege and understudy in law, says of Monroe:

in law, says of Monroe:

"I clearly think with you on the competence of Monroe to embrace great views of action. The decision of his character, his enterprise, firmness, industry, and unceasing vigilance would, I believe, secure, as I am sure they would merit, the public confidence and give us all the success which our means can accomplish."

So much for the man with whose name is linked forever a great principle of government and rule of conduct which has not only been accepted by the Americas but by other nations of the earth under one interpretation or another.

one interpretation or another.

Primarily the Monroe Doctrine is essentially American, and, as
Dr. Alderman has so well said, it preserves "America for Americans."

We are determined always to keep it inviolate for America and

Americans

In this laudable resolve, however, we need not place too local a meaning or application upon the doctrine. While safe and secure in its enjoyment, ourselves, is it not in the nature of Americans to hope to extend similar blessings to other peoples less fortunate who would emulate our example? Surely, if this great code of international ethics could be extended to other portions of the world, serving as a powerful deterrent of war and a vital moral force toward preserving peace and security among nations, we, as a people, should wish that everything humanly possible be done to speed that benign result.

speed that benign result.

Today history is repeating itself. President Roosevelt is reiterating the principles of the Monroe Doctrine and, observing the grave threat to the democracies of Europe and the ruthless invasion of helpless small nations, as America's constitutional spokesman in foreign affairs he is warning aggressor nations against any violation of the peace and security of the Americas. He has said, in his recent Pan American address:

"The American peace which we celebrate today has no quality of weakness in it. We are prepared to maintain it and defend it to the fullest extent of our strength, matching force to force, if any attempt is made to subvert our institutions or to impair the inde-And in his earlier statement, issued after the violation of Albania, the President went further, and said:

"The forceable and violent invasion of Albania is unquestionably an additional threat to the peace of the world.

"It would be shortsighted not to take notice of this further development. Any threat to world peace seriously concerns all nations and violates the will of all peoples in the world that their governments shall lead them not toward war but along paths of peace.

Secretary Hull has said:

"The American republics have in clear and unmistakable terms expressed their determination to assure peace on this continent. * * *

"The devotion of this hemisphere is to an organization grounded on juridical equality of all nations, on respect for the sovereignty of each, and on understanding so complete that every question can be dealt with by reason and peaceful discussion."

It will be noted that both the President and the Secretary of State have been very careful to confine their demands to the rights of the Americas in the Western Hemisphere; and that the President has made it equally clear that his role in European affairs is that of intermediary. In restating the principles of the Monroe Doctrine at this time, therefore, they have put America on record not as seeking war but as very earnestly desiring peace.

Time will not here permit a review of the often recurring instances, through more than a century since its adoption, that the Monroe Doctrine has been invoked to protect the interests of the Monroe Doctrine has been invoked to protect the interests of the United States in this hemisphere. Known as the unwritten constitution, without legislative sanction, by its sheer moral force it has gained the recognition and respect not only of governments on this continent but of those in Europe who have any regard for a code of national honor and justice. Although Monroe made many valuable contributions to his country, the outstanding contribution, not only to the United States but to the Western Hemisphere and of the world, was the Monroe Doctrine. It belongs in the same category as the Washington Farewell Address and those great charters of liberty, the Declaration of Independence and the Constitution, the spirit of whose authors is found also in the Doctrine. During all the vicissitudes of our national also in the Doctrine. During all the vicissitudes of our national existence, these great guaranties have proven beacons to guide America's ship of state away from the shoals on the sea of international and domestic complications. In every crisis affecting our foreign relations on this continent, when darkening shadows overcast the Nation, the Monroe Doctrine has broken as a great light on our pathway to peace and security. In the present international crises, let us hope that the Doctrine may again stand us in good stead.

Long live the Monroe Doctrine and long live the memory of the great Virginian, its author.

Suffrage in the South

EXTENSION OF REMARKS

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES Thursday, April 20 (legislative day of Wednesday, April 19), 1939

ARTICLE BY BARRY BINGHAM

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the RECORD an article published in the Louisville Courier-Journal on Sunday, April 9, 1939, by Barry Bingham, entitled "Do All Americans Have the Right to Vote?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Louisville Courier-Journal of April 9, 1939] Do All Americans Have the Right to Vote?—Not in Eight South-ern States, Where Poll Taxes Still Limit Suffrage—Nearly Twice as Many Kentuckians as Tennesseans Voted in the 1936 ELECTION

(By Barry Bingham)

Is the United States a free country, where every man and woman enjoys the right to vote? If you were to ask that question of any 100 American citizens of the upper income brackets, 99 would probably answer "yes." Our Constitution, as amended by succeeding generations of Americans, guarantees the right of suffrage to all, and provides that this right "shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude," or "on account of sex." of sex.

Yet there are millions of people in America today who are not enjoying the right to vote. Many of them are Negroes, but far more than a majority of them are white. They live in eight states, all in the South. The States are Alabama, Arkansas, Georgia, Mississippi, South Carolina, Tennessee, Texas, and Virginia and Carolina, Texas, Carolina, Ca

Those States have a voting population of 11,606,046 people over 21, but in 1936, a presidential year, only 2,679,473 of those people voted. In other words, less than one qualified voter in four cast a ballot in those eight Southern States, while in the other States of the Union 72 percent, or almost three out of four, of the adult population voted. What ails those Southern States? Have their people lost interest in a democratic form of government?

POLL TAX IS HEAD TAX

That is not the answer. The answer can be summed up very largely in two words, poll tax. What is a poll tax, that it can have the power to bar three people out of four from exercising their rights as citizens to cast a ballot?

The phrase poil tax means simply head tax. In early England, down through Shakespeare's day, the word "poil" was used in common parlance to mean "head," and a poil tax was therefore a tax on every head or every person, without regard to property or ability to pay. It is a direct tax that every person is expected to pay

on every head or every person, without regard to property or ability to pay. It is a direct tax that every person is expected to pay simply for the right of being alive.

The poll tax has always been hated because it falls heavily on the poor man and lightly on the rich. Its history is a long and turbulent one. Back in the days of the Roman emperors, the tax was levied on conquered peoples, and was commonly known in the days before Christ as a "badge of servility" or a "mark of slavery." It was a head tax, imposed by Caesar Augustus, that Joseph went up into Bethlehem to pay on behalf of himself and of "Mary, his espoused wife," as St. Luke relates, when the town was so filled with those who came to pay the levy that Mary had need to bear her child in a manger. Even in Biblical times the tax was often levied on oppressed nations, and always it reaped a whirlwind of resentment. The poll tax established in England was the prime cause of the peasants rebelling led by Wat Tyler the following year. Again, under Charles II, the device was used to raise money for the Again, under Charles II, the device was used to raise money for the expense of foreign wars and native mistresses, and as always the public turned angry and rebellious. In 1698 the poll tax was thrown out forever in England, but it is interesting to note that the tax was clapped on the American colonists by their English masters in the days before our own revolution.

DARTMOUTH STUDENTS HAD A REMEDY

The traditional resistance to the poll tax took an amusing modern form not many years ago at Hanover, N. H., when the townspeople decided to levy such a tax on the students at Dartmouth College.

The students, according to the Reader's Digest, "retaliated by attending the annual town meeting where, greatly outnumbering the townsfolk, they passed a law requiring that Hanover build a town hall 1 inch square and a mile high, also a sidewalk with a canopy over it to Colby Junior College, a girls' school 40 miles away." The following year they devised even more desirable projects for the startled township. "They put through a law calling for a subway to Smith, a mere 110 miles away, and an eight-lane concrete highway to Skidmore," thus assuring access to every group of girl students in that part of New England. "In desperation the town of Hanover begged the State legislature to annul these laws. The students thereafter went untaxed."

Despite its shady history the poll tax hangs on today in 34 of

students thereafter went untaxed."

Despite its shady history the poll tax hangs on today in 34 of our American States, but it is slight in amount and very sketchily collected in most of those States. Only in eight States, all in the South, is the payment of the poll tax made a requirement for voting, and there lies the core of viciousness that is capable of producing another Wat Tyler among the submerged classes of our region.

The laws requiring payment of a poll tax as a prerequisite to voting stem from the 1890's and the early 1900's. They were all established in States which had a considerable Negro population, and it has been generally assumed that the desire of the whites and it has been generally assumed that the desire of the whites to protect themselves from political dominance by Negroes gave rise to the whole movement. By a clever device, poll-tax revenues were frequently dedicated to school funds, thereby giving the legislation a double-barreled appeal. A certain gentleman in Tallapoosa County displayed commendable frankness in advocating the poll tax in Alabama in 1907. "What we would like to do in this country," he averred, "more than any two other things, would be to disfranchise the darkies and to educate white children."

KENTUCKY STEERED CLEAR

That was a popular rallying cry, and the poll tax as a requisite to voting fastened itself on Alabama and nearly every other Southto voting fastened itself on Alabama and nearly every other Southern State. (I am glad to say that Kentucky steered clear of this issue.) It is interesting to note, however, that this apparent effort to protect white supremacy against the Negro who had the audacity to vote did not occur until three decades after the War between the States, and long after the worst days of Reconstruction. The nineties, on the other hand, were marked by the rise of the Populist movement, that curiously American form of radicalism that once loomed rather large on our political horizon, In 1892 it will be remembered the Populist candidate for Presicalism that once loomed rather large on our political horizon. In 1892, it will be remembered, the Populist candidate for President carried five States and gave the Democratic Party a run for its life in Georgia and Alabama. William Jennings Bryan also emerged in that era as a leader of the underprivileged classes. Isn't it possible that certain members of the entrenched ruling class in the South became apprehensive of the growth of a people's party in the South which reliefs units the interests of the present party in the South, which might unite the interests of the poor whites and the Negroes? Wasn't it a fear of "radicalism" among the sharecroppers and lower class whites that may have been at least partly responsible for poll-tax legislation at the turn of the century, riding into Troy in the wooden horse of protection for white supremacy?

At any rate, the results of poll-tax suffrage in Southern States have been no more disastrous to Negroes than to whites on the lower economic levels. It is estimated that as many as 64 percent lower economic levels. It is estimated that as many as 64 percent of the white adult voters have been disfranchised in the poll-tax States, and in every one of those States more whites than Negroes are barred from the ballot box by the tax. Let me give you the figures for the percentage of adult citizens who voted in each of the poll-tax-suffrage States in 1936, the year of a Presidential election: Alabama, 20.4 percent; Arkansas, 18.5; Florida, 37.8; Georgia, 19.6; Mississippi, 16.2; South Carolina, 14.1; Tennessee, 33.5; Texas, 26.2; and Virginia, 25.7. That works out to an average of 24.1, the worst voting record shown anywhere in the world under even a pretense of a democratic system of suffrage. Even in Mexico, twice as many people cast their ballots as the 24 percent who vote in our poll-tax-ridden group of States.

ONE DOLLAR MEANS SACRIFICE

How does this disfranchisement of voters work out so strikingly? The amount of poll tax runs from \$1 to \$3 annually, which may not seem so terribly high, but can anybody expect a Southern tenant farmer to spend even a dollar for a ballot when he can't eat that ballot or wear that ballot or patch his dilapidated cabin with it? Those are people, remember, who have an average yearly income per person of only \$73. Even one dollar out of that sum means a mighty big sacrifice for anything as unsubstantial as suffrage. suffrage.

But that isn't half the story. Several of the States make payment of the poll tax retroactive, so that a voter can't cast his ballot unless he has paid up his tax for several years back. In Alabama, that retroactive clause is so stringent that it is possible Alabama, that retroactive clause is so stringent that it is possible for a man to be required to pay \$36 before he can cast his vote. And in addition, several States require the payment of the tax months in advance of election day, and only the most wary citizen is likely to remember to pay up in time to save himself from disfranchisement. That is only one of a welter of restrictions that serve the sole purpose of confusing and confounding the would-be voter, to such an extent that in Arkansas and Virginia, for instance, it is not unusual for a citizen to require the services of an attorney before he can assure himself of a vote.

TOTAL VOTE DECLINED

We have seen what the result has been in the voting record of these Southern States. From 1896 to 1916, the total vote of the poll-tax suffrage States actually declined 18 percent, though the population of those States increased 50 percent, Virginia, the mother of Presidents and the cradle of our democracy, polled only 26 percent of its citizens of voting age in 1936, as against a remarkable percentage of 92.1 of adult citizens voting the same year in West Virginia, where no poll-tax barrier exists. Are the people of Virginia less capable of governing themselves than the people of West Virginia? Here in North Carolina the poll tax as a prerequisite to voting was repealed in 1920, and the popular vote immediately soared. From 1916 to 1932, the vote in this State actually increased 142 percent. North Carolina sent 839,000 people to the polls in 1936 against a mere 115,000 for South Carolina, which has poll-tax suffrage. Kentucky and Tennessee are almost exactly equal in population, but Kentucky cast 911,000 votes in 1936 against poll-taxed Tennessee's 473,000. Have Americans in some States a better right to vote than Americans in other States? We have seen what the result has been in the voting record of other States?

SOUTH'S VOICE WOULD BE WHISPER

Another serious indictment of poll-tax suffrage is the medium it provides for corruption of elections. Political machines for years have made a regular practice of buying blocks of poll-tax receipts for their henchmen and herding them in to vote the will of the political boss. The system provides an excellent method for machines to control State and local politics. Thomas Jefferson plainly perceived this type of danger from a limited franchise, and reperceived this type of danger from a limited franchise, and remarked that "the Government of Great Britain has been corrupted because but 1 man in 10 has a right to vote for members of Parliament. The sellers of government, therefore, get nine-tenths of their price clear. It has been thought that corruption is restrained by confining the right of suffrage to a few of the wealthier of the people; but it would be more effectually restrained by an extension of that right to such numbers as would bid defiance to the means of corruption."

From the standpoint of purely practical politics, the South is

From the standpoint of purely practical politics, the South is running a strong risk in limiting its vote by the poll tax. At the 1936 Democratic convention the suggestion was put forward that 1936 Democratic convention the suggestion was put forward that the number of delegates from each State at future national conventions should be based solely on the size of the Democratic vote cast in each State at the previous election. If that system is adopted for the 1940 convention, and it would be difficult to make a rational argument against its principle, then the Southern States with poll-tax suffrage would suddenly find themselves reduced to the merest pawns on the party chessboard. The total vote of the poll-tax suffrage States for Roosevelt in 1936 was only 2,457,000, or less than 10 percent of the total Roosevelt vote. New York State alone cast 3 293 2000 Roosevelt votes or pearly a million more than

less than 10 percent of the total Roosevelt vote. New York State alone cast 3,293,000 Roosevelt votes, or nearly a million more than the total of the eight States in the poll-tax suffrage group. On the basis of proportional representation the South's voice would become little more than a whisper in the selection of a Democratic candidate for President, though the South is almost solidly Democratic.

In recent years a fight has been made by some of the Southern States to shake off the yoke of poll-tax suffrage. Following the lead of North Carolina, Louisiana discarded the tax in 1934 and Florida in 1936. Arkansas brought the issue to a vote in 1938, but the heavy artillery of entrenched interests was trained on the effort at repeal. Every daily newspaper in the State, with one exception, fought repeal. The old bugaboo of Negro dominance was raised. School teachers were enlisted in the battle against repeal by the threat of reduced revenues for education. The repeal measure lost by a vote of 2 to 1, but, of course, the Arkansas citizens who would have derived direct benefit from repeal had no opportunity to vote. The 83,000 people who killed the repeal measure represented only about 4 percent of the population of Arkansas, but they were enough to maintain the political dominance of a small, privileged group.

LOSING FIGHT IN TENNESSEE

Still more recently the fight has flared up in Tennessee and Alabama. In Tennessee, the League of Women Voters and other interested citizens succeeded in pledging all candidates in the Governor's race last year to seek repeal of the poll tax as a requisite to voting. The man elected, Governor Cooper, reiterated his pledge after taking office, but when a repeal measure was introduced in the Tennessee Legislature it died in committee, without the slight-est attempt at a rescue by the Governor. The Crump machine, which operates smoothly in Memphis and dominates State politics, finds poll-tax suffrage a handy device which it does not care to relinquish.

relinquish.

In Alabama an attempt was made to alter the poll-tax law so that a voter would need to pay only 3 years' tax in arrears in order to vote, in place of the present maximum of 24 years. The 24 years won. In Virginia an effort is being made to force the collection of the poll tax on every citizen, an oblique approach that may stir a rebellion and cause repeal of the tax.

What is the basis of the effective opposition to poll-tax repeal? Not all the opposition shows itself on the surface, but the two arguments most frequently employed are the danger of Negro political dominance and the danger of loss of revenue to the schools. The white supremacy argument was hammered home in front-page editorials in Arkansas papers during the repeal fight, but statistics from States that have abandoned poll-tax suffrage

prove conclusively that Negro voting does not increase disproportionately after repeal.

The Democratic Party, the traditional "white party" in the South, actually made gains in North Carolina after repeal, cutting down the Republican vote from 42.7 percent in 1920 to 33.3 percent in 1936. There are counties in North Carolina where Negroes predominate, yet there has been no suggestion of Negro political control in those counties since repeal. With only one Southern State now showing as much as 50 percent Negro population, and that proportion steadily declining, it is not flattering to southern whites to suggest that Negroes will capture political dominance if they are allowed to vote.

TAX NOT IMPORTANT SOURCE OF REVENUE

TAX NOT IMPORTANT SOURCE OF REVENUE

The argument that revenues will be dangerously cut by abolition of poll-tax suffrage is almost equally hollow. In the first place, such States as North Carolina have continued to draw revenue from poll taxes without opposition after severing the connection between payment of the tax and the right to vote, and that course is open to other States. In the second place, poll-tax revenues provide only a fitful income which nowhere plays an important part in the State's financial structure. Alabama collects as little as 0.67 percent of its revenue from this source, while Virginia hit a high level when it secured 1.86 percent of its revenues from the poll tax in 1937. It would seem more important to grant all citizens the right to vote than to insist on the preservation of a minor tax source for which a substitute could be found.

The real opposition to the repeal of poll-tax suffrage, however.

could be found.

The real opposition to the repeal of poll-tax suffrage, however, lies beneath the surface of most printed argument. It is lodged in the conviction of a small group of southerners on the upper rungs of the economic ladder that they are more entitled to rule than the public at large. These people often have the saying of Thomas Jefferson and the tenets of democracy hot in their mouths, yet they privately fear the dangerous experiment of a government that is really of, by, and for the people. They mistrust the motives of the man in the street, the man looking for a job, the man working another man's land. They cannot persuade themselves that these men are created equal to themselves. Down in their hearts they treasure a belief in Alexander selves. Down in their hearts they treasure a belief in Alexander Hamilton's extraordinary dictum that "the public is a great

FEW OUTSTANDING MEN CHOSEN

Now an argument can certainly be made for an oligarchy or a plutocracy, a government controlled exclusively by a small class who possess property and position. Such a limited group might theoretically be expected to select the most useful public servants and place only the highest type of citizen in office. But the history of the South in the past 40 years has given cold comfort to such a theory. The States with poll-tax suffrage have elected precious few men of outstanding ability to public office, and they have placed some of the most extreme demagogues the country has known in the seats of the mighty. It was Louisiana before poll-tax repeal that perpetrated Huey Long on the United States Senate; Mississippi's poll-tax suffrage produced "The man" Bilbo, and Alabama's Tom Heflin came up by the same route.

The ferment of social unrest, stimulated by a harsh restriction on suffrage, has pushed the demagogues up through the thin crust of the voting public. The fact that South Carolina, for instance, has sent as little as 6.1 percent of its population to the polls to yote has not assured the election of men of the highest ideals of public service. The politician in the poll-tax suffrage States makes Now an argument can certainly be made for an oligarchy or a

public service. The politician in the poll-tax suffrage States makes on the average just as cheap a campaign and plays just as shamelessly on ignorance and prejudice as the office-seeker who must woo the entire citizenry of a State at voting time.

"RED GALLUS" BOYS USEFUL SERVANTS

In addition, the system of poll-tax suffrage is a direct though un-

"RED GALLUS" BOYS USEFUL SERVANTS

In addition, the system of poll-tax suffrage is a direct though unavowed flouting of the democratic process. It is too easy for a man who owes his election to only 6 percent of the people of his State to represent the interests of that 6 percent to the exclusion of the other 94 percent. Where the voting class is small it is naturally dominated by vested interests, whose greatest desire is to maintain the status quo and assure financial profits.

Some of the cleverest demagogues the South has produced have succeeded in serving as agents of entrenched wealth while posing as the plainest and homeliest men of the people. Among the most useful servants that selfish interests in the South have enjoyed have been "red gallus" boys from the poll-tax States. It is easy to understand why the States with poll-tax suffrage have lagged behind all others in social legislation. The people who want laws to protect labor, the tenant farmer, and the bottom income group from exploitation are seldom the people who can pay a poll tax.

The South produced great leaders in the early days of our history, and that selfsame stock is still in our Southern States. Nobody would argue that poll-tax suffrage has been the only factor in the degeneration of southern politics, but it has played an important part. It was southerners who first dreamed the great dream of a democracy on these shores. Shall it be southerners who will deny that dream? Would we turn our backs on the philosophy of Thomas Jefferson, who said, "Every government degenerates when trusted to the rulers of the people alone. The people themselves, therefore, are its only safe depositories. The influence over government must be shared by all the people. If every individual which composes their mass participates of the ultimate authority, the government will be safe."

Are we southerners prepared to support a democracy on that basis? If not, let us at least be honest and admit that we have

Are we southerners prepared to support a democracy on that basis? If not, let us at least be honest and admit that we have abandoned our faith in Jeffersonian democracy.

Internal Dangers to America

EXTENSION OF REMARKS

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES Thursday, April 20, 1939

ARTICLE FROM NEWPORT NEWS (VA.) DAILY PRESS OF APRIL 16, 1939

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the Congres-SIONAL RECORD an article from the columns of the Daily Press, Newport News, Va., issue of Sunday, April 16, 1939—front page—entitled "Warns of Danger to Nation From Internal Enemies and Foreign 'isms' in America," which article reports a talk which I delivered at Hampton, Va., in the county courtroom there on Saturday, April 15.

There being no objection, the article was ordered to be

printed in the RECORD, as follows:

WARNS OF DANGER TO NATION FROM INTERNAL ENEMIES AND FOREIGN "ISMS" IN AMERICA—SENATOR REYNOLDS SPEAKING BEFORE VINDI-CATORS SAYS PROPAGANDA RAMPANT FOR ANOTHER WAR

Senator ROBERT R. REYNOLDS (Democrat, North Carolina) bitterly assailed the "isms" which he said today are earnestly at work in America to destroy democracy and "our Government" yesterday afternoon in an address in the Hampton courthouse as he delivered the charter of Elizabeth City County Unit, No. 1, of the American Vindicators Association, an organization which he founded and heads as president.

founded and heads as president.

Scathingly he denounced organizations headed, he said, by foreign elements that would entangle America in war, and called for deportation of those trying to destroy the American fundamentals of government. "The danger today," he said, "is from those enemies boring from within like a lot of termites. Those outside can be intercepted and destroyed but internal enemies are hard to find for they work quietly and secretly," the member of the Senate Foreign Relations Committee and the Senate Military Affairs Committee, warned.

hard to find for they work quietly and secretly," the member of the Senate Foreign Relations Committee and the Senate Military Affairs Committee, warned.

Speaking almost 2 hours, Senator Reynolds brought his address to a close with the presentation of the charter to the county group, the first to be authorized. He said Hampton was selected for the honor because it is the oldest continuous English-speaking settlement in America and since it was destined to play such a large role in American independence, it was only fitting that an organization founded purely to preserve "America for Americans" should be "rooted" here.

Approximately 50 men, identified as charter members of the local unit, heard the Senator speak. Leaders in the unit are William A. Curtis, president; William G. Camp, first vice president, and Fred S. Beighton, secretary and treasurer, all of Kecoughtan Veterans' Administration facility. Most of those in the audience were also identified as facility members.

Senator Reynolds, who said the organization was only 2 months old, had swamped his greatest expectations to date. He mentioned that the membership had reached 60,000, from coast to coast, and that about 200 charters were sought. The next to be presented, he said, will be at Boston, where he expected thousands will attend the ceremony.

OBJECTIVES OUTLINED

He listed as objectives of the Vindicators: Keep America out of war, register and fingerprint all aliens, stop all immigration for the next 10 years, banish all foreign "isms," and deport all alien criminals and undesirables. Each brought forth a detailed comment from the genial lawmaker as he loosed his oratory against war and the totalitarian states.

He displayed a copy of the bulletin which is published by the Vindicators, which he said, is not in competition with newspapers but only tends to serve to show the growth of the organization and reveal the "great imminent danger faced by the American democracy."

Scheduled to speak at 2 o'clock Senator Revnous arrived show

Scheduled to speak at 2 o'clock, Senator Reynolds arrived about 3 o'clock. In a historical résumé he cited the significance of the many colonial shrines which he passed on the journey here. He

many colonial similes which he passed of the journey here. He said he came as a friend, being from a sister State, and a great booster of the Old Dominion.

But I have been able to prevent the throwing open of the country to the scum and refugees."

He declared it was necessary for him to filibuster frequently to

He declared it was necessary for him to filibuster frequently to He declared it was necessary for him to fillbuster frequently to prevent such moves. "I was born and am a poor citizen of the North Carolina mountains and sometimes they refer to me as an 'uncouth mountaineer,' but I don't and won't pretend," he added. "My State, North Carolina, has the smallest percentage of aliens, the total being only one-half of 1 percent."

He said the Vindicators welcomes into membership all native or naturalized citizens, white and black, men and women, rich or poor, and is not denominational.

"I voted for hillions for national defense, doing so to appease the

"I voted for billions for national defense, doing so to appease the American people who wanted to be protected. America is not in danger from an enemy from without. We know none will come 3,000 miles to attack. The danger today is from the enemies boring 3,000 miles to attack. The dividing like a lot of termites.

within like a lot of termites.

"Why did we go to war in 1917? Under arms were 4,400,000 men, and the war cost us \$65,000,000,000, a figure likely to mount to \$100,000,000,000, as wise Calvin Coolidge said when he was President. I'll tell you what they said we went to war for: To save Christianity, to spare democracy, and to stop all wars. When I mention that in the Senate, I know what I'm talking about. If you don't know, you better not shoot your mouth off. Did we save Christianity? Lawless nations since then have burned churches, murdered ministers—Japan has murdered 2,000,000 since 1931; Spain, 1,000,000; and Italy, 600,000 in Ethiopia."

CALLS STALIN SLAYER

He pictured Stalin as the world's outstanding murderer and accredited to him the starving to death of three or four millions in the Ukraine in 1933 and 1934.

He said America even has to pay for the ground where 35,000 American men lay dead as the result of the war to stop all wars.

"What good did you get out of it all? That is our first objective—to stay out of war

"What good did you get out of it all? That is our first objective—to stay out of war.

"Never will I vote to send a man to war to save the so-called Christianity or democracy. Propaganda is rampant to get us into another war; and if you don't believe it, all you have to do is to read the daily papers and periodicals. If you had children, would you want to send them to war for other countries—and I don't care whether it is Great Britain, France, or who it is? I'm not procare whether it is Great Britain, France, or who it is? I'm not proEngland, pro-France, or pro-anything, except pro-American. When
they talked about leaving it to referendum whether we go to war
or not, I told them the simplest way was to leave it to the mothers.

"Yet my friend, Senator Bob Wagner, who has an office opposite
mine, is seeking to permit 20,000 German children into this country. They are 14 years and under, and it is true they are orphans,
but orphans here should be considered first."

He pictured the high costs to taxpayers of keeping aliens in jails
and penitentiaries. "It would be cheaper in the long run to deport
them. Even if it is necessary to tie 100 seaworthy barges to boats,
they should be sent back to their lands."

Senator Reynolds launched into a denunciation of the Workers'

they should be sent back to their lands."

Senator Reynolds launched into a denunciation of the Workers' Alliance and the German-American Bund, citing recently held meetings. "Why, in Madison Square Garden 27,000 people paid \$1 to attend the bund meeting, but give a patriotic meeting and charge 10 cents and you wouldn't have enough for a steak dinner."

Senator Reynolds introduced Wesley E. McDonald, his secretary, who, he said, has been selected as national secretary of the Vindicators. He promised after the adjournment of Congress to lead a more strenuous fight for the organization and urged regular meetings of the county unit. He suggested he might be able to attend a huge mass meeting here later.

In introducing the speaker, Curtis read letters from commandants of the Norfolk Navy Yard, the naval training station, and Fort Monroe, who said they were unable to attend because of the fleet. He said the meeting was being held with the endorsement of Mayor James V. Bickford, of Hampton.

Power Over Money

EXTENSION OF REMARKS

HON. JOHN G. TOWNSEND, JR. OF DELAWARE

IN THE SENATE OF THE UNITED STATES Thursday, April 20 (legislative day of Wednesday, April 19),

1939

EDITORIAL FROM THE NEW YORK TIMES OF APRIL 20, 1939

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial which ap-

peared in the New York Times this morning under the headline "Power Over Money."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> [From the New York Times of April 20, 1939] POWER OVER MONEY

The report of the Republican House committee on the money question is on the whole an excellent example of what an intelligent opposition should do. It is no merely partisan document, but, with minor exceptions, a series of sound and well-considered recommendations that clearly ought to be adopted. The Republi-

recommendations that clearly ought to be adopted. The Republican report recommends:

(1) That the power of the President to determine the gold content of the dollar, due to expire on June 30, should not be extended. In spite of the fact that a persuasive case may be made for continuing this power, its expiration seems desirable. As long as the President has this power there will be intermittent rumors and guesses regarding what use he will make of it. If we allow the President's discretionary power to lapse we will remove from the present economic situation a major source of continued uncertainty. Even if there is substance in the argument that the value of the dollar may again have to be changed, for whatever reason. tainty. Even if there is substance in the argument that the value of the dollar may again have to be changed, for whatever reason, it may still be pointed out that the power to change it should not rest with one man, but with Congress. If this is not properly a function that Congress should retain for itself, it would be difficult

(2) That a joint congressional committee be named to study the

(2) That a joint congressional committee be named to study the whole monetary question and recommend revision. Such a study could surely do no harm.
(3) That the Silver Purchase Act of 1934 should be repealed. This repeal is eminently desirable. The act, forcing us to buy from foreign countries at artificial prices of our own making huge quantities of silver for which we have no need, is an expensive and fantastic piece of legislation. As the Republican report points out, if we wish merely to subsidize the domestic silver industry, we can do it directly without also subsidizing foreign producers and speculators.

we can do it directly without also subsidizing foreign producers and speculators.

(4) That the section of the law which gives the President the power to issue \$3,000,000,000 in greenbacks should be repealed. There is no good reason whatever for continuing this power. If the President does not intend to make use of it, as is sometimes said, then there is no need for him to have it. If he does intend to make use of the power, then the case for taking it away from him is overwhelming.

(5) The Republican report recommends the continuance of the stabilization fund. This is highly desirable. It suggests that certain limitations be put upon the power of the Secretary of the Treasury in administering the fund. The particular limitations it suggests, however—that he be prohibited from using it "in any manner that might involve us in international hostilities" or "in such a way as to make exchange available for carrying on armed hostilities"—would be unwise. Such prohibitions, even if they were free from other objections, would be ambiguous and subject to too wide a range of possible interpretation. The best safeguard against any abuse of the uses of the fund is publicity. This publicity need not extend to current operations, but there seems no good reason why we could not have at least monthly reports on the position of the fund, even if these did not appear until 2 or 3 months after the period to which they referred.

No realist expects Congress to adopt all these Republican recom-(5) The Republican report recommends the continuance of the

No realist expects Congress to adopt all these Republican recommendations. But some of them ought to have considerable support from the Democratic side. Wholly apart from purely monetary considerations, it would be a highly reassuring sign in a period in which legislatures everywhere have been losing their powers to the executive branch, for our own chief legislature to take back some of the "emergency" powers it has delegated.

President Roosevelt's Message to the Young Democratic Clubs of America

EXTENSION OF REMARKS

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES Thursday, April 20 (legislative day of Wednesday, April 19), 1939

LETTER FROM HON. FRANKLIN D. ROOSEVELT, APRIL 19, 1939

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the message addressed by the President of the United States to the Young Democratic Clubs of America, at a banquet held last evening at the Mayflower Hotel, Washington, D. C.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

There being no objection, the message was ordered to be printed in the Record, as follows:

Young Democratic Cluus of America,

May Toung Friends: It is to my great regret that I cannot be with you in this celebration in memory of the first President who demonstrated to the world that democracy was workable. On you now depends the future of the Democratic Party, More important even than that, on you depends the future of our country.

Party organization is the vehicle by which the mobilized sentiment of the United States gets anywhere. If the chauffeurs of the organization are wise in pleking the course, the going is good and the destination aimed at is reached. If, on the other hand, they are wittens, the organization will find itself on a rocky road and the probabilities of flat tires and other break-downs are so great that the will of the people gets nowhere.

This means distress to the party, of course, and likewise distress to the Nation. For in the present political and economic situation the alternative in the event of a failure for our party to keep straight ahead, is for the country to find itself traveling in the direction exactly opposite to that it has in mind.

Incidentally, the progress of our political car is not helped by the clamor of the back-seat drivers who point out the apparent smoothness of the detours of compromise and subterfuge, and complain of the speed of our going.

The Democratic Party of itself camot elect a President. The Republican Party is in the same fix. This is fortunate for all of us, for it means that no party can continue in power unless its policies are such as to add to its basic strength the ten or more millions of votes that are cast for ideas and ideals, rather than because of the emblem at the top of the ticket.

In the campaign we are now approaching there is just one agency potent enough to defeat the Democratic Party, and that is the Democratic Party itself. It can commit suicide by abandoment of the policies that brought it to power. There is no use fooling ours

Suppose, for a change, and you know I am frequently accused of being devoted to change, we learn our lesson this time without being sent to the corner to meditate?

This country of ours is democratic with a small "d." It is never, and never will be democratic with a big "D," except when the two words mean the same thing

with the two words mean the same thing.

With the highest hopes and expectations that the Young Democrats will continue with their youthful enthusiasm, and yet retain their old faith as enunciated by Thomas Jefferson and Andrew Jackson, Very sincerely yours,

FRANKLIN D. ROOSEVELT.

Has Gold a Future?

EXTENSION OF REMARKS

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 20, 1939

ARTICLE BY FRANK D. GRAHAM AND CHARLES R. WHITTLESEY

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article "Has Gold a Future?" by Frank D. Graham, professor of economics in Princeton University, and Charles R. Whittlesey, associate professor of economics in Princeton University, which was published in the current issue of Foreign Affairs:

HAS GOLD A FUTURE?

(By Frank D. Graham and Charles R. Whittlesey)

(By Frank D. Graham and Charles R. Whittlesey)

In 1923 certain British economists, in characteristic half-serious half-humorous vein, proposed that, in the process of paying reparations and interallied debts, Europe should first send her monetary gold to the United States and then turn her back on the gold standard once and for all, leaving this country, quite literally, holding the bag. In the relatively tranquil period that followed, this suggestion, even as an economist's whimsy, fell into the limbo of forgotten things. Today, however, it is becoming altogether too real. The United States is, in consequence, confronted with a gold problem which almost defies solution.

In 1923 the total visible monetary gold stocks of the world.

gold problem which almost defies solution.

In 1923 the total visible monetary gold stocks of the world amounted to eight and a half billion dollars, of which we possessed something less than four billion, or 45 percent. At the present time American holdings are approaching \$15,000,000,000—approximately 60 percent of the world's visible stock of monetary gold. It is true that the present dollars are lighter in gold content than the dollars of 15 years ago; but they represent more, not less, of goods, services, and days' labor. In the past 15 years we have sunk in increments to our gold supply a much greater value of goods, services, and whatever else nations give up in acquiring gold, than the equivalent of the stocks of monetary gold of all foreign countries a decade and a half ago.

We should certainly have been better off if the British econo-

We should certainly have been better off if the British economists' little joke had been realized before it grew stale and then grim. If, in 1923, our debtors on war account had sent us their gold supplies in part payment of their debt, we should, in effect, have obtained the gold for nothing, rather than at the heavy cost at which it has in fact been acquired.

cost at which it has in fact been acquired.

In 1923, of course, we were all concerned about the restoration of the international gold standard. This would probably have been precluded if the United States had then acquired the great bulk of the world's monetary stocks of gold. However, it is open to question whether, even in the sphere of international trade and finance, the restoration did more good than harm. Furthermore, the second break-down of the standard, with its accompanying phenomena, has not only imposed upon us the burden of buying gold already in existence but has compounded this burden by adding the cost of immense supplies which were still in the mines in 1923 and would doubtless in large part have remained there if the British suggestion had been followed. Such a transfer of ownership would not, perhaps, have given the best possible turn ownership would not, perhaps, have given the best possible turn to events but it would certainly have been greatly preferable to what has in fact occurred.

what has in fact occurred.

The prospect of reestablishing once again an international gold standard is steadilly receding and, for the first time in history, the world demand for gold is showing distinct signs of satiety. To the United States at least, gold has now become a nuisance of the first magnitude. We are buying, at enormous cost, gold which serves no useful purpose and which we do not want; the stock already in our monetary system provides a constant inducement to serious inflation so that we are paying heavily for what is a positive bane; so long as present policies continue the evil is certain to grow worse instead of better; and we do nothing about it because we are afraid to face the facts.

Perhaps the most remarkable feature of the whole situation is

It because we are afraid to face the facts.

Perhaps the most remarkable feature of the whole situation is that our gold policy has met with so little condemnation. Critics of the Government's silver policy have very justly, and vociferously, assailed the practice of accumulating large stocks of silver, but they have remained silent concerning the similar but far greater extravagance of adding to our redundant stocks of gold at a cost which makes the outlays on silver pale into insignificance. There is scarcely an argument against the silver purchases which does not apply with greater force to our acquisition of gold.

There is practically speaking no chance whatever that the exist-

There is, practically speaking, no chance whatever that the exist-There is, practically speaking, no chance whatever that the existing relationship between the price of gold and the relatively low money cost of producing it can be permanently maintained. In the long run we have the choice between (1) the maintenance of the present price of gold along with marked inflation, and (2) a reduction in the dollar price paid to producers for new supplies of gold. The former would lower the real cost to the buyer of a given dollar value of the metal and, by increasing its dollar cost of production, curtail output gradually; the latter would lower the real cost to the buyer, and curtail output immediately. The longer we refrain from choosing the second alternative the heavier

¹Nothing, i. e., in excess of what we had already transferred to our debtors during the war. On the principal of our war loans we have not been able to make any net collections and, presumably, never will. Even such interest as was paid on these debts was more or less directly dependent upon the receipt, by our debtors, of a much larger sum in German reparations which, in a similar more or less direct fashion, we may be held to have financed by loans to private German borrowers. Most of the German "securities" have, like the war debts, been repudiated in whole or in part, so that, instead of getting paid by our debtors we actually contrived to secure large payments to them at our expense and, on top of all this, paid them anew for the gold we might have had in lieu of debts that have now gone into the discard.

are the entirely futile outlays with which we saddle ourselves and the greater the danger of serious economic and social disturbances.

At the beginning of 1929 the world's stocks of monetary gold amounted to about 18,000,000,000 present dollars. At the end of 1938 the total value was not far short of \$27,000,000,000 (allowance being made for a certain amount of monetary gold in occidental private hoards). In other words, in the past 10 years the world has added to its monetary gold stocks half as much metal as had been there accumulated in all preceding time. In the same 10 years the dollar value of gold stocks held by governments and central banks rose to nearly 250 percent of the 1929 figure. The increase was made up of an increment of approximately 80 percent increase was made up of an increment of approximately 80 percent in additions to the physical stock of gold while 69 percent came from the reduction in the gold content of the dollar. World production of gold, which is steadily increasing, is now running close to \$1,300,000,000 annually.

Changes in the distribution of the world's stocks of gold are no less striking than changes in the total. The United States has in recent years been absorbing a good deal more than the total increase in the world's supply. Major shifts in the relative holdings of a few of the more important countries are indicated below:

Gold reserves of the central banks and governments of selected countries

(In millions of present gold dollars)

	1913	1929	1933	1938 (Oct. 31)
United States. Great Britian France. Italy. Germany.	2, 184	6, 603	6, 793	14, 065
	279	1, 202	1, 571	1 2, 690
	1, 150	2, 765	5, 117	2, 428
	452	462	630	210
	472	921	155	29

¹Bank of England holdings only. Early in 1939 the Bank of England transferred to the British Exchange Equalization Account \$1,650,000,000 of gold so that the Bank of England's holdings are now presumably not much above \$1,000,000,000. The figures on British gold reserves ought, of course, to include not only the stocks of the Bank of England but, after 1931, those of the Equalization Account as well. The latter are not currently available. Total British gold holdings when this table was prepared are, however, probably not more than \$2,800,000,000.

A map of the world indicating the net international movements of gold from 1933 to the present time would show heavy lines running from the principal gold-producing countries, especially South Africa, to the great gold market at London, there being joined by other lines from the Orient and western Europe representing gold released from public and private hoards, and all moving on in heavy volume to the United States. There would be lighter lines running direct to the United States from other counlighter lines running direct to the United States from other countries, especially Japan. At the end of 1933 our gold stocks amounted to 6,793,000,000 present dollars. At the end of 1937 they totalled \$12,760,000,000 and 1 year later had risen to nearly \$15,000,000,000. Estimates indicate a gold production, in the 5 years 1934-38, of about \$5,800,000,000. Gold released from oriental hoards was about \$650,000,000, while an undetermined but probably smaller sum came out of private hoards in the Occident. This is to say that, during the 5 years in question, this country absorbed not only all new production of gold, plus the amounts released by the Orient and private hoarders in western countries, but also a substantial part of the former monetary reserves of other nations.

As has been intimated, the country from which gold moves to

stantial part of the former monetary reserves of other nations.

As has been intimated, the country from which gold moves to the United States may be simply an intermediary. Since London is the central market for gold it is most important to note the movement and countermovement between Great Britain and the United States. Since 1934 the great influx of gold to this country from Great Britain has, to all intents and purposes, been attended by no countermovement whatsoever. Recurring apprehension as to Europe's political future has set in westward motion tidal waves of gold which, though they may subside temporarily, are soon repeated. In the intervals of comparative calm the gold remains in this In the intervals of comparative calm the gold remains in this country and the result is a persistent accretion to our supplies.

Since we have been purchasing considerably more than the cur-

Since we have been purchasing considerably more than the current world output the cost of buying gold may not remain indefinitely as high as it has been in recent years. As public and private stocks of gold find their way to a greater extent to this country, new purchases will gradually be limited to the volume of gold currently produced. At the existing level of prices, with its prodigious profits to gold producers, this is not likely to decline below the present output for many years so that a continuing cost below the present output for many years, so that a continuing cost to this country of upward of a billion and a half dollars a year is quite possible. Moreover, we must not forget that there still remain outside this country about twelve billion dollars of monetary gold, and a large but not determinate supply of nonmonetary tary gold, and a large but not determinate supply of nonmonetary gold, which may find its way to our shores. It might happen that an improvement of conditions abroad, or some international agreement, would lead to the net absorption of a certain amount of gold by foreign countries. In this case a considerable reduction in the new burdens placed on us, and conceivably even an alleviation of the existing burden through an outflow of the metal, might occur. But to admit that such a development is possible is far from saying that it is probable. It assumes that other countries will be economically blessed to a greater extent than seems likely and that they will be dominated more largely by tradition than by reason. reason.

TIT

A variety of explanations for the unprecedented gold movements of the past 5 years has been offered. It is frequently asserted, for example, that gold has come to the United States as a result of the devaluation of the dollar. It is to be noted, however, that all other currencies have been devalued at least once since the World War, and, since 1931, the price of gold has been raised in terms of most other currencies by as much as, or more than, it has been raised in terms of dollars. There is nothing, therefore, in the dollar devaluation, as such, which would cause a movement of gold to this rather than to other countries.

gold to this rather than to other countries.

Nor are gold flows to be explained on the more sophisticated ground of differences in relative national price levels. If, in comparison with other countries, we were offering more currency for gold than for goods we would tend to get the gold while the other countries got the goods. Such an offer would take the form of a lower commodity price level in the United States than in other countries. For most of the period since the devaluation of the dollar, however, the price level in terms of gold has not been especially low in the United States as compared with that in many other countries. It has, in fact, on a 1929 or any other base, been nearer the top than the bottom of the scale of comparative national price structures. It follows that the price situation arising from the dollar devaluation cannot, any more than the devaluation itself, be accepted as the reason for the flow of gold to this country. this country

This conclusion is confirmed by an analysis of our foreign trad-This conclusion is confirmed by an analysis of our foreign trading situation. From the date of devaluation of the dollar in 1933 until the business slump in this country in 1937—for which international prices, in all probability, were in no way responsible—the ratio of our merchandise imports to our merchandise exports was steadily rising. In addition to confirming the conclusion that the price level in this country has not been unduly low, as compared with price levels abroad, this indicates that, up to a year ago at any rate, the inflow of gold was not in fact caused by excessive exports of American goods.

to a year ago at any rate, the inflow of gold was not in fact caused by excessive exports of American goods.

In the same period, our net annual debit on service items has been rising and our net annual credit on interest and dividends falling. Both phenomena would tend to drive gold abroad rather than attract it. They reinforce the influence of the rising ratio of merchandise imports to exports. The argument that the devaluation of the dollar has been an important factor in diverting gold to the United States is therefore quite without foundation.

TV

We may turn now to what appears to be the true explanation of the heavy flow of gold.

Since the war it has been customary to regard the United States as a great lending Nation. It will be a shock to many to discover the degree to which we have been reversing our position in this respect. Instead of being a lender Nation on current interdiscover the degree to which we have been reversing our position in this respect. Instead of being a lender Nation on current international account, as had been the situation from 1914 on, we have, in recent years, been a net borrower of billions: \$360,000,000 in 1934; \$1,536,000,000 in 1935; \$1,169,000,000 in 1936; \$1,187,000,000 in 1937; almost certainly not less, and perhaps much more, than a billion in 1938. All of this indebtedness has, in a very real if not literal sense, been incurred in the purchase of gold on which we laid out, net, \$1,134,000,000 in 1934; \$1,739,000,000 in 1935; \$1,117,000,000 in 1936; \$1,586,000,000 in 1937; and \$1,974,000,000 in 1938.

There is, in short, a close connection between our imports of There is, in short, a close connection between our imports of gold and the recent increase in our borrowing abroad. But, as will be seen, the connection is wholly anomalous; it is completely the reverse of what would ordinarily be expected. In former times net gold imports to any country were normally the consequence of, and equal to, a current credit balance on other items in the international account. Gold did, it is true, sometimes move into a country as a result of a current credit balance established by borrowing abroad, but the decision to borrow almost always preceded the acquisition of gold and the initiative lay with the borrower. the acquisition of gold and the initiative lay with the borrower. The acquisition of gold was incidental, was preliminary to the import of capital in the form of goods, and was not expected to be permanent. Only in times of crisis was borrowing undertaken for the purpose of financing a gold import for its own sake.

At the present time, however, our gold imports are the consequence neither of a credit balance on merchandise and service items, nor of a current credit balance on financial account acquired by prior borrowing by this country abroad; on the contrary, they are themselves the cause of our indebtedness. The volume of gold movements has not been determined by the amount of our of gold movements has not been determined by the amount of our borrowing. Rather, the amount of our borrowing—which is largely involuntary—has been determined by the volume of gold movements. That is, since gold is being sent here not to extinguish American claims on the outside world, but to establish foreign claims against this country, we are, without any intent on our part to assume the role, being forced into a debtor position on current international account. The initiative has passed from our hands. We are importing gold not on our own volition but in accordance with the will of foreign sellers.

²The assumption of new liabilities fails to cover the entire cost of our gold purchases. The difference has been made up by the encashment of foreign obligations to this country and by the use of American claims on foreign currencies accruing from interest, dividends, and a current excess of commodity and service exports over imports.

Rates of exchange have no longer any decisive influence on gold movements even though gold movements still have a marked influence on rates of exchange. The significant point is that discretion as to whether gold will be imported or exported, not only in tion as to whether gold will be imported or exported, not only in their own country but here also, rests entirely with foreign monetary authorities who can also dominate exchange rates when they so elect. So long as they possess, will take, or will export, gold, then can put exchange rates practically where they want them; even without gold, they could do this in some degree through the purchase and sale of dollar claims provided we remained ready to buy and sell gold at a fixed price in dollars. On the other hand, if they are indifferent to the exchange value of their currency, they can export, retain, or acquire gold by the simple expedient of changing their daily buying price for the metal in correspondence with current movements in rates of exchange.

The wishes of foreign monetary authorities with respect to exchange rates have not been revealed, but gold is, in any event, coming here solely because foreigners prefer dollars to their own currencies or gold.

currencies or gold.

The motive that inspires the extraordinary export of gold from foreign countries to the United States is, to a considerable extent, fear. But this by itself is not enough. If price-level adjustment, such as the gold standard used to provide, had followed the flow of gold, or if gold did not command a fixed price in dollars, the incentive to transfers would be quickly reduced. The fact that we maintain a fixed price for gold, while failing to have the increase in gold exert its former expansive effect on the volume of disculcing medium. circulating medium, prevents the operation of equilibrating adjust-

ments.

A movement of funds such as that under discussion is not, on the face of it, inconsistent with the traditional international functioning of gold. It is conceivable that it might have arisen under an international gold standard but it is not conceivable that it could have lasted for long. Certain corrective adjustments in the countries losing or gaining gold would automatically have stopped an excessive flow in one direction. The mechanism of this selfan excessive flow in one direction. The mechanism of this self-adjusting system was relatively simple. So long as currencies were attached, by means of certain legal or conventional reserve requirements, to the volume of gold within the gold-standard countries, a change in the international distribution of gold was closely associated with changes in the relative volume of money in the different countries. This resulted in such a shift in relative national price levels, and in the international movement of goods, as to bring about a more even balance in the international accounts and to render further shipments of gold unlikely. Whengoods, as to bring about a more even balance in the international accounts and to render further shipments of gold unlikely. Whenever, for any reason, gold movements in one direction were excessive, the same process of adjustment would in due course lead to a return flow. The quantity of gold held by each country was thus automatically adjusted to the trading requirements of the several countries; there was no question of any one country absorbing an undue share of the world's stocks; and new supplies of gold were distributed in approximate proportion to existing baldings. holdings

Under the ordinary operation of the international gold standard any extraordinary preference for dollars would have been subject to steady diminution when, as a sequel to the movements of gold, prices in the outside world fell relatively to dollar prices. Dollars would then have been in steady process of becoming less valuable in domestic purchasing power relative to the domestic purchasing power of the alternative currencies obtainable with a like amount of sold, so that the trading investment speculative or refused deof gold, so that the trading, investment, speculative or refugee demand for dollars, as against these other currencies, would have rapidly waned. Gold would then have ceased to come to this

country.

At the present time the fundamental bases of this automatic mechanism no longer exist. Only in the United States, and possibly Belgium, does even the outward form of the system remain. Since gold is elsewhere completely divorced from any direct con-Since gold is elsewhere completely divorced from any direct connection with the pricing mechanism, it has ceased to be a regulator of international economic relations. When gold moves today it may leave unchanged—may even aggravate—the fundamental causes of the movement. These observations lead to the extremely important conclusions that gold flows are now in no way automatically corrective or self-limiting and that imports of gold to countries willing to buy it in unlimited amounts may therefore continue indefinitely.

fore continue indefinitely.

Under existing conditions the immediate effect of gold imports into the United States is to depress the exchange value of the dollar. So far, and no farther, does the analogy with international gold standard conditions hold. The tendency for prices in the United States to rise on the receipt of gold is now largely nullified, whereas there is no reason whatever to expect these gold movements to depress prices in other countries. This follows from the fact that gold is no longer used in these countries either as money or as a regulator of the money supply; exports of gold, therefore, have no more influence on prices than exports of any other commodity.³ commodity.3

A decline in the exchange value of the dollar attendant upon gold imports has now a tendency to raise the ratio of American exports to imports of goods and services. This is because the shift in exchange rates makes it easier for foreigners to buy in this in exchange rates makes it easier for foreigners to buy in this country and harder for Americans to buy abroad. Such an outcome is just the converse of the situation under an international gold standard where imports of gold were normally attended by price movements provocative of a fall in the ratio of commodity exports to imports in the country receiving gold. There is now not only no automatic tendency toward the checking of a flow of gold but a strong impetus to its acceleration. The provisional conclusion must be that in the absence of intervention there is no reason to suppose that our gold imports will decline until we have exhausted the world's stocks and are taking all of the then current output of the metal. then current output of the metal.

Even if the fear-motivated flight from other currencies to the Even if the fear-motivated flight from other currencies to the dollar should cease, the statement just made would hold true in the long run. The flight is, indeed, responsible for an undetermined, but certainly sizable, proportion of our recent gold imports. It has been supporting, and even enhancing, the exchange value of the dollar against the tendency of the imports of gold to depress it. If the flight were checked, the presumptive effect would be a drop in the exchange value of the dollar. We should then, in consequence, probably pay for continued imports of gold by an increase in the ratio of commodity exports to commodity imports rather than by the sale of securities or the purveyance to foreigners of what are substantially demand claims to dollars.

"Hot" or refugee money has played so important a role in gold movements that a further word should be said about it. The immediate effect of flight from a currency is to increase the exchange value of the currencies in the countries of refuge. This prompts the sending of gold from the refugee country to prevent an abrupt rise in the price of foreign currencies. Resort to sterling as a refuge has so far been in greater volume than the British retention of gold. That is to say, the British monetary authorities have not kept a gold reserve equal to the demand claims of foreigners on balances arising from shipments of gold to London. London is therefore in a precarious position. Whenever fear develops, the "city" is likely to be subjected to the international analog of a run on a commercial bank. Sterling, however, partly as cause and partly as consequence of the export rather than retention of gold by the British, has tended to rule relatively high on the exchanges. The British ratio of commodity imports to exports has, in consequence, shown a rising tendency and this, in turn, has stimulated exports of gold. If, as seems likely, refuge in the future is sought more in this country than in England the only alternative to a sharp fall in the dollar exchange value of sterling and associated currencies will be further shipments to this country of the red prove held by the British and other foreign monetary associated currencies will be further shipments to this country of the gold now held by the British and other foreign monetary authorities. This would continue until a reversal of the trend in the balance of British and similarly affected trade was accomplished, and it is by no means impossible that British reserves of gold and foreign exchange would be exhausted in the process.

If the United States had not offered an unlimited market for gold at a fixed dollar price, the volume of "hot" money seeking refuge here could scarcely have attained its present proportions, and flights to sterling would also have been curtailed. Any attempted flight to dollars would then have raised the price of dollar exchange in the refugee currencies to levels which would have made the process so costily as to my any effective decrease. dollar exchange in the refugee currencies to levels which would have made the process so costly as to put an effective damper upon it. If the United States, moreover, had not offered the British the prospect of the indefinite continuance of a favorable market for gold, the flight to sterling would have encountered similar difficulties since the British would then have been reluctant to acquire as large gold supplies as they have in fact absorbed. Furthermore, such flights as occurred would, in these circumstances, have been a mere swapping of currencies, with the sellers of dollars or sterling acquiring claims on foreign currencies coincidently with the transfer of claims on dollars or pounds to the buyers. Movements of exchange rates great enough to inhibit flights from currencies might, however, be a seriously disequilibrating factor in international trade.

With the shipping of gold to this country the foreign shipper

With the shipping of gold to this country the foreign shipper acquires indefeasible claims on dollars since we undertake to pay \$35 for every ounce of gold offered; we, on the other hand, do not acquire even a potential claim on foreign currencies since foreign acquire even a potential claim on foreign currencies since foreign monetary authorities can always refrain from purchasing any gold we might later offer them. Foreigners fleeting from their own currency under the influence of fear would, in the absence of gold movements, be obliged to sell us their currency so cheaply that the terms of trade would turn strongly in our favor. The flight of "hot" money would then entail a penalty for the individuals and countries sending funds abroad and a gain for the country to which it was sent. But when foreigners send us gold this does not happen. They are then not selling us their own currency cheaply, or at all, but are buying at fixed rates one form of American currency with another form which used to be, but is no longer, part of their own currency supply, and which will reenter it, if ever, only as they themselves may determine.

that the ever-present possibility that prices may rise in any foreign country, not only in equal but in indefinitely greater degree, than in the United States, is a strong reason for the shift, via gold, from these currencies to dollars.

If prices in the United States should rise under the impact of gold imports from other countries, it is more probable than not that they would not fall, but rise, in at least equal measure, in foreign countries. In England, for example, a loss of gold prob-ably induces a slight immediate, if not necessarily permanent, tendency toward inflation. Space does not permit a discussion of the reasons for this paradoxical tendency, but it should be noted

Since refugee gold, so far as it comes out of the monetary use, is currently supplanted by some form of debt money in the country from which the flight occurs, the reimport of the metal would presumably be superfluous, inflationary, and expensive. Under such circumstances reimports of gold are not likely to be sought for long with any enthusiasm. "Repatriation of capital" will take the form of outpayments of the foreign currency, by the central banks of the countries concerned, in exchange for dollar credits held by their nationals. Refugee gold, like all the rest that has found its way to the American Midas, is therefore not likely to move away even temporarily from our borders.

Such intervention as would reduce our imports of gold, and

Such intervention as would reduce our imports of gold, and perhaps check the flow entirely, need not occur on this side of the water. A drop in the exchange value of the dollar is identical with a rise in the exchange value of other currencies, and the ensuing presumptive increase in the ratio of American commodity and service exports to the corresponding imports is identical with a decline in the similar ratio for foreign countries taken as a whole. To a world still mercantilistic, even if it has lost its hankering for gold, this may not be very palatable, and foreign countries may purchase and hold gold with the deliberate intent of increas-ing the exchange value of the dollar, diminishing the pressure of competition from American commodity exports, and keeping the way open for their own. This may well be the principal basis on which such gold as is not coming to the United States is now being held or purchased abroad and it is probably our best chance being held or purchased abroad and it is probably our best chance of future relief from continuous dumping of the metal. Under existing conditions, the possibility of reducing our imports of gold therefore turns on the outside world being as mercantilistic in pushing commodity exports as we ourselves seem to be in engrossing gold.

Some countries however, are beginning to value commodity imports more highly than exports and to look upon exports solely imports more highly than exports and to look upon exports solely as the means of providing themselves with the desired imports. This sensible attitude is making rapid headway under the course of preparation for war. To such countries the purchase of gold looks like a very poor substitute for direct imports of the materials of war and they are likely to send what gold they have to us in order to enlarge their purchases of those materials. The tendency in this direction is reinforced by the fact that, where gold is no longer turned into currency, it is almost wholly superfluous, while its purchase by the Government involves a direct and uncompensated charge on the Budget. Under this strain many foreign countries are much more likely to move in the direction of reducing than of increasing their supplies of gold. They may therefore show an increasing indifference to a rise in the exchange value of their currencies and may even welcome it as facilitating the imports which they covet. as facilitating the imports which they covet.

as facilitating the imports which they covet.

If this occurs we can, of course, expect from them no intervention to stem the flow of gold, and the existing trend toward the complete absorption by this country of the world's stocks, as well as the new supply from the mines, will be greatly strengthened. Under present legislation there is nothing that we could do about it. Gold would come here whether the exchange value of the dollar should rise, fall, or remain unchanged, since the foreign currency price offered for the metal would be correspondingly set at a figure low enough to prevent any diversion of the gold from this to other markets. this to other markets.

Under the practice of maintaining a fixed dollar price for gold, we can neither refuse to buy the metal nor refrain from selling it freely for purposes of export. This may not inevitably mean that we have no means for influencing exchange rates, since that can be done through the purchase or sale of foreign currencies by our monetary authorities. It does mean, however, that we are powerless to affect gold movements. Any control we might otherwise have over exchange rates is thereby rendered all but completely nugatory. For, if our monetary authorities desire to raise the exchange value of the dollar, and therefore sell foreign currencies, foreign monetary authorities can nullify our action by buying the currencies we are selling with the dollar proceeds of gold remittances to us. If, on the other hand, our monetary authorities desire to depress the exchange value of the dollar, and therefore buy foreign currencies, the foreign authorities can nullify this action by directly supplying us in indefinite volume with their respective currencies (which they can print at will) or by taking in gold.

In a sense, then, our present plight is a consequence of the

In a sense, then, our present plight is a consequence of the general abandonment of the gold standard; but our weakness is attributable not to the abandonment itself but to our resumption of that standard while other countries were leaving it or, if already off, were remaining "unregenerate." We should be at no relative disadvantage if the rest of the world were on gold, but we should similarly be at no disadvantage if we had stayed off gold instead

The unconditional purchase of weak currencies, is, however, ⁴ The unconditional purchase of weak currencies, is, however, a dangerous expedient inasmuch as a possible devaluation may involve the purchaser in heavy losses. Such losses would already have been realized if francs had been unconditionally purchased, over the past year or two, by non-French monetary authorities or anyone else.

⁵ The tripartite argeement on exchange stabilization may be of service to us in this connection but only if the other parties to that agreement are under obligation to buy gold when dollar exchange tends to fall. It is not likely that there is any hard and fast obligation of this sort.

of returning to it. The trouble arises from the fact that we are on gold and the rest of the world is not, and that we have a standing offer to buy gold in unlimited amounts, at a high fixed price in dollars, while the monetary authorities in other countries can take it or leave it at their discretion.

It is somewhat ironical that the "friends" of the gold standard, repeating the history of silver, are proving to be the greatest enemies of the standard they favor. It is they who are largely responsible for an untenable position from which, so long as responsible for an untenable position from which, so long as foreign countries refuse to alter a status in which they are at a marked advantage, we can perhaps best extricate ourselves by the definitive demonetization of gold. Once off the gold standard in 1933, we could easily have avoided the emergence of our present difficulties. But conservative bankers and businessmen protested that failure to tie the dollar to gold was dangerous and that we must return, orthodoxly and at once, to the traditional standard, (The new gold content of the dollar was, they alleged, a matter of secondary import, and they were content to have the dollar stabilized at its then current gold value.) Partly in bafflement and partly in weakness, the administration at Washington capitulated. Some of the monetary policies then in vogue were unquestionably Some of the monetary policies then in vogue were unquestionably ill-conceived, but the establishment of a new fixed price for gold was surely a mistake, even though it was halled by bankers and was surely a miscase, even though it was haned by bankers and businessmen with an enthusiasm which they have accorded to very few acts of the present administration. Whether we should or should not have devalued the dollar is perhaps an open question; but once having broken the link between our currency and gold, we should certainly have been in no hurry to go back alone. If we had not done so we could readily have lowered the dollar price offered for gold when, as now, the occasion required it. As matters stand, however, such an action, for reasons presently to be adduced, could be taken only with great misgiving.

could be taken only with great misgiving.

When foreign countries, exercising their present privilege, refrain from taking gold it must come here because there is nowhere else for it to go. Individual hoarders abroad may, of course, absorb a certain amount of the metal. It is more to the point, however, to turn the gold into dollars, since the value of gold abroad will not go above its present value in dollars unless we perpetrate either or both of the almost incredible follies of further increasing the price of gold or of refusing the right to export the metal. Either procedure would magnify our present difficulties. The belief is professed in some quarters that raising the dollar price of gold would depress the exchange value of the dollar and improve the position of our commodity exporters. This belief is almost wholly illusory and derives from the period when a number of foreign countries were on gold. Raising the dollar price of gold would probably have no effect whatever upon dollar exchange rates against currencies which are in no way tied to gold, except for some slight depression of the dollar attendant upon the increased imports of gold which such a step might occasion. If it were thought, however, that the step would be repeated, the exchange value of the dollar might actually rise by reason of the withholding of gold abroad in the hone of getting a higher the exchange value of the dollar might actually rise by reason of the withholding of gold abroad in the hope of getting a higher dollar price later on. Any movement in exchange rates which might occur would no doubt be followed by a corresponding alteration in the foreign currency price offered for gold, modified

atteration in the foreign currency price offered for gold, modified slightly according as foreign private persons, or monetary authorities, wished to enter on one side of the market or the other. If the real value (purchasing power) of dollars should fall through inflation, the real value of gold, which is tied to the dollar, would fall in precisely the same degree. Except, therefore, on the very improbable conditions stated above, gold can be no better they dollars. But because gold would imprediately fall in on the very improbable conditions stated above, gold can be no better than dollars. But, because gold would immediately fall in dollar value if we should adopt the logical course of ceasing to buy the metal freely, gold may prove very much worse than dollars. Dollars, moreover, can be invested in short-term securities yielding some interest—which cannot be done by holding of gold. No shrewd speculator is therefore likely to purchase gold rather than dollars, unless he has wind that we are about to commit one of the stated follies. He will turn such gold as he has into dollar claims. into dollar claims.

It would be surprising if monetary authorities abroad should fail to be impressed, eventually, by the considerations which must affect intelligent private hoarders. Gold is for those authorities almost solely a means of acquiring dollars. Since dollars can now and apparently always will be able to do practically anything that gold can do, and possess unique advantages besides, there seems to be no reason whatever why foreign monetary authorities should hold on to the metal. This not only involves storage cost, and deprives them of such interest as they might earn by holding dollar credits, but it exposes them to a by no means negligible danger of loss through invasion of their territory. The holding of direct claims to dollars permits them to escape this danger.

Only one remote possibility not yet mentioned would give reason to a preference for holding gold rather than dollars. If, as a re-sult of war or otherwise, we should repudiate foreign claims to dollars, the holders of such claims would perhaps have done better to have gone in for stores of gold; though what they would do with it under those circumstances is worth pondering. It should be borne in mind that in the World War Sweden refused to accept gold in payment for her exports though she eagerly took dollars. This precedent seems likely to be widely copied in any major future

⁶ Some relatively small amounts might be sent to Belgium, if, as is unlikely, the sellers of gold should prefer belgas to dollars.

Since all but the most far-fetched considerations tell in favor of foreigners divesting themselves of their stocks of gold in favor of direct claims to dollars, the hitherto tentative conclusion that, unless we change our policy, we can expect to gather to ourselves practically all the monetary gold in the world, is strongly buttressed. We are already well on the way toward this result and, though we may expect temporary interruptions of the flow and occasional reversals, it seems highly probable that the long-run trend in the present direction will continue. The monetary authorities in countries which still have large holdings of gold will perhaps, for some time yet, fall to recognize that the king is naked and will continue to do obeisance to him under the illusion that he is clothed in royal raiment. But the light will eventually break even in these dusty corners. Even now, fealty shows signs of wavering. Central banks in a number of the lesser countries have, as the occasion seemed to warrant, shifted part of their assets from gold to dollars or sterling; and the British monetary authorities, in turn, do not seem to have been averse to holding dollars.

The fact is that, having ceased to employ gold as money, the public and private holders of gold outside the United States have no use for the metal. It is true that the foreign world has not so far acted in the matter with rigorous logic. Under the influence of tradition, and of the assumption that gold might again be restored to its former sovereignty, foreign holders have not, as a group, consciously sought to rid themselves of it. In some cases they have added to their stocks and, in others, have seen them diminish with regret. As time goes on, however, and they discover that they are not hampered by the loss of gold, especially when it is replaced by claims to dollars, this attitude will almost certainly change so that the transfer to this country of most of the remaining stocks is likely to be accelerated rather than retarded. The present value of gold is purely factitious; it is solely dependent upon the policy of this country and the extremely faint possibility that some other country would, or could, support the price of gold if we should abandon the attempt to do so. So long as we provide an unlimited market at a favorable price, foreign countries would be foolish not to take full and early advantage of the situation.

Even as a war resource, and on the unreliable assumption that we shall not change our policy, it is hard to see how gold can offer any net advantages over claims to dollars. In time of war, those suppliers of materials who would be unwilling to accept in trade the goods, currency, or credit of buyer belligerents, would probably take claims to dollars as readily as gold. The only conceivable exception is that involving two countries both of which in a future war were enemies of the United States and at the same time were suspicious of each other.

VIII

What now remains of the functions of gold and what is now its international role? Of the traditional functions not a single one remains intact. Gold is no longer employed, either as coin or as bullion, to redeem paper currency; its function as a regulator of the money supply has either fallen into complete desuetude or is retained as a fifth wheel; and the sole remainin attribute of monetary gold, that of serving to "adjust" international payments, has been perverted and is now in process of atrophy.

To make the last point clearer it will be well briefly to recapitulate. Gold does, it is true, move between countries, but the movement is almost wholly in one direction. Far from serving to settle inter-

To make the last point clearer it will be well briefly to recapitulate. Gold does, it is true, move between countries, but the movement is almost wholly in one direction. Far from serving to settle international obligations, the flow of gold is now chiefly instrumental in creating them. Nowhere in the world are imports and exports of gold the means of regulating the currency supply. Instead of serving as a stabilizing influence, gold movements are the agency for disturbing flights of capital. Apart from the positively harmful or potentially dangerous aspects of the role now played by gold in international economic life, its chief function is to improve the international position of producers and disbursers of the metal. The total volume of goods, days' labor and the like now annually devoted to paying for new gold (for which the world has no economic need) is more than twice what it was 10 years ago when there was a genuine need for the metal. This is of substantial benefit to producers of gold, but by the same token it represents a corresponding burden to the final purchasers. The same is true as between the disbursers and the buyers of the gold accumulation of the ages. The most significant monetary purpose that gold still serves is probably its use as the basic element in exchange stabilization funds. In this capacity it is one of the instruments whereby monetary control is exercised, rather than, as formerly, the controlling device itself, and for all countries but our own this function can be better performed by the possession of reserves of dollar exchange.

Adequate discussion of different alternatives for meeting the dilemma that faces us is impossible in the space that remains. We must be content with a few general observations and shall have to forego full explanation of why they appear to be justified.

⁷As has been noted, in most countries gold is frankly divorced from the monetary system. In the United States the two have been separated but are now somewhat uncertainly reunited. Even in this country, however, gold exercises over the money supply only a very remote control and is wholly superfluous for that purpose. The cost of separation—or "sterilization"—coupled with our determination to maintain gold, was so great a burden on the treasury that it had to be abandoned.

Restoration of an international gold standard system appears to be very improbable. Sentiment in favor of such a step is not strong abroad, nor are conditions propitious for international loans of the magnitude that would be required if such a system were to be set up. Even more conclusive is the fact that the causes that brought about the second collapse of the international gold standard, beginning in 1931, are still present in aggravated form. These influences were sufficient to destroy the gold standard at a time when its prestige was high; it is most unlikely therefore that the standard, whose prestige has been impaired by the events of recent years, could survive even if it were reinstated by some great coup.

Continuance of the present policy whereby the United States undertakes single-handed to maintain a fixed price for gold is likely to entail upon us a burden more or less equal to the cost it has imposed during recent years. In short, the cost to this country may be expected to amount to something like a billion and a half dollars a year; and there is no foreseeable cessation of the flow through limitation of the current output of the metal.

If we disregard the escape by way of inflation, which is open to all the familiar objections, the obvious solution is to abandon

If we disregard the escape by way of inflation, which is open to all the familiar objections, the obvious solution is to abandon the present fixed price for gold and permit it to find its economic level. This would automatically provide relief from the burden that excessive gold production now imposes upon us. Changing the price of gold would have no great or necessary long-run effects upon important exchange rates, on prices, or, with exception of adjustments to the new dollar value of our gold purchases, on the course of trade. The long-run economic consequences of this step would therefore be far less serious than those of the maintenance of present policies even if, under these policies, inflation is avoided. The short-run effects on countries which are important producers of gold might, however, be devastating and there is a strong probability that there would be extremely disturbing repercussions on our own economy including, as one incident, the rushing of gold to this country to prevent further anticipated loss on a falling market.

The step is open to the very practical objection, moreover, that

anticipated loss on a falling market.

The step is open to the very practical objection, moreover, that it would constitute an admission of error on the part of the administration. Indeed, it would look bad even on the record of any future administration. Every drop of a dollar in the price of an ounce of gold would mean a loss of about \$430,000,000 in the nominal market value of the gold stock we now possess. If the price of gold were allowed to seek its "natural" level, there can be little doubt that it would fall far. Even if the price should fall only to the old mint par of \$20.67 per eunce—and there is good reason to believe that it would go beyond this—the book loss would be about \$6,000,000,000, or well over twice the book profit obtained at the time of devaluation in 1933-34. This would, it is true, be only a paper loss and there is, moreover, much to commend such a move. There is little likelihood, however, that it could be put into effect. The prospect of so great a paper loss is more forbidding, from a political standpoint, than the annual real burden of a billion and a half, or more, that might go on forever.

The substance of the gold problem, then, is this: At present there is a grave disequilibrium between the low cost of producing gold and the high price at which it sells. Existing policies perpetuate this condition and compel the United States to foot the bill. The obvious means of reaching a solution are, for one reason or another, objectionable. A possible compromise is some device that will result in a fall in the price of gold abroad—thus checking production and discouraging the flow of gold to this country—and will at the same time maintain its price within the United States and permit us to preserve the fiction that our gold is worth what it purports to be. Such a two-price system for gold could be created without serious technical difficulty. It would simply call for a sizable import duty on gold. This might be on a sliding scale and accompanied by a corresponding export subsidy to facilitate an efflux of the metal without loss to foreign buyers. The details of such a scheme cannot be elaborated here. It is enough to say that it might be made more effective through an extension of the so-called tripartite agreement to include an undertaking by the six participating countries to aim at the absorption, by each, of stipulated percentages of the new supplies of gold coming on the market.

A device of the type here suggested is, of course, a palliative rather than a solution of the problem. Whether it is to be preferred to more drastic measures is a political rather than an economic question.

In no way are the views advanced in this paper to be interpreted as an attack upon the gold or any other standard. The present monetary outlook is unassuring, whatever standard is employed. However, we may as well face facts. The outstanding facts are these:

1. Barring changes so great as to be all but out of the question, it is improbable that an automatic international gold standard can be restored except as a possible consequence of the abuse of existing or future paper currencies.

Subject to the same reservations, it is likely that, if such an international gold standard were restored, it would fall again within a few years.

3. The present relationship between the price of gold and the cost of producing it is not an equilibrium relationship and, if not modified by positive action, seems certain to collapse with effects not pleasant to contemplate.

4. There is nothing in sight to interrupt a continuance of the

flow of gold to this country.

5. Granted that present policies are maintained, it is therefore not only possible but probable that the United States will come into possession of virtually the entire world's stock of monetary

6. In this event we shall have incurred the enormous cost of acquiring the gold and may find it impossible to avoid the inflation that the gold threatens.

tion that the gold threatens.

It behooves us either to bring gold back into familiar use under conditions favorable to its maintenance as money, or to abandon it as a monetary material. Unless we make of the gold standard something more than a rainbow, the pot of gold in which rainbows are said to terminate is likely to turn to ashes in our hands. To continue to buy gold as at present is not likely to keep this from happening; in the end, it may simply mean more ashes. A complete and final surrender of the use of gold as money would, perhaps, be the better course. Under existing conditions the value of our gold, for any purpose, seems little less evanescent than that of its celestial counterpart. The English economists in 1923 were not offering us an important asset, and they knew it.

Recovery Obstacles

EXTENSION OF REMARKS

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Thursday, April 20 (legislative day of Wednesday, April 19), 1939

ARTICLE BY MARK SULLIVAN

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mark Sullivan published in today's Washington Post, entitled "Recovery Obstacles."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

> [From the Washington Post of April 20, 1939] RECOVERY OBSTACLES—SEVEN CONDITIONS LISTED

(By Mark Sullivan)

Men ask, with deep concern, will there be business recovery? But their concern would be greater if all realized that not only is

But their concern would be greater if all realized that not only is business recovery at stake, but much more.

There are at least seven conditions, all domestic, any one of which probably, and the sum of which certainly, prevents business recovery. Because these conditions prevent recovery, they carry America toward a changed form of society—that is, from the system of private ownership to some form of collectivism. Necessarily the conditions which carry America toward collectivism carry it also toward a changed form of government, for it is inevitable that a change in the form of society must be accompanied by a change in the form of government.

The seven conditions overlap and interlock. For the sake of simplicity, they can be stated separately:

(1) Continued spending by Government in excess of receipts, which has now gone on for 8 years, and is still under way, with no end in sight. It remains as true today as when President Roosevelt said it on March 10, 1933, that: "Too often in recent history, liberal governments have been wrecked on the rocks of loose fiscal policy."

"FRICTION TAXES" STALL BUSINESS

"FRICTION TAXES" STALL BUSINESS

"FRICTION TAXES" STALL BUSINESS

(2) Two forms of tax, the capital-gains tax and the undistributed-profits tax. It is not the amount of these taxes that is fatal—the amount is small, relative to the total of taxes generally. The danger in these two taxes is the impediment, the brake, they put on business. It is the quality that causes some Treasury officials to speak of these as "friction taxes." With these taxes repealed (and with other conditions made right) business could go forward to a volume which would produce a much greater total of general taxes. Of all the conditions that prevent business recovery, this is the easiest to remove. High fiscal officials of the Government want it removed. The Democratic leaders in Congress are willing to remove it. The motive of those who oppose removal is not easy to understand. It is impossible not to feel that these do not entertain any great concern for bringing about business recovery. recovery

Triple A. Triple A affects not only farming but all industry, the whole economic structure of the country. Triple A expands, automatically, from within itself—for example, thus: (a) Reduce the amount of cotton grown; (b) this reduces the number of persons employed in cotton planting, ginning, spinning, and in the transportation of cotton and cotton products; (c) this added unemployment reduces ability to buy cotton goods; (d) this reduction of ability to buy cotton goods leads to further reduction of the quantity of cotton grown. And so on around the vicious circle.

TOO MANY LIVING ON GOVERNMENT

(4) W. P. A. as now operated. It is not the amount of money spent on W. P. A. that is the primary danger. The primary danger is the practice of W. P. A. in giving to persons dependent on W. P. A. a slightly better standard of living than is received by persons dependent on private employment, on the economic level just above W. P. A. This practice, if continued, must steadily draw men from private employment onto the lists of those who get their living from government. When the number of the latter reaches—let us take an arbitrary figure—say, 25 percent of the whole, the structure of society will turn upside down, for 75 percent in private employment cannot support 25 percent living on government.

(5) The National Labor Relations Act. This act, combined with some practices of C. I. O., especially the sit-down strike, which C. I. O. has practiced and never repudiated, and which the Labor Board does not completely condemn—this combination is such as to discourage men from setting up new enterprises or expanding existing ones.

ing ones.

(6) Large unemployment. This is not separable from the other conditions—it is a consequence of the other conditions. But large unemployment is important because of the psychological factor it introduces. Men unable to get jobs for a long time become less loyal to private ownership, more ready to listen to proposals that private ownership be abandoned and collectivism substituted. Persons and cults who wish to bring about collectivism necessarily wish to prolong unemployment and not see it end.

RECOVERY OBSTACLES ALL ARE DOMESTIC

(7) A state of mind on the part of some in quarters within government which says, in effect, "the private ownership system is pretty sick, why not let it die?" There are some within government who affirmatively wish to end private ownership and bring about some form of collectivism. There are others who are not especially partisan for collectivism but are not partisan for private ownership either. Private ownership can only be saved, and business recovery brought about, by an attitude which affirmatively and dynamically wishes to bring about business recovery.

All these obstacles to recovery are domestic. All are within our

and dynamically wisnes to bring about business recovery.

All these obstacles to recovery are domestic. All are within our own control to change. It is true there is a foreign condition that is an obstacle. But the foreign condition alone would hardly hold us back if all the domestic conditions were ended. It is not necessary to remedy all the conditions at once. Remedy of a few would create a momentum which would remedy the others automatically.

matically.

Amendment of the Sugar Act

EXTENSION OF REMARKS

HON. SAM RAYBURN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES Thursday, April 20, 1939

LETTER FROM THE PRESIDENT TO HON. MARVIN JONES OF TEXAS

Mr. RAYBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the President of the United States to Hon. MARVIN JONES, chairman of the House Committee on Agriculture:

The White House, Washington, April 18, 1939.

Dear Mr. Congressman: The three departments of the Government primarily concerned with the problems involved in the pending amendments to the Sugar Act have advised me of your courteous reference to them of S. 69 for expression of their views thereon. Since the proposed amendments raise grave governmental problems which transcend the specialized interests and functions of the individual departments concerned, I have been requested by them to set forth the basic position of the administration on the proposed amendments.

Prior to 1934 the sugar industry was suffering from unsatisfactory returns and our exports to Cuba had declined to a disastrously low level. The legislation pertaining to sugar enacted by Congress in 1934, and revised and extended in 1937, and the reciprocal-trade agreement negotiated with Cuba in 1934, resulted not only in a substantial increase in the income of domestic sugar beet and sugarcane growers and processors, but also in a gratifying increase in our export trade with Cuba. Between 1933 and 1937 our exports to Cuba of rice, wheat flour, lard, and other agricultural products were trebled and exports of manufactured articles were increased fourfold.

I am advised, however, that only a year and a half after exhaustive consideration by the Congress and the congress and the consideration by the Congress and the consideration by the Congress and the congress and the consideration by the Congress and the congress and the congress and the congress and a half after exhaustive consideration by the Congress and a half after exhaustive consideration by the Congress and the congress and

I am advised, however, that only a year and a half after exhaustive consideration by the Congress and the administration of the

1937 legislation, the sugar lobbyists, who, in order to justify their employment must be professionally dissatisfied under any conditions, are pressing for drastic amendments to the act which would tions, are pressing for drastic amendments to the act which would disrupt the balance established in the existing legislation as between the opposing interests of the various groups concerned: they would further burden consumers for the additional benefit of producers, seriously impair one of the principal markets for our export crops, and establish discriminations among various parts of the United States. Moreover, the proposed amendments would undermine the basis upon which the trade agreement with Cuba was negotiated, and violate our treaty obligations under the International Sugar Agreement, approved by the Senate on December 20, 1937. ber 20, 1937.

The first paragraph of the bill contains special exemptions from the acreage adjustments now required as a condition for payments under the act, that would operate primarily for the benefit of the large plantation companies in the mainland sugarcane area. Such exemptions would not only constitute a serious discrimination against the domestic insular areas, particularly the island of Puerto Rico, in which area a substantial adjustment of production this year is well under way, in compliance with the provisions of the act, but is also extremely unfair and unjust to provisions of the act, but is also extremely unfair and unjust to the producers in all areas whose great sacrifices in prior years under former sugar programs are directly responsible for the favorable position enjoyed by sugar producers in the mainland cane area in recent years. It is unthinkable that plantation pro-ducers in the mainland sugarcane area should be relieved of any responsibility for their appropriate share of crop adjustment as a condition for payments. condition for payments.

The second amendment in S. 69 would unfortunately delete the present provision in the Sugar Act designed to protect the housewives of the Nation against sugar prices in excess of those necessary to maintain the domestic industry. In recent years the total burden of sugar legislation on consumers, if measured by the full difference between the unprotected price of sugar in world markets and the protected price in the United States, has been equivalent to the purchasing power of approximately 50 quarts of milk and 50 loaves of bread per annum for each family in the United States.

The third amendment of S. 69 discriminates against two sec-The third amendment of S. 69 discriminates against two sections of the United States, Puerto Rico and Hawali, by reducing their present shares of the total domestic quota and by denying these areas their proportionate shares of the large increase provided for in the bill for all domestic areas. The bill would thus create a colonialism of the old-world type in the form of an underprivileged American citizen living in these particular insular parts of the United States. The imperialistic nature of such discriminations against some of our own citizens becomes clear when it is realized that although the Congress could legally destroy the economy of its insular possessions through such destroy the economy of its insular possessions through such discriminatory trade restrictions, the American citizens in those areas would possess no legal right to defend themselves against

such action by erecting trade barriers against products produced in the mainland.

The third amendment also proposes a severe reduction in the Cuban quota which would further curtail our shrunken markets for American agricultural exports at a time when Congress and the administration are struggling with measures to expand such markets

markets.

Furthermore, our principal benefit to Cuba in our reciprocal trade agreement of August 24, 1934, in return for over 400 duty concessions to American goods, was a duty reduction on Cuban sugar negotiated against the background of the quotas provided in the Jones-Costigan Act, upon the assumption on the part of the contracting parties that the quota basis would not be changed to Cuba's detriment. The reduction which this bill proposes to make in the Cuban quota, is so inconsistent with the purposes of the trade agreement and the basis on which it was entered into that it seems at variance with our fundamental principles of fair play and fair dealing which we have been urging as essential to world economic recovery and world peace.

fair play and fair dealing which we have been urging as essential to world economic recovery and world peace.

Under article 9 (a) of the international sugar agreement, we agreed to accept from the full-duty countries every year a quantity of sugar directly proportionate to the small share allotted on a historic basis to these countries under the Jones-Costigan Act in 1937. Under the proposed bill this proportion would be decreased. In addition to losing part of their basic quotas the full-duty countries would lose under S. 69 the important reallocation of the Philippine dutiable sugar deficiency now provided for. The purpose of this provision in the Sugar Act of 1937 is to enlarge the foreign market for American exports.

purpose of this provision in the Sugar Act of 1937 is to enlarge the foreign market for American exports.

Thus, the enactment of the bill S. 69 would be a serious threat to the future of the policy of improved relationships among the American republics, which has become so important and favorable a factor in our international relations in the past few years. We have been bending every effort to develop a vital program of inter-American cooperation. This program is becoming increasingly advantageous. It is earnestly believed that the Congress will not wish to impede its progress.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

FRANKLIN D. ROOSEVELT.

Hon. MARVIN JONES, House of Representatives. LXXXIV—App—99

Fair Labor Standards Act

EXTENSION OF REMARKS

HON. MARY T. NORTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Thursday, April 20, 1939

LETTER FROM HON. ELMER F. ANDREWS, ADMINISTRATOR OF THE WAGE AND HOUR DIVISION, DEPARTMENT OF LABOR

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the Speaker of the House from Hon. Elmer F. Andrews, Administrator of the Wage and Hour Division:

United States Department of Labor, Wage and Hour Division, Washington, April 19, 1939.

The Speaker of the House of Representatives.

My Dear Mr. Speaker: The Administrator of the Wage and Hour Division is directed by section 4 (d) of the Fair Labor Standards Act to submit annually in January a report to the Congress and to make recommendations for further legislation in connection with the matters covered by that act. In my interim

Standards Act to submit annually in January a report to the Congress and to make recommendations for further legislation in connection with the matters covered by that act. In my interim report to the Congress last January I referred to a few of the problems which this act presented but at that time I did not feel that the Division had had sufficient experience to justify the recommendation of legislation. Since the submission of that report one of the problems referred to therein has become so serious that it should again be called to the attention of the Congress. Section 7 (c) of the said act provides as follows:

"(c) In the case of an employer engaged in the first processing of milk, whey, skimmed milk, or cream into dairy products or in the ginning and compressing of cotton or in the processing of cotton seed or in the processing of sugar beets, sugar-beet molasses, sugarcane, or maple sap, into sugar (but not refined sugar) or into sirup, the provisions of subsection (a) (requiring the payment of time and a half for overtime) shall not apply to his employees in any place of employment where he is so engaged; and in the case of an employer engaged in the first processing of, or in canning or packing, perishable or seasonal fresh fruits or vegetables, or in the first processing, within the area of production (as defined by the Administrator) of any agricultural or horticultural commodity during seasonal operations or in handling, slaughtering, or dressing poultry or livestock, the provisions of subsection (a) (requiring the payment of time and a half for overtime), during a period or periods of not more than 14 workweeks in the aggregate in any calendar year, shall not apply to his employees in any place of employment where he is so engaged."

Section 13 (a) (10) provides, as follows:

"Sec. 13 (a). The provisions of Sections 6 and 7 shall not apply with respect to * * * (10) to any individual employed within the area of production (as defined by the Administrator), engaged in handling, packing, storing, g

shall apply and when they shall not apply is given to the Administrator.

As Administrator, I have been beset with manifold difficulties in attempting to issue a definition of "area of production" which would be in accord with the expressed intent of the Congress, and at the same time would avoid the creation of chaotic conditions in the competitive positions of employers similarly situated.

Before exercising the power to define "area of production," I considered the possibility of mapping producing regions for each of the many agricultural and horticultural commodities. This procedure was found to involve the mapping of producing regions and locations of processing establishments and concentration points for several hundred individual commodities, as to many of which area lines could not practically be drawn. That procedure, besides leading to discrimination against plants on the border lines of areas, would have required several years and would have involved great expense. The plan was therefore abandoned as impractical.

impractical.

The term "area of production" is subject to a great variety of possible interpretations. The term was used previously in the N. R. A. definition of agriculture and was the cause of serious administrative difficulties at that time. Its history under the Fair Labor Standards Act has been even more disturbing.

Each industry to which the term might apply interprets it in such a way as to mean complete exemption of all establishments in that industry. Thus, for example, cotton handlers consider the "area of production" for cotton to be the entire area in which cotton is grown, ginned, stored, or compressed, although that means including all or large parts of at least 11 States in the "area of production," or in other words all areas where these "area of production," or in other words all areas where these operations occur. That type of definition, of course, renders the term meaningless in any such limiting sense as the Congress obviously intended. Where the act provides blanket exemptions, it is explicit in so doing. It does not so provide in this section. Labor, on the other hand, would define "area of production" in such a manner as virtually to exempt no one.

Aside from the uncertainty of the term, the basic idea underlying this exemption release a serious economic question. It con-

Aside from the uncertainty of the term, the basic idea underlying this exemption raises a serious economic question. It contemplates exemption of only such employers or employees as are located or employed within the "area of production." It therefore requires the drawing of a line, on one side of which all employers and employees are to be exempt, while on the other side they are not to be exempt. The operations within or without the "area of production" may be the same and may be performed upon the same products.

same products.

No matter what approach is taken to define this term, inequities will result. Some enterprises will be barely within the "area of production" and others, directly competitive, just outside; some farms will be in the area with reference to the processor handling their crops, and others, though growing the same crops, will be outside this area. It is earnestly urged, therefore, that the wage-and-hour coverage of the act should not depend upon the proximity of the operation of the area in which the raw products are grown.

mity of the operation of the area in which the raw products are grown.

I recently presided at a hearing for the consideration of a definition of "area of production" for fresh fruits and vegetables, which was recommended by the chief of our hearings and exemptions section following an earlier hearing at which he presided. I have just issued an amendment to such regulations to provide that with respect to perishable or seasonal fresh fruits and vegetables, an individual is to be considered as employed within the "area of production," if he is engaged in handling, packing, storing, drying, or canning such fresh fruits and vegetables in an establishment which is located in the open country or in a rural community (not including a city or town of 2,500 or greater population) and which obtains all of its fresh fruits or vegetables from farms in its immediate locality (but not beyond a radius of 10 miles). The legislative history of the act, particularly with reference to "area of production," was referring to the "immediate production area" and to "rural areas" and "farm areas." Thus, mileage and population limitations seem clearly to have been contemplated by the Congress in connection with the definition of such area. tion of such area.

The definition was adopted to carry out the expressed intent of the Congress. In my opinion, it produces a minimum of discrimination and economic dislocation. Nevertheless, this definition of "area of production" does give rise to some discrimination between employers, but those discriminations are inherent in the

tween employers, but those discriminations are inherent in the act as it now stands. Roughly one-fourth of the establishments packing and canning fresh fruits and vegetables fall within the area as it has been defined and are therefore exempt from both the wage-and-hour provisions of the act. The remaining establishments do not fall within the area and are therefore compelled to comply with such wage and hour provisions.

The principal need of the fresh fruit and vegetable industries, particularly during periods of peak production, seems to be a flexibility in hours which will permit the expeditious handling of fruits and vegetables, which are highly perishable commodities. The definition which has just been issued, affords an exemption from the hour provisions (as well as from the wage provisions) to only a part of the industries and, therefore, does not meet this need for flexibility in hours.

need for flexibility in hours.

On the other hand, there seems no justification for exempting even a small percentage of these industries from the wage provisions of the act. Every reason that dictated the passage of the wage provisions of the Fair Labor Standards Act is applicable in the sions of the act. Every reason that dictated the passage of the wage provisions of the Fair Labor Standards Act is applicable in the fullest sense to such industries. In the first place, many employees engaged in these industries are not being paid a wage sufficient to maintain themselves at a standard of living necessary for health and decency. Secondly, fresh fruits and vegetables compete in a national market and, because of such competition, those who bring the commodity to the consuming market at the lowest cost play a large part in determining the market price of such commodities. Some employers have used lower wages to gain an unfair competitive advantage. Furthermore, the payment of low wages in competitive industries tends to depress the entire wage structure at the expense of the worker. Thirdly, several States require the payment of minimum wages in these industries, which are equivalent to or higher than the standards fixed in the Fair Labor Standards Act. The Federal Government should, therefore, apply uniform standards so as to make impossible economic advantages for the employers in those States which have no minimum wage rates. Lastly, the labor costs in these industries are extremely low. For example, with but a single exception, wages in the food industries constitute a smaller proportion of the total value of the manufactured product than in any other major group of industries in the United States.

There are approximately 1,000,000 employees who are directly effected by the examptions from the manimum tour requirements.

There are approximately 1,000,000 employees who are directly affected by the exemptions from the maximum hour requirements

of the act in section 7 (c) or from both the wage-and-hour requirements in section 13 (a) (10). It seems to me, upon the basis of the careful consideration which I have given to this matter, that the only sound solution to the problem is an amendment of the act which will (1) eliminate the term "area of production," (2) grant to the industries in question an adequate exemption from the hour provisions, and (3) make the wage provisions applicable to them. The reasons outlined above for granting an hours exemption to the fresh fruit and vegetable industries and denying them a wage exemption are equally amplicable to all the hours exemption to the fresh fruit and vegetable industries and denying them a wage exemption are equally applicable to all the other industries at present affected by sections 7 (c) and 13 (a) (10). The products involved are all perishable, or seasonal, or both. The general limitation of hours prescribed in the act, although suitable and sound elsewhere, may frequently be impractical as applied to these industries. The disadvantages, in fact, outweigh the benefits. On the other hand, for the reasons mentioned above, it is just that these industries should be required to observe the national minimum-wage standards of the act.

It should be observed, however, that although the general hour limitations established by the act are unsuited to these industries, that does not mean that no hour limitations at all are desirable. It is imperative that hours which are so long as to endanger the health and efficiency of the individual worker should be discouraged by the imposition of the overtime penalty. A further reason is that such hour limitations are necessary to give support to the hour standards already established by many States for these same industries. Unless the limitations on hours are made uniform, those sections of the country in which hours of work are unregulated will enjoy a competitive advantage in the marketing of their products.

The Norton bill (H. R. 5435) which was introduced in the House on March 29, 1939, and the Thomas bill (S. 2008) which was introduced in the Senate on March 30, both contain the amendments just discussed. On March 31, I made a recommendation to both Senator Thomas and Mrs. Norton in which I discussed such amendments at length. I stated that such amendments, if enacted, would promote the effective and fair administration of the act, would provide needed flexibility, would assist in enforcement, and would remove a substantial number of annoyances and hardships which harass us and which we are at present powerless to avoid. I urge the consideration of that recommendation by the whole Congress

The economic importance of the fresh fruit and vegetable indus-y and the food-processing industries is apparent. The chief con-The economic importance of the fresh fruit and vegetable industry and the food-processing industries is apparent. The chief concern of these industries has been the hour limitations of the statute. The 14 workweeks exemption, which the statute accords most of these industries each calendar year has expired for those industries whose active season began in January. These industries are faced with a serious emergency by virtue of the requirement that time and a half be paid for all hours of work in excess of 44 per workweek. per workweek. As administrator of the wage-and-hour division, I feel obliged to recommend to the Congress that the amendments previously referred to be given serious consideration to avoid undue hardship.

ELMER F. ANDREWS, Administrator.

Tom Amlie Pays Respects to His Opposition

Ave Caesar, moriturus te saluto. (Hail to thee, Caesar, I, who am about to die, salute thee.)

EXTENSION OF REMARKS.

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Thursday, April 20, 1939

EXCHANGE OF LETTERS BETWEEN HON. THOMAS AMLIE AND HON, FRANKLIN D. ROOSEVELT

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein an exchange of letters between the Honorable Tom Amlie, former Member of Congress from the State of Wisconsin, and Hon. Franklin D. Roosevelt, President of the United States. These letters reveal an interesting exchange of sentiments concerning two opposing philosophies of government. Personally, I think Tom Amlie was subjected to unjust treatment. I wish he might have been confirmed. My personal friendship for Mr. Amlie and long association with him probably makes me somewhat prejudiced in his favor, yet we cannot escape the conclusion that Mr. Amlie possesses one

of the most alert brains which has adorned either House of ! Congress for many years.

The letters are as follows:

WASHINGTON, D. C., April 7, 1939.

President Franklin D. Roosevelt,

The White House, Washington, D. C.

MY DEAR MR. PRESIDENT: On January 24, 1939, you sent my name to the Senate as a minority nominee to the Interstate Commerce Commission. A reactionary press and an unscrupulous political cabal immediately seized the occasion to transform the public debate and the Senate hearings over my confirmation into a veritable witchcraft trial.

Because I had in the course of my 8 years' agitation for a permanent solution of our mass unemployment problem expressed doubts at times as to the ability of unregulated capitalism to solve this problem, I was branded a Communist and subverter of American institutions. Because I had expressed my sympathy for the late levelist government. American institutions. Because I had expressed my sympathy for the late loyalist government of Spain, I was accused of being an accomplice in the "promiscuous slaughter of Christians and their apostles." Because I had at various times proposed Government ownership of the railroads, I was accused of wishing to wipe out the savings of widows and orphans.

The bitterness of the attacks directed against my confirmation

The bitterness of the attacks directed against my confirmation recalls the similar campaign directed against the confirmation of Justice Brandeis 23 years ago. However, in Justice Brandeis' case, his long career as a fighter for the public good, during which he clashed with so many powerful interests, and the consequent fear of what he might do in his position of authority as a Supreme Court Justice, may serve to explain the bitterness of the campaign against his confirmation. In my own case, the modest character of my public career, and the relative lack of power of an Interstate Commerce Commissioner belie such an explanation. As the magazine Time observed, I could do the railroads no harm, and might serve to stir up the Interstate Commerce Commission to activity.

The real explanation of the savage attack on me lies not in my own deeds or misdeeds, but in the political calculation that by branding me as a Communist and an antichrist, a real blow—a

braiding me as a communist and an anticrist, a real blow—could be struck against you, Mr. President, and your administration.

The fact that your responsibility in nominating a minority member of the Commission is strictly limited and does not involve acceptance of the political philosophy of the nominee or of the party he represents, does not interfere with this calculation. When the

he represents, does not interfere with this calculation. When the whole campaign is based on witchcraft psychology, it is futile to carp at the lack of logic at any of the stages.

You will recall how in the British electoral campaign of 1924 the Conservative Party press published a purported letter of Gregory Zinoviev, head of the Third International, giving instructions for the setting up of a Communist dictatorship in Great Britain. The letter was, of course, a forgery, but the Conservative Party won power on the basis of that letter. Many times during the past 2 months I have wondered whether it is not the intention of the American conservatives to turn me into another fake Zinoviev letter, and conduct the campaign of 1940 on the basis of garbled and adulterated extracts from my Forgotten Man's Handbook. Handbook.

You can understand my embarrassment under these circumstances. The thing nearest my heart is, of course, the desire to get the American people to do some fundamental thinking on the problem of unemployment and the danger to democracy in the economic disfranchisement of 20 percent of our population. Under these interpretarious Library in the property of the high pr economic disfranchisement of 20 percent of our population. Under other circumstances I should have welcomed the high-powered publicity given to my economic writings of the past 8 years. But a hearing and debate on the nomination of a minority member to the Interstate Commerce Commission hardly offers a free and proper forum for the discussion of such topics. I have felt that in justice to you, who passed only on my qualifications to serve as a minority member of the Interstate Commerce Commission, I should refrain from forcing a debate on the floor of the Senate—where I could not myself defend my views—on the merits of the various economic proposals which I had advanced since I entered Congress in 1931.

There is one issue, however, which, though it has nothing to do, or, rather, should have nothing to do, with the question of my fitness to serve on the Interstate Commerce Commission, I should have liked to see fought out not only on the Senate floor but before the whole American people. I refer to the right of a minority party to proper participation in the process of democratic government. It is the position of my critics that under the Constitution I am, of course, free to advocate any ideas I please, but it

government. It is the position of my critics that under the Constitution I am, of course, free to advocate any ideas I please, but it is grossly improper for the national administration to appoint me or any member of a similar political group to take part in the work of a governmental commission. This is equivalent to setting up a doctrine of second-class citizenship. Full citizenship, full participation in democracy, is to be accorded only to those whose ideas are acceptable to the American Liberty League; to the rest, only second-class citizenship.

second-class citizenship.

With dismal ignorance and unmitigated arrogance, the partisans of such a doctrine speak of it as Americanism. A glance at American history and at American traditions reveals what would have happened had this doctrine prevailed. This doctrine would have barred from full citizenship Abraham Lincoln, who wrote that it was wrong that "some have labored, and others, without labor, have enjoyed a large proportion of their fruits," and that it is a "worthy

object of any good government" to "secure to each laborer the whole product of his labor as nearly as possible."

The same doctrine would have condemned Thomas Jefferson as a despicable "red" for suggesting that "a rebellion now and then is a good thing." "The tree of liberty," he said, "must be refreshed from time to time with the blood of patriots and tyrants. It is its natural manure." Yet Thomas Jefferson became the third

It is its natural manure." Yet Thomas Jefferson became the third President of the United States and the revered founder of the Democratic Party.

The same doctrine would have condemned to second-class citizenship Benjamin Franklin, who, in 1783, wrote:

"All the property that is necessary to a man, for the conservation of the individual and the propagation of the species, is his natural right, which none can justly deprive him of; but all property superfluous to such purposes is the property of the public, who, by their laws, have created it, and who may therefore by other laws dispose of it, whenever the welfare of the public shall demand such disposition. He that does not like civil society on these terms, let him retire and live among savages. He can have no right to the benefits of society who will not pay his club have no right to the benefits of society who will not pay his club toward the support of it."

And yet these utterances did not bar Benjamin Franklin from playing a leading role in the Convention of 1787, which drafted our present Constitution.

our present Constitution.

It is because I see what it would have done to the past of America that I fear for the future of American democracy if such a doctrine is once allowed to take hold and become a guiding precedent. It matters very little whether I serve as Interstate Commerce Commissioner, but it matters very much whether the leaders of the American people continue to serve the cause of democracy. For this reason I have been extremely anxious to see fought out the issue of the democratic right of progressive groups to take part in our Government. But I have at length concluded to request you to withdraw my nomination as Interstate Commerce Commissioner because I do not believe that there is any great eagerness among the members of either the Democratic or Republican Party in the Senate to defend the great principle of minority

eagerness among the members of either the Democratic or Republican Party in the Senate to defend the great principle of minority representation. I desire no reluctant nor apologetic champions of my position, and I have no wish to conciliate those who cannot read the signs of the times.

The people are becoming impatient with temporizing measures. If unemployment is to be eliminated, if equality of opportunity for the average man is to be restored, and if every American is to be insured the right of a job, "radical" measures are necessary. "Radical" measures are as necessary to meet the urgent needs of our day as they were to meet the urgent needs of our day as they were to meet the urgent needs of the Nation in 1787 when Washington said to the Constitutional Convention: "My wish is that the Convention may adopt no temporizing expedients, but probe the defects of the Constitution to the bottom, and provide radical cure."

I am satisfied that it is not necessary to continue the fight for purposes of personal vindication, since even Senator Reed, speaking for himself and his Republican colleague, declared at the hearings:

hearings:

hearings:

"I do not think anybody has ever questioned Mr. Amlie's character or integrity or his very great ability. It seems to me unnecessary to add anything upon either of these three points. It is just a question of taking our time and prolonging the record. I do not think Mr. Amlie needs any defense as to his character and integrity, and surely in his lengthy statement before this subcommittee he has demonstrated ability. Now, whatever views the members of the subcommittee may hold, or conclusions they may reach, certainly on neither one of these three points is there any controversy."

may reach, certainly on neither one of these three points is there any controversy."

I deeply appreciate the confidence you have reposed in me by nominating me to this post, all the more so since I have so frequently been a critic of New Deal policies. It is unfortunate, but not altogether surprising, that such a high spirit of responsible nonpartisanship should be regarded by timid politicians as a dangerous political liability, and by a hysterical press as a veritable trafficking with the devil.

Very sincerely yours,

Thomas R. Amure.

THOMAS R. AMLIE.

MY DEAR MR. AMLIE: I have your letter requesting me to withdraw your nomination as a member of the Interstate Commerce

draw your nomination as a member of the Interstate Commerce Commission. I am doing so shortly.

I deeply regret that a certain type of opposition should deprive the Interstate Commerce Commission of one as able and as whole-heartedly devoted to the public service as you are.

You and I have often differed on important issues, but I can assure you nothing has occurred to alter my belief in your qualifications to serve as a minority member of the Interstate Commerce Commission.

merce Commission. Those who for political reasons have called you a Communist do not perhaps realize that such name calling ill serves the democratic form of government which this Nation as a whole wishes to

continue. A quarter of a century ago I, too, was called a Communist and a wild-eyed radical because I fought for factory inspection, for a 54-hour-a-week bill for women and children in industry, and similar measures. You are still young and I hope that you will continue to work for the improvement of social and economic legislation under our framework of government.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

Why Hamstring the Sugar Industry?

EXTENSION OF REMARKS

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1939

Mr. GILLIE. Mr. Speaker, there has been much talk recently about President Roosevelt's remark that the South is our No. 1 economic problem. Perhaps he is right. I am a freshman in Congress and I will frankly admit that I have not had an opportunity to study all of our national problems.

As a horny-handed Hoosier farmer, however, and as the proud but humble Representative of a highly productive farm district in northeastern Indiana, I have acquired some practical knowledge of another problem—the agricultural problem. And I know I voice the sentiments of my constituents and millions of other Americans when I say that this—not the South—is the No. 1 economic problem today.

Solve the agricultural problem and the economic problem of the South will solve itself. And so will the problems of the

North, East, and West.

My friends in other rural districts know this to be true. The long-distance gentleman farmer in the White House must also realize that if prosperity is to come, if employment is to be increased and relief costs reduced, we must have a return to sound agricultural conditions.

I wish, therefore, to address my colleagues, and indirectly Mr. Roosevelt, Secretary Wallace, and Secretary Hull, on a phase of this great problem as it affects the State of Indiana, and also the neighboring States of Ohio, Michigan, and Wisconsin. I refer to the much-talked-of sugar question.

My interest in this problem will be understood when I explain that I represent the only district in Indiana that raises sugar beets, and the only district in Indiana that has a beet-

sugar processing plant.

I hope that my remarks will reach the ears of my esteemed colleagues on the Agriculture Committee, who have before them the Ellender bill, an excellent measure passed by the Senate several days ago, which for some reason they hesitate to report out. I think the House should have an opportunity to express itself on this measure.

Mr. Speaker, there is no product that comes from God's good earth that is more universally consumed on the tables of American families than is sugar. This product represents one

of our most essential items of food.

It is inconceivable to me, and I am sure it must be inconceivable to millions of other thinking Americans, that today, when we are faced with great national agricultural surpluses, that we should keep our farmers, and laborers, and manufacturers from producing a food product so widely consumed as sugar.

Why, when we have millions of acres of land that must be subsidized because the products from these acres are creating an unwieldy surplus, should we discourage the growth of such a promising agricultural industry as the sugar industry?

Why, I repeat, when we have never at any one time produced in continental United States of America as much as one-third of the sugar we consume?

The control of the cotton crop is a problem that is now confronting our national legislative bodies. What is going to be done about it, and whether it is going to be done intelligently, I do not know.

I do know, however, that in my district corn is under Government seal. I do know that the price of wheat is greatly depressed. I do know that the prices of fats and oils are greatly depressed. And I know that the American farmers, particularly the Indiana farmers, are much disturbed as to the corn allotments they are receiving this spring, and as to the other provisions that are being forced upon them by the Soil Conservation Committee and the A. A. A. regulations.

In the face of all these facts, I again ask you, Mr. Speaker,

why should we hamstring the beet-sugar industry at this time and keep it from doing what it could so easily and profitably do for the well-being of our people.

We hear it said that we have an obligation or a duty to the Philippine Islands and to Cuba. I do not know what this obligation is, neither do I know what it should be. But there is one thing that millions of Americans will agree with me in, and that is this, that whatever obligation we have to the Philippines and the Republic of Cuba, it is a national obligation and not an obligation that should be shouldered on to one American industry.

Why should the sugar industry be singled out to bear the brunt of whatever obligation we might owe to these countries? Let us be realists and acknowledge the fact that whatever obligation we owe these people is a national obligation

and should be met nationally.

I am aware of the facts and the statements presented by the Secretary of Agriculture to Senator Prentiss M. Brown on April 6, 1938, when he declared that it is estimated—

That at current prices American consumers are obliged to pay more than \$350,000,000 per annum in excess of the value, at world prices, of their annual sugar supply (without allowance for the estimated net revenue of approximately \$47,000,000 represented by the difference between disbursements under the Sugar Act of 1937 and receipts from the tariff and the 50-cent tax on sugar, or for the possible increase in world prices that might result from changed conditions. This is equivalent to a tax of approximately \$2.70 per capita on a population of 129,000,000 persons. It means, on the average, a levy of more than \$10 per family, including that one-third of the Nation which is ill-nourished, and it represents an amount of purchasing power equal to more than 50 quarts of milk and 50 loaves of bread for each family in the United States.

This statement of Mr. Wallace seems to be a most misleading presentation of the case. May I analyze in my own way an interpretation that should be made of such a statement?

We agree with Mr. Wallace that we want to have our consuming public buy food products as cheaply as is consistent with an American standard of living, but should we not ask ourselves this question, Do we want the American housewife to have for 1 year the benefit of a price on her sugar below the American cost of production and then run into the hazard of a time which we have already experienced when she will have to pay 30 to 35 cents a pound for sugar?

May I refer to a speech made in this Chamber by the gentleman from Michigan, the Honorable Fred L. Crawford on January 10, 1939, in which he brings out the point, and a point which impresses me very much, that there was a period of 5 or 6 months in 1920 when—

The price of sugar went to \$35 per hundred pounds to the American consumer, because we were then dependent upon Cuba for our supply. We were dependent upon a foreign country for our sugar supply.

As the Secretary of Agriculture is, and we know that he is, sincerely interested in protecting the American consumer in the price of the products that go on the family table, should he not look ahead beyond a period of 1 or 2 years and see that we are not building up a situation whereby the small protection that is provided for a short period of time will be paid for ten to twenty fold?

The Secretary makes much of the statement that the present Sugar Act exacts a levy of \$2.70 per capita on a population of 129,000,000 people, or a levy of more than \$10 per family, or a total levy, as he states it, of around \$350,000,000.

Let us grant that these figures given by the Secretary are correct. Let us grant that it costs the American family \$10 per year to protect the American sugar industry. What of it? On the contrary, let us look to see what the American family is getting for their \$10 per year.

If I know the American people at all, I know that they are not so much concerned as to what a thing costs them, as they are to what it is worth. If the American people can, by the expenditure of \$10 per family per year, protect themselves against runaway prices for one of the most vital necessities of the family table, and protect an industry that spends millions of dollars in labor and brings millions of dollars' return to American agriculture, and uses millions

of acres in the way of producing a cash crop, and year in and year out a more profitable cash crop than any other commodity they can grow, may I ask is this expenditure too much, and who would object to such an expenditure?

We are spending millions and millions of dollars for public relief in one way or another. We are spending millions and millions of dollars for good roads. We are spending millions and millions of dollars for schools, and other purposes. The American people are not adverse to expenditures when they know that these expenditures are not only protecting a necessity of the American table, but also promoting the betterment of our whole economic well-being.

In the year 1933, which year saw, up to that time, the largest production of beet sugar that this country had ever known, we produced East and West 32,826,000 bags of beet sugar. In the year just closed, we produced East and West 33,491,850 bags of beet sugar. In the year 1933, in the so-called eastern area, including the States of Michigan, Ohio, Indiana, and Wisconsin, we produced 4,702,000 bags of beet sugar; and in the year just closed, these same States produced 4,910,000 bags of beet sugar.

I am informed on reliable authority that every 100 pounds of beet sugar produced represents 8 man-hours of labor. At a time when we have from twelve to thirteen million men unemployed, is not such an industry worth while?

For the year 1933, according to some figures introduced into this body by the Honorable Frank C. Kniffen on June 15, 1934, 22 beet-sugar factories in the eastern area used 379,929 square yards of cotton filter cloth; 243,645 barrels of fuel oil; 379,811 tons of coal, coke, and limerock; 6,376,543 sugar and pulp bags; and \$1,882,958 worth of miscellaneous supplies; our railroads and trucking companies received \$3,242,868 for transportation service; the employees of the sugar-beet growers—all 22 eastern companies—received in excess of \$5,000,000 in the form of wages; and the farmers represented in the eastern area received over \$11,000,000 for their crop.

If these figures were accurate for 1933—and I am sure that they are representative figures—you know, as well as I know, that with the increased costs that have taken place during the 5-year period from 1933 to 1938, it would be perfectly reasonable to say that these figures could be increased at least 10 percent and still be representative of the value of the 1938 crop.

Yes; maybe Mr. Wallace's figures are correct. Maybe it does cost \$2.70 per capita on a population of 129,000,000 persons to protect the American sugar industry; but let me say that, assuming we could increase our production to where we would produce in this country 50 percent of our requirements, and assuming that this 50-percent production would cost the American family a little more than \$10 per family, would it not be worth the cost? For this cost the farmer would be receiving a larger return and the American housewife a more stable protection.

The Secretary gives only one side of the picture. Please remember that this \$2.70 per capita, or \$10 per family cost, or whatever it is, goes to the American people. It does not go outside the borders of our own country. When the American housewife buys imported cane sugar, she is paying for peon wages in the bag; she is buying from foreign producers and increasing our unused agricultural opportunities. The money goes out of these United States of ours.

Maybe the father gives the son 25 cents to bring in the wood, but the money is still in the family. What if he gives him 50 cents? It is still in the family,

What a thing costs is of little concern. What it is worth to the receiver is what counts. Much argument is made of the fact that we should subsidize Cuban cane sugar, so that the Cubans would be able to buy more American-made products, and this argument is also used in connection with the Philippine Islands. I am not going to tire you with figures, but I again refer you to the speech of the gentleman from Michigan [Mr. Crawford] on January 10, wherein this argument is statistically refuted.

You know there is an old saying that one can know too much about a subject. I do not claim to know very much about the sugar industry, and I do not think that one has to be an authority to comprehend the real fundamentals of the problem. I would, however, like Mr. Wallace to answer a question or two for me:

First. Why should we prohibit the production of a commodity that we have the ability to grow and the desire to consume when we have millions of acres of good American soil going to waste?

Second. Why should we tell the American farmer that he cannot raise sugar beets, or sugarcane, because we must let Cuba and the Philippines produce our sugar?

Are we not carrying the "good neighbor" policy a little too far? Why not extend it to the folks at home—the American farmers and American laborers? And incidentally, the Indiana beet growers?

It seems to me that we are following a suicidal free-trade policy, regardless of its consequences to the American people. And we are saddling an assumed obligation to Cuba and the Philippines on the domestic sugar industry.

I could say a great deal about the free-trade policy, but I will not at this time. The farmers in my district have asserted their distaste for it in no uncertain terms. There will be a reckoning on this question in 1940. Farmers and laborers are rightfully demanding protection against peop-produced imports from abroad. They are sick and tired of seeing the American market handed over to foreigners. They demand simple justice and they will get it—if not under this administration at least not too far in the future.

The American sugar industry is being sacrificed to the theory of free trade. Why should the sugar industry be penalized to take care of some national obligation we allegedly owe to Cuba and the Philippines? It simply does not stand to any degree of reason. Why not load the obligation on the steel industry or the automobile industry?

From what I can gather, the Department of Agriculture, particularly the sugar section, seems to operate on the theory that the domestic sugar industry is too expensive and that it is a burden on the American housewife. They attempt to support this theory with figures, but they say nothing about the protection that is being afforded the American housewife by keeping alive and encouraging the industry. They do not point out what it would cost us if we had to depend solely on foreign sources for our sugar supply.

The American housewife will never kick on paying 6, 7, or 10 cents a pound for sugar if the American husband has the 6, 7, or 10 cents to pay the bill.

There is one other phase of this situation that I would like to call attention to in conclusion. We are spending millions and millions of dollars in preparation for the defense of our people, our industries, and our form of government. If these expenditures are wise and necessary, then it must follow that we should at the same time promote further protection of the necessities of life, such as sugar, fats, and so forth. If there ever was a time when the American sugar industry should be protected, it seems to me that that time is at hand now.

Under the Sugar Act of 1937 Secretary Wallace has the right to establish marketing quotas for both the beet- and cane-sugar industry. As I understand it, this provision was placed in the act to establish orderly marketing.

Mr. Wallace has presented to both the cane- and beetsugar industry some tentative marketing quotas for 1939, and I have learned from reliable sources that if these quotas are made effective somewhat orderly marketing conditions may be established in 1939, but by 1940 the industry will be in chaos. If these quotas are made effective great hardships will be imposed on many companies by reason of having to carry their sugar over until a period when they are permitted to market it.

Mr. Roosevelt, Mr. Wallace, and Mr. Hull seem bent on ruining the American sugar industry. In view of this obvious fact I cannot, for the life of me, see why Congress has given over to these hands all their rights and duties in the control and regulation of this vital industry.

Mr. Speaker, the Ellender-Adams sugar-quota bill is a move in the right direction. Let us get this bill out of committee, where it now seems destined to die. Let us take back the responsibilities that belong to us and save American agriculture, and the domestic sugar industry, from being crucified on the cross of free trade and a misguided "good neighbor" policy. [Applause.]

United States in Peace or War?

EXTENSION OF REMARKS

HON. J. FRANCIS HARTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1939

Mr. HARTER of New York. Mr. Speaker and my colleagues, I am all too conscious of the domestic problems of our great country, but I cannot be too conscious of those domestic problems. I am all too conscious of what is transpiring in portions of the world outside of the Western Hemisphere, and I think to a degree, at least, I could well afford to be less conscious thereof with accompanying more consciousness of our domestic problems.

Who can help but be conscious of world goings on? We thought we were subjected to propaganda following the 1914 debacle, but today and many more days to come will make the nineteen and teens propaganda look like the work of an amateur. We are so modernized that, to screen and print we have added the perfected voice from the ether and who knows what day the screen will accompany that voice into our homes, as television is truly here.

Today let us vividly remember at least one wise warning given to us by the immortal Washington against habitual hatred or passionate attachment toward any particular nation or group of nations.

Today let us vividly recall the futility of war as known by those of us remembering the war to end all wars or the war to save the world for democracy.

Today let us vividly recall the awful suspense watching for the casualty list after the United States entered the World War in 1917. Let us vividly recall the list of "missing in action," those slaughtered in action, those maimed in action, and those shattered minds and bodies that are still with us or in the institutions of our land. Remembering these horrors, let us spread the gospel to keep our boys within the bounds of these great shores that none shall pass but all may visit as friends and we can insure against the blood-scaked bodies of our boys lying on any bloody international battlefield.

It is hard to keep aloof from international indecencies that make our blood boil. It is harder than ever to do, in face of the clever propaganda coming from all quarters. It is hard for the younger generation to see the horror of war, but easy to see pictured the beauty of the lithe body incased in a splendid new uniform, marching to marshal airs and to envision the glory and honor of being gallant in again fighting to end all wars. Let us look about us reflectively, however, and contemplate what was existent then and what is existent now.

We were in the midst of downward-plunging farm prices, low wages, desolate and idle factories, soup kitchens, hunger, and suffering in 1913, but 1914 brought the war and we thought prosperity—bought at the price of spilled human blood. The propagandists worked "overtime." First, our money went. It was easier for the propaganda after that, for we were told we had to save ourselves from being invaded and, incidentally, but not stated, save that money.

Through this period President Wilson was credited with keeping us out of war, but in April 1917 we entered the bloody fray which ended in 1918. That holocaust officially ended with the controversial Treaty of Versailles and our spoils of war were loss of manpower, money, and faith.

We started to reap in 1929 the crop that was sown from 1914 to 1918. No work, no income, surplus farm goods crying to be used, and relief, with all its horrible implications. I need not cite the present domestic condition, with millions crying for jobs, other millions begging for necessary food and clothing; idle factories; huge Federal, State, and municipal debts; loss of homes; loss of farms; and the multitudinous other experiences that are kept with us and still coming on us 10 years after we started to reap.

Do not be fooled by propaganda, young and old, either from within or without our country—war does not pay. A short time of seeming prosperity, but the ever-present whisper of "blood," "maimed bodies," and "death" always has and always will follow, and after that inevitable day of reckoming

and accompanying want, distress, and depression.

Bend your ears to what is being done to settle our knotted domestic troubles. Put the spotlight of publicity on those problems and throw the searching eye into every corner of all propaganda and activities which tend to move us toward the brink of another international war. Come, war veterans, with your wives, parents, and sisters, lead the clergy, the radio, and the press in overcoming this propaganda, and with reasonable national preparedness and bending our efforts to honestly put our own house in order, our boys will not go over there and those over there will not come over here.

These views are not original, but are developed from the many, many pleading letters received by me—not dictated from behind a desk, as a rule, but laboriously written in long-hand—praying that nothing be done to start us over the bloody brink and imploring that everything possible be done

to put us back to work.

We are an enlightened people and our fight is not on the gruesome battlefield, but on the battlefield of America's daily industrial, agricultural, home, and political life. Labor and business must fight shoulder to shoulder to bring forth, manufacture, transport, and merchandise our divers products, the while backing and being backed by the farmer in the field, in order for us to produce the wherewithal to balance our scales of "the American standard of living," while parenthood in the home knits and molds the America of tomorrow in our children of today, with all watching with unabated interest the accomplishments of those in charge of our instrumentalities of government to insure restoration of a solvent, potent, democratic government, minding America's business, however, moving sympathetically but independently among the other nations of the world. Eternal vigilance in battling on the battlefield of our domestic problems is the best antidote against another war involvement by us in any "over there."

It was the great Edmund Burke who said:

All persons possessing any portion of power ought to be strongly and awfully impressed with an idea that they act in trust.

You and I are possessed of a portion of power. You and I must act in trust, and first and above all act to restore and maintain the greatest, grandest, and only truly great democracy of the world—as much as we abhor indecencies prevailing elsewhere.

Americans—everywhere and everyone! Let us mend our fences, and it will be United States in peace!

The H. O. L. C. Was Intended To Be a Human Agency. Let Us Hasten to Make It Such

EXTENSION OF REMARKS

HON. EDWARD W. CURLEY

IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1939

LETTER TO HON. HENRY B. STEAGALL, OF ALABAMA

Mr. CURLEY. Mr. Speaker, under leave to extend my remarks in the RECORD I include a copy of my letter to the Honorable HENRY B. STEAGALL, chairman of the Committee on

Banking and Currency, in support of legislation to relieve [distressed home owners.

The letter is as follows:

APRIL 18, 1939.

Hon. Henry B. Steagall, Chairman, Committee on Banking and Currency,

Chairman, Committee on Banking and Currency,
House of Representatives, Washington, D.C.
My Dear Mr. Chairman: Due to illness I am precluded from
personally appearing before your committee today in the interest
of the pending legislation for the relief of our distressed home
owners. I will be grateful, therefore, if you will be kind enough
to have my views on the subject, herewith submitted, inserted in the hearings held before your committee.

Early in the last Congress I introduced H. R. 7132, for the relief of distressed home owners, and spoke over the radio in support thereof. Thereafter I received thousands of letters from all over the country citing the urgent need of such legislation and urging its enactment. Every letter was turned over to the H. O. L. C. for review and such action as was consistent with the law and regulations governing the H. O. L. C. Act. Thousands could not be aided under the legislation as enacted.

At the beginning of the present Congress I found that the situation was materially the same for, although Congress had appropriated \$3,100,000,000 and saved 1,018,000 homes, many, many, appropriated \$3,100,000,000 and saved 1,018,000 homes, many, many, through no fault of their own, caught in the quicksands of the depression, were unable to keep up their payments and were and still are in danger of foreclosure. Many have lost their homes. There are upward of 160,000 of such distressed home owners, since the law does not go far enough to reach those in the lowest strata of the distressed home owners. I, therefore, reintroduced my bill, H. R. 5019, in the present Congress.

It was foreign to the minds of Congress and the President to abandon this helpless class of home owners. Both branches of the

abandon this helpless class of home owners. Both branches of the Government, the executive and the legislative, meant financial relief for the complete rescue of all and not a part of the home owners. Neither did the President or the Congress intend that Uncle Sam should handcuff the weakest home owner with the cruel, legal devices commonly used by private mortgages—fore-closure, followed by the strait jacket of a deficiency judgment. Since this was not true, then the Home Loan Act should be amended to cover all home owners in dire distress. The act was intended to help those who, through no fault of their own, could not obtain employment and thus failed to meet their obligations. This is the plight of over 160,000 home owners, equal to half a

million persons.

These unfortunate victims would pay if they could. I hold no brief for the chiseler who can and will not pay, but the chiseler is the isolated case and that "worm" is found here and there in spots; but why blame all delinquent home owners for the slacker

element in this crisis?

The time has arrived to speak the language of the distressed home owner. This unfortunate group of American citizens is actually crying out to Congress to save them from economic destruction. The ambition and fond hope of these distressed home struction. The ambition and fond hope of these discressed nome owners to have and to hold a small home for themselves, their wives and children, prompts the prayer for the relief they ask. They see their savings of a lifetime, invested to protect the peace, happiness, and security of their families, vanishing in the loss of their homes. Their vision of prosperity, built up through years of hard labor, thrift, and self-sacrifice, seems about to disappear.

of hard labor, thrift, and self-sacrifice, seems about to disappear. The home owners are the backbone of our democratic form of government. We must not let them down. The H. O. L. C. did a marvelous job in rescuing but it did not go far enough in the rescuing operation, because the H. O. L. C. Act would not permit them to. While the H. O. L. C. saved over a million homes, there are still hundreds of thousands of distressed home owners who are delinquent in their payments to the H. O. L. C., the Government rescuing agent. This group is right back where they were when they sought relief from private mortgages. The H. O. L. C., under the present Home Loan Act, is compelled to carry out the same vicious, inhumane, legal practices as the private mortgagees did before the enactment of the Home Loan Act.

The H. O. L. C., under the present existing Home Loan Act, is

mortgagees did before the enactment of the Home Loan Act.

The H. O. L. C., under the present existing Home Loan Act, is not permitted to descend to the strata of the real distressed home owner; so, by a strange twist, we must now rescue the distressed group from the rescuer, the H. O. L. C. Since it is not a 100-percent rescuer, let us make it so by amending the act itself. The H. O. L. C. was intended to be a human agency. Let us hasten to make it such. Do not permit it to revert to the hard-boiled practices of the former private mortgagees.

It is a strange result at times when the operation of law intended to give relief in a trying situation affecting the public, goes into reverse and actually cuts off the head to stop the bleeding. Experience indicates that there are many laws like cobwebs, where the small flies get trapped and the large ones break through with ease. Witness the analogy as applied to the H. O. L. C. Act. It helped the more substantial of total number of home owners in distress but failed dismally in the lowest strata—the least substantial of the group.

If the Nation is handicapped by a temporary financial strait jacket that is no logical reason why the distressed group of home owners.

that is no logical reason why the distressed group of home owners should be singled out to be penalized. The sword of Damocles is hanging over their heads. What can the Government gain by foreclosing on these defaulted properties? Uncle Sam should not even think of deserting the weakest link in his economic structure. Uncle Sam saved the wealthy mortgagees, the banks, insurance

companies, etc. Why destroy the peace and happiness of this unfortunate group of our citizens, the undernourished children of the depression? Why ruin their morale forever by seizing their homes? If the relief sought cannot be granted under the existing law, it must be modified to liberalize its provisions.

My bill, if enacted into law, provides for the additional relief sought by the distressed home owners affected by the existing H. O. L. C. Act.

(1) It will give a breathing spell to this harassed group by an

(1) It will give a breathing spell to this harassed group by an extension of the moratorium feature.

(2) It will prohibit the enforcement of the vicious deficiency

judgment scarecrow.

(3) It will reduce the interest charge.(4) It will extend the amortization period.

It will be retroactive in effect and benefits.

(b) It will be retroactive in elect and benefits.

Until such time as industry absorbs the unemployed, the only remedy to solve the problem of the distressed home owner and bring joy and happiness to this very harassed and dejected group will be legislation of the type proposed in my bill—H. R. 5019.

It is the opinion of a widespread population in America that my bill is a constructive, meritorious bill and should be adopted. I sincerely hope it will be.

With best wishes.

Sincerely vours.

Sincerely yours,

EDWARD W. CURLEY.

T. V. A. Investigation

EXTENSION OF REMARKS

HON. RAYMOND S. SPRINGER OF INDIANA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 20, 1939

EDITORIAL FROM THE MUNCIE (IND.) EVENING PRESS

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Muncie (Ind.) Evening Press of April 18, 1939:

[From the Muncie (Ind.) Evening Press of April 18, 1939]

From the moment that the joint committee of Congress to investigate the Tennessee Valley Authority was appointed a year ago it was obvious that the new dealers proposed to apply a coating of whitewash to this socialistic undertaking. So thick did the Democrats on the committee apply the whitewash when they presented their report that the odor of lime was discernible from the Capitol to the White House.

In the first place, the New Deal did not want an investigation of the T. V. A. When former Chairman Arthur E. Morgan revealed some of the strange happenings in that agency early last year, Mr. Roosevelt undertook to silence his own appointee by going through the motions of giving him a trial in the White House office—an

the motions of giving him a trial in the white House oince—an unprecedented procedure—and then summarily dismissed him when he refused to cooperate in this little scheme a la Russe.

Then Senator H. Styles Bridges, Republican, of New Hampshire, called on Congress to investigate what was happening down in the Tennessee Valley—only when the American press complained that the whole business needed an investigation—did the new dealers in Congress budge. They agreed to the investigation, but took good care to see that a real investigation would not be made.

First, they kent Senator Bridges off the investigating committee

First, they kept Senator BRIDGES off the investigating committee. Usually the author of a resolution for an investigation, because of his interest in the matter, is named to such committees. Secondly, his interest in the matter, is named to such committees. Secondry, they placed on the committee a majority of ardent new dealers. Thirdly, this majority employed as its counsel in charge of the inquiry Francis Biddle, Philadelphia new dealer, who had demonstrated his dependability by previous chores he had performed for the Roosevelt administration. Since the end of the so-called T. V. A. investigation Mr. Biddle has been rewarded by an appointment to the Federal bench.

ment to the Federal bench.

Once the hearings on T. V. A. got under way it became clearer than ever that the proceedings would be farcical. For instance, T. V. A. officials issued orders that records were not to be made available to Dr. Morgan, the ousted chairman, and T. V. A. personnel were forbidden to discuss T. V. A. matters with him. Yet Dr. Morgan needed these records to testify. Mr. Biddle, who, instead of an investigating counsel, had become the T. V. A.'s defense lawyer, graciously said Dr. Morgan could talk with T. V. A. in his presence.

Let it be said for the whole committee that

Let it be said for the whole committee that such tactics, smacking of Soviet Russia, were too much for it. After this state of affairs was brought to its attention, the committee unanimously ruled that any T. V. A. employee could talk with Dr. Morgan without the presence of T. V. A. representatives or the committee

But the damage was done. Those on T. V. A. pay rolls knew that if they gave the slightest help to Dr. Morgan or the committee

in ascertaining the truth they would be marked men. Indeed, the record contains evidence that the assistant secretary of the T. V. A. record contains evidence that the assistant secretary of the T. V. A. was subjected to a sweating and grilling, along with one of his assistants, by T. V. A. lawyers on suspicion they had given information to Dr. Morgan. Subsequently the assistant secretary was purged from the T. V. A., despite a reputation for competence.

Nor was that all. Although the chief controversies over T. V. A. centered around its financial aspects, the majority of the committee

centered around its financial aspects, the majority of the committee refused to employ independent, trained accountants to assist it. Let it be noted that there never has been a completed independent audit of the affairs of T. V. A. Indeed, the newly appointed comptroller of T. V. A.—named after the investigating committee was created—said he was "somewhat appalled" when he first examined the accounts. He said it would take him 2 years to straighten the mess out. Heaven only knows what has been going in those accounts for 5 years.

Yet the majority of the committee did not think.

Yet the majority of the committee did not think it necessary to have trained auditors among its investigators. The Democrats would not even accept free help. When demands of the Republicans on the committee for trained accountants were refused, friends of Senator James J. Davis, one of the Republican members, employed M. C. Conick, a certified public accountant, to assist him and the minority. Every obstacle was placed in Mr. Conick's way, with the committee refusing to clothe him with the power of subpena.

Moreover, the majority shut off the hearings last December and refused to reopen them, although the Republicans on the committee demanded that approximately 50 material and important witnesses be called. For instance, although the relationship of the T. V. A. with the General Accounting Office was a major issue, the committee failed to call former Comptroller General J. R. McCarl. Nor did the majority even permit the consulting engineer to the com-mittee to appear to explain a report he had submitted and to be cross-examined regarding it. His report was kept secret until after his death.

As Canada Sees Us

EXTENSION OF REMARKS

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES Thursday, April 20, 1939

ARTICLE FROM THE TORONTO GLOBE AND EMPIRE

Mr. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD I desire to insert some observations recently made on New Deal spending by the Toronto Globe and Empire, which appeared in the Minneapolis Journal under the capition "As Canada Sees Us." The article follows:

AS CANADA SEES US

[From the Toronto Globe and Empire]

It has been the most colossal spendthrift in history and without results; it has welshed upon its platform promises of retrenchment; it is squandering the money of the people in partisan propaganda; it has elevated many a political accident to high office, including the Supreme Court; it has badgered and impeded business, big and the Supreme Court; it has badgered and impeded business, big and small; it has held up to public ridicule and hate the producers of material wealth—for party purposes; it has built up power by exploitation of the misery of 13,000,000 of unemployed and has accomplished nothing for the latter after 5 years of glib promises and expenditures of \$20,000,000,000; it has sapped the morals of the people by inculcating the idea that the Government owes everyone a living; it has adopted the policy of scarcity, paying farmers for that which they did not raise, and at the same time spent billions to increase productivity of the soil; it has murdered hundreds of thousands of pigs while human millions cried for sustenance; it has encouraged class hatred by abuse from high places; it has set capital encouraged class hatred by abuse from high places; it has set capital against labor and labor against capital; it has tacitly sanctioned mob expropriation of property and it has abridged personal freedom guaranteed by the Constitution.

we are tired to death of pink communism, and sick at heart that a great nation, leading the world in initiative and individualism, should have been brought perilously close to its knees by a pied piper of the air fatuously fluting in ragtime.

Its whole mistaken popularity has been based upon the sob appeal that a third of the Nation is ill-fed, ill-clothed, and ill-housed, and the collateral idea that the national sock is everlastingly stuffed full. No decent man, here or elsewhere, begrudges one penny paid out for the aid and support of those really in want, but the New Deal has squandered billions in deliberate, drunkensailor prodigality and concealment of facts and intent. sailor prodigality and concealment of facts and intent.

We believe the richest country the world has known is headed for New Deal catastrophe if a halt be not called at once; that its people, and there are none finer, are being brought down to shameful misery by the most colossal stupidity that political insanity has devised for its own self-perpetuating ends.

Invasion of Mormon Crickets in Oregon

EXTENSION OF REMARKS

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Thursday, April 20, 1939

ARTICLE FROM THE PORTLAND OREGONIAN

Mr. ANGELL. Mr. Speaker, it will be recalled that when we had under consideration the agricultural bill an appropriation was requested for the control and extermination of grasshoppers, Mormon crickets, and other similar pests. Many of my colleagues are not familiar with the devastation and havoc wrought by these pests.

Recently in my own State of Oregon we have had an invasion of the Mormon crickets. An article appeared in the Portland Oregonian of April 16, 1939, which described in some detail and so accurately the immense damage wrought by these pests that I desire to call it to your attention. The article is as follows:

[From the Portland Oregonian of April 16, 1939]

HOPPERS SWEEP WARM SPRINGS-RESERVATION CALLS FOR AID AS MOR-MON HORDE MOWS ALL IN ITS PATH-MILD WINTER BLAMED FOR REBIRTH OF SCOURGE

(By Herbert Lundy)

A crawling, reeking, countless army of Mormon crickets marched Saturday in a relentless, devastating invasion of the Warm Springs Indian Reservation.

The black, voracious horde of oversize grasshoppers appeared for the first time in history on the reservation last spring, coming on their powerful, wingless bodies from none knew where.

WINTER TOO MILD

WINTER TOO MILD

Indians and whites who live on the reservation fought them as best they could. Government officials promised to spray the eggs in the fall, but reportedly decided not to do so on the theory that a cold winter would kill them. The winter was mild.

Two weeks ago tiny marching 'hoppers swarmed out of the grass and brush and headed for the green alfalfa, garden patches, and fruit trees which dot the valleys of the Deschutes and Warm Springs Rivers. As they advanced they grew in size. Each 'hopper is about an inch long now. Before his destructive life span is ended he will be about 3 inches long.

CALLS SENT FOR HELP

CALLS SENT FOR HELP

Dr. and Mrs. F. B. Friedland, who operate the Hot Springs Sanitarium on 160 acres of deeded land along the Warm Springs River, and A. H. York, of Portland, who owns an acre of alfalfa, fruit, and garden surrounding a house at the springs, sent out calls for aid Saturday.

The starving legions have swept over the sage hills and green valleys of an area at least 50 square miles, said York. They have not crossed the Deschutes to the east shore yet, but they extend from North Junction on the Indian side to a point halfway between the springs and the Warm Springs Agency.

BODIES LITTER ROAD

The road is covered with their tire-crushed, slippery bodies to a point midway between the hot springs and Semnasho, York said.

Dr. Friedland, like Horatio, but without his success, stood on the wooden bridge spanning the Warm Springs River with a portable blower spraying gasoline on the crickets as the horde marched across toward his fertile fields.

The bodies of millions of the hoppers piled up to a depth of several feet, and those that marched behind, pausing for the feast of cannibals, yet came on so fast that they swept over and around

STENCH ROUTS PATIENTS

They moved alfalfa with terrible efficiency, covered houses and buildings completely, clogged the springs' outlet, drove 10 patients from the sanitarium with the stench and repulsiveness invasion, York reported. of the

Dr. Friedland appealed, without success, to agency headquarters for more blowers, and put in an appeal to the C. C. C., which fought last year's invasion. York telephoned Gov. Charles A. Sprague

Thousands of head of Indian cattle are threatened with loss of forage by the Mormon crickets. "Indian leaders," said York, "are alarmed at the threat to their livelihood."

Harry H. Stage, associate entomologist, said that control of the vicious insects was not under his department, but was the charge of L. P. Rockwood, entomologist in charge of forage-crop insects. Mr. Rockwood, who lives at Forest Grove, said that he was unable to handle the matter because it was under the direction of "a man with the Oregon State College entomology department.'

Are We Deserting Our Railroads?

EXTENSION OF REMARKS

HON, GEORGE H. BENDER OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, April 20, 1939

Mr. BENDER. Mr. Speaker, the Seventy-fifth Congress of the United States was urged to take action on behalf of America's railroads by a host of responsible railroad officers. They pointed out in terms of dollars and cents the inescapable conclusion that our railroads are rapidly reaching an impossible financial situation. Expressed in its simplest terms, railroad revenues have decreased tremendously while railroad expenses have been maintained at the same high level which they have occupied for many years. Competition from trucks and interstate busses has made the transportation problem increasingly acute as traffic is constantly

diverted from the rails to public highways.

For at least a decade the public has been flooded with a host of misleading arguments whose theme has been the assertion that the railroads have only themselves to blame for their sad predicament. Our reading public has been told that the railroads are vastly overcapitalized with watered stock: that their fixed charges are far too high; that they are unworthy of public assistance, and need not compel any anxiety for their future. Every one of these assertions has been completely refuted by the facts. To those who have taken the time and trouble to examine the statistics it is obvious that our railroads have long since squeezed out the "water" which was poured into their original capitalization system. Whatever the evil may have been in the infancy of railroad finance, it has been completely eliminated in recent years. Nor is there any basis today for the accusation that the railroads are paying outrageously high fixed costs which could be decreased by new financing ventures. Economists have long known that the ratio of fixed charges on rail debts to their capital structure is equitable and proportionate to the usual charges in our other industries.

Like so many other problems which confront the Nation, our railroad difficulties will not be easily solved. They may not, for this reason, be simply dismissed. The destruction of our railroad transportation has far too many implications to be lightly ignored. Billions of dollars of investment in land, rolling stock, and equipment are involved. Pay rolls mounting into the highest brackets of our national economy are affected. Investors whose life earnings and security for old age are tied up in the future of our railroads have the right to call upon the Nation's leaders to protect their confidence

in the destiny of one of our greatest industries.

For over 70 years the National Government, through the agency of the Interstate Commerce Commission, has been exercising jurisdiction over the railroads of America. Their financial activities, their labor policies, their rate structure have been subject to the scrutiny of railroad experts. If the railroads are perilously close to bankruptcy today, their plight is in no small measure an indictment of the supervisory machinery of the Federal Government. Under these circumstances, it is cowardice to throw in the sponge and turn the railroads over to the mercy of fate. We are so much to blame ourselves for what has happened that we must not point the finger of scorn and assume the easy role of the mocker.

There are those who argue for governmental ownership of the Nation's rails. Seemingly, they believe that the reward for inept supervision should be outright ownership, a principle difficult to follow. But there are other proposals, less drastic, which have been advanced. One thing seems certain in the midst of this confusion. There is a definite need for a thorough study of the problem of the railroads. We must know more of the facts concerning the diversion of traffic by other modes of transportation, and the reasons for this growing competition. We must properly evaluate the subsidy which is unconsciously given to private trucking interests through

the use of publicly built and publicly maintained highway networks connecting every corner of the Nation.

Not one of these considerations will result in a clear-cut program which will restore prosperity at one stroke. But the study must be undertaken quickly if the Nation is to fulfill its obligation to the millions of American citizens who depend for their incomes upon the success of our great railroad

War Propaganda

EXTENSION OF REMARKS

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Thursday, April 20, 1939

EDITORIAL FROM THE GAELIC AMERICAN

Mr. SWEENEY. Mr. Speaker, the recent order directing our fleet to take its position in the Pacific Ocean has given rise to the usual propaganda that our interests in the Atlantic are well protected by the English and French Fleets. The hysterical propaganda which we experienced from 1914 to the end of the World War is again being spread throughout the land. And we are again told that the United States is in danger of an invasion by some potential enemy.

The following editorial, recently published by the Gaelic American, of New York City, includes an excerpt from the speech made by the great liberator, Abraham Lincoln, on the subject of a prospective invasion of the United States. I submit this editorial in its entirety, in the hope it will allay the fears of the unsophisticated portion of our people who are not

familiar with organized propaganda.

[From the Gaelic American, New York, April 8, 1939] IS UNITED STATES FREEDOM DEPENDENT ON ENGLISH NAVY?

The odd statement that England and France are our protection against invasion by some European or Asiatic Colossus is frequently being repeated at present in special articles and letters in the American press. The same bugaboo was used to intimidate the American people from 1914 until the United States was jockeyed into the World War. "If you don't fight the Germans in Europe, you will have to fight them on American territory" was often heard and read in the nearly 3 years that elapsed before we entered the World War. Most of the alarmists were alien propagandists with a sprinkling of native fools or knaves. How Germany could cross the Atlantic and invade America at a time when she was fighting for her very existence was not explained and those who made the statements studi-ously avoided giving details. This propaganda with little or no change is being again revamped in letters and foreign dispatches to the American press. So far no explanation of how the invasion of America is to be carried out has not been made public. The American who would believe such a fairy tale cannot be envied for his patriotism or intelligence. America could not be conquered by all the nations of the globe combined in the impossible event of their uniting for such a purpose

America is unconquerable while the people respect their own ideals and institutions.

What did Abraham Lincoln say on a prospective invasion of the United States? Speaking at Springfield, Ill., on January 27, 1837,

United States? Speaking at Speaking at Speaking and Speaking at Speaking and Speaking and Speaking and crush us at a blow? Never! All the armies of Europe, Asia, and Africa combined, with all the treasure of the earth (our own excepted) in their military chest, with a Bonaparte for a commander, could not by force take a drink from the Ohio or make a track on the Blue Ridge in a trial of a thousand years."

At the time that Lincoln delivered his speech on a prospective invasion of America the population was less than 15,000,000.

At the time that Lincoln delivered his speech on a prospective invasion of America the population was less than 15,000,000. The propagandist may argue that space and time have been practically eliminated by the telegraph, radio, fast ships, and airplanes, and that conditions are different today from those that prevailed in Lincoln's time. In invention, however, America has led the way, and the airplane as well as the telegraph had their origin in our country, and we continue in all new discoveries and devices, commercial and military, to keep abreast of the times. Today we have a population of 130,000,000, and in a military contest we could defy a world combination.

we could defy a world combination.

The thrilling words of the Great Emancipator should be memorized by those who consider that our continued independence is largely dependent on the English Navy. Those weaklings, victims of English propaganda, are unworthy citizens, without patriotism, understanding, or pride in their great heritage.

APPENDIX TO THE CONGRESSIONAL RECORD

Neutrality or War Trade

EXTENSION OF REMARKS

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Thursday, April 20, 1939

RADIO ADDRESS BY HON. BERNARD J. GEHRMANN, OF WISCONSIN

Mr. GEHRMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I recently delivered over the radio:

Ladies and gentlemen of the radio audience, can we keep our country out of war? This is a question of the most vital importance to us all. Well do we remember the fateful days of over 20 years ago. Under a wave of emotionalism and hysterics, over 20 years ago. Under a wave of emotionalism and hysterics, fanned to a white heat by a most adroit propaganda, we embarked upon a crusade to make the world safe for democracy and to fight a war to end all wars. After the armed conflict was over and the facts gradually leaked out, we found that the major propelling force which drew us into that war was to protect our foreign investments and to protect and expand our commerce. This is put-ting it bluntly. But the facts are that our commercial and foreign

ting it bluntly. But the facts are that our commercial and foreign policy gradually but inevitably drew us into the world conflict.

Twenty-two years have passed, and the world is again thinking of war. Nations are preparing for war. Never in all human history has the armament race been carried on on such a gigantic scale as today. All the loss of the millions of young men, and all the destruction of billions of dollars of property, have seemed. all the destruction of billions of dollars of property, have seemingly been for naught. Wars have not ceased, nor are democracles secure. All this supreme sacrifice has been in vain. Instead, in its wake we have the most unprecedented world depression with its suffering and despair. Friendly trade relations have almost been destroyed. Fear has driven nations to intense nationalism. Huge national debts are breaking the backs of the people, and the heels of the dictators are crushing out the last vestige of human rights and liberty. The sum total of that supreme effort has been bets fear less degrain choose hate, fear, loss, despair, chaos.

The present evils and national differences cannot be corrected

by force. If that were attempted, it would result only in another carnage. Only justice based on due respect for mutual rights can heal the wounds of a bleeding and sick world. Then, if more war is not an antidote against future wars, what are we going to do about it?

Let us be realists and look the situation square in the face.

Let us be realists and look the situation square in the face.

Everyone is for peace. At least everyone says so. And most Americans will tell you with great emphasis that they don't want this country to get mixed up in another European war.

But what we want and what we get are sometimes two different things. And generally the thing that determines is how much we are willing to give and to do to get the thing we want.

No great good has ever come into the world and no great evil has ever been kent out of it without a corresponding price reid to

has ever been kept out of it without a corresponding price paid to accomplish that. America will not stay out of war, nor make her contribution to world peace, unless she makes up her mind now to pay the price that will be necessary.

Basically, we have got to decide whether we will choose peace or profits when the pinch comes.

If we adopt a policy of allowing war trade to go on by selling arms and war materials, we would start straight down the road that led to the World War. Our munition factories would be enlarged to meet the war demand. When cash gave out, we would have to extend loans or close our factories, and we would have to help those who have been buying arms from us to win the war. In this connection, the following forwer ore introcepting.

war. In this connection, the following figures are interesting:

Our trade with the Allies up to the time we entered the war
amounted to \$7,000,000,000. The World War has cost us up to
date over \$50,000,000,000.

Here is another way of looking at the question of war profits. In the last war the United States sent 2,000,000 men to France. The pay for the period they were there was about \$1,100,000,000.

This is the sum which one corporation—United States Steel—
made in clear profits, over and above all taxes in 1915—18.

While soldiers fought in trenches for \$1 a day, Eugene G. Grace,

president of Bethlehem Steel, for the single year 1918, collected

a bonus of \$1,386,193.

While 10,000,000 men lost their lives, the du Pont Co. paid While 10,000,000 men lost their lives, the du Pont Co. paid dividends on its common stock of 100 percent in 1916; 51 percent in 1917; 26 percent in 1918; and still had \$50,000,000 to put into a new dye industry; \$47,000,000 to buy 25 percent stock ownership of General Motors; acquired partial or entire control of 26 other corporations, which today gives the du Pont interests their immense industrial power, amounting to approximately \$202,000,000. While 5,000,000 women were being left widows, profits in munitions companies ranged from 22 to 943 percent.

While \$208,000,000,000 were being spent on the war, profits in 1917 in a few of the munitions and supplies companies ranged as

Pe	Percent		
Nagel Steel Co	319		
Utah Copper Co	_ 200		
Calumet & Hecla	_ 800		
Bethlehem Loading Co	_ 362		
Did the second of the second o			

Did it pay to choose profits from munitions sale instead of staying out of the bloody conflict?

Knowing perfectly well that the American people want to do what is right, those who would have us take part in another foreign war are talking a great deal about our duty to be ready to fight for peace.

Just ponder for a moment the wisdom of these words of Senator Norris in connection with this duty of ours to take part in

another world war:

another world war:

"It seems to me that, if we had stayed out of the World War, we in America would have been able to step in at a time when the warring nations were completely worn out, when there was no victory in sight for either side, and help to make a peace which would have been an honorable one instead of the dishonorable peace which was made by the Treaty of Versailles."

And note what President Wilson himself told Frank Cobb the night before he asked Congress to put us into the World War.

And note what President Wilson himself told Frank Cobb the night before he asked Congress to put us into the World War:

"It means that we will lose our heads along with the rest and stop weighing right and wrong. * * It means an attempt to reconstruct a peacetime civilization with war standards, and at the end of the war there will be no bystanders with sufficient power to influence the terms. There won't be any peace standards left to work with. There will be only war standards."

The whole question of peace or war for America is being thrashed out now in Congress in connection with the proposed changes in our neutrality law. There are just two fundamental questions to be settled in this debate, which will probably go on for weeks. The first is, Is one man, the President, to have the power to put this country into a foreign war by helping one side against the other? and the second is, Are we to repeat the same policies which led us into the World War?

The American people must make their choice about profits or

other? and the second is, are we to repeat the same poincies which led us into the World War?

The American people must make their choice about profits or peace. They should make their choice known to their Representatives in Congress. This is a choice which will vitally affect all of our people. Let there be no delay in the people's decision. If there is prompt action by the people, there will be prompt action by Congress. Let that action be for peace instead of profits.

There is one other important phase of the war and peace question which I would like to call to your attention in closing. That is the question of who shall have the power to decide on peace or war when we are not attacked. Many of those listening tonight know that there have been introduced in this Congress various proposals to give the people the right to make the war or peace decision by means of a Nation-wide referendum when the Western Hemisphere is not attacked. These resolutions have been introduced in both the Senate and the House. They say that we shall not engage in a foreign war unless the people give their consent.

This legislation, I believe, is a protection which should be given to the people who, in the final analysis, pay the bills in blood and taxes.

I want to read to you an editorial which has just reached my desk. It is from the Farmers Equity Union News of Wisconsin, my home State. Speaking of this question of a vote on foreign

my nome state. Speaking of this question of a vote on foreign wars, this paper says:

"Isn't it fair for the mothers and fathers of this Nation to determine whether or not they wish to furnish their sons and daughters to be fed to the cannons and machine guns for some supposed to be approximately as a contract of the cannons." supposed to be enemy—an enemy primarily created by war lords, composed of financiers, steel corporations, munitions makers, and individuals seeking power of some nation's leadership?

individuals seeking power of some nation's leadership?

"In a true democracy a vote of the people on foreign wars (except in case of attack) is the honest way to decide the issue.

"But while we are discussing this subject, and it is a timely topic in national affairs, why not conscript all war industry, materials, and finance, and take the profit out of it? Then follow this up by prohibiting any person or relative of a stockholder in the war industry from holding a rank in the Army or Navy above a private, and make it mandatory that they be in the first draft and in the front-line trenches? I believe in letting those who want to fight do the fighting, and let the rest of us do the directing or be the officers. This would take a little starch out of their spine and maybe they would, and could, figure some way of keeping us out of trouble. us out of trouble.

"It's easy to run a roughhouse or get into trouble if you have a good bouncer to do the battering for you."

I believe that Congress will not only think it over but act as soon as you and your fellow Americans make your desires known to your Representatives.

Let us stay out of foreign conflicts. Let us choose neutrality in place of profits. Let us all work to give the people the right to vote on foreign wars. These, I believe, are the things we have to do to stay out of war.

But this is not enough. We must be ready and willing to help the world and our own people achieve the economic security which is the bedrock of a peaceful world. Our contribution as a Nation should be first to put our house in order and give to the world an example of democracy that is working for all.

The Meat Products Under the Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1939

Mr. REED of New York. Mr. Speaker, one of the most important farm crops grown in this country is corn. The major portion of this crop is marketed by the farmer in the form of livestock, and for years this country has been an important exporter of meat products. Therefore any changes in our foreign trade of meat products is of special importance to the welfare of a large part of our farm population.

Naturally meat products have been given special consideration by the State Department in negotiation of trade agreements. Eleven of the twenty agreements in effect have made concessions to this country. It is reasonable to expect that if these concessions are of real value, our exports of meat products would have increased in 1936 and 1937 to the countries which lowered their trade barriers. However, exports to these countries fell 33.2 percent between 1935 and 1937. The Roosevelt administration claims this decrease is due to the droughts and that the concessions are of real value; but exports to all other countries fell but 18.8 percent between 1935 and 1937.

The concessions that have been received on meat products have not even arrested the downward trend in the volume of meat exports. We find that concession countries have been buying a smaller amount of meat products from this country each year since 1929 except in 1933 when they were slightly more than 1932. Purchases of our meat products by countries from which we have received no concessions increased from 1932 to 1934, but from 1934 through 1937, the period in which the Roosevelt farm program has been in effect, they have again been buying less each year. Thus, we find concession countries' purchases have decreased by 33.2 percent from 1935 to 1937, while countries which made no special concessions decreased but 18.2 percent during the same period. Further, our exports to concession countries are but 15.7 percent of the 1929 level, while to other countries they are 30.2 percent of the 1929 level, or nearly twice as high relatively.

But exports do not tell the entire story, because while Secretary of State Hull has been lowering tariffs, Secretary of Agriculture Wallace has been restricting production of agricultural commodities in this country and doing all in his power to raise domestic prices of farm products above the

Figures from the Bureau of Foreign and Domestic Commerce make it evident that these policies have disrupted the normal flow of goods. They indicate a decrease in both exports and imports between 1929 and 1932, the decrease in imports being much more marked than exports. From 1932 to 1934 both exports and imports increased with larger export balances each year. In 1935 exports decreased while imports increased by 75.9 percent. This was due in part to the drought, but in a much larger measure to the pricepegging and crop-restricting policies of the Roosevelt administration. Since 1935, exports have decreased each year and imports have increased, until in 1937 this country imported 68,277,000 pounds of meat products more than we exported. This condition is true in spite of the fact that the Roosevelt administration has obtained concessions on meat products from 11 countries and has not made any concessions on these commodities.

The United States' foreign trade in meat products is further evidence of the contrary foreign and domestic policies of the New Deal. How can a domestic policy of increasing costs of production and prices with a foreign-trade policy of lower tariffs help anyone but the foreign producer?

Puerto Rican Industrial Soldiers

EXTENSION OF REMARKS

HON, SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1939

Mr. IGLESIAS. Mr. Speaker, I have requested the unanimous consent of the House, and it was granted, to print in the RECORD a resolution from the House of Representatives of Puerto Rico, and also letters received by me from the Secretary of Labor, the Secretary of War, and from Dr. Gruening, of the Department of the Interior, dealing with the same subject matter contained in the many petitions sent by the representatives of the so-called Puerto Rican Industrial Soldiers to the officials mentioned.

The resolution and letters are as follows:

House of Representatives of Puerto Rico, San Juan, Puerto Rico, April 12, 1939.

Hon. SANTIAGO IGLESIAS,

Puerto Rican Resident Commissioner, Congress of the United States of America,

Washington, D. C. SIR: For the information of Your Honor I take pleasure in enclosing herewith both an English and Spanish copy of House Concurrent Resolution No. 1, of the Third Session of the Fourteenth Legislature of Puerto Rico, entitled "Concurrent resolution to petition the Congress of the United States and competent auto petition the Congress of the United States and competent authorities to promote legislation appropriating reasonable compensation for the Puerto Rican laborers who rendered services at various places in the United States in the year 1918 in war industries."

Duly signed by the speaker of the House of Representatives of Puerto Rico and the president of the Senate of Puerto Rico, and certified by the secretary of the House of Representatives of Puerto Rico.

Puerto Rico.

Respectfully,

ANTONIO ARROJO,
Secretary, House of Representatives of Puerto Rico.

Government of Puerto Rico,
Bureau of Translations,
San Juan, P. R., April 6, 1939.

George W. Roberts, chief of the bureau of translations of the
Legislature of Puerto Rico, hereby certifies to the Governor of
Puerto Rico; and Luis A. Deliz, assistant chief of the said bureau,
certifies to the president of the Senate and the speaker of the
House of Representatives of Puerto Rico, that each of them has
duly compared the English and Spanish texts of a certain act
(H. C. R. 1) of the Third Session of the Fourteenth Legislature of
Puerto Rico entitled "Concurrent resolution to petition the Congress of the United States and competent authorities to promote
legislation appropriating reasonable compensation for the Puerto
Rican laborers who rendered services at various places in the
United States in the year 1918, in war industries," and finds that
the same are full, true, and correct versions of each other.

George W. Roberts,
Chief, Bureau of Translations.

Chief, Bureau of Translations.

Luis A. Deliz, Assistant Chief, Bureau of Translations.

Concurrent resolution to petition the Congress of the United States and competent authorities to promote legislation appropriating reasonable compensation for the Puerto Rican laborers who rendered services at various places in the United States in the year 1918, in war industries

Whereas in 1918 expeditions of Puerto Rican laborers were organized which went to various places in the United States to

ganized which went to various places in the United States to engage in war industries;
Whereas these expeditionary laborers cooperated with the American Government at a time when it was involved in the World War;
Whereas the Government of the United States has rendered assistance to the soldiers who went to the battlefield, and to their

Whereas these manual laborers and intellectuals have not been compensated for the disinterested services rendered by them: Now

Resolved by the house of representatives (the Senate of Puerto Rico concurring).

Rico concurring):

First. To petition the Congress of the United States and competent authorities to promote adequate legislation for reasonable compensation to the expeditionary laborers who went to various places in the United States in 1918 to engage in war industries.

Second. To petition likewise that such legislation be made extensive to their needy families.

Third. That a copy of this resolution be sent to the presiding officers of the two Houses which form the *Congress of the United

States, to the President of the United States, to the Resident Commissioner for Puerto Rico in Washington, and to the Governor of Puerto Rico.

MIGUEL A. GARCIA MENDEZ, Speaker, House of Representatives. NOLUARA PAGÁN, President of the Senate.

DEPARTMENT OF LABOR, OFFICE OF THE SECRETARY, Washington, February 14, 1939.

Hon. Santiago Iglesias,
Resident Commissioner for Puerto Rico,

House of Representatives, Washington, D. C.
DEAR COMMISSIONER IGLESIAS: This Department has received numerous communications from residents of Puerto Rico requesting a bonus for civilian service rendered in the construction of Army camps during the World War. In that connection you were kind enough to send me, on January 16, 1939, copies of bills proposing to grant bonuses to civilian employees engaged in the construction of the Panama Canal, together with your suggestion that similar action might be taken with respect to the above-mentioned workers in Puerto Rico.

I am informed that during the World War a number of Puerto Ricans were transported to the States for work in the construction of Army camps; that they were compensated for their labors at the prevailing rate of wages; and that upon the completion of their efforts, they were afforded transportation home. Many of these persons through an unfortunate succession of intervening events have been reduced to dire poverty and they now seek relief in the form of a civilian veterans' bonus.

in the form of a civilian veterans' bonus.

It does not appear that the present claim of these workers is for compensation in accordance with their former employment contract or is in any way concerned with an existing employer-employee relationship. Consequently I do not believe that this is a matter upon which the Department of Labor is qualified to render any particular service. As a matter of public relief or social recognition of wartime services, the proposal of a bonus for the Puerto Ricans engaged in Army camp work falls more properly within the jurisdiction of the Bureau of Insular Affairs of the Department of Interior or of the Department of War. I suggest therefore that this proposal be submitted to those suggest, therefore, that this proposal be submitted to those agencies

Sincerely,

FRANCES E. PERKINS.

FEBRUARY 20, 1939. Hon. SANTIAGO IGLESIAS,

Hon. Santiago Iglesias,

House of Representatives.

Dear Commissioner Iglesias: I have your letter of the 15th instant enclosing copies of correspondence with the Secretary of Labor and copies of bills H. R. 980 and H. R. 1674, with the suggestion that action similar to that proposed in the bills referred to be taken with respect to residents of Puerto Rico who performed civilian service in the construction of Army camps during the World War. the World War.

To avoid any possible embarrassment in the relations between the War Department and committees of Congress, it is a long-standing rule of the Department not to express an opinion on proposed legislation until called upon for a report by the appropriate committee. Therefore I am constrained to refrain at this time from stating the views of the Department as to the merits of a bill such as you propose. I assure you however that should of a bill such as you propose. I assure you, however, that should such a bill be referred to the Department for report thereon by a House committee, it will receive careful consideration.

I am sure that you will appreciate the position of the War Department in this respect.

Sincerely yours, HARRY H. WOODEING

HARRY H. WOODRING, Secretary of War.

United States Department of the Interior, Division of Territories and Island Possessions, Washington, February 23, 1939.

Hon. SANTIAGO IGLESIAS,

Resident Commissioner for Puerto Rico,

Resident Commissioner for Puerto Rico,

House of Representatives, Washington, D. C.

MY DEAR MR. IGLESIAS: I have your letter of February 15. If a bill providing for a bonus or annuity for the Puerto Rican laborers who worked in Army camps here during the World War should be introduced in Congress, the appropriate committee chairman would doubtless call upon this Department for a report. At that time the question would be studied by the Solicitor and a recommendation made.

Sincerely yours,

ERNEST GRUENING, Director.

APPEAL SENT TO THE PRESIDENT

The substance of the petitions is contained in the following appeal sent to the President and which is being presented here.

[Comite pro-expedicionadios, Puerto Rican Industrial Soldiers, New York Committee, 170 East One Hundred and Tenth Street, New York City]

To the Honorable President and Congress of the United States: During the hectic days of the Great War, 1917-18, this country was forced to declare war on the German Empire.

All forces—moral, spiritual, and material—were mobilized for one sole purpose: Win that war and save democracy and liberty everlastingly for humanity.

Soldiers were enlisted throughout the land and her possessions

and rushed to France and other strategic places like the Panama

Canal

Puerto Rico did her bit in that great struggle.
Proud were the natives to fight for justice under the Stars and
Stripes, proud to buy Liberty bonds, proud to suffer shoulder to
shoulder the sacrifices and tribulations with their brothers in the United States.

With the enlistment of men from 21 to 45 years came the scarcity of laborers to work at home in manufacture of explosives, medical and food articles so that the soldiers might fight and be properly

cared for.

To provide that labor the United States Government appealed to the people of Puerto Rico, ever industrious, honest, and the one of her possessions that had easily assimilated in a short time the democratic ideals and institutions that are the backbone upon which this great country has rested, lived, and progressed since they untied thethershifted bonds from Progressed. their political bonds from England.

their political bonds from England.

The War Department, with the assistance of the Department of Labor at Washington and the cooperation of the department of labor in Puerto Rico, established an employment service for the purpose of enlisting the service of boys under the age of 21 and men past 45 to work for the Government for 6 months under the care of the Department of War and with the agreement that they be enlisted immediately in the Army any place they might be and if conditions deemed it necessary.

Over 15,000 Puerto Ricans answered that call with gladness in

conditions deemed it necessary.

Over 15,000 Puerto Ricans answered that call with gladness in their hearts, proud to help the country that ruled their destinies.

U. S. transports City of Savannah, Hancock, and Kilpatrick brought to these shores this industrial and patriotic legion and scattered and placed them to work at munition plants and under Government supervision, guarded by the National Guards of these different States and by strict military discipline.

Sickness ran afoul. Influenza spread to this camp. Dysentery played havoc on the undernourished bodies of these people with such a cruel strength that the mortality rate in such places was surprisingly high.

surprisingly high.

The armistice came as a benediction to the Puerto Rican industrial soldiers.

Men were not given jobs promised them according to their trade and knowledge. Teachers, clerks, accountants, mechanics, carpenters were told and compelled to dig holes, tear down trees, poorly, improperly cared for, and not paid the salary promised and previously expected at and previously agreed at.

Sick men that died aboard these military transports on their trip

Sick men that died aboard these military transports on their trip back to Puerto Rico were buried with the same services given any American soldier and conducted by a military chaplain.

Their relatives never got a penny for their loved ones.

We worked under the most deplorable conditions. We were not treated as American citizens should be treated; men received pay envelopes with nary a single penny for their work, made their complaints to our Resident Commissioner at Washington, D. C., and the Federal Government established an office at San Juan, P. R.

No satisfaction was given, and the articles and money lost were never returned. Wives still feel the loss of their husbands and their sons in the prime of their youth and in whom laid all their

their sons in the prime of their yours and in wholes.

We demand that justice be done to the Puerto Rican industrial soldiers and a compensation be given in the form of a bonus to those affected by said expedition.

By this memorandum we are reminding that good faith and liberal spirit in consenting to give our just claims the attention and satisfactory approval we are entitled to, according to the circumstances: "With justice for all and malice toward none."

VUENTI SANTOS.

VUENTI SANTOS.

The Money Question

EXTENSION OF REMARKS

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, April 20, 1939

EDITORIAL FROM THE NEW YORK TIMES

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of April 20, 1939:

[From the New York Times of April 20, 1939]

POWER OVER MONEY

The report of the Republican House committee on the money question is, on the whole, an excellent example of what an intelligent opposition should do. It is no merely partisan document but, with minor exceptions, a series of sound and well-considered

ecommendations that clearly ought to be adopted. The Repub-

lican report recommends:

1. That the power of the President to determine the gold con-1. That the power of the President to determine the gold content of the dollar, due to expire on June 30, should not be extended. In spite of the fact that a persuasive case may be made for continuing this power, its expiration seems desirable. As long as the President has this power there will be intermittent rumors and guesses regarding what use he will make of it. If we allow the President's discretionary power to lapse we will remove from the present economic situation a major source of continued uncertainty. Even if there is substance in the argument that the value of the dollar may again have to be changed for whatever reason. tainty. Even if there is substance in the argument that the value of the dollar may again have to be changed, for whatever reason, it may still be pointed out that the power to change it should not rest with one man but with Congress. If this is not properly a function that Congress should retain for itself, it would be difficult to think of one that is.

That a joint congressional committee be named to study the whole monetary question and recommend revision. Such a study could surely do no harm.

3. That the Silver Purchase Act of 1934 should be repealed. This repeal is eminently desirable. The act, forcing us to buy from foreign countries at artificial prices of our own making huge quantities of silver for which we have no need, is an expensive and fantastic piece of legislation. As the Republican report points out, if we wish merely to subsidize the domestic silver industry, we can do it directly without also subsidizing foreign producers

we can do it directly without also subsidizing loteign products and speculators.

4. That the section of the law which gives the President the power to issue \$3,000,000,000 in greenbacks should be repealed. There is no good reason whatever for continuing this power. If the President does not intend to make use of it, as is sometimes said, then there is no need for him to have it. If he does intend to make use of the power, then the case for taking it away from him is overwhelming.

5. The Republican report recommends the continuance of the

5. The Republican report recommends the continuance of the stabilization fund. This is highly desirable. It suggests that certain limitations be put upon the power of the Secretary of the Treasury in administering the fund. The particular limitations it suggests, however—that he be prohibited from using it "in any manner that might involve us in international hostilities" or "in such a way as to make acceptance available for carrying on armed manner that might involve us in international hostilities" or "in such a way as to make exchange available for carrying on armed hostilities"—would be unwise. Such prohibitions, even if they were free from other objections, would be ambiguous and subject to too wide a range of possible interpretation. The best safeguard against any abuse of the uses of the fund is publicity. This publicity need not extend to current operations, but there seems no good reason why we could not have at least monthly reports on the position of the fund, even if these did not appear until 2 or 3 months after the period to which they referred.

No realist expects Congress to adopt all these Republican recommendations. But some of them ought to have considerable support from the Democratic side. Wholly apart from purely monetary considerations, it would be a highly reassuring sign, in a period in which legislatures everywhere have been losing their powers to the executive branch, for our own chief Legislature to take back some of the "emergency" powers it has delegated.

The Strecker Case

EXTENSION OF REMARKS

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Thursday, April 20, 1939

OPINION OF THE SUPREME COURT

Mr. MARCANTONIO. Mr. Speaker, the Strecker case, which was decided last Monday by the United States Supreme Court, had aroused a great deal of interest. The International Labor Defense, of which I am the national president, played a very prominent role in the defense of Strecker's rights. Under leave to extend my remarks, I submit herewith the decision and opinion of the United States Supreme Court, sustaining the position taken by the International Labor Defense and its attorneys. I take this opportunity to congratulate the attorneys for Mr. Strecker-Mr. C. A. Stanfield, of Hot Springs, Ark.; Mr. Whitney North Seymour; Prof. Herbert Wechsler; and Mrs. Carol King, of New York.

[Supreme Court of the United States. No. 330. October term, 1938. Eugene Kessler, District Director of Immigration and Naturalization, petitioner, v. Joseph George Strecker. On writ of certiorari to the United States Circuit Court of Appeals for the Fifth Circuit. April 17, 1939.]

Mr. Justice Roberts delivered the opinion of the Court.

The respondent is an alien who entered the United States in

1912 and has since resided here. In 1933 he applied for natural-

ization to a United States district court in Arkansas. He made certain admissions to a district director of naturalization as a result of which naturalization was withheld and his case was

result of which naturalization was withheld and his case was referred to the Department of Labor.

November 25, 1933, the Second Assistant Secretary of Labor issued a warrant for the respondent's apprehension, in which it was recited that he was in the United States in violation of law in that (1) he believes in, advises, advocates, or teaches the overthrow, by force or violence, of the Government of the United States; (2) he is a member of, or affiliated with, an organization, association, society, or group that believes in, advises, advocates, or teaches the overthrow, by force or violence, of the Government of the United States; (3) he is a member of, or affiliated with, an organization association, society or group that writes circulates are approached the United States; (3) he is a member of, or affiliated with, an organization association, society or group that writes circulates the United States; (3) he is a member of, or affiliated with, an organization, association, society, or group that writes, circulates, distributes, prints, publishes, or displays, or causes to be written, circulated, distributed, printed, published, or displayed, or that has in its possession for these purposes written or printed matter advising, advocating, or teaching the overthrow, by force or violence, of the Government of the United States; and (4) after his entry into the United States he has been found to have become a member of one of the classes of aliens enumerated in section 1 of the act of October 16, 1918, as amended by the act of June 5, 1920, to wit: an alien who is a member of, or affiliated with, an organization, association, society, or group that believes in, advises, or teaches the overthrow, by force and violence, of the Government of the United States.

The respondent was apprehended and was given hearings before

The respondent was apprehended and was given hearings before an immigration inspector, at which he was represented by counsel and testified in his own behalf. The Government offered in evi-

an immigration inspector, at which he was represented by counsel and testified in his own behalf. The Government offered in evidence transcripts of his examination by the Naturalization Bureau of an interview with him by an immigration inspector and his membership book in the Communist Party of the United States of America, issued November 15, 1932, with stamps affixed showing payment of dues to the end of February 1933. The rules of the party, set forth in the book, provided that a failure to pay dues for 3 months automatically results in the loss of membership, and it is admitted there is no evidence respondent continued to be a member after March 1, 1933.

The book contained printed matter stating the purposes and objects of the party. The Government also offered a copy of a magazine called the Communist, dated April 1934, and read into the record excerpts from articles appearing therein. The respondent admitted that he joined the Communist Party in November 1932, asserted that his membership terminated prior to March 1, 1933, and had never been renewed, and professed ignorance of the magazine called the Communist and its contents. In some respects his testimony as to his beliefs and actions was contradictory of his statements on prior examinations, and testimony was elicited from him in an effort to show that his denial of present elicited from him in an effort to show that his denial of present affiliation with the Communist Party might not be made in good faith, but there was no sufficient evidence to sustain that concluraith, but there was no sumcent evidence to sustain that concrusion. After a review of the record by the Board of Review of the Department of Labor, a warrant of deportation was issued by the Assistant Secretary, which recites an affirmative finding as to each of the counts in the warrant of arrest, and orders the respondent's deportation.1

The respondent petitioned a Federal district court in Arkansas for a writ of habeas corpus to deliver him from the custody of the immigration inspector. The writ was denied. Thereafter he filed the petition in the instant case in the district court for Louisiana. In this petition he alleged that he had not been accorded a fair hearing; that the Department of Labor has not correctly construed the immigration laws applicable to his case; that the findings were without support in the evidence; that he had been denied due process of law; and that he is not a citizen of Poland, to which the war-rant directed his remission. The district court dismissed the writ. The respondent appealed to the circuit court of appeals, assigning The respondent appealed to the circuit court of appeals, assigning error to the district court's action in denying each of his contentions. That court found that the hearings had been fair, but held that each of the findings recited in the warrant was without support in the evidence. The court was of opinion the evidence failed to show that the respondent is now a member of the Communist Party or that he or that party, in 1933, taught, advocated, or incited the overthrow of the Government by force and violence, and that the record was bare of evidence to countervail his denial that he had ever taught or believed in the unlawful destruction or overthrow of the Government by force. The court held that the overthrow of the Government by force. The court held that the acts of 1918 and 1920 were passed to meet a situation caused by crises in Russia in 1918 and 1919;² that the major changes in policy and conduct of the Soviet Socialist Republics which had taken place between 1918 and 1933 rebutted the implications arising from membership in the Communist Party at the time the acts were adopted; that mere membership in that party in 1933 is not a statutory ground for deportation. The order of the district court was reversed, and the cause was remanded for further proceedings not inconsistent with the opinion.³

The Government moved for a rehearing, pressing specially the contention that the overwhelming weight of authority is to the

The delay in this case is due to the fact that respondent was born an Austrian subject but was refused reentry into that country on the ground that the place of his birth is now in Poland. Protracted negotiations on the part of the Department were required to obtain the consent of the Government of Poland to his return to that country.

That this view is erroneous is shown by the history of the legislation referred to infra, p. 6. Compare H. Rept. 504, 66th Cong., 2d sess., p. 7; S. Rept. 648, 66th Cong., 2d sess., p. 7; S. Rept. 648, 66th Cong., 2d sess., p. 4.

effect that membership in the Communist Party is sufficient to wareffect that membership in the Communist Party is sufficient to war-rant deportation. The petition was entertained, the judgment was amended to provide: "Reversed, with directions to try the issues de novo as suggested in Ex Parte Fierstein (41 Fed. (2) p. 54)", and a rehearing was denied. Judge Sibley dissented on the ground that on the basis of the respondent's membership book which refers to the Third Communist Internationale, the court could take judicial notice of the objectives and programs of the Com-munist Party and the Third Internationale.

The United States petitioned for certiorari, asserting that the single question presented is "whether the court below erred in failing to sustain an order of deportation against respondent, an single question presented is "whether the court below erred in failing to sustain an order of deportation against respondent, an alien who in 1932 became a member of the Communist Party of the United States." In its specification of errors to be urged the Government enumerated (1) the holding that an alien who became a member of the party in 1932 is not, by reason of that fact, subject to deportation; (2) the holding that the evidence before the Secretary of Labor concerning the principles of the party was insufficient to sustain the order; (3) the remand for a trial de novo in the district court; and (4) the failure to affirm the judgment of the district court. As reason for the granting of the writ the Government urged a conflict of decision on the question whether membership by an alien in the Communist Party of America subjects him to deportation. By reason of the allegation of conflict and the action of the circuit court of appeals in ordering a trial de novo in the district court we granted the writ.

The Government does not attempt to support the warrant of deportation on the second and third grounds therein specified, namely, that the respondent "is a member of or affiliated with" an organization described in the act. The only evidence of record is that his membership ceased months before the issue of the warrant for his arrest. The contention is that respondent is deportable because, after entry, he became a member of a class of aliens described in section 1 of the act, to wit, a member of the Communist Party, an organization membership in which is made a cause of deportation because the organization believes in, advocates, and teaches the overthrow of the Government of the United States by force and violence. This contention presents the question whether the act renders former membership in such an organization, which has ceased, a ground of deportation. Respondent insists that the statute makes only present membership in an organization described in the act such ground.

Section 1 of the act of Octob

Section 1 of the act of October 16, 1918, as amended in 1920,* has to do with the exclusion of alien immigrants and specifies five classes, members of which may not be admitted to the United States. One of these classes—subsection (c)—includes "aliens who believe in, advise, advocate, or teach, or who are members of or affiliated with any organization, association, society, or group, that believes in, advises, advocates, or teaches * * * the overthrow by force or violence of the Government of the United States * * *." United States

Section 2 of the act of 1918, which was not altered by the act of 1920, deals with deportation. It provides that "any alien who, at any time after entering the United States, is found to have been at the time of entry, or to have become thereafter, a member of any of the classes of aliens enumerated" in section 1, shall, upon warrant of the Secretary of Labor, be taken into custody deported, in the manner provided by law.

Relying on the phrases italicized in the quotation, the Govern-ment insists that the section embraces an alien who, after entry, has become a member of an organization, membership in which, at

has become a member of an organization, membership in which, at the time of his entry, would have warranted his exclusion, although he has ceased to be a member at the time of his arrest. We hold that the act does not provide for the deportation of such an alien. This conclusion rests not alone upon the language, but, as well, upon the context and the history of the legislation.

The phrase "at any time" qualifies the verb "found." Thus, if at any time the Secretary finds that at entry the alien was a member, or has thereafter become and is a member, he may be deported. The natural meaning is that, as the alien was excludable for present membership, he is deportable for present membership subsequently acquired. The Government's construction, which collocates the phrase "at any time" with the phrase "or to have become thereafter" is unnatural and strained. If Congress meant that past membership, of no matter how short duration or how far in the past, was to be a cause of present deportation the purpose could have been clearly stated. The section does not bear this import.

By the first section of the act, as amended in 1920, aliens are to

By the first section of the act, as amended in 1920, aliens are to be excluded who are members of a described organization. The section does not require the exclusion of those who have been in the past, but are no longer, members. When the Congress came to provide for deportation, instead of again enumerating and defining the various classes of aliens who might be deported, it provided that if at any time it should be found that an alien had provided that if at any time it should be found that an alien had been admitted and, at the time of admission, was a member of any of the proscribed classes, or had thereafter become such, he should be deported. It is not to be supposed that past membership, which does not bar admission, was intended to be a cause of deportation. And the fact that naturalization is denied to an alien only on the ground that he "is a member of, or affiliated with, any organization entertaining" disbelief in or opposition to organized govern-

496 F. (2d) 1020.
Act of Oct. 16, 1918, c. 186, 40 Stat. 1012, as amended by the act of June 5, 1920, c. 251, 41 Stat. 1008; U. S. C., title 8, sec. 137

(a) to (e). 40 Stat. 1912; U. S. C., title 8, sec. 137 (g).

ment, and not for past membership or affiliation, lends added

force to this view.

In the absence of a clear and definite expression, we are not In the absence of a clear and definite expression, we are not at liberty to conclude that Congress intended that any alien, no matter how long a resident of this country, or however well disposed toward our Government, must be deported, if at any time in the past, no matter when, or under what circumstances, or for what time, he was a member of the described organization. In the absence of such expression we conclude that it is the present membership, or present affiliation—a fact to be determined on evidence—which bars admission, bars naturalization, and requires deportation. Since the statute deals not only with membership in an organization of the described class, but with affiliation therewith and, as well, with belief and teaching, it enables the Secretary of Labor, as trier of the facts, fully to investigate and to find the true relation, belief, and activity of the alien under investigation.

The legislative history of the statute supports this conclusion. By act of March 3, 1903, Congress directed the exclusion of "anarchists, or persons who believe in or advocate the overthrow by "architect the coverthrow by" force or violence of the Government of the United States, * * *"
and also of any "person who disbelieves in or who is opposed to all
organized government, or who is a member of or affiliated with any

and also of any "person who disbelleves in or who is opposed to all organized government, or who is a member of or affiliated with any organization entertaining and teaching such disbelief in or opposition to all organized government * * * "" The only section authorizing deportation of such persons is directed to an allen found to have entered in violation of the act, if proceeded against within 3 years after entry." These provisions were reenacted without alteration in the act of February 20, 1907."

The first legislation authorizing deportation of persons who had entered lawfully is H. R. 6060, enacted by the Sixty-third Congress but vetoed by President Wilson January 28, 1915. This bill required deportation of "any alien who within 5 years after entry shall be found advocating or teaching" the defined doctrines. It also altered existing law in respect of deportation of those who had entered illegally to provide that "at any time within 5 years after entry, any alien who at the time of entry was a member of one or more of the classes excluded by law" should be deported.

A bill, in substance the same, was introduced in the Sixty-fourth Congress and enacted February 5, 1917, over Presidential veto. While this measure was in course of passage, the chairman of the House committee in charge of it moved, on behalf of the committee, to amend section 19 by inserting the phrase "at any time," so that the section should provide for deportation of "any alien who at any time after entry shall be found advocating or teaching" forcible overthrow of the Government. The act, as adopted, was in this form. The purpose of the amendment was to make plain that no time limit was fixed for deportation of aliens found advocating the doctrine. The act of 1917 was amended by that of October 16, 1918, here under consideration, which, by its title, purported to apply to "aliens who are members of the anarchistic and similar classes * * "."

Section 1 enlarged one of the classes of excludible aliens by the addition of the words "aliens

Section 1 enlarged one of the classes of excludible aliens by the addition of the words "aliens who are members of or affiliated with any organization that entertains a belief in, teaches, or advocates the overthrow by force or violence of the Government of the United States. * * "Section 2 modified the earlier act in respect of deportation, both in form and substance. The provision for deportation of those who, at the time of entry, were members of one of the proscribed classes was retained, but the 5-year period of limitation within which deportation might be had was eliminated. The provision for deportation of aliens of anarchistic and similar classes was expanded by including as causes of deportation all the causes of exclusion enumerated in section 1, which were themselves much broader than those included in the 1917 act. Thus, although there was no provision in the act of 1917 for deportation of aliens who did not personally advocate the proscribed doctrine, but were members of an organization which did, the act of 1918 embodied such a provision. This alteration and the elimination of the 5-year time limitation were the important changes relevant to the question under examination, which the act of 1918 effected in the earlier legislation. These modifications lend no support to the contention that section 2 of the act of 1918 was intended to make quondam membership a ground of deportation. ground of deportation.

Nor is there anything in the formal alteration worked by the act of 1918 which leads to a different conclusion. Section 19 of the act of 1917 dealt in distinct clauses with the various classes of allens who might be deported, specifying in one clause an alien "who at the time of entry was a member of the classes excluded by law" and, in another clause, an alien "who, at any time after by law alle, in another clause, an allen "who, at any time after entry, shall be found advocating or teaching" the obnoxious doc-trines. Section 2 of the act of 1918 combined the clauses dealing with the two groups in a single sentence, with a somewhat different locution. We think this consolidation was not intended to alter the substantive law as it theretofore stood.

 H. Rept. 645, 65th Cong., 2d sess.

The only decisions which support the Government's position are those in the second circuit. We cannot approve their reasoning or result. It is claimed that the administrative construction has always accorded with the Government's contention in the present case. We cannot find that there has been such a uniform concase. We cannot find that there has been such a uniform construction as requires an interpretation of the act in accordance with that view. The administrative construction seems to have been in favor of the respondent's view until after the decision in the Yokinen case. Is and the construction seems to have been changed in deference to the decision in that case. Is Our reading of the statute makes it unnecessary to pass upon the conflicting contentions of the parties concerning the adequacy of the evidence before the Secretary concerning the purposes and aims of the Communist Party or the propriety of the court's taking judicial notice thereof.

The Solicitor General suggests that the evidence is sufficient to

Judicial notice thereof.

The Solicitor General suggests that the evidence is sufficient to sustain the warrant of deportation on the first ground therein stated, namely, that the respondent believes in and teaches the overthrow, by force and violence, of the Government of the United States. It is said that the error of the circuit court of appeals in reversing the district court is, in this aspect, so plain that we should notice it, although the petition does not present the question. We have the power to do this in the case of plain error, but we exercise it only in clear cases and in exceptional circumstances.

We do not know on what grounds the district judge's action

We do not know on what grounds the district judge's action rested, since he wrote no opinion. The circuit court of appeals held the evidence insufficient to support the Secretary's finding. We think that the record does not justify a reversal of the holding of the court below upon this point.

The circuit court of appeals remanded the cause to the district court for a trial de novo. In this we think there was error. The proceeding for deportation is administrative. If the hearing was fair, if there was evidence to support the finding of the Secretary, and if no error of law was committed, the ruling of the Departand if no error of law was committed, the ruling of the Department must stand and cannot be corrected in judicial proceedings. If, on the other hand, one of the elements mentioned is lacking, the proceeding is void and must be set aside. A district court cannot, upon habeas corpus, proceed de novo, for the function of investigation and finding has not been conferred upon it but upon the Secretary of Labor. Only in the event an alleged alien asserts his United States citizenship in the hearing before the Department, and supports his claim by substantial evidence, is he entitled to a trial de novo of that issue in the district court. The status of the relator must be judicially determined, because jurisdiction in the executive to order deportation exists only if the person arrested is an alien; and no statutory proceeding is provided in which he can raise the question whether the executive action is in excess of the jurisdiction conferred upon the Secretary. It follows from what has been said that, as the Secretary erred in the construction of the statute, the writ must be granted, and the respondent discharged from custody. and if no error of law was committed, the ruling of the Depart

The construction of the statute, the wit must be granted, and the respondent discharged from custody.

The judgment of the circuit court of appeals is accordingly modified and the cause is remanded to the district court with instructions to proceed in conformity with this opinion.

So ordered.

address of Hon. Marriner S. Eccles, Chairman of the Federal Reserve Board. Chairman Eccles in this significant address discusses the new economics and shows by forceful argument the important part played by Federal spending in our national business life. I commend its reading to all those who would embark this country upon a course of rigid economy, drastic curtailment of Federal spending, for they are blind to the development of the past quarter of a century.

The address is as follows:

A week ago tonight Senator Byrd, of Virginia, spoke over this station on Government Spending. I am grateful to the National Radio Forum, conducted under the auspices of the Washington Evening Star, for this opportunity to speak to you on the same general subject.

general subject.

What I say represents my own viewpoint as it is now and as it has been consistently for more than 8 years. I do not speak for the Board of Governors or for the Federal Reserve System. I speak merely as one who has had more than 20 years of practical experience in banking, as well as in various business and agricultural enterprises, and who happens to occupy a public office concerned with banking, fiscal, and monetary problems. These are economic problems, and I have always approached them from an economic rather than from a political standpoint. In fact, I cannot approach these questions from any other standpoint, for I have never taken an active part in politics and I have never sought a public office.

The greatest of all domestic problems before this country today is to find steady jobs in private enterprise for all of our unemployed who are able and willing to work.

The fundamental issue between Senator Byrn and myself is

The fundamental issue between Senator Byrn and myself is whether the Government can and should contribute to bringing about an increase in private employment by borrowing idle money, and lending and spending it, at a time like the present when there are millions of people who cannot find jobs in private industry, when there is an abundance of natural resources, unused productive facilities of all kinds, and billions of savings and of bank credit waiting to be used.

waiting to be used.

In the limited time at my disposal tonight I cannot deal with all of the misconceptions of my position under which Senator Byrn evidently labored in his recent statements on this subject. This I expect to do by letter at an early date. The issue between the Senator and myself is not personal, and I ascribe to him, as he does to me, the fullest degree of sincerity.

At the outset I want to clear away some of the more glaring misconceptions of my views. I do not believe in Government spending at any time for spending's sake. I do believe in Government deficit spending in depression periods as a supplement and stimulant to private spending, using only the manpower, materials, and money that otherwise would be idle, and using them only in a way that avoids competition with private enterprise. I believe that inefficiency and waste should be eliminated. Government should get the maximum of value for the money it spends, recognizing the size and inherent difficulties of the unemployment and relief problem—the objective always being a maximum of private employment. size and inherent difficulties of the unemployment and relief prob-lem—the objective always being a maximum of private employment. I abhor politics and favoritism in any phase of Government ex-penditures. I am as anxious as anyone to see the Federal Budget balanced. In my judgment, this cannot be accomplished until the national income is higher than it will be this year. I do not believe it can be done at this time either by reducing Government ex-penditures or by increasing Federal taxes, particularly those that bear most heavily upon consumption. I believe that the only way the Budget can be brought into balance is through increased Fed-eral revenue from an increased national income. eral revenue from an increased national income.

I am just as much against inflation as I am against deflation. However, we do not want to stay in a perpetual deflation because of fear of inflation. Inflation can and should be prevented, and this can be done by giving adequate powers to the Treasury and the Federal Reserve System. I do not see how it would be possible to have a dangerous general inflation so long as we have a large amount of idle men and unused resources. Long before sible to have a dangerous general inflation so long as we have a large amount of idle men and unused resources. Long before inflation could develop we would have a volume of business activity that would increase the national income to a point where the Budget could easily be balanced. I do not believe, and I have never said, that the Federal debt should continue to grow indefinitely and no part of it ever paid. I do believe that it cannot safely be reduced except when national income is high and when private debt is expanding. Reduction of Government debt at such private debt is expanding. Reduction of Government debt at such a time would tend to counteract any trend toward inflation that might develop, just as expansion of the Government debt during depression tends to offset deflationary developments.

I realize that Government spending is not a cure-all or a remedy for all of our problems or for special conditions that may be retarding private employment and investment. Everything should be done to bring about a prompt solution of these problems. In the meantime, I can see no practical alternative except to sustain purchasing power through public employment until private employment substantially increases.

The vigoroint which I have a substantially increases.

The viewpoint which I have outlined relative to the need for The viewpoint which I have outlined relative to the need for Government spending is strongly opposed by Senator Byrn, by most of the press, and by many of the bankers and large business interests of the country today. Most of them still demand, as they did at the bottom of the depression in 1932, that Government expenditures be cut and that the Federal Budget be brought into balance in order to reestablish confidence. Only in this way, they believe, will jobs be provided in private enterprise.

I quite understand why so many of our bankers and businessmen have this viewpoint, for I did also until about 1929. I knew from experience that private investment had led the way out of past depressions without Government spending.

In the face of fundamental changes that have come over our economy—changes that I think many of our businessmen and bankers either have not fully perceived or fully appraised—I can no longer bring myself to believe that the Nation can risk stopping its support to the unemployed in the hope or expectation that, upon doing so private enterprise will move forward on any scale sufficient. doing so, private enterprise will move forward on any scale sufficient

to give them jobs.

To discuss these fundamental changes adequately would take To discuss these fundamental changes adequately would take more time than I have on the air. I can only remind you that we are no longer a nation with rapidly expanding markets at home and abroad, as we were through most of our history. We are no longer pushing our frontiers westward and opening up vast new territories to settlement. We no longer have great incoming tides of immigration. The day has passed when millions can follow Horace Greeley's advice and go west when they fail to find employment or opportunity in the populous eastern centers. The era of railroad expansion has come to an end.

We no longer have expanding foreign markets. We are now a creditor and not a debtor nation, as we were before the war. We are no longer willing to lend billions of dollars abroad, as we did in the twenties, to enable foreigners to absorb American products. The rapid growth of the automobile and related industries, which

In the twenties, to enable foreigners to absorb American products. The rapid growth of the automobile and related industries, which were important factors in the expansion of the twenties, has been greatly slowed down. There are not immediately visible vast markets awaiting production by existing industry. Nor does new invention and new industry, which I should especially like to see encouraged and stimulated, hold out prospects for enough investment and employment to absorb great numbers of the unemployed at this time. at this time.

If I felt that the Government were risking a dangerous inflation, or that it could not afford the expenditures, because of the size of the national debt, I would not advocate a continuance of the present stimulus—on the basis of a deficit. I do not share these fears. I do not agree with those who believe, as Senator Byrd does, that the Government is like an individual in its fiscal affairs and,

therefore, should not spend more than its income, but should always balance its Budget and keep out of debt.

I do not scorn the old precepts of thrift and frugality, as the Senator has said. One of the most familiar of these time-honored sayings is: "Neither a borrower nor a lender be." Admirable as sayings is: "Neither a borrower nor a lender be." Admirable as these maxims are for the individual, they cannot be applied realistically to business or to the Nation. If there were no borrowing or lending in the business world, there would be no business except by the primitive methods of barter. Borrowing and lending means creating debt. We have never had a period of prosperity without an expansion of debt. Conversely, we have never had a period of deflation without a contraction of debt.

I would like to see more equities and fewer debt forms in our economy, but it operates now very largely by the process of debts being created and extinguished. To recognize that debt expands with prosperity, which we all favor, does not mean that one is in favor of debt, but only that under our system we cannot have the prosperity which we all want without the debts which we all dislike.

It is beyond dispute, I think, that as debt contracts or expands, business activity rises and falls and that national income increases or decreases in relatively greater volume. Thus, from 1929 to 1933, total debts, both public and private, contracted by 14 percent. Yet at the same time national income fell by more than 50 percent. As a result, the private-debt structure, even though contracted the structure of the same time national income fell by more than 50 percent. tracted, was so large in relation to the diminished national income

that debts became insupportable. Hence, our entire financial structure collapsed and general economic paralysis resulted.

Had the Government been like an individual, nothing could have been done to help the situation. We ultimately found that only the Government, under such conditions as existed, was able by its lending and spending to stop the tide of deflation and bring about the upturn that we have since had, though it is still far short of the goal of full recovery. However, acting on the advice of the business and financial leaders of the country, the Government did attempt to act like an individual from 1930 until the end of 1933 on the theory that the Government could not afford to do otherwise, and that in order to maintain confidence and keep money sound, it must balance the Budget. Most of you

haven't forgotten the results.

Of course, the Government could not balance its Budget because the incomes and profits of the taxpayers continued to fall or to disappear. Therefore the Government's revenues fell faster than it disappear. Therefore the Government's revenues len last the disappear was possible to reduce expenses. Consequently it had a total deficit of more than \$7,000,000,000 for the calendar years of 1931, 1932, and the policy advocated by those who beof more than \$7,000,000,000 for the calendar years of 1931, 1932, and 1933, while it was pursuing the policy advocated by those who believe as Senator Byrn does. And, mind you, all this happened during the period when everything was being done that business leaders thought would encourage business, even to the extent of setting up the R. F. C. to provide money to support the private financial structure. At the same time the same business and financial leaders, some of whom were the beneficiaries of Government's credit was such that it could not afford to come to the financial assistance of millions of unemployed through creation of beneficial public work in the absence of private work. the absence of private work.

The deficits incurred in 1931, 1932, and 1933 cannot be considered

as being of what Senator Byrn chooses to call the "pump priming"

variety, because they resulted largely from decreased Federal revenues rather than from increased Government expenditures. During this period we had no increase in the national income. In fact, during this period the sum of the annual losses in the national income, compared with the 1929 level, amounted to \$120,000,000,000. This staggering loss, to which Senator Byro makes no reference, resulted from our failure to utilize our idle human and material resources. This is the kind of waste that the Nation can ill afford. We had no increase in the national income until a comprehensive lending and spending program was launched, beginning in 1934, giving aid to farmers and home owners and creating jobs through relief and public works.

relief and public works.

Let us now consider the years 1934-37, inclusive. In this period the Government made cash loans and expenditures, including the soldiers' bonus, of \$11,000,000,000 more than it collected, including pay-roll taxes. This largely resulted from a deliberate policy of stimulating recovery in private activity. During this period the national income rose from approximately \$40,000,000 in 1933 to about \$70,000,000,000 in 1937. The combined increases in the national income for these 4 years, as compared with 1933, aggregated \$70,000,000,000, or more than six times the Government's cash deficit of \$11,000,000,000 for the same period.

\$70,000,000,000, or more than six times the Government's cash deficit of \$11,000,000,000 for the same period.

And then what happened? During the year 1937 the Government contributed about \$3,000,000,000 less to the buying power of the public than it did in the year 1936, so that its cash receipts were only about \$400,000,000 less than it spent. This too rapid withdrawal of the Government's stimulus was accompanied by other important factors, including sharply increased construction costs, large-scale speculative inventory buying, a too rapid expansion of short-term installment credit, serious conflicts between capital and labor, and a widening spread between agricultural and industrial labor, and a widening spread between agricultural and industrial prices. The result was another period of rapid deflation in the fall of 1937, which continued until the present spending program of the Government was begun last summer. The national income has been rising steadily ever since that time.

rising steadily ever since that time.

In the light of this record of the last 9 years—a record which Senator Byrn denounces as one of "fiscal insanity"—does it seem reasonable to believe that, as the Senator said in his letter to me—and I quote: "For every dollar the Government borrows and spends in pump priming, private enterprise is deterred from spending two?" If Senator Byrn really believes this, he should be exerting all of his influence in fighting for an immediate, instead of a gradual, balancing of the Budget, in order to reduce Government expenditures by at least \$3,000,000,000. Such a reduction, according to his unequivocal statement, would bring about an expansion in spending by private enterprise of \$6,000,000,000 a year. I am convinced that the exact opposite is true. Accordingly, I believe that the country can well afford to have the Government continue its stimulus to consumption and thus to business at this juncture. this juncture

We might have had about the same results with less Govern-ment spending had some of it been directed into other channels, or had it been better timed, or if private activity had not felt that there were deterrents due to Government policy, but of one thing I am certain—whatever the deterrents have been, Govern-

ment spending has not been one of them.

As to the burden of the Government debt on our children and our children's children, which also disturbs the Senator, if they reduce the national debt it will probably be because their national income justifies the reduction, and it will be no more of a burden on them than was the reduction of nine billions of the war debt during the twenties. In fact, we could have paid off much more of the war debt if we had not had three major income-tax reductions which helped to encourage stock-market speculation and the making of uncollectible foreign loans.

making of uncollectible foreign loans.

Why not worry also about the burden of all of the private debts on our children and their children, because these debts will also be passed along to future generations who will have to pay the cost of servicing or paying these debts just as in the case of the Government debt. We should know that all debts, both public and private, are passed along from one generation to the next, just as all assets, both public and private, are handed down from one generation to the next. It may be that Senator Byran would be less worried if there were no debts, but in that case there would be no banks, insurance companies, or other financial institutions. The Senator has warned you that the total debt of all public bodies in the United States now amounts to \$430 for every man, woman, and child; that it is a mortgage on you and your prop-

woman, and child; that it is a mortgage on you and your property; and that your children and grandchildren will have to pay off this mortgage. But he failed to tell you who owns the mort-You, of course, know that it is owned by all of the people and amounts to an average of exactly \$430 owed to every man, woman, and child. In other words, all of the people are borrowing

through their public bodies from all of the people.

through their public bodies from all of the people.

The whole problem of internal debt, public and private, must be considered in relationship to the total real wealth of the Nation. Our total debts are great or small, depending upon total national income. The British public debt a century ago was equal to \$4,000,000,000. At the present time it is \$40,000,000,000, or 10 times greater. Their debt has grown, but the income of the British people has grown much faster than the debt. While doubtless it would be better for them if they had less public debt, it cannot be said that the debt has either bankrupted or impoverished the British nation, because their standard of living has increased during this entire period. ing this entire period.

Now, make no mistake, I am not advocating ever-increasing debt, but I am merely pointing out that we should see the problem of

debt in its true perspective. I do not think that alarmist talk about it is calculated to help recovery or to induce private capital

to go to work.

As to the argument that the British achieved recovery by balancing their budget, it would be well for those who cite this to remember that while our national income was falling 50 percent their Government never permitted theirs to fall more than 10 percent, and that British rates of taxation, if applied to the United States, would very likely balance our Budget. Their balanced budget is not due to the fact that they spend proportionately less than we do, but because their income and inheritance taxes are relatively much

Individuals and corporations may become bankrupt; but no nation, having the human and material resources of the United States, need impoverish itself by borrowing from itself. The only way that we can impoverish ourselves is by failing to utilize our idle manpower, resources, productive facilities, and money in the production of real wealth.

I have been talking so far about the economic aspects of the problem of government fiscal policy. In conclusion, I would like to say a word about the human or fundamental aspects of this

problem.

We did not hesitate to have the Government borrow billions of dollars to protect this country against a foreign enemy during the World War. In one year alone we created a deficit of \$13,000,000,000, as much as the entire cash deficit of the Government dur-

ing the past 5 years. We are again proposing to spend billions for preparedness. Yet at the same time many are quibbling about \$150,000,000 necessary to help protect our human resources.

The same Government credit that can be used to protect human lives in time of war against the encroachment of a foreign enemy can also be used in times of peace to protect these human lives against demoralization and despair. There is no more limitation upon a government's ability to fight a depression than there is to fight a war. Both depend upon our human and material resources.

upon a government's ability to light a depression than there is to fight a war. Both depend upon our human and material resources, brains, and courage—and upon nothing else.

The danger for the future of democracy comes from within as well as from without. The leadership of this country, both in Government and in business, must realize that if the American liberal tradition is to be preserved, then for the millions of our citizens the right to work must also be preserved.

Murphy Is Correct

EXTENSION OF REMARKS

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1939

EDITORIAL FROM THE WEST VIRGINIAN, FAIRMONT, W. VA., OF APRIL 18, 1939

Mr. SCHIFFLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the West Virginian, of Fairmont, W. Va.:

[From the West Virginian, Fairmount, W. Va., April 18, 1939] MURPHY IS CORRECT

Attorney General Frank Murphy was not kidding anybody when he declared recently that the New Deal is in danger.

It certainly is.

It is on its way out.

As to the complete lack of substitute program, concerning which the Times worries this morning, the American people will pro-vide that substitute—they have even now started to do so.

We are going back to the American way.

When the New Deal came into being this country was going through a crisis, which was, of course, nothing new in the history of the country. There had been panics and depressions before. Always the American people pulled themselves out the American way.

Mr. Roosevelt offered something attractive to the American mind in his campaign speeches and programs. He was for bring-ing back prosperity, for reducing taxes, for reducing Government bureaus and commissions, for economy in Government. He charged that those in power were wasteful and that a government like a

household must live within its income to be successful, to escape in the final analysis bankruptcy.

In the years since the New Deal came into power we have accomplished none of the things the people had hoped for. And the reason for this is the simple fact that Mr. Roosevelt did not stick to his promises made in his campaigns.

When the New Deal came in the Democratic press relates unemptoned.

When the New Deal came in, the Democratic press relates, unemployment was the Nation's greatest problem. It reluctantly admits that unemployment still is the Nation's greatest problem.

LXXXIV-App-100

The New Deal then finds itself in one of these two pots of hot water—either it had no intention of making unemployment a minor problem, or its policies have failed in efforts to cure the situation existing when it came in.

You can't create prosperity by shackling business and private industry; nor by making private capital fearful to make investments. Nor can we spend our way back to prosperity by simply wasting our resources and squandering our national bank account; nor by yet again ever increasing the burden of taxation and ever increasing the patients debt

increasing the national debt.

If Mr. Roosevelt had been capable of taking advice, not alone from Republicans, but Democrats who believe in the American way, he would not be in the fix he is in today. Or things would be different if he had sought to carry on along the lines he proclaimed that he would in various speeches. But he would do

That is why Mr. Roosevelt and the New Deal are fast ebbing away...
Mr. Murphy knows the show is just about over.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Friday, April 21, 1939

STATEMENT OF THE DEPARTMENT OF COMMERCE AND COMMENT BY THE SECRETARY OF STATE

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Department of Commerce on reciprocal-trade agreements and a comment thereon by the Secretary of

During the 3 years 1936, 1937, and 1938 imports into 16 countries with which trade agreements have been concluded, showed a much larger average rate of increase from the United States over the 2 preagreement years 1934-35 than imports from Germany, the chief exponent of barter, clearing, compensation, or similar trade pro-

Imports from the United States into the 16 countries with which amports from the United States into the 16 countries with which reciprocal-trade agreements were in effect prior to 1938 experienced an average increase of approximately 39.8 percent in value in the past 3 years over the 2 years 1934–35, while imports into those same countries from Germany increased only by an average of about 1.8 percent in value during the corresponding period. In terms of dollars the average annual gain in imports from the United States was approximately \$297,746,000, while that from Germany was only \$12,244,000.

During the past few years there have been several powerful forces operating to influence the flow of international trade. However, it seems very significant that in comparison with the two preagreement years 1934-35 inports into the 16 trade-agreement countries during the past 3 years experienced a far greater average rate of increase in value from the United States than from Germany. The

tries during the past 3 years experienced a far greater average rate of increase in value from the United States than from Germany. The contrast between the relative worth of the two trade programs as a trade-enlarging medium is even more pronounced than revealed by statistical results when account is taken of the heavy export subsidies paid by Germany on many commodities.

An analysis of the individual country imports during the past 5 years brings out some very striking conclusions. First of all, it shows that "the exchange of goods for goods," the thing which makes barter, clearing, compensation, or similar trade programs attractive to other countries upon first trial, is the very thing which limits the expansion of trade under any such system. As an example of this there is a maximum amount of coffee that can be exchanged or sold by Germany to third countries. Consequently, when Germany obtains through barter this maximum amount of coffee from one country it is unable to make similar commitments to the other coffee-producing countries. Thus we find that in the early years of the barter system, when Germany first made barter agreements with Central America and Colombia, imports of German goods into those countries increased sharply, as such imports were in payment for the coffee which had been exported to Germany. Following this, when Germany made large purchases of coffee in Brazil it was unable to continue its large purchases of coffee in Central America and Colombia. Trade between these countries then suffered intermittent declines except in cases where Germany was able to purchase large quantities of other products from them. in cases where Germany was able to purchase large quantities of other products from them.

Another striking conclusion is that with Germany's highly industrial economic life the adoption of the barter or compensation program has necessarily shifted Germany's trade, both imports and exports, to those countries which are in a position to supply raw materials. A close examination of the statistics for the individual

countries shows that Germany has imported large quantities of raw materials which in turn have been paid for with manufac-tured goods. Coincident with this trade, Germany's exports of these manufactures to other nations who are not suppliers of raw

materials declined sharply.

One of the first difficulties to be encountered by countries concluding barter agreements with Germany was the creation of large blocked balances in that country which could only be liquidated by the purchase of German goods. Many countries such as Greece, Turkey, and Yugoslavia faced a difficult task in attempting to liquidate these balances, because in many cases the balances were much greater than that country's normal demand for German goods. Consequently, the complete operation of these barter, compensation, or similar agreements frequently breaks down until the blocked balance can be liquidated. These frequent break-downs have proven a very serious obstacle to the countries exporting raw materials as fooders. terials or foodstuffs to Germany as they have meant a temporary, complete, or partial severance of this outlet for exports with a corresponding gyration in domestic prices of the export commodities involved. Frequently the domestic agricultural interests of these countries have placed considerable pressure on the domestic clearing institutions to reopen these export outlets for their production under these barter arrangements. On the other hand it has often been necessary for these countries to accept inferior merchandise at higher than competitive prices in order to liquidate the balances

In some countries the greatest difficulty encountered in the barter or compensation trade is that Germany has purchased practically the entire output or production of certain principal crops or raw mateentire output or production of certain principal crops or raw materials, effecting virtual economic domination of the country in question. In many cases Germany has resold these goods to third countries at a discount. Thus the country with which Germany had the barter arrangement lost these former customers together with the foreign exchange that was usually paid for such transactions. The surpluses above its own consumption which Germany has sold to third countries at a discount have tended to lower world prices on these commodities and again this has adversely affected the countries producing them.

With the realization that the penalties of large-scale barter or

compensation trade more than offset the advantages of such systems, many of the countries involved have taken steps definitely to decrease such transactions with Germany.

 3 Calculations include estimates of 1938 imports into Nicaragua, El Salvador, and Costa Rica as complete statistics are not yet available for those countries.

DEPARTMENT OF STATE

April 18, 1939.

The Secretary of State, Cordell Hull, asked to comment on figures released by the Department of Commerce concerning imports into 16 trade-agreement countries from all countries, United States and

16 trade-agreement countries from all countries, United States and Germany, said today:

"I have naturally been most interested by the memorandum released by the Department of Commerce for publication yesterday, which compares the trends of imports of American products and German products into the countries with which the United States concluded reciprocal-trade agreements effective prior to 1938. This memorandum, which deals with one aspect of the results of the trade-agreements program, clearly suggests that the United States, with its reciprocal trade agreements program, has been far more successful in restoring its trade with this group of countries than has Germany with its policies of heavily subsidized barter and compensation trade. The 16 trade-agreement countries increased their purchases of American goods 39.8 percent between the periods 1934-35 and 1936-38. Meanwhile, these countries increased their purchases of German goods by only 1.8 percent.

"I have frequently had occasion to point out that regimented foreign trade based upon the principle of bilateral balancing, implemented by barter or compensation arrangements, is fundamentally unsound, and that such practices, when adopted as a general policy,

mented by barter or compensation arrangements, is fundamentally unsound, and that such practices, when adopted as a general policy, not only constitute a highly disruptive influence in world commerce but are injurious to the very countries which utilize them. While there may be circumstances under which special types of barter arrangements may be considered necessary to supplement other methods of trade promotion, the substitution of a general policy of barter or compensation trade for normal nondiscriminatory trade methods inevitably leads to a curtailment of total trade and a reduction of living standards in the countries pursuing such policies.

duction of living standards in the countries pursuing such policies.

"The figures compiled by the Department of Commerce serve to emphasize this general truth. They also focus attention upon the fact that our trade-agreement program has proven to be an instrument of policy more than able to hold its own in world markets against the most aggressive trade policies yet devised.

ment of policy more than able to hold its own in world marked against the most aggressive trade policies yet devised.

"The President, in his address at the Pan American Union last Friday, pledged the economic support of this country against economic pressure exerted upon American nations. The trade-agreement program is well calculated to alleviate such pressure in this hemisphere as well as elsewhere. Economic pressure is brought to bear by countries which force barter and compensation trade polices upon those from which they buy. By facilitating normal, profitable, international trade the trade-agreement program is enhancing the ability of the countries with which we conclude agreements to resist economic pressure abetted by barter and compensation arrangements and subsidies.

"Every advance made by the trade-agreement program is an advance for the cause of economic sanity and peace and, as the report in question shows, the program yields substantial economic dividends."

States Alone Have the Right to License Doctors and Druggists to Practice

EXTENSION OF REMARKS

HON, CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1939

WHAT IS PROPOSAL?

Mr. LEAVY. Mr. Speaker, the legislation we have had under consideration since yesterday has just been defeated by a roll-call vote. It properly should have been defeated.

This legislation in substance would have amended the Pure Food and Drugs Act that becomes effective in all of its provisions on the 25th of June of this year. I voted against the proposed amendment, because to me it appeared clear that its purpose was to permit some gentlemen residing in Mount Gilead, Ohio, to diagnose by mail and to prescribe by mail for unfortunate persons who are suffering from asthma. This diagnosis and this prescribing could be done only by these gentlemen and not by any other duly licensed and reputable physician anywhere else in the United States. It was contended that they should be exempt from the provisions of the Pure Food and Drugs Act, because they possess a prescription or formula that brings relief to sufferers from asthma, as no other prescription or formula known.

All of us feel the deepest sympathy for those unfortunate people everywhere who are afflicted with this dreaded ailment. There are none here who by their vote nor by any word of theirs would deny the greatest degree of relief possible to sufferers from asthma wherever they may reside.

EXCLUSIVE PRIVILEGE CONFERRED UPON TWO PEOPLE

The legislation that we have been considering has been admitted by its sponsors to be for the specific purpose of permitting two doctors to sell to the public a medicine without compliance with the provisions of the Pure Food and Drugs Act and, of course, without regard to State laws.

These doctors acquired for a consideration, many years ago, a prescription or formula known as the Nathan Tucker Asthma Remedy and which they compound at Mount Gilead, Ohio. This legislation would affect no other dispenser of drugs or medicine in the United States except these doctors. Its passage would have meant absolute monopoly; it would have meant a privilege by conferring upon them an advantage given that no other duly licensed physician or surgeon in America would have. This would be Federal legislation conferring private privileges beyond anything that has perhaps ever been proposed.

The fact that we have today, by a decisive vote, defeated this special-privilege legislation does not in any way indicate that the sufferers of this disease need be deprived of the use of this remedy if they desire it. The possessors of this formula under the existing law can make it a patent medicine and thus dispense it through the thousands of retail druggists in the United States, or they can dispense it directly to the patients by complying with the Pure Fcod and Drugs Act by placing the formula on each bottle or they can dispense it directly to physicians generally throughout the United States, who in turn could prescribe it. This they did not desire to do but preferred to have Federal legislation, conferring upon them an exclusive right to practice medicine throughout the United States in connection with their secret remedy.

EACH STATE MUST BE THE JUDGE OF WHO MAY DIAGNOSE AND PRESCRIBE FOR HUMAN HILS.

To me the proposed legislation on general principles is highly objectionable but there is a more important consideration involved here than merely the right of these doctors in Ohio to sell their prescription to suffering humanity throughout the United States. Overshadowing other considerations is involved the all-important question as to whether Congress can ever justify itself in enacting Federal legislation that would nullify the police power of every State in the Union, in reference to the practice of both medicine and pharmacy. By that I mean that had we passed this legislation, these Drs. Robinson of Mount Gilead, Ohio, whom I presume are duly qualified, licensed, and practicing physicians in the State of Ohio, would be permitted to come into my State of Washington and into every other State in the Union, through the use of the mails, and diagnose a human ailment, then prescribe for such ailment, then fill such prescription, and forward the same to the patient. This under the laws of my State, and I am sure practically every other State in the Union, would be a violation of such State laws because these doctors are undoubtedly not licensed to practice medicine nor pharmacy in the States where their patients are living, except those in Ohio. To me the most dangerous feature of this proposal comes by reason of the fact that it would nullify the salutary objectives and purposes of the laws of the various States of the Union in reference to protecting the public welfare and public health, which require a certain standard of persons who seek to engage in the practice of medicine and pharmacy in such

DOES MEDICINE SOUGHT TO BE EXEMPT CONTAIN NARCOTICS?

Mr. Speaker, there are numerous other and compelling reasons why I felt justified and warranted in casting a negative vote on this legislation. I was alarmed when the debates disclosed that there are from 5 to 71/2 grains of cocaine put into each fluid ounce of this compound, and while it was contended that before the compound is sent to the patient for use the decomposition of the cocaine has taken effect to such a degree that it is no longer present in habitforming proportion. The proof of such an assertion should not be allowed to rest within the discretion of one or two men who stand to profit financially, as do the gentlemen who possess the formula sought to be exempt from the provisions of the Pure Food and Drugs Act.

Amendments to Fair Labor Standards Act

EXTENSION OF REMARKS

HON. GRAHAM A. BARDEN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1939

ADDRESS BY HON. GRAHAM A. BARDEN, OF NORTH CAROLINA, APRIL 15, 1939

Mr. BARDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over the radio on April 15, 1939:

My friends of the radio audience, at the last session of Congress a law was enacted known as the Fair Labor Standards Act, but more widely known throughout the country as the wage-hour law. This act provides for a minimum of 25 cents per hour for the first year and increases to 30 cents per hour on October 24 of this year and eventually goes to 40 cents per hour. Hours under the act are fixed at 44 hours for the first year and 42 hours per week for the second year beginning October 24 next and 40 hours on and after October 24, 1940.

When this law was before the House of Representatives Congress clearly realized the effects of increased wages and decreased hours in any long the properties and decreased the effects of increased wages and decreased

hours in employment closely associated with the preparing, packing, processing, and marketing of agricultural commodities. Members of Congress also understood that any increase in the cost Members of Congress also understood that any increase in the cost of these operations is invariably deducted from the price paid to farmers for their products. In other words, it has unfortunately grown to be the custom to make the farmer pay handling and processing charges as long as he is in reach of the one imposing the charges. This is definitely true, for instance, in the case of truck crops, tobacco, dairy products, etc., and with farm income already far too low, we had better find some way to increase the farmers' income before we impose additional charges which would mean additional injury to and further disturbances of the economic situation which confronts him.

Accordingly, with these problems in mind a series of amendments

Accordingly, with these problems in mind a series of amendments were placed in the bill exempting the so-called agricultural trades from the provisions of the wage-hour law. The most important of these exemptions provides that the law should not apply within the "area of production" of any agricultural commodity. This particular section was placed in the law by Congress not only in recognition of the fact that increased costs are taken out of the prices farmers receive for their goods but in further recognition of the fact that in the areas of production surrounding the farms and in the small towns and villages of this country conditions are entirely different from those in our big metropolitan centers. Wages and hours which might be properly applicable to living conditions in New York, Chicago, and San Francisco would be entirely out of line in the small towns and villages in and around our farming communities.

However, the Wage-Hour Administration has practically nullified the exemption intended to be granted by Congress through its interpretation of the phrase "area of production." The Wage-Hour Administration, however, is not entirely to blame for this situ-

Hour Administration, however, is not entirely to blame for this situation in which we find ourselves, because obviously a definition of the phrase "area of production" involves a difficult and trying task, but I am definitely of the opinion that Congress intended that a liberal construction should be given this term.

In order to clarify the expressed intention of the Congress to remove the burdens which the wage-hour law might place upon farmers and to clearly emphasize the fact that in the preparing and processing of agricultural commodities, hours and wages fixed for industry generally should not be mandatory in these handling for industry generally should not be mandatory in these handling and marketing processes which are so closely associated with agriculture, I have introduced a bill, H. R. 5374, in the House of Representatives. This bill was introduced not only at the request of various farm leaders in my own State but also at the request of the National Grange, the American Farm Bureau Federation, the National Cooperative Council, the National Cooperative Milk Producers' Federation and many other noticed and State form ducers' Federation, and many other national and State farm organizations.

These amendments do not interfere with collective bargaining nor with generally recognized industrial labor, nor would they affect or disturb the enforcement of the act as Congress originally intended it.

There is not now, nor should there ever be, a fight between industrial labor and agriculture. Please let me remind you of this unfortunate situation in which the farmer finds himself. The prices on practically every commodity purchased by him, including farm machinery and supplies, is fixed in the large industrial centers, and he must pay that price. At the same time the prices on practically every commodity sold by him is fixed in those same metropolitan centers, and the result of this is known to every farmer in America. The Wage-Hour Administration has suggested certain amend-

ments which they state are to take care of the agricultural situa-tion. As a matter of fact, these amendments, which were intro-duced by Mrs. Norton, chairman of the House Labor Committee, duced by Mrs. Norton, chairman of the House Labor Committee, do not give to agriculture any exemptions which it does not have under the present law. These amendments of Mrs. Norton's would take away many of the exemptions granted to agriculture and would place many operations under the law that are now exempted from the wage-hour provisions. My bill specifically exempts from the wage-hour provisions of the law all employees engaged in dairying, fruit and vegetables, livestock, tobacco prior to storage, poultry, and other agricultural lines.

It does not exempt any of these agricultural industries from complying with the child-labor provisions of the act. This provision Congress intended to apply to all industries. It does not condone obnoxious sweatshop conditions. They do not exist, so far as I know, in any of the agricultural trades.

The exemption of employees whose total compensation inevitably

The exemption of employees whose total compensation inevitably comes out of the price the farmer receives for a product will certainly not be injurious, nor will it affect, the general provisions of the wage-hour legislation. I might point out here that the farmer is a workingman—a laboring man. Not only is this true but in most instances the operation of his farm requires the assistance of his wife and children from approximately 6 years up, and rare, indeed, are those farmers who are making anything like 25 cents per hour for the labor that they and their families put in on the farms, and rarer, if any there be, are those who work less

than 60 hours per week.

Neither the Child Labor Act or any other act will help these men, women, and children on the farm unless the income and purchasing power of the farmers be increased, thereby improving their

economic conditions. If and when this occurs, the farmer can and will gladly pay better wages and carry his portion of the burden.

In view of the present conditions of agriculture, with the long hours and low incomes of our farmers and their families, I have no hesitancy in standing upon the principles that further Federal hesitancy in standing upon the principles that further Federal legislation imposing rigid wage-hour requirements upon the preparing and processing of agricultural commodities should not be countenanced by Congress, certainly not until some definite assurance can be given agriculture of increased income, because, as I have previously stated, the effect is inevitably to lower the already substandard prices received by our farmers throughout the United States. There is no quarrel between agriculture and labor, but so long as conditions continue as they are, and our farm prices remain at their present low ebb, I intend to fight for the protection of the already low and inadequate farm income against further charges, which, if created, would inevitably have to be borne by agriculture.

Permanent Policy for a Reasonably Low Interest Rate on Farm Loans

EXTENSION OF REMARKS

HON. MILTON A. ROMJUE OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Monday, March 27, 1939

Mr. ROMJUE. Mr. Speaker and Members of the House of Representatives, I desire to call attention to the importance of establishing as a permanent policy a reasonably low interest rate on or for agricultural or farm loans. Congress, within the last few years, has at least twice enacted legislation providing for a temporary low rate of interest for loans on farms, establishing such rate at 31/2 percent on a class of loans and 4 percent on what is known as Commissioner's loans, and at the last session of Congress this was renewed and extended for another period of time.

Some of our Members at that time felt that the policy should be made more permanent rather than for a limited period and some believed that the rate should be made at a somewhat lower percent. To both of these suggestions I was then, and am now, in agreement and accord. Instead of the present 4-percent and 31/2-percent rate, I favor the establishing of a rate of 3 percent on such loans as a permanent policy, and this, in my opinion, should be done, and before the expiration of the present temporary law I propose to join with those who may entertain a similar view to my own in an effort to bring this about, and I trust that such Members as desire to bring this about may give consideration to this subject. It has well been said there can be no perma-

nent prosperity even in such a great country as our own unless the agricultural interests of our people are maintained on a reasonably sound and prosperous basis. I congratulate those who have been helpful in bringing the interest rate down to where it is now on these Government loans, but we need further assistance in this regard for the agricultural sections of our country, agriculture being, as it is, America's most basic enterprise. There can be no lasting and sound industrial and general financial prosperity except it be built upon and reliant upon success and prosperity in agricultural pursuits.

The farmer must have an adequate financial return for his labor and industry in his field of operations, and a reasonably low rate of interest will be of much help. While it has in many cases already shown a helpfulness, the low rate should

be made a permanent policy.

Taking into consideration the condition the farmers found themselves in at the close of 1932, when wheat was then selling at 25 cents per bushel and corn was then selling in the great Corn Belt at 10, 12, and 15 cents per bushel. They are in much-improved conditions in general, however, in addition to that situation, most of the chief farming sections suffered the affliction of two major droughts, against which no human agency could possibly make a complete and fully satisfactory effort. The avenues of credit which had formerly been accessible to the farmer, were by the previous low prices supplemented by the drought and the many bank failures were largely closed to him. In many instances his own money on deposit in some banking institution was wiped out and lost to him. Too much credit cannot be given for the enactment of the law guaranteeing bank deposits. Since its enactment the depositor no longer runs any risk of losing any money he has on deposit up to the sum of \$5,000. Every depositor knows his money in the bank up to that amount is safe and there for him when he calls for it. Financial institutions and banks in general have, ever since being placed under this administration, on a more sound and lasting basis have apparently been unduly slow and reticent in extending financial loans to many farmers even though the Roosevelt administration saved the banking institutions from what was practically a complete destruction. They, forgetting the benefits, in some cases, that they have received, have not only withheld loans that might have been safely loaned to many deserving farmers, but at the same time, while criticizing and professing the Government was almost or soon would be bankrupt, many of these institutions have not only withheld loans to many worthy farmers and have in large measure invested much of their funds in Government bonds.

Government bonds are selling higher now than at any period of our Government's history. All Government bonds for many months have been selling above par, some even selling recently as high as more than 20 points above par. If those who criticize this administration and express a fear for its credit safety still put their money in these highpriced bonds, what can one say as to the confidence or lack of it one should or might have when the word is compared with the act.

The Emancipation of Women

EXTENSION OF REMARKS

HON. RALPH O. BREWSTER OF MAINE

IN THE HOUSE OF REPRESENTATIVES Wednesday, April 19, 1939

ADDRESS BY HON. RALPH O. BREWSTER, OF MAINE, MARCH 21, 1939

Mr. BREWSTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD. I include the following address delivered by me before the annual banquet of the Woman's Christian Temperance Union for the District of Columbia celebrating the centenary of the birth of Frances Willard at the Hotel Roosevelt, Washington, D. C., Tuesday evening, March 21, 1939:

The life of Frances Willard marks an epoch in the history of America that only the centuries can appraise. A philosopher has wisely said that the progress of civilization may be measured by the status of its women. Measured by this standard, civilization reached a new peak in America in the closing days of the nineteenth cen-

During this period woman was emancipated in a variety of ways from the shackles of customs and tradition by which for untold centuries she had been bound. In social, economic, and political life woman found a new freedom. In this emancipation of women from the limitations of the centuries Frances Willard played a

leading role.

The portents had long been forming. Women everywhere were beginning to awake. Men also were awakening to the profound philosophic truth of Emerson's statement: "When one hitches a chain to a slave, one must hitch the other end to one's self." Man gained a new sense of a helpmeet for man and came to desire a companion who should share all the problems and the triumphs of this new economic day.

Every new invention that lightened the labor of mankind and womankind alike, every device contributing to our ease and comfort and pleasure, inevitably involved the further opening of the door that women also might be free.

NINETEENTH CENTURY REVOLUTION

Everywhere traditions were moving rapidly into the discard. In retrospect that is easy to perceive. But if one moves back a century and looks about, the surface would still seem calm. It would seem incredible that in the brief period of a century almost a complete revolution would be wrought in the status of women. The courts then still talked the language of woman as enjoying a legal status little above that of those who were in bondege.

To lead in this liberation required the vision of the prophet and the sturdiness of the pioneer. These qualities Frances Willard demonstrated she possessed in especial measure. In her illusive nature was blended the sweetness and the charm of one who needs not to be irritated because she is above the flesh and at the same time the vision and determination and the steadfastness of spirit characteristic of the pioneer.

ENTER EVERY OPEN DOOR

While Frances Willard is chiefly known for her leadership in the temperance cause and as one of the founders of the Woman's Christian Temperance Union of America and of the world, yet this was only the center of her interest in a variety of activities that encompassed all the problems of mankind and a spirit that ranged the world.

At her magnetic touch doors opened everywhere. Any human problem was simply to her an invitation to bring to its solution all those great qualities of mind and character that should organize the energy and the loving kindness of women everywhere for

Organizing genius of a rare order was required to carry out this work. Yet the first essential in the great crusade was the art of the orator that should both illuminate and inspire the confidence of mankind. One of the first forums in which her eloquence found expression interestingly enough and very properly was the congenial atmosphere of Portland, Maine, where one of her early public addresses was delivered. Very quickly news of her compelling oratory spread throughout the United States and her presence was demanded on every platform as the great temperance crusade spread steadily its beneficent influence.

UNIVERSAL BLESSING

The achievements of her life are to be measured in the richer, fuller life enjoyed by women everywhere. The temperance crusade of the last century dedicated itself primarily to education along temperance lines. Teaching the effects of alcohol, pledging individuals to the path of temperance, and extending a helping hand to those in need was the spirit of the cause. As the crusade waxed in strength more and more territory came to banish the licensed traffic in intoxicating drink until finally the crusade culminated in a constitutional amendment contemporaneously with our efforts to win the war and to return to normalcy thereafter.

With the adention of the constitutional amendment

With the adoption of the constitutional amendment after what had been a long and mighty struggle there was the inevitable tend-ency to let down. All the forces that had cooperated so vigorously in promoting the cause of temperance education and in pointing out the dangers of intoxicating drink tended to consider the battle done and to rest upon their cars and leave the future of the problem to law-enforcement agencies. This was a mistake.

ETERNAL VIGILANCE

In a little over a decade the amendment was repealed as the result of a great campaign of education and propaganda by those who were opposed. Their efforts reached fruition in the depression of the early thirties with the assurance that repeal of national prohibition would solve our economic ills.

Ten million still unemployed testify today that their assurances on this score were seriously mistaken. In spite of the millions received from liquor taxes, the Government is still running an annual deficit of more than \$3,000,000,000. Temperance advocates surely can no longer be held responsible for our economic ills.

WHAT OF TOMORROW?

Meanwhile what of tomorrow? Sometimes there is a tendency to think that all the loving labors in the last century of Frances Willard and Neal Dow and the other pioneers of temperance represent love's labor lost. This would be true only if all the lessons of the last century and the first three decades of this century could be forgotten or ignored. Temperance advocates have as much to learn from this experience as their critics.

Undoubtedly many sincere and honest people advocated the repeal of national prohibition because of the evils which they believed were incident to its operation. With those sincere leaders there is full opportunity to cooperate in what they believe to be a better method to handle a traffic that their own regulations recognized the statement of t nize must be the subject of very specialized control. Every law we have upon the statute books today differentiating alcoholic products from any other item of commerce is a recognition of its

very different character and the social problems which are involved in its distribution.

Even the brewers and the distillers are becoming seriously concerned at the evils that seem inevitably to follow in its wake. There is no necessity to consider that these interests are hypocritical in seeking to ameliorate its evils, since more than any other group they are concerned that its abuse shall not once again bring retribution on their heads and the destruction of their investment.

Liquor is still on trial, as it has been throughout the history of the world. Almost every country on earth recognizes this traffic by special regulations in its laws. Almost every civilized country seeks to ameliorate its evils and encourage temperance in its use.

TEMPERANCE AND ABSTINENCE

The few brief years of the widespread sale of liquor have been sufficient once again to reveal the abuses that almost inevitably result. Quietly but steadily there is spreading the influence of those who find in total abstinence a satisfactory way of life. Innumerable laws have been passed to hedge about the liquor traffic but no law requires that anyone shall drink. Temperance or total abstinence is still recognized as a proper way of life. Against much there is no law

such there is no law.

WINNING FRIENDS

Nor is there any law against inculcating the advantages of temperance or total abstinence so far as liquor is concerned. In this period we hear much of "how to make friends and influence people." Sometimes it is suggested that one must be a good fellow and take at least an occasional drink in order to demonstrate one's good fellowship. Washington presents some rather interesting examples to demonstrate that indulgence in alcohol is not essential to friendship or success. Postmaster General James A. Farley, chairman of the Democratic National Committee, is the most glittering example in the Democratic Party of a total abstainer who is today perhaps the most influential single man within his party ranks and likely to exercise as large an influence as any single individual in the selection of the next Democratic nominee for the Presidency.

Meanwhile Life magazine has recently given Nation-wide publicity to its selection of Representative Joseph W. Martin, Jr., Republican leader of the House, as the most influential Member of Congress.

Representative Joe Martin has achieved this exceptional position of leadership and success without finding it necessary to depart from the example of Jim Farley as far as drinking habits are

This story could be duplicated many other times in Washington and elsewhere as milk bars become more popular and fashionable not only at the Waldorf-Astoria but at all the other centers for

not only at the Waldorf-Astoria but at all the other centers for which the Waldorf sets the style. Young people in particular are beginning to desire a change and find the joy of being different. With the repeal of national prohibition, there was perhaps a natural tendency to overindulgence in strong drink. Medical advice is now leading many men and women alike to give up alcohol for their own good. The stern competition of the modern world requires increasingly clear heads.

LIQUOR INTERESTS

The liquor interests have prudently attempted to restrict in some The liquor interests have prudently attempted to restrict in some measure the character of their advertising appeal, with due regard for the sensibilities of Americans and the temptations to the young. Now, these interests face a challenge as their market begins to shrink as to whether they will seek new avenues of expansion and new methods to advertise or will, in their own interests, as well as in the interest of the country, be willing to content themselves with the market that they already serve.

The liquor interests now enter the valley of decision. This decision may be fraught with as momentous consequences for their future as was faced by the temperance cause in an earlier decade, when in the full glow of what seemed to complete and final victory the temperance forces let down their guard.

It is interesting to note that Gene Tunney, former heavyweight champion of the world, has not hesitated to serve stern warning, as one engaged in the liquor business, as to the consequences that

will follow if they do not use great prudence in exploiting the temporary advantage they seem to have obtained.

TEMPERANCE PROGRAM

Temperance forces may well encourage every sincere effort to hold within bounds the liquor traffic and every sincere advocate of such a cause. While it would be easy to sit back and let license and lawlessness run rampant in order that this seeming evil might more quickly destroy itself, yet that would not seem the path of wisdom nor the way best calculated to serve the youth of the United States who are after all our most precious heritage and concern

Vigilance and organization were never more necessary than today, and the wholehearted cooperation of all those sincerely interested in temperance and in holding the liquor traffic within some bounds may well mitigate the evils that seem so sure to flow.

WOMAN'S CHRISTIAN TEMPERANCE UNION

Meanwhile the life of Frances Willard may well teach us to "enter every open door." All good is the object of those who are allied in this great fight. Temperance is a term far broader than simply

controlling the appetite for intoxicating drink.

A union of Christian women for temperance may well encompass every evil in our land and in the world. A proper conception of temperance properly applied will save this Nation and perhaps the world from another holocaust of war. Temperance in thought and action within our own land may do much to mitigate the tragic consequences of this depression as we seek with temperance and moderation to meet the great economic and social challenge of

this new day.

Christian women with the inspiration of Frances Willard are needed as never before to cooperate with citizens everywhere in coping with the problems that threaten the disintegration of the

civilization produced by our ancestors at so great a sacrifice.

As a result of the loving labors of Frances Willard and her compatriots in the last century women have been liberated for this task. Now it is their duty and their opportunity to carry on, inspired by the example of those who fought so wisely and so well.

On every hand there is the opportunity for service. The pressing social problems invite the service of willing hearts and hands.

No lip service of devotion to their memory can possibly substitute for the daily labor in the highways and the byways to follow the path blazed by these pioneers. The task is far easier because they lived and worked, but the demands are no less imperative if civilization is to continue its onward and upward path.

TEMPERANCE

Temperance in the sense of self-control or calmness is said by Webster's Dictionary to be archaic usage. A revival of both the usage and the virtue would seem to be much to be desired.

Intemperance in speech and action seems to be rushing the

world rapidly toward an abyss—in which civilization itself may soon be enguised as the Dark Ages come again.

Let every American watch well his tongue in these very troublous times. Temperance in thought and utterance is the only thing that can save America from the chaos that now looms. Proper preparedness in arms is imperative in this very troubled world, but engitting preparedness to the other propers. world but spiritual preparedness to use the mighty power of America wisely is more essential than all else. As men's tempers

rise their reason flees. On every hand there are those who seek to inflame America to their own ends. America needs as much today as in the days

of Washington to be ever upon guard.

It is interesting to note that the only time the man of Galilee used force was in purging the hypocrites from the temple. Manused force was in purging the hypocrites from the temple. Mankind today might well declare war on hypocrisy and all its manifestations and the atmosphere would begin to clear. "Let him who is without sin among you cast the first stone." That injunction may well be borne in mind as we move from self-defense to a missionary crusade to save the world.

"I, if I be lifted up, shall draw all men unto Me." That is the gospel that will eventually save the world.

Let America demonstrate the capacity of a self-governing democracy to put 10,000,000 Americans back to work. We shall not then need to worry about any tyranny anywhere in the world. All mankind will wish to follow our glorified example.

Let us individually demonstrate the rich joys of Christian living

Let us individually demonstrate the rich joys of Christian living and all the world will wish to follow like the Pied Piper of Hamelin. How quickly the world forgets! National prohibition came in with the last war as everyone came to recognize the necessity of a supreme effort and the sacrifice of everything that would impede.

Moderation in all things will alone save us from the holocaust. The growth of intelligent voluntary temperance—particularly among youth—is one of the most encouraging signs of these very troublous times.

In the fierce competition of this increasingly mechanized world there is less and less room for intoxicating drink. Everywhere

youth is turning from alcohol to milk. The leaven is working steadily as their thoughts begin to clear.

Youth is getting ready for high adventure as they prepare to ride the storm. The pilots of the future will be found at the milk bars

of today.

Effect of the Reciprocal-Trade Agreements on Leather Boots and Shoes

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1939

Mr. REED of New York. Mr. Speaker, any legislation which affects the leather-shoe industry affects a large proportion of the wage earners and farmers of this country. In 1935 the industry ranked sixth in the number of wage earners, thirteenth in the value added by manufacture, and sixteenth in the value of products.

In the Tariff Acts of 1913 and 1922 imports of leather shoes were admitted free. This proved to be no hardship to American producers as the World War and post-war conditions created a large export market, and European producers were not in a position to export to us. However, in 1929, imports of shoes rose to 6,182,000 pairs. Realizing the danger to American producers if this trend was allowed to continue, the Republican administration included in the Smoot-Hawley Tariff Act of 1930 an ad valorem tariff of 20 percent on all leather shoes. This tariff was amended in 1932 and the duty was reduced to 10 percent on turned shoes and increased to 30 percent on McKay sewed shoes. This was beneficial in stopping the heavy importations, which fell from 6,182,000 pairs in 1929 to 1,371,000 pairs in 1932, and 1,977,000 in 1933,

Since 1934 the present administration has completed with 17 countries trade agreements designed to aid both participants through the exchange of mutual benefits. Of the concessions granted to the United States, one country, the Netherlands, gave us a concession on leather shoes, but it is difficult to see what benefits have been derived by the shoe manufacturers of this country from this concession, since the increase in our exports has been due to trade with countries other than the Netherlands.

On the import side of the picture we find that Czechoslovakia occupies the whole arena. To combat the tariff on McKay sewed shoes, Czechoslovakia exported cheap shoes, the average value per pair dropping from \$2.36 in 1929 to \$0.74 in 1936 and \$0.80 in 1937. The success of this policy in defeating our tariff barriers inspired other countries to do the same thing, and the average value per pair of shoes from trade-agreement countries and all other countries has experienced a steady decline since 1935.

To stop this was essential to the interests of American farmers, laborers, and producers. If this trend was allowed to continue it would inevitably result in lower annual wages for all laborers, unemployment for many, and a smaller market for the farmer due to curtailed production, or a lowering of the standard of living of both the laborer and the farmer in order to maintain production. But the present administration did nothing. Production of leather shoes declined 1 percent from 1936 to 1937, while imports increased 71 percent and exports but 12 percent for the same period, and the production of women's shoes declined 8 percent while imports increased 92 percent.

In the recent agreement signed with Czechoslovakia, the leather-shoe industry received another boost downward. The tariff on McKay sewed shoes was reduced from 30 percent to 20 percent ad valorem, that on molded soles laced to uppers from 20 percent to 10 percent, and on other shoes except turn or turned and welt process, the duty was bound at 20 percent. The most objectionable provision of this agreement is the binding of the duty on other shoes. import classifications this includes shoes with soles attached by cement process and molded sole sandals. Cement process shoes accounted for 90 percent of our total imports in 1937 and molded sole sandals were second in importance.

The agreement further provides that, should more than 1.25 percent of our average annual production for the last 5 years of all shoes covered by the agreement be imported from any source, the two governments will meet, and, if a satisfactory agreement is not reached through consultation, the United States reserves the right to increase the duty on all shoes entering above that amount. This provision would permit 4.796.000 pairs to enter in 1938, an increase of over 1,100,000 pairs over 1937. Thus does the administration take care of the interests of those who depend on a prosperous leather-shoe industry for their livelihood.

In light of the foregoing analysis, can anyone honestly conclude that the leather-shoe industry has benefited from the reciprocal-trade agreement? Rather, is it not fair to conclude that in its haste to bring about a trade agreement with Czechoslovakia the administration-instead of aiding those who depend on the shoe industry-has brought lower living standards to American laborers by bringing them into direct competition with cheap foreign labor?

"New York City Will Have Coal or Else"

Statement concerning pending strike in the coal mines and its possible effect on New York City.

EXTENSION OF REMARKS

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1939

Mr. MARTIN J. KENNEDY. Mr. Speaker, I feel it my duty, as a Member of Congress from the city of New York, to call the attention of the Congress to the imminent danger that confronts New York City of a complete tie-up in traffic and abandonment of business due to the failure of the bituminous coal operators and the heads of the United Mine Workers to reach an agreement. It is difficult for the people of New York City to understand why there should be any labor troubles in view of the tremendous machinery which has been set up by the Government at the expense of our country and taxpayers to adjust labor troubles in every industry. New York, through its Representatives in Congress, and most particularly Senator Wagner, has taken the lead to enact laws to protect the American workingman. I hope that the American workingman throughout the country appreciates this leadership and will respond to the people for whom I am now asking a settlement of the coal situation.

It has developed to a narrow issue, and that is, Shall the so-called penalty clause in the wage contract be eliminated? It is because of the lack of agreement on this issue that people in my city are threatened with a serious interruption of their daily lives and a ruinous stoppage of their business. This penalty clause has been in the agreement for a great many years. I understand that the miners are satisfied with the wage provision of the agreement, but that because the C. I. O. leaders fear that the A. F. of L. may be able to enlist support in the bituminous-coal fields they want the penalty clause removed so that they may be in a position to strike against any operator who permits other than C. I. O. members to work in his mines. People in New York are anxious to see the miners, as well as every wage earner, get an adequate wage, but do not see why they should be destroyed because the leaders of two great labor organizations cannot settle their differences. It is a very easy matter for

those who are of the coal industry, both on the labor side and on the operators' side, to live at New York's most luxurious hotels, but it is a very tragic matter that the patients of our hospitals and the poor of our city should be faced with greater ills than they are now patiently suffering because leaders in labor cannot get together. The observation is frequently made in Congress that there have been so many laws passed in favor of union labor that the laws are almost selfoperative, and that the professional labor leader is no longer necessary. Labor leaders should be intelligent enough to realize that this is no idle statement and should lay aside their personal differences and try to serve the public in much the same way as all other executives. There is also rising a strong resentment among the people at large against the oppressive and high-handed tactics of some labor leaders. Politicians who have been pulling the chestnuts out of the fire for these labor leaders had better realize that they have been elected to serve the entire people and not a selfish minority of obstinate leaders.

Unless an agreement is made very shortly, I shall introduce a resolution in Congress for an investigation which will expose the real motives of the obstructionists and place upon the heads of the guilty parties responsibility for their cruel and inhuman treatment of the miners as well as the general public. It is a sad state of affairs in any such controversy when the mayor of the great city of New York, speaking for its millions of citizens, and the United States Department of Labor, representing the entire country, are given such shabby treatment and virtually rebuffed by these labor dictators.

No one could have greater sympathy than I for organized labor, because my own father was a member of a labor union. and I am thoroughly acquainted with the problems of the workingman; but I certainly do not feel that the petty politics of labor leaders should be permitted to cripple our industry, our transportation, and impose hardships and severe restrictions on our citizens. I hope that the men who have it within their power to settle this question will do so at once for the best interests of the miners and the public.

It is a sad commentary on our democracy if labor czars are permitted to ride around in elegant limousines and live in the best hotels and issue statements threatening the very life of our citizens by suggesting that they will stop our subways

and cut off our food supply.

Democracy has been challenged abroad and is now challenged here. Democracy, to justify itself, must be workable: and in such a catastrophe as John L. Lewis promises to bring to our people the city of New York and the Government of the United States will be justified in taking summary action.

Again the Power Authority

EXTENSION OF REMARKS

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Friday, April 21, 1939

EDITORIAL FROM THE BUFFALO EVENING NEWS

Mr. DONDERO. Mr. Speaker, under feave to extend my remarks in the RECORD, I include the following editorial from the Buffalo Evening News on the power question:

> [From Buffalo Evening News] AGAIN THE POWER AUTHORITY

The bill introduced by Representative John E. Rankin, of Mississippi, for a Niagara T. V. A. clearly was inspired by the New York Power Authority. All along Chairman Frank P. Walsh and his associates in that body have been urging such a set-up, just as they have been urging ratification of the St. Lawrence seaway treaty; this in defiance of sentiment in the State and in opposition to the New York Senators in Washington.

New York Senators in Washington.

The power authority has thundered at the power companies—and it must be admitted that in times past they were open to severe criticism for high-handed procedure and for mixing in politics—but the authority has refused to cooperate with the public service commission in rate cases. If the companies now display a more accommodating spirit, if they show a disposition to engage public goodwill—and it may fairly be said that they do—no credit belongs to the power authority for the reform. Its policy is constantly to hector and harry them in the interest of the New Deal. Now it proposes to put them out of business.

Mr. Rankin says that a Niagara T. V. A. would save the pecple of New York State \$172,000,000 a year in rates. This figure probably came from the power authority. But such a representation is blatant nonsense. The gross revenues of all the power utilities in the State, as public records show, are \$300,000,000 a year, out of which they pay \$70,000,000 in taxes and \$55,000,000 in interest on bonds. These charges total \$105,000,000,000 so there is left of the

bonds. These charges total \$105,000,000, so there is left of the gross revenues \$195,000,000. Then there are salaries and wages to be paid to thousands of workers; there are upkeep charges; there are the costs of materials; there are amortization charges—all to come out of that \$195,000,000. And this is dwelling on only the

larger deductions.

But let that \$195,000,000 stand as if there were no deductions to make. Take from it the \$172,000,000 which Mr. Rankin says that he would save for the people of this State, and there would be left \$23,000,000 on which all these power utilities in the State would have to be operated. To get a faint idea of how ridiculous the whole thing is, just consider that the annual pay roll of the Niagara-Hudson alone is \$18,000,000 a year. It may be taken for granted that Mr. Rankin would not cut down the operating force or reduce wages. All right; then there would be left \$5,000,000 or reduce wages. All right; then there would be left \$5,000,000 for all the other power utilities in the State. And the Consolidated Edison is larger than the Niagara-Hudson. Don't forget, too, that Mr. Rankin promises "adequate compensation" for the taxes which the State and its municipalities would lose through the setting up of a Niagara T. V. A. And there would be the interest on the bonds that would be issued to establish this governmental agency. One hundred and seventy-two million dollars a year saved in rates. As a dispenser of other people's money Mr. Rankin does little credit to the intelligence of the people of New York State. to the intelligence of the people of New York State.

Further Delegation of Power by Congress Must

EXTENSION OF REMARKS

HON. CLARENCE J. McLEOD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1939

Mr. McLEOD. Mr. Speaker, I am opposed to H. R. 3325. which provides for the extension of time within which the powers relating to the stabilization fund and alteration of the weight of the dollar may be exercised. We are asked by the administration, through this bill, to again assign our prerogatives as members of the legislative branch of our Government to the executive department. As representatives of the people we are urged to delegate their only voice in our government to one man. Supporting this request, the proponents of the bill offer a queer and seemingly paradoxical argument. We are supposed to be taken in by it. It goes something like this: "What you group of men cannot do, one man can do." In an attempt to cure the self-evident failings of this remarkable postulate, they mention: "Only the Executive is a Solomon in time of emergency; his wisdom is boundless, and he and he alone has the faculty to make masterful decisions, and then with the speed of the wind."

In effect, we are urged to believe that section 8 of article I of the Constitution is a mistake; that the opinions handed down by the Supreme Court on this question are in gross error. If we are to believe them, we are to believe that Congress should not have the authority "to coin money, regulate the value thereof and of foreign coin, and fix the standard of weights and measures."

Supposing such gross error does exist—that is, the maldistribution of a major power-where, then, would the analogy fail if we should decide to permit our Executive to declare war for us, to spend our money, to tax us, and be our judge?

This is more than just a political question. I am not opposing this bill because I am a Republican and the Executive is a new dealer, as the gentleman from Illinois implied might be the case in his anticipatory opening speech. I oppose it for the same reasons set out in the minority report of the bill. I oppose it equally as much for the lack of argument made in its behalf by the majority of the committee that considered it. But more particularly and more emphatically do I oppose it because I do not hold any faith in legislation that is contrary to the terms and purport of the Constitution. The gentleman from Illinois has attempted to cast an ill light on all arguments by the opponents of this bill before they are expressed by employing the sly innuendo that politics govern the stand taken by the opposition. But I contend that such strategy cannot overcome the proposition that this is more than a political issue; that the bill strikes at the very foundation of our Government, and that all who favor constitutional legislation must and will oppose it.

For my part, I do not like the tenor or tone of their plea. Listen seriously for a moment to the implications of their invitation: "Come on, boys, be regular about this matter; let us turn over the reins of government to our President.' In the meantime we can go home and engage in our private business. On second thought such a furlough might be beneficial. The gentlemen on the other side could then discover first-hand how the businessman has been harassed and tormented, overburdened and ruined by the spending, the waste, the blundering inefficiency of the present administration. Let us give him another try? Why, the Chief Executive for 7 years has been trying to carry out our duties; the duties delegated to this body by the Constitution.

If the results of the President's efforts to stabilize the currency during the past 5 years, and increase the purchasing power of the Nation, are precursors of what would follow if we extend this power, then I say, speaking for myself and the people I represent, let each of us hasten to reassume all of our duties as legislators. So long as it is necessary that laws be enacted; so long as there is need for some system of human management, there is need for propriety, honesty, and caution. I repeat, if we must enact laws, let us enact them not in haste but only after careful deliberation and sane thought. In making laws for the future let us look to the past as well. The past six and a half years, especially, will reveal much of interest. The great trouble that has beset our Government in the past few years has been the presence of a stupid urge to plunge headlong into grave and weighty matters. Hurry, hurry, hurry, has been the incentive behind many of our actions,

The people have been whipped into a frenzy by the activities of the Federal Government. The laws have piled up so thick and fast, the taxes have so multiplied, and the public debt has risen to such a stupendous figure that not 1 out of 10 businessmen is sure of what he should do or what he should not do; for, as antithetical as it may sound, the only thing certain about the businessman is that he is uncertain. The passage of this bill will do nothing to quell his fears but will definitely increase them. How can business expand and millions be reemployed when their destiny rests with the whims and decisions of one man, a man whose ego will not permit his admission of any of his many grave and costly mistakes?

Admittedly there have been times when haste was of the essence, but there also have been times when the majority of this body forgot the man back home and the possibility of his having any ideas on national affairs. And the results have proven disastrous to our Nation and have brought calamity to other nations besides. Witness the financial plight of China as a result of Presidential manipulating of money.

Briefly the argument resolves itself around our decision as to whose planning we are to cater. Each time I come across that famous phrase "We planned it that way," I recall my college days and the professor who taught me constitutional law. He told us that the Constitution was a magnificent plan of government; that under its protecting system of checks our people would know liberty, happiness, and prosperity forever. Things have not changed. The professor was right. If this country is to know once again the blessings of peace, prosperity, and happiness, it will only be through the Constitution. But how can we expect that instrument to function properly if we fail to abide by its terms? And, certainly, living up to its terms is not accomplished by delegating our legislative powers to the executive branch of our Government; by putting into the hands of one man the authority to run the United States Government. I say, let the executive branch of Government function in its own constitutional sphere, and let this body legislate as it

I exhort each of you never to betray the people of this Nation by discarding their vote-do not still their voices in government. The laws are made for them and should, as Lincoln said, be by them. If we are to listen any longer to that overworked phrase, "We planned it that way," let us associate it with another plan, the plan the creators of our Constitution evolved. Part of that plan is section 8 of article I. After 150 years of progress under that plan, with the exception of a few detours in the past 7 upset years, let us continue to follow it.

Congress Will Carry Out the Wishes of the Overwhelming Majority of the American People and Keep America Out of the Next European War When It Comes

EXTENSION OF REMARKS

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1939

EXCERPTS FROM ADDRESS OF HON. MARTIN F. SMITH, OF WASHINGTON

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks, I insert certain excerpts from an address which I delivered at the annual banquet celebrating the thirty-fifth anniversary of the founding of James S. Pettit Camp, No. 3, of the United Spanish War Veterans, held in the Capitol Park Hotel, Washington, D. C., April 18, 1939.

The excerpts referred to are as follows:

All the spoils of war for which the nations of Europe would de-stroy each other are not worth one American life or one drop of American blood.

American blood.

Congress will never vote to send our boys across the ocean to participate in another European war.

If the neutrality law is repealed, it should and, I believe, will result in legislation to permit trade with belligerents upon a strictly cash-and-carry basis, so that we receive our money and the goods we sell will have to be shipped in foreign bottoms. Thus we will not become financially interested in the success of either side or expose our vessels to the perils and hazards of submarine warfare as occurred in the World War.

Congress will carry out the wishes of the overwhelming majority of the American people and keep America out of the next European war when it comes.

war when it comes

War or Peace

EXTENSION OF REMARKS

HON. RALPH O. BREWSTER OF MAINE

IN THE HOUSE OF REPRESENTATIVES Wednesday, March 22, 1939

ADDRESS BY HON. RALPH O. BREWSTER, OF MAINE

Mr. BREWSTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD I include the following address delivered by me before the Political Study Club;

Every mother in America is wondering whether America is to be involved in war. Warlike talk is more and more heard on every hand, and America seems to be contributing its full share.

Jobless Americans begin to wonder whether war is not perhaps the only answer. Enough hungry millions are always a good preparation for a first-class war.

The government of many a country throughout history has taken the attention of the people away from pressing domestic problems by stirring them to a fury over some supposed foreign foe. Many wars have been simply the red herring across the trail of an utter failure of domestic policies to alleviate social

trail of an utter failure of domestic policies to alleviate social and economic ills.

Two reasons are advanced why America should depart from the historic policy laid down by George Washington in his Farewell Address and enter into the internal affairs of Europe and Asia. Curiously enough, everyone seems to agree that we should adhere more strongly than ever to the Monroe Doctrine, which serves notice on all the world that the United States does not want any European or Asiatic nation to intrude in the affairs of South America. Yet, at the same time, loud voices are raised in America today to insist that we shall take a very active hand in what is going on in Europe and Asia. It is a poor rule that does not work both ways. What is sauce for the goose is usually sauce for the both ways. What is sauce for the goose is usually sauce for the

gander.

The first argument is based solely on sentiment. America's historic sympathy for suffering humanity in the last hundred years led us to serve as a haven for people from almost every land. Now this sympathy is to carry us across the seas to rescue downtrodden humanity wherever they may be found.
